AN APPRECIATIVE VIEW OF THE HOME NEWSPAPER

FOLLOWING is an appreciation of the Local Newspaper from the pen of Wesley A. Stanger, Editor of the *Office Outfitter*, Chicago.

Did you ever go into a town that looked as though there was something wrong with it?

I have.

Maybe you wondered why all the buildings looked so strange, why the stores appeared to have been stocked up with unsalable goods, and if you wandered down the street you discovered that the storekeepers were in fact "storekeepers." You talked to some of them and they were knockers. There seemed to be a spirit of jealousy abounding everywhere. You inquired why they did'nt get together and form an association. You were told that they had a flourishing association and that they all belonged to it. You may have asked a hundred and one questions, and all of them seemed to elicit a favorable answer, and still you wondered. Surely something was wrong. Ah! you struck it—they did'nt advertise! You put the question to one of the storekeepers.

"Advertise, why thunder, yes!" was his reply.

Again you were stumped. Finally in dispair you sought out the local newspaper. If the merchants advertised, had an association, and everything seemed so favorable, why was the town awry? The newspaperman would know. So away you went to see him.

On your way you saw many things that convinced you that there was something radically wrong, but you did'nt get very close to the cause, until you lost your way to the newspaper office and had to ask someone to direct you. Here you began to get a handle on the real cause.

"Newspaper office? Why, oh, yes. You mean the *Bugle?* Oh yes. Old man Sanders runs that. Sure, keep on going, you can't miss it. You'll probably find Sanders there. He's there most of the time, I guess.'

"What sort of a paper is it?" you ask.

"Oh, not much of a paper, I guess. Sort of dead. Old man Sanders owes everybody and nobody will trust him any more."

"Do you advertise in the paper?"

No. No use. It don't bring results. I can't see any good in it. Some times I run an ad to help the old man out. Nobody pays much attention to him. He's been here a long time. Too poor to get away, I guess. No, I don't advertise very often unless I want some dodgers, and then I make the old man run 'em off free if I give him an ad for his paper.'"

If you know anything about real conditions you feel your heart beat fast, then slow down. You know the cause. You have solved the mystery. No wonder the town is dead. No wonder the merchants are knockers. No wonder Old Man Sanders owes everybody and is too poor to get out. You have it. The merchants do not support the local newspaper.

Many a good town is'nt worth a cent because the local newspaper is neglected. Many a good merchandising center is dead because the men in business treat the editor of the newspaper as an object of charity. This is wrong. The local paper is the greatest thing in the community. It should be supported. It should be read and patronized. The merchant's who think they are clever and smart when they slip one over on the local paper, make a big mistake. Every dollar you take away from the local newspaper in schemes and knocks, hurts the town. It hurts business, and most of all, it hurts the merchants who indulge in it.

Whatever else you merchants do, patronize your home paper. Don't tell me that it has a small circulation. Don't tell me that you reach ten times as many people with less expense using circulars. Don't spring any of those time-worn gags on me at all. Stop standing in your own light. Get behind that local paper and push it for all you are worth. I don't mean push it to the wall, push it up grade to a position where it ought to be, and as sure as you are alive you will push your own business up with it to a point you never dreamed of before.

When a man tells me that he reaches more people and gets better results from his circulars. I know that he is deceiving himself and telling me what I can prove to be untrue. A newspaper in the community is read by the people. They learn to watch and look for it, and when they get it, every member of the family wants his turn to see what it says. Ads and all are read. If the merchants of a community will educate the people to look in the newspaper for their announcements, more and more people will read the paper and greater will be the returns. If the local newspaper has a small circulation, it is the fault of the merchants. If it is weak, puny, sickly and financially depressed, it is the fault of the merchants. Suppose you do get results from dodgers, that is because you have educated the people to depend upon dodgers, and it does not prove that newspaper advertising will not pay. It proves that you have missed a good opportunity and have wasted a lot of time and money educating people to a wrong idea, and it is up to you to get busy and change your tactics. When a man tells me that he gets his circulars printed and distributed for less expense and with greater returns than the newspaper produces, I figure that he is robbing a printer some-

where, for if a printer makes a decent profit, he must charge a price. In addition, postage stamps cost money and Uncle Sam gives no discounts. When stamps are used for sending out circulars they represent a big investment. If delivered by boys, only about 25% ever get delivered at all, and it costs money to hire boys. As to relative and comparative returns,—there is no comparison. It does'nt prove a thing if you advertise once or twice in a newspaper and do not get the results that your circulars brought. Remember, you cannot get the people to grasp a new idea in thirty minutes when you have been for thirty months educating them to circulars. If you will give the local paper half as good a tryout as you gave your circulars, you will get bigger and better returns all around.

"Cut out this circular business. Cut out this knocking. Hook up with the editor and make him the biggest man in the community. He ought to be, and I tell you that he will pay you back five dollars for every one you spend with him. A man once said that I could 'spout' on this proposition so well because I am a publisher myself. Remember, I do not publish a local paper, but I promise that if ever I do, there will be something doing.

"I make these statements as a result of careful investigation and an exact knowledge, and I can sit down with you in your store, in the hotel or at your home, and prove that every word I say is true, and when I get through the hardest headed old knocker in the crowd, who has done his best to nail down the coffin lid on the local editor will say:

"'By George, old man, you'r right.'"

"Maybe he won't say it out loud to me, but he will say it in his heart, and I will be able to tell by his subdued manner when I get through that I know it, too.

"Remember, there are two great factors that make this country the biggest, best and most enlightened in the world. The first is the public school; the second is the local newspaper. It is up to you merchants. If you want success, support these two great institutions, and for business sake, if for nothing else, support your local newspaper.

"Remember how 'sore' you get when your customers patronize mail order houses or buy in the big cities from department stores. Remember how you howl about it and resolve your heads off in these association meetings, and then, if you have the moral courage, think of the editor of the local paper in your town, and try to figure out how he feels and where justice comes in when you literally 'stick it into him,' and do not give him the support for his proposition that you ask for your own.

"Be careful. There is no alley so long but that has its ash barrel, and there is no knock so powerful or subtle but that reacts. Get together. Take the editor into your midst. Give him the place he has earned and which is justly his. Do yourself a favor and keep up your end by supporting the local newspaper, and support it for all you are worth."

ST. PAUL IS THANKFUL.

Office of Consolidated Publicity Bureau.

October 13, 1908.

Mr. B. B. Herbert, care National Printer-Journalist, 1319 Ravenswood Park, Chicago.

My Dear Mr. Herbert:—I want to thank you for the very many courtesies that St. Paul has received at the hands of the National Printer-Journalist and tell you how much we appreciate what you have done. If there is anything I can do for you in this territory at any time, I trust you will not fail to advise me.

Yours truly, Curtis L. Mosher,
Manager.

HELPING PRINTERS TO PROSPERITY

LAST month, we sent out a letter to a number of manufacturers, asking them to state what their several establishments were accomplishing for the good of publishers and printers, and to help on improvement and the promised prosperity. The replies of engravers and type manufacturers were published in our December issue. These showed not only what the engravers and typefounders were doing, but were useful and inspiring in that they pointed the ways to secure an increase of business and to reach higher attainments, and better and more artistic results. Other contributions to symposium follow:

THE WHITLOCK PRINTING PRESS MANUFACTURING COMPANY.

Derby, Conn., November 28, 1908.

Mr. B. B. Herbert, National Printer-Journalist, Chicago, Ill.

Dear Sir:—To yours of the 14th inst. re., brief article on our printing machienry.

Speaking of Whitlock printing presses and how they "Are of advantage to the Printing Craft?"

To give a dissertation on their merits, while cogent in its value to the Craftsman looking for results, would be to enter upon detailed descriptions of a more or less technical nature outside the confines of this article.

The printing press is not often considered as a machine tool in the same category, for instance, as planers, lathes, milling, precision and other machinery used in its construction. Nevertheless it should be a machine built to give an output in the printing plant co-equal with the best practice in engineering construction and as such considered and developed to give the maximum results within its field and capacity.

Whitlock presses have their specific and valuable features to the end that they shall meet the demands upon them.

The continuous rim cylinder co-acting with the box type bed,—by the way—the nearest approach to ideal construction in this respect, and controlled by the Whitlock Co.—give a combination not found in any other press so well adapted for uniform and strong impressional qualities, and this, in conjunction with the peculiar yet simple impression mechanism, is unsurpassed.

Interchangeable composition rollers, automatic form roller lift when distributor rollers are raised, positively driven plate distributor rollers with self locking vibrators, tipping fountain for using ink to its smallest quantity, the pin latch fountain feed adjustment, give the best distribution, with facilities for easy manipulation, obtainable.

Quick lift feed gages, accurate, safety and quiet gripper action, wide opening and adjustable blanket clamps, self locking reel rod pawls—open or closed—the power backup, all add to the features by which the press is gotten ready and insure its register. In structural strength and functional operations of its concomitant parts the Whitlock press is constructed as a machine tool.

You ask "How these various features are of advantage to the Printing Craft?" The answer: The Whitlock press is built as a manufacturing machine and to the end that it will serve in its sphere to the same extent that the machine tools employed in its production are bought to give the best returns for the investment.

Yours very truly,
The Whitlock Printing Press Mfg. Co.,
W. S. Huson, Gen. Supt.

HOW THE CHALLENGE MACHINERY COMPANY SERVES THE INTERESTS OF THE CRAFT.

The Challenge Machinery Co., at its factory in Grand Haven, Mich., keeps a corps of men constantly employed on new machinery and improvements. Sometimes it is a new machine involving an entirely original idea; again, it is merely a minor part, which can be brought up to increased efficiency. Every expressed want of the printer means to this force of men a possibility of bettering the Challenge product or evolving some valuable new device.

This Company is ever alive to opportunities for bettering its service also. As an example of this, for some time considerable difficulty was experienced in securing castings promptly. To overcome this, prevent delay and consequent disappointment to customers, and also to secure the highest possible grade of castings, a modern foundry has recently been built. This contains upwards of 14,500 feet of floor space, and is equipped with all up-to-date appliances for the production of high grade work.

Every want of the printer, expressed to us, means a possibility of bettering our product or evolving some new and valuable device.

The Challenge Machinery Co., Catalogue, from cover to cover, is made up of machines and devices which are distinctly helpful to the printer and which form decided advances over other machines designed for the same work. To prepare an article on what the C. M. Co. is doing for printers and publishers would be to explain the merits of each machine in our catalogue.

The Stonemetz Two-Revolution Press, for example, combines in a marked degree, simplicity of construction, ease of operation and a high class of product. Owing to its simplicity and small number of parts it is sold at a price which places it within easy reach of the smaller offices and also places its operation within the capability of a pressman who could not successfully handle the more complicated machines. Surely, this is a step upward.

The old style Gordon press has received most of its improvements in the Challenge factory. The removable cam roller, the large one-piece ink disc, the reinforced counterbalanced platen, equalized platen lock, locomotive type connecting rods, direct throw-off and many minor advantages originated in and are still exclusive features of the Challenge Gordon Job Press. The Challenge Patented Fountains are also material aids to better job work.

For the country newspaper with comparatively small circulation, the Diamond Cylinder Press has done wonders. It has made possible the printing of a fine appearing paper at a good rate of speed. The Diamond Press is so low in price that practically any printing office can secure one. It is astonishing how many users who install the Diamond report such an increase of business within a few months as to necessitate the purchase of a still more rapid and expensive machine.

The Advance Lever Cutter embodies the reinforced curved lever, which does away with stooping to the floor to make a cut, and enables one man to do what formerly required the strength of two. The "Easily Squared" back guage and the gibs and set screws in the frame are guarantees of accuracy, while the side guages, back and front, on both sides are not only very convenient, but they are a decided saving in knife wear. They enable the operator to use either end of the knife with equal facility. The massive center bed brace is helpful, holding the bed absolutely rigid under clamp and knife. The Pony Advance is made with as much care as its larger brother. Advance and Challenge Power Cutters are equally well known, and are constructed with a view to securing the maximum efficiency with a minimum number of parts.

The Mercantile Addressing Machine embodies a rapid, simple, effective machine which prints a high grade address from any size or style of type directly on the piece of matter to be sent out. It is the only machine which has such a wide range of usefulness, using with equal facility founders type or linotype slugs and yielding from 2,000 to 3,000 perfect addresses per hour in the hands of an office boy at an approximate cost of five cents per thousand.

The Challenge Machinery Co. is a pioneer in the field of patent blocks for plate mounting, and register hooks. The Expansion System of Printer's Blocks is known all over the world. The use of this system not only adds materially to the profit of printing from plates, but the use of rigid steel bases, and register hooks of the most minute accuracy of adjustment, make possible far better work than could be secured from wooden blocks.

The Hoerner Combination Shute-board and Type High Machine, for reducing cuts to type-high, correcting warped blocks, squaring edges, mitering, trimming rules etc. is a great time and labor saver for the printer. The Challenge type-high guage for determining instantly the height of plates and for setting the cylinder is also a source of much satisfaction in the press room. Challenge Labor Saving Iron Furniture has been brought to a high degree of accuracy and is rapidly supplanting the heavier and less accurate metal. The Challenge Co.'s Hempel Quoins, with their rounded corners and beveled heels and points need no introduction. The Challenge Galleys offer the printer a wide range of values suitable for any need and purpose from the very low priced dependable Galvano Steel Galley for storage, to the Challenge All-Brass Galley, representing the highest type of galley construction. The machines in this department are all especially constructed for work on these galleys.

The McGreal Combination Printers' Chase is an article recently added to our line and one which printers generally should include in their equipment. The advantages of several steel chases of varying size, one convertible into another, is apparent.

Our lead and slug department is one of the largest in the country, turning out immense quantities of accurate leads, slugs and metal furniture. Like the Galley Department, the Lead and Slug Department uses a great deal of special machinery.

There are a number of other articles of minor importance manufactured by the Challenge Machinery Co., and many of these articles have contributed materially to the advancement of the printing art. Every day sees new models, new machines, new devices brought up for consideration and tested out. Competent printers are employed whose duty it is to put to a practical test every machine turned out; also to carry on experiments to determine the value of new machines and devices. No machine or device is put on the market until it has been carefully thought over, tested, and pronounced good; and those things which we do make show the influence of our shop motto which may be seen hanging on every wall—"Quality First."

CHALLENGE MACHINERY CO.

CANNOT GET ALONG WITHOUT IT.

GAYLORD, MINN.

B. B. Herbert, Editor National Printer-Journalist, Chicago, Illinois.

DEAR SIR:—I am enclosing herewith, draft for $2 in payment for subscription to the PRINTER-JOURNALIST. Can not very well get along without the N. P.-J. Consider it the best in its class. I am, Fraternally yours,

CHAS. WALLIN.

THE IMPORTANCE OF PAPER

THE past score of years have witnessed many advanced methods in graphic art production and the result is a healthy improvement in its qaulity.

Two powers are chiefly responsible for this condition,—the manufacturers of paper, and of printing materials vieing with each other on the one hand and the ambitious advertiser on the other. Paper, no one will dispute, is the fundamental requisite to a successful piece of printing. Hence, the greatest care and thought should be exercised in its choice. To produce a certain desired effect, no matter how lavish the expenditure for plates and composition, the foundation of your echeme, *paper*, must essentially be of the proper kind, in perfect harmony and susceptible in the greatest degree to the intended treatment, otherwise the result will be disappointment.

On the average, paper stock represents one-half of the total cost of a printed job and too frequently, an unappreciative advertiser in his attempt to bring down the cost, no matter how little, unwisely substitutes an inferior quality of paper and is satisfied that he has accomplished a a saving which the printer very often, because of competitive circumstances, is compelled to accept.

However, it is reasonable to conclude that cases of this kind will be very remote in the near future when firms who are competing in the quality of their merchandise will be forced also to improve the character of their literature.

The enormous increase in the consumption of Coated Book Paper tends to indicate the rapid growth of the halftone process for illustrations. On coated papers, the screens most generally used are 133 and 150 line. On long runs where speed is important, 133 line screen plates will give best results and there is less tendency to "fill up." However, it is safe to run 150 and 175 line cuts on medium and heavy weight papers where the run will be from originals. The stock can now be had in white and all tints permitting almost any effect.

S. & S. C. and Machine Finish Papers are most generally used for catalog and circular printing. The coarser screen halftones, wood and zinc line cuts should be employed for illustrations. Antique and Linen Finish Papers are especially suitable for Brochure and Announcement printing. By modern mechanical means, it is possible to closely imitate the beautiful hand-made papers which heretofore have been too expensive for most purposes.

In the sampling of the multitude of "Butler Brands," the printers' and advertisers' interests have been seriously considered. Specimens of the various stocks are printed up so as to suggest appropriate combinations of type, color and stock and to practically demonstrate the print-

FIG. I.
Printed Specimen of Book Paper intended to assist the Printer in selecting Stock and to suggest Style. Issued by J. W. Butler Paper Co., Chicago.

FIG. II.
A group of beautiful Cover Paper Samples designed to help the Printer and his Customer in the choice of Stock. Originals show interesting color harmonies. Issued by J. W. Butler Paper Co., Chicago.

ing qualities of each paper by using the kind of plates, etc., which show up to best advantage. The accompanying illustrations suggest interesting and original treatments.

Fig. I. comprises a handsome collection of tests on Book Papers which are for submission to the printer and his customer.

Fig. II. is a group of attractive, "Fine Cover Papers," beautifully printed in the colors which are most harmonious and illustrate some attractive effects which are possible.

Fig. III. illustrates a very interesting specimen book, treating on the subject of Modern Business Stationery, giving hints in the selection of stock and showing actual Letter Heads and Envelopes to match, printed, lithographed, die-stamped and embossed. In the main, it is an exemplification of the quality of "Brother Jonathan Bond" intended to convince the most skeptical of the wisdom of its choice for business stationery.

Such samples as these are invaluable to the printer, because they eliminate all guess work as to what can be accomplished on the different papers, and they serve to influence the buyer of printing towards quality rather than price.

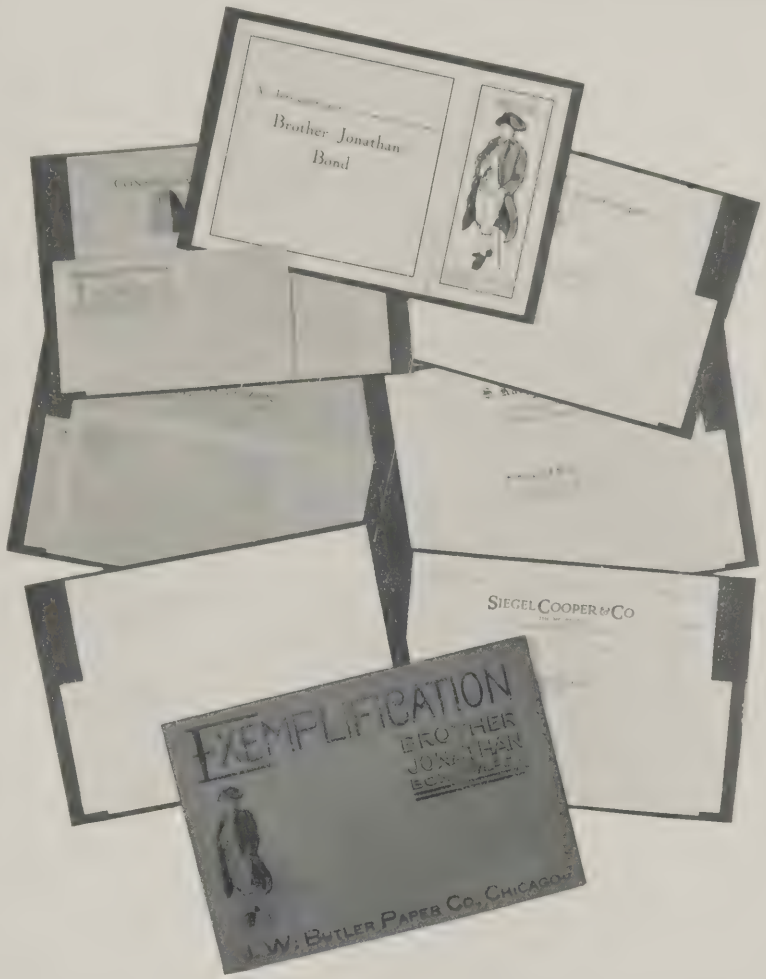

Fig. III.
Portions of a recent issue sent out by J. W. Butler Paper Co., Chicago, which is a splendid showing of Business Stationery, giving valuable hints to users of Bond Paper.

WISCONSIN UNIVERSITY HAS THREE PRESS CLUBS.

UNUSUAL ACTIVITY AMONG STUDENTS INTERESTED IN JOURNALISM.

Madison, Wis., Dec. 21.—The students preparing for newspaper work at the University of Wisconsin are now maintaining three press clubs. The University Press Club, organized in 1892, consists of the men interetsed in newspaper work. This year a Woman's Press Club has been organized, with a membership of forty. Twenty-five students of the college of agriculture, under the direction of Mr. J. C. Marquis, editor of the agricultural publications, and for a number of years connected with the editorial staff of the Orange Judd farm papers, have organized an Agricultural Press Club, with the following officers: President, Louis Nelson, '09, Eau Claire; Vice-president, '10, Lowell; Secretary-Treasurer, Arthur C. Baer, '09, West Bend; Librarian, William C. Lassetter, '09, Villa Rica, Ga.

Madison and Varsity Scribes Dine.

At the first of a series of informal monthly dinners given by the University Press Club, the members of the Madison Press Club were guests. Plates were laid for thirty-five at the Wayside Inn. Dr. Reuben Goldthwaites, the author, opened the program of after-dinner speaking with an account of his experiences in pioneer newspaper days at Oshkosh. The other speakers were A. O. Barton, managing editor of the *Wisconsin State Journal;* Col. C. K. Lush, novelist; H. E. Legler, formerly of the Milwaukee *Sentinel;* W. G. Bleyer, in charge of the courses preparatory to journalism in the University; J.C. Marquis, editor of the University agricultural publications; W. J. Goldschmidt, managing editor of the *Daily Cardinal,* the president of the University Club, presided and acted as toastmaster.

Elliott Flower Addresses Newspaper Girls.

Elliott Flower addressed the second bi-weekly meeting of the Woman's Press Club, Thursday night, on the subject, "Getting on in Newspaper Work." He gave an interesting account of some personal experiences in newspaper work in Chicago, and spoke of the value of the reporter's training as preparation for magazine writing. R. R. Hiestand, city editor of the *Wisconsin State Journal,* gave an informal talk on, "The Christmas Feature Story," illustrating his sub-

ject with a number of well-written stories taken from metropolitan papers.

HAPGOOD ADDRESSES NEWSPAPER CLASS.

Norman Hapgood, editor of *Collier's Weekly,* gave the second of the series of special lectures by well-known newspaper and magazine editors, to the students in the courses preparatory to journalism at the University. Mr. Hapgood took as his subject, "Some Principles of Present-Day Journalism," and discussed the value of muck-raking and the literature of exposure, the influence of yellow journalism, press bureaus, the purchased press, and the place of college trained men in newspaper work.

CRITICISING LETTER FROM UNION MAN, WITH ANSWER

COUNCIL BLUFFS, IOWA, December 9, 1908.

Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—Today the November number of the P.-J. accidentally came into my hands, and the first portion which attracted my attention was pages 749 and 750, which I enclose herewith.

In my estimation these two pages form the best argument that could be formulated by a person or publication which can only see good in combinations of business men, or capital, and wrong in defensive organization on the part of the laboring man.

As the general purpose or aim of the P.-J., as I gathered from the high places which I struck while dodging the typographical errors from cover to cover, appears to be to "boost" non-unionism while delivering more or less effective jabs at organized labor, it occurred to me that it would not be a bad idea for the P.-J. to sub-let its proofreading job to a competent union proofreader.

It is a dead moral certainty that if my work showed up such a proportionate number of errors daily, about the third day would find me looking for a job among the "free and independents." I will state here that I am proofreader on a daily paper—an office manned from cellar to garret with *union men,* who are turning out first-class work, to the satisfaction and with the utmost good will of the proprietors.

Seriously speaking, don't you think the enclosed pages are decidedly "punk" to appear in a publication which is supposed to represent *the best* in the printing business, setting itself up as an authority in matters pertaining to the mechanical part especially?

In my experience in the printing business, which has extended over twenty-seven years, I never saw as highly developed specimen of inefficiency as the bit of proofreading in question. Union membership would never force such a man onto an employer. It could not. His own inefficiency would preclude making good, even in the hurried work of a daily paper, and, like water finding its own level, unable to hold a situation where the "goods must be delivered," he would gradually drift into positions where loose methods, catch-as-catch-can pay and men of his own ability are generally to be found in non-union offices, where the "free and independent" delivers all the work his employer can get out of him, during the longest stretch of hours he will stand for, and for whatever wage he may be able to embezzle his employer out of.

Re-write the article in question, using the caption, "How Can We Secure Competent Proofreaders?"

Very truly yours,

U. G. Cox,

Secretary B. C. T. U., No. 203.

2550 Ave. B., Council Bluffs, Iowa.

THE ANSWER.

Mr. U. G. Cox, Secretary B. C. T. U., No. 203, Council Bluffs, Iowa.

DEAR SIR:—You are unfortunate in not having formed the acquaintance of the NATIONAL PRINTER-JOURNALIST earlier and more thoroughly. It is, however, a matter for congratulation that "the November number of the P.-J. accidentally came into your hands." It contains much by which you can profit. The paper is published to give information and inculcate right principles rather than to serve as an example for proofreaders, though this is no reason why the typography should not be correct. I have known sticklers for forms and ceremonies, who could miss all the lessons of a great sermon because the priest's vestments were not of the prescribed pattern or were incorrectly arranged. There are proofreaders who become cranky over typographical errors. Your criticisms of the bad typography are correct and deserved, but your conclusions are all erroneous and evidently are to be charged up to prejudice and lack of broadness of view and of information. You could have found nothing in the issue of the NATIONAL PRINTER-JOURNALIST, to which you refer, or in any other issue of the publication, that would justify the statement "that these two pages form the best argument that could be formulated by a person or publication which can only see good in combinations of business men or capital, and wrong in the defensive organization on the part of the laboring man." You probably have not said in this what you have meant, for it is hard to see what a number of typographical errors has to do with the forming the best or any other kind of an argument by a person or publication. You do not say what the argument is, or what it is about or what is its object. You may have in all the words properly spelled, but your sentence is involved, obscure and meaningless, except by inference. Your statement is false in which you undertake to say, "As the general purpose or aim of the P.-J., as I gathered from the high places which I struck while dodging the typographical errors from cover to cover, appears to be to 'boost" non-unionism while delivering more or less effective jabs at organized labor," etc.

There was nothing in that issue of the NATIONAL PRINTER-JOURNALIST that could suggest or justify any such an inference or conclusion, though that a competent compositor and competent proofreader, whether union or non-union, were both much needed, is an easy guess. I am glad to know that you are so competent a "proofreader on a daily paper—an office manned from cellar to garret with *union men,* who are turning out first-class work to the satisfaction and with the utmost good will of the proprietors." You are fortunate and so are the proprietors. Another evidence that you have been born under a lucky star, is contained in this further declaration, "In my experience in the printing business, which has extended over twenty-seven years, I never saw so highly developed a specimen of inefficiency as the bit of proofreading in question. Union membership would never force such a man onto an employer." Well, if you "never saw" "as highly developed specimen of inefficiency," then you "never saw" the one that you presume to criticise. But let that go. I have conducted union offices in both Indianapolis and Chicago, and my experience has been that men that the unions were able to supply were noted for inefficincy, among other undesirable things.

The fact is, that efficient, reliable workmen, whether union or non-union, have steady employment and they are difficult to secure when men are wanted. Obviously, the union assumes no responsibility for its members. It only makes demands. In some other countries trade guilds go bond for the efficiency and integrity of their members, and bind themselves to make good for any loss arising from their incompetence or defalcations. In this free America, the union de-

mands that you shall employ no other than union men at the risk of being declared unfair or suffering a boycott. They do not even permit employers to be represented, as was once the case, by their own foremen. The union foreman must do the hiring and the discharging of the men, and if he discharges a man in good standing in the union, however proper or urgent he may have deemed such discharge, he is liable to be called to account, to be fined, and even to have his card taken away. If the employer keeps the foreman after he has been dismissed from the union, for doing what he considered his duty, he is liable to suffer a strike and a boycott. Luckily, union men are generally too intelligent to try rigidly to enforce their rules in these regards. But unionism, as it exists today—though there is a more enlightened condition now and a vast improvement in practice—is a selfish, one-sided system of petty tyranny instead of being, as you say, "a defensive organization on the part of the laboring man." When unions were first started in this country, employers were taken into the organizations and their counsels sought and respected. The employers and the employes, who are really fellow-workers, with mutual interests—the employer putting in his own work and his accumulated wages that he has saved up by economy and thrift, together with his credit which he has earned by his integrity, frugality and ability. There are no trusts or combinations in the printing business, and if they ever do exist it will be because of the oppressive demands and the selfish tyranny of spurious unionism. The fact is that the employers' organized to resist the oppressive demands of an aggressive, spurious unionism, and did not exist until it was felt absolutely necessary to organize. I wish to say, in order to show how unjust you have been in your conclusions, that everyone of the several men employed in the mechanical production of the issue of the NATIONAL PRINTER-JOURNALIST, which you justly criticise, are members of the Typographical Union. The composition was done in a Linotype office owned, conducted and operated by a union man. He was so loyal to the union that he struck for the eight-hour day and being out of work, came to me and sought my aid and on my promise to give him my work, bought his first Linotype machine. He has done my work for over three years and has so prospered that he has bought a second machine. He gets his check for his work whenever he presents his bill. I have been in the printing business thirty-five years and there never has been any "catch-as-catch-can-pay" in my office. I have never passed a pay-roll for a day or an hour, yet, though, at one time in 1893, I had to mortgage my home to pay my men, owing in part to the financial crash and in part to the dishonor of the union men I then employed, though I was paying five of them above the union scale. I had a union office. Possibly I have been unfortunate above others in my experiences, but in October, 1892, I was nearly killed in an elevator accident and was unable to be at my office for nearly six months. I had directed that men, who had been recommended for their ability, be paid from two to four dollars a week above the scale. I got back to my office just before the financial crash on May 1st, 1893, and I found that the business had been losing money, and an investigation showed that instead of these men appreciating my liberality, they had come to look upon me as "an easy mark," and one of them afterwards voluntarily confessed that a number of them would go out nights on drinking bouts with the foreman, and then hunt him up in the morning and fill him up with black coffee, so that he could stand around in a dazed condition and draw his pay while they soldiered at my expense. He was the foreman in the composing room and got $25 a week when the scale was only $21 or $21.50. Largely through trying to conduct a union office in Chicago and be liberal, I lost some $18,000, and the men were all the time competent to have won a success, but they had been inoculated with the virus of disloyalty to employers and had been weakened morally by the drink habit, which, in days past, has been the curse of union men in our large cities, growing out of their associations and meetings at or over saloons.

I have never been one of those "*which* (or who) can only see good in combinations of business or capital and wrong in defensive organizations on the part of the laboring man." I have never been the tool or lacky of the union, of any man or set of men, and have always managed to keep in becomingly moderate circumstances financially. Like most other employing printers, I have always worked more hours than have my men and taken all the worry without growling. I have ever strenuously opposed the wrong, the graft, the low craftiness, the oppressions of spurious unionism, and of monopolistic capitalism. I have strenuously denounced attempts to stir up strife between employers and employes. I have claimed that in no sense do employing printers deserve to be treated as the enemies of those whom they employ and that they do not deserve to be distrusted, fought and despoiled. It is the damnable spirit of inhumanity and tyranny that strives to drive all who will not join the union out of work and to poverty, to the poorhouse and to death and to base claims for employment on the holding of a union card, instead of on efficiency and loyalty, that we have opposed. The kind of unionism that I oppose is that which teaches that a man who works for wages paid by an employer is any better than any one else. This cry about labor is largely from ignorance, or is pure selfishness, damnable demagogism or hypocritical cant. This effort to divide men into classes is un-American. I have commended every effort on the part of unions looking toward the betterment of laborers. I have denounced graft and overreaching greed, tyranny, oppression and wrong in so-called combinations of labor and capital with equal severity. The fact is, that both labor and capital, which is the fruit of labor, are in themselves entirely innocent and harmless and absolutely necessary, but the bad, dishonest, men back of these, who are without principle, filled with envy, greed, pride, hate, and suspicion, are the damnable sinners. Yet, it is well, if not absolutely necessary for wage earners to organize along intelligent, legitimate lines for the purpose of improvement, mutual understanding of their rights as to wages and employment, so as to enforce these and prevent ruinous competition. However, the fact should be recognized that every man, whether an employe or employer, has a right to control his own affairs without molestation or dictation, and that, as a rule, a workman will get employment whenever he shows himself efficient and useful to his employer. Neither the industrious and efficient workmen nor the honest employers should be weighted down by being compelled to worry along with inefficient, careless, indifferent, shiftless, shirking workers. It should be remembered, too, that it is not given to men to judge and condemn others, "for wherein thou judgest another, thou condemnest thyself," and associates, as you have in this case.

The compositors who set the type, the man who makes up the pages, and the editors of our three departments of "Newspaper Criticism," "More Work Through Publicity," and "Job Review," are all members of the Typographical Union, and Mr. Hanson, editor of "Job Review," showed his loyalty to unionism by leaving one of the most desirable foremanships in Chicago in the strike for the eight-hour day, though he had a wife and family of small children to support. He has not suffered, however, though he took the risk. I respect him for being loyal to his principles. I believe in the old Bible teaching as to the nobility of "the man who sweareth to his own hurt and changeth not," unless he reaches a point where he honestly changes his opinions and is convinced in his own mind, that he was wrong.

The pressmen who print the National Printer-Journalist are all members of the Pressmen's union. I respect all these men because they are faithful, honest workers. Their being members of the union never entered into my consideration.

The union man who does the N. P. J. composition, failed in correct typography on the last two issues of the National Printer-Journalist, through an effort to do a favor to another union man under whom he had worked some fifteen years ago. This man had the reputation of being one of the best union compositors in Chicago and he acted as foreman in some of the best offices, but he seems to have lost his hold, possibly he had depended more on his aggressive, loyal unionism to keep himself in employment than on efficiency. He took a course in Linotype Composition in the Union School of Typography and then went to the office of the man whom he had taught and favored as a boy, and asked the privilege of working until he "could get up speed" so as to hold a regular position. I suffered through one union man trying to show a favor to another union man, for the mistakes in the numerous lines corrected were greater than in the original proofs, and while this ought not to have been, there was haste in getting to press and the corrected lines were slipped into the pages after the forms reached the press-room, and hence the results that have caused you such a shock.

Now I want to add that, while I have found fault with the use of unionism for the doing of injustice, I fully recognize the fact that a union like a church depends more on its membership than on its rules. Even a despotism, if the ruler be wise, honorable, humane and kindly disposed to his subjects, may prove more beneficial to the subjects than a republic to its citizens. There are a great many unions in this country whose members are just, honorable men, efficient as workmen and loyal to their employment, who ask only justice, and seek to do no wrong to any one.

I presume that you are so fortunate as to be secretary of such a union. I have had occasion to praise in highest terms the daily paper at Council Bluffs, and have every reason to believe that you tell the truth as to the good qualities as to the force. You have probably judged others from the high standard of your men, but a little wider observation would convince you that I have substantial reasons for all the criticims that I have made, and that the good men have been used to support others in their evil doings that have been in some instances not only a violation of every principle of free government but a disgrace to humanity.

With sincere respect and highest regards,

Yours respectfully,

B. B. Herbert.

EXECUTIVE MEETING OF N. E. A. AT KANSAS CITY, FEB. 2d AND 3d.

Brownwood, Texas, Dec. 11, 1908.

National Printer-Journalist, Chicago.

The Executive Committee of the National Editorial Association is called to meet at the Baltimore Hotel, Kansas City, Mo., Tuesday and Wednesday, February 2nd and 3rd, 1909. The first session will be held at 10 o'clock the morning of February 2nd. The afternoon of that day the entire party will take a special train for Topeka, Kansas, where the afternoon and night will be spent as the guests of the Kansas Editorial Association, which will then be in session at Topeka, and of the citizens of Topeka. Several members of the committee will take part in the afternoon program of the Kansas Association. At night a banquet will be given the Kansas Editors, the members of the Executive Committee and the ladies accompanying them in the newly completed $150,000 Topeka *Daily Capital* building. This will partake of the nature of a "house warming" for the new building. The next morning the party will return to Kansas City to conclude the business of the Committee. Mr. Sheridan Ploughe, writes that from the time the party leaves Kansas City until it is safely returned there, we are to be the guests of Kansas and that nothing shall be left undone that will add to our pleasure. At Kansas City the entertainment will depend largely on the weather, but will likely consist of a trolley trip to Leavenworth, a reception at the home of Col. Nelson, of the Kansas *City Star* and a theater party. Those who have ever been the guests of Kansas City need not be told that its hospitality is unbounded and that we will have all the entertainment for which we have time.

There are many important things to come before the committee. At the St. Paul meeting the Association authorized the committee to change the place of meeting to Toledo or some other place if entirely satisfactory arrangements could not be made to get to Seattle and for our entertainment there and following the meeting. It now looks like it may be necessary to change the meeting place. Suggestions will also be offered for increasing the attendance at the next meeting. The business affairs of the Association need the attention of every member of the Executive Committee and we hope to have every one there.

Will H. Mayes, President,
W. F. Parrott, Cor. Secretary.

ALL AROUND EXCELLENCE

Denver, Colo., Dec. 16, 1908.

Mr. B. B. Herbert, National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

Gentlemen:—We wish to compliment you on the all around excellence of your Christmas number. The writer's experience has been such that he does not value himself, and consequently does not dispense any hot air, but this number was truly interesting and instructive to any man directly or indirectly connected with any of the allied industries having to do with the art preservative.

We would like to ask you incidentally what you think of the *Lariat*, from which we note you have kindly reproduced one of our little stunts.

Again thanking you for past favors and courtesies, and awaiting your further commands, we beg to remain,

Yours very truly,

The Williamson-Haffner Co.,

Per F. D. Zimmerman, alias "Tim," Mgr. Art & Eng. Dept.

A PRINTER PLEASED

Adel, Iowa, November 28, 1908.

Mr. B. B. Herbert, Chicago, Ill.

Dear Sir:—For the past five years I have been a union printer, though I am now holding an honorable withdrawal card. I have seriously studied this question on both sides, but was really all the time on the fence. Your reply to Mr. O. G. Wood of Butte, Mont., was certainly fine. You brought out some of the best points I ever heard of or read. I want to tell you, I appreciate that letter and am glad you printed it in full. I have often taken note of your being on the other side and often wondered why it was that Mr. Copper, whom I worked with in the West, had a department with you. I have read your article a second time and only wish every union man could read it—it's certainly *fine*.

Fraternally, Van V. Boyce.

LAW OF LIBEL

(Concluded from December Issue.)

In Balch's case a printed article making grave charges against the character of a candidate for county attorney was circulated among the voters of the county previous to the election. In the opinion holding the occasion to be privileged the court said:

"If the supposed libelous article was circulated only among the voters of Chase county, and only for the purpose of giving what the defendants believed to be truthful information, and only for the purpose of enabling such voters to cast their ballots more intelligently, and the whole thing was done in good faith, we think the article was privileged and the defendants should have been acquitted, although the principal matters contained in the article were untrue in fact and derogatory to the character of the prosecuting witness * * * *

"Generally, we think a person may in good faith publish whatever he may honestly believe to be true, and essential to the protection of his own interests or the interests of the person or persons to whom he makes the publication, without committing any public offense, although what he publishes may be injurious to the character of others. And we further think that every voter is interested in electing to office none but persons of good moral character, and such only as are reasonably qualified to perform the duties of the office. This applies with great force to the election of county attorneys."

Substantially the same doctrine is the basis of the following decisions: Mott vs. Dawson, 46 Ia., 533; Bays vs. Hunt, 60 Ia., 251; Marks vs. Baker, 28 Minn., 162; the State vs. Burnham, 9. N. H., 34; Palmer vs. Concord, 48 N. H., 211; Carpenter vs. Bailey, 53 N. H., 590; Briggs vs. Garrett, 111 Pa. st. 404; Press Co., vs. Stewart, 119 Pa. st. 584; Jackson vs. Pittsburg Times, 152 Pa. st. 406; Myers vs. Longstaff, 14 S. D., 98; Express Printing Co., vs. Copeland, 64 Tex., 354; Shurtleff vs. Stevens, 51 Vt., 501; Posnett vs. Marble, 62 Vt. 481; O'Rourke vs. Publishing Co., 89 Me., 310; Crane vs. Waters, 10 Fed. 619.

The plaintiff asks that the decisions of this court quoted above be overruled and that they be supplanted by one which shall express the narrow conception of the law of privilege held by the majority of the courts.

Kirkpatrick's case was decided in 1881 and Balch's case in 1884. The Redgate decision is almost ten years old. A quarter of a century has elapsed since the doctrine of those cases was promulgated and the legislature, coming directly from the people year after year, has not seen fit to make any modification to it. Surely in that length of time, and in view of the repetition of the error if any were committed, some legislative action would have been taken to safeguard the reputations of our citizens if they were unduly imperiled by those decisions. The fact that so many courts of this country, all of high character, of great learning and ability, and all equally interested in correctly solving the problems of free government, differ from us, makes us pause; but a reversal of policy and the overturning of what has been so long as settled law would be tantamount, under the circumstances, to legislation. Such a step ought not to be urged upon the court except for conclusive reasons. What are the reasons supporting the majority rule?

The decision most freely quoted since it was rendered in 1893 and chiefly relied upon by the plaintiff here, is that of the United States circuit court of appeals for the sixth circuit in the case of the Post Pub. Co., vs. Hallam, 16 U. S. App. 613 (8 C. C. A. 201, 59 Fed. 530.) Counsel in the case had argued from the duty of newspapers to keep the public informed concerning those who are seeking their suffrages and confidence and had asked if it were possible that the privilege allowed in discussing the character of public servants should be less than that which protects defamatory statements made concerning a private servant. The opinion states this argument and then proceeds as follows:

"The existence and extent of privilege in communications are determined by balancing the needs and good of society against the right of an individual to enjoy a good reputation when he has done nothing which ought to injure it. The privilege should always cease where the sacrifice of the individual right becomes so great that the public good to be derived from it is outweighed. Where conditional privilege is extended to cover a statement of disgraceful fact to a master concerning a servant or one applying for service, the privilege covers a bona fide statement on reasonable grounds to the master only, and the injury done to the servant's reputation is with the master only. This is the extent of the sacrifice which the rule compels the servant to suffer in what was thought to be, when the rule became law, a most important interest to society. But, if the privilege is to extend to cases like that at bar, then a man who offers himself as a candidate must submit uncomplainingly to the loss of his reputation, not with a single person or a small class of persons, but with every member of the public, whenever an untrue charge of disgraceful conduct is made against him, if only his accuser honestly believes the charge upon reasonable ground. We think that not only is such a sacrifice not required of every one who consents to become a candidate for office, but that to sanction such a doctrine would do the public more harm than good. We are aware that public officers and candidates for public office are often corrupt, when it is impossible to make legal proof thereof, and of course it would be well if the public could be given to know, in such a case, what lies hidden by concealment and perjury from judicial investigation. But the danger that honorable and worthy men may be driven from politics and public service by allowing too great latitude in attacks upon their character outweighs any benefit that might occasionally accrue to the public from charges of corruption that are true in fact, but are incapable of legal proof. The freedom of the press is not in danger from the enforcement of the rule we uphold. No one reading the newspaper of the present day can be impressed with the idea that statements of fact concerning public men, and charges against them, are unduly guarded or restricted; and yet the rule complained of is the law in many of the states of the union and in England."

Here, the rule by which privilege is to be measured, is correctly stated, as in Watson vs. Walter, the balance of public good against private hurt. The argument of counsel is then answered and the statement is made that a candidate ought not to suffer a loss in reputation with the whole public for the public good. That is the question to be decided and not a reason why it should be so decided. Then the sole reason for the decision is stated—that honorable and worthy men will be driven from politics. Then the consequences of the decision are commented upon: Freedom of the press will not be endangered—an assertion—as shown by the manner in which public men are handled by the press at the present time—an appeal to experience for proof.

The single reason upon which the Hallam decision is based is also in the nature of a prediction, and is not new. It was advanced in this country in 1808 by Chief Justice Parsons (Commonwealth v. Clapp, 4 Mass. 163) and by Chancellor Walworth in 1829 in the case of King v. Root, 4 Wend. 114. Speaking in opposition to the liberal doctrine the chancellor said:

"It is however insisted that this libel was a privileged communication. If so, the defendants were under no obligation to prove the truth of the charge; and the party libeled had no right to recover unless he established malice in fact, or showed that the editors knew the charge to be false. The effect of such a doctrine would be deplorable. Instead of protecting it would destroy the freedom of the press, if it were understood that an editor could publish what he pleased against candidates for office, without being answerable for the truth of such publications. No honest man could afford to be an editor, and no man, who had any character to lose would be a candidate for office under such a construction of the law of libel. The only safe rule to adopt in such cases is, to permit editors to publish what they please in relation to the character and qualifications of candidates for office, but holding them responsible for the truth of what they publish."

These predictions call to mind that of Lord Thurlow who, when protesting against the passage of the Fox libel act, said it would result in "the confusion and destruction of the law of England," (May Const. History of England, Vol. 2, p. 122.) The actual results of the struggle ending in the enactment of that law are stated by the author cited as follows:

"* * * The press was brought into closer relations with the state. Its functions were elevated, and its responsibilities increased. Statesmen now had audience of the people. They could justify their own acts to the world. The falsehoods and misrepresentations of the press were exposed. Rulers and their critics were brought face to face, before the tribunal of public opinion. The sphere of the press was widely extended. Not writers only, but the first minds of the age,—men ablest in council and debate,—were daily contributing to the instruction of their countrymen. Newspapers promptly met the new requirements of their position. Several were established during this period, whose high reputation and influence have survived to our own time; and by fullness and

rapidity of intelligence, frequency of publication, and literary ability, proved themselves worthy of their honorable mission to instruct the people."

In opposition to the high authority of King vs. Root and the Hallam case may be placed Thomas M. Cooley, who must be reckoned with in the discussion of any question upon which he has deliberately expressed himself. Commenting on the foregoing quotation from King vs. Root, he says:

"Notwithstanding the deplorable consequences here predicted from too great license to the press, it is matter of daily observation that the press, in its comments upon public events and public men, proceeds in all respect as though it were privileged; public opinion would not sanction prosecutions by candidates for office for publications amounting to technical libels, but which were nevertheless published without malice in fact; and the man who has a 'character to lose' presents himself for the suffrages of his fellow citizens in the full reliance that detraction by the public press will be corrected through the same instrumentality, and that unmerited abuse will react on the public opinion in his favor. Meantime the press is gradually becoming more just, liberal and dignified in its dealings with political opponents, and vituperation is much less common, reckless and bitter now than it was at the beginning of the century, when repression was more often resorted to as a remedy." (Const. Lim. 7th ed. 644n.)

This statement of the results of Judge Cooley's observation is in full accord with our own local experience. Without speaking for other states in which the liberal rule applied in Balch's case prevails, it may be said that here at least men of unimpeachable character from all political parties continually present themselves as candidates in sufficient numbers to fill the public offices and manage the public institutions, and the conduct of the press is as honest, clean and free from abuse as it is in states where the narrow view of privilege obtains.

The fact that the public welfare has been promoted in England by the liberalizing the law of libel is freely acknowledged in Watson vs. Walter:

"Our view of libel has, in many respects, only gradually developed into anything like a satisfactory and settled form. The full liberty of public writers to comment on the conduct and motives of public men has only in very recent times been recognized. Comments on government, on ministers and officers of state, on members of both houses of parliament, on judges and other public functionaries, are now made every day, which half a century ago would have been the subject of actions or ex officio informations, and would have brought down fine and imprisonment on publishers and authors. Yet who can doubt that the public are gainers by the change, and that, though injustice may often be done, and though public men may often have to smart under the keen sense of wrong inflicted by hostile criticism, the nation profits by public opinion being thus freely brought to bear on the discharge of public duties?"

Since the only reason given for the rejection of the liberal rule fails it is pertinent to inquire if the consequences of the narrow rule are so innocuous as the Hallam case asserts, and in doing so it must be borne in mind that the correct rule, whatever it is, must govern in cases other than those involving candidates for office. It must apply to all officers and agents of government, municipal, state and national; to the management of all public institutions, educational, charitable and penal; to the conduct of all corporate enterprises affected with a public interest—transportation, banking, insurance—and to innumerable other subjects involving the public welfare. Will the liberty of the press be endangered if the discussion of such matters must be confined to statements of demonstrable truth and to what a jury may, ex post facto, say is "fair" criticism and comment. Will free discussion of the subjects indicated be smothered if the newspapers understand that they must respond in damages for deducing and stating a wrong conclusion of fact from strong circumstantial evidence indicating fraud, corruption or other conduct injurious to the public welfare?

The case of Atkinson vs. Detroit Free Press, 46 Mich. 341, was decided upon a question of pleading and a question of evidence. The opinion of the court did not treat the subject of privilege. Judge Cooley, however, took occasion to express himself upon the point now under consideration as follows:

"The beneficial ends to be subserved by public discussion would in large measure be defeated if dishonesty must be handled with delicacy and fraud spoken of with such circumspection and careful and deferential choice of words as to make it appear in the discussion a matter of indifference. * * * If such a discussion of a matter of public interest were prima facie an unlawful act, and the author were obliged to justify every statement by evidence of its literal truth, the liberty of public discussion would be unworthy of being named as a privilege of value. It would be better to restore the censorship of a despotism than to assume to give a liberty which can only be accepted under a responsibility that is always threatening and may at any time be ruinous. A caution in advance after despotic methods would be less objectionable than a caution in damages after in good faith the privilege had been exercised. No public discussion of important matters involving the conduct and motives of individuals could possibly be at the same time valuable and safe under the rules for which the plaintiff contends. It is a plausible suggestion that strict rules of responsibility are essential to the protection of reputation, but it is most deceptive, for every man of common discernment who observes what is taking place around him, and what influences control public opinion, cannot fail to know that reputation is best protected when the press is free. Impose shackles upon it and the protection fails when the need is greatest. Who would venture to expose a swindler or a blackmailer, or to give in detail the facts of a bank failure or other corporate defalcation if every word and sentence must be uttered with judicial calmness and impartiality as between the swindler and his victims, and every fact and inference be justified by unquestionable legal evidence? The undoubted truth is that honesty reaps the chief advantages of free discussion; and fortunately is it honesty also that is least liable to suffer serious injury when discussion incidentally affects it unjustly. * * *

"In what I say in this case I advance no new doctrines, but justify every statement of principle on approved authorities. It will be freely admitted that there are decided cases from which a different argument may be constructed, but it is affirmed that they are no longer deserving of credit if they ever were. The gradual and beneficial modification of the law of libel is shown in Wason vs. Walker, L. R. 4 Q. B. 73, and in so far as it has been modified it has been made consistent with just reason. While it is admitted that the public press is often corrupt and often reckless in dealing with private reputations, it is at the same time affirmed that the duty of its conductors to abstain from such misconduct is no plainer than is the obligation of the authorities to refuse to impose penalties when in the exercise of a just independence they make use of their columns for the exposure of public wrong-doers to public condemnation. The law, justly interpreted, is not chargeable with the inconsistency of tempting conductors of the press with a deceptive pretence of liberty, and then punishing them in damages if they act upon the assumption that the liberty is genuine."

If it be said that this argument contains an element of prophecy it may be replied that it will support the liberal rule as well as the same kind of prophecy in the Hallam case supports the narrow rule.

The Hallam case quotes the following discrimination of the two rules made by Lord Chancellor Herschel, in Davis vs. Shepstone, 11 App. Cas. 187:

"There is no doubt that the public acts of a public man may lawfully be made the subject of fair comment or criticism, not only by the press but by all members of the public. But the distinction cannot be too clearly borne in mind between comment or criticism and allegations of fact such as that disgraceful acts have been committed or discreditable language used. It is one thing to comment upon or criticise, even with severity, the acknowledged or approved acts of a public man, and quite another that he has been guilty of particular acts of misconduct."

This statement is one of education merely and furnishes no reason for a choice between the rules. It may be observed, however, that the decisions in England are in great conflict upon the question whether fair comment is a branch of the law of privilege. Only last year a writer in the Law Quarterly Review (Vol. 23, p. 97) called attention to this fact and expressed the hope that the case of Thomas vs. Bradbury, Agnew & Co., Limited, L. R. 2 K. B. 627 (1906) might be taken to the House of Lords so that the defense of fair comment might be reviewed and placed upon some logical basis. It may be observed further that the distinction between comment and statements of fact cannot always be clear to the mind. Expression of opinion and judgment frequently have all the force of statements of fact and pass by insensible gradations into declarations of fact. In England fair comment includes the inference of motives if there be foundation for the inference. (Hunter vs. Sharpe, 4 F. & F.

985; Campbell vs. Spottswoode, 3 Best & Smith, 769). In the latter case Cockburn, C. J., said:

"I think the fair position in which the law may be settled is this: that where the public conduct of a public man is open to animadversion, and the writer who is commenting upon it makes imputations in his motives which arise fairly and legitimately out of his conduct, so that a jury shall say that the criticism was not only honest but also well founded, an action is not maintainable."

This doctrine is repudiated in Hamilton vs. Eno, 81 N. Y. 116, and Negly vs. Farrow, 60 Md. 158, both cited in support of the Hallam decision. What is a charge of intoxication—an inference from conduct and appearances and therefore fair comment or the statement of a fact? What is the difference between a charge of intoxication and the following:

Having appearances which were certainly consistent with the belief that they had imbibed rather freely of the cup that inebriates. Their condition in the chapel also led one to such a conclusion."

In England this statement is fair comment. (Davis vs. Duncan, L. R. 9 C. P. 396). In New York no matter how strongly appearances and conduct may justify the inference, a charge of intoxication made against a public officer must be fully proved. (King vs. Root, 4 Wend. 114). In keeping plain the distinction between comment and statements of fact the courts of some of the states leave the law very much in the attitude of saying to the newspaper—you have full liberty of free discussion provided, however, you say nothing that counts.

The Hallam case quotes the supreme court of Ohio (Publishing Co. vs. Moloney, 500. 71; 33 N. E. 921) in opposition to the liberal doctrine as follows:

"We do not think the doctrine either sound or wholesome. In our opinion a person who enters upon a public office, or becomes a candidate for one, no more surrenders to the public his private character than he does his private property. Remedy by due course of law, for injury to each, is secured by the same constitutional guaranty, and the other is no less inviolable than the other. To hold otherwise would, in our judgment, drive reputable men from public positions, and fill their places with others having no regard for their reputation, and thus defeat the purpose of the rule contended for, and overturn the reason upon which it is sought to sustain it."

Manifestly a candidate must surrender to public scrutiny and discussion so much of his private character as affects his fitness for office, and the liberal rule requires no more. But in measuring the extent of a candidate's profert of character it should always be remembered that the people have good authority for believing that grapes do not grow on thorns nor figs on thistles. The other arguments furnished by the Ohio quotation have already been considered. The Hallam case contains nothing further worthy of note.

Another decision much approved, frequently quoted and confidently proposed for consideration by the plaintiff here, is that in the case of Upton vs. Hume, 24 or. 420. The narrow rule is stated clearly and authorities for it are cited. The only reasons urged against the rival rule are the old ones, sensitive and honorable men should eschew politics, yellow journalism would run riot, candidates would be exposed to the malignity of party strife—and this new one:

"The only safe evidence of a man's intentions are his acts, and if he accuses another of a crime, he must conclusively be presumed to have intended to injure him."

The doctrines of the common law relating to malice seem to the Delaware court, also, to be of the utmost importance in finding out what the true rule of privilege ought to be (Star Publishing Co. vs. Donahoe.—Del. —. 65 L. R. A. 980).

With all due deference to Upton vs. Hume, the remarks quoted read as if they had been written in the midst of the fog of fictions, inferences and presumptions which enshroud the law of libel. Facts and the truth never have been much in favor in that branch of the law. Its early use as a weapon and shield of caste and arbitrary power would have been impaired. Suppose a serious charge to be made. By a fiction it is presumed to be false. By a fiction malice is inferred from the fiction of falsity. By a fiction damages are assumed as the consequences of the fictions of malice and falsity. Publication only is not presumed and until recent times the offer to show the truth of the charge as having some bearing upon liability was a sacrilegious insult to this beautiful and symmetrical fabric of fiction. Then a defendant was made to suffer additional smart for venturing to obtrude the truth as a defense, if, although his proof were abundant, he barely failed, in the opinion of the jury, to make out a preponderance. It is, however, in the field of malice, where the rule stated in the quotation lies, that truth and fact are most superfluous. In the first place it is said that malice is the gist of the action for libel. This is pure fiction. It is not true. The plaintiff makes a complete case when he shows the publication of matter from which damage may be inferred. The actual fact may be that no malice exists or could be proved. Frequently libels are published with the best of motives, or perhaps mistakenly or inadvertently but with an utter absence of malice. The plaintiff recovers just the same. Therefore, "the gist of the action may be taken out of the case." This is done by another fiction. It is said that of course malice does not mean the one thing known to fact or experience to which may apply, but it is just a legal expression to denote want of legal excuse. In this state a statutory definition of libel making malice an essential ingredient, as at the common law, compels this court to say that the international publication of libelous matter implies "malice" whatever the motive in fact may be. ,The State vs. Clyne, 53 Kan. 8.) So, a fiction was invented to meet an unnecessary fiction which became troublesome, and the courts go on gravely ascending the hill for the purpose of descending, meanwhile filling the books with scholastic disquisitions, verbal subtleties and refined distinctions about malice in law, malice in fact, express malice, implied malice, etc., etc., etc. Now what is the fact? Instead of malice being the gist of the section it may come into a libel case and be of importance in two events only, to affect damages and to overcome a defense of privileges. If the occasion be absolutely privileged there can be no recovery. If it be conditionally privileged the plaintiff must prove malice, actual evil-mindedness, or fall. When it comes to this proof there is no presumption, absolute or otherwise, attaching to a charge of crime. The proof is made from an interpretation of the writing, its malignity or intemperance by showing recklessness in making the charge, pernicious activity in circulating or repeating it, its falsity, the situation and relations of the parties, the fact and circumstances surrounding the publication and by other evidence appropriate to a charge of bad motives as in other cases.

Nothing else in Upton vs. Hume requires comment and no decisions more persuasive than those discussed have been cited or have fallen under the observation of the court.

Speaking generally, it may be said that the narrow rule leaves no greater freedom for the discussion of matters of the gravest public concern than it does for the discussion of the character of a private individual. It is a matter of common experience that whatever the instructions to juries may be they do not, and the people do not, hold a newspaper publisher guilty and brand him a calumniator from an effort in good faith to discharge his moral duty to the public he oversteps that rule. In a political libel suit if a non-political jury be secured the newspaper usually gets a verdict if in the language of Balch's case "the whole thing was done in good faith." Otherwise damages are assessed. Although he adhered to the narrow rule. Sir Frederick Pollock, when Chief Baron of the Exchequer came near stating its rival when he said:

"I think it quite right that all matters that are entirely of a public nature: conduct of ministers, conduct of judges—the proceedings of all persons who are responsible to the public at large, are deemed to be public property; and that all bona fide and honest remarks upon such persons, and their conduct, may be made with perfect freedom, and without being questioned too nicely for either truth or justice." (Gathercole vs. Miall, 15 M. & W. 318.)

The liberal rule offers no protection to the unscrupulous defamer and traducer of private character. The fulminations in many of the decisions about a Telemonian shield of privilege from beneath which scurrilous newspapers may hurl the javelins of false and malicious slander against private character with impunity are beside the question. Good faith and bad faith are as easily proved in a libel case as in other branches of the law and it is an every-day issue in all of them. The history of all liberty, religious, political and economic, teaches that undue restrictions merely excite and inflame, and that social progress is best facilitated, the social welfare is best preserved and social justice is best promoted in presence of the least necessary restraint.

Aside from other reasons for adhering to it the court is of the opinion that the rule in Balch's case accords with the best practical results obtainable through the law of libel under existing conditions, that it holds the balance fair between public need and private right and that it is well

adapted to subserve all the high interests at stake—those of the individual, the press and the public.

The plaintiff argues that the defense of privilege was destroyed by the fact that copies of the defendant's newspaper circulated in other states, complains of the instructions given upon the subject and insists that the instruction offered by him should have been given. The instruction given was correct and follows the rule announced by this court in Redgate vs. Roush, 61 Kan. 480. There a matter of interest to communicants of a church was published in the church papers in Indiana, Ohio, Texas and Nebraska. It was inevitable that they should be read by people of other denominations. The syllabus reads:

"Where the publication appears to have been made in good faith and for the members of the denominations alone, the fact that it incidentally may have been brought to the attention of others than members of the church will not take away its privileged character."

This accords with the general rule stated in 25 Cyc. 387. (See also Hatch vs. Lane, 105 Mass. 394, Mertens vs. Bee Publishing Co. 5 Neb. (Unoff. 592.)

In the cases of State of Iowa vs. Haskins, 109 Ia., 656; Buckstaff vs. Hicks, 94 Wis. 34, and Sheftall vs. Central Railway Co. 123 Ga. 589, language is used from which it might be inferred that privilege will be destroyed if the communication should reach the eyes of others than persons interested. This would be the end of privilege for all newspapers having circulation and influence.

Generally, the publication must be no wider than will meet the requirements of the moral or social duty to publish. If it be designedly or unnecessarily or negligently excessive, privilege is lost. But if a state newspaper published primarily for a state constituency have a small circulation elsewhere, it is not deprived of its privilege in the discussion of matters of state-wide concern because of that fact.

The second subject propounded for consideration at the beginning of this opinion is one of practice which goes to the efficiency of the administration of the law as a means of justice. Did the special finding of the jury that the evidence does not show that the plaintiff suffered any damage from the article in the defendant's newspaper render errors regarding instructions upon other matters immaterial?

Under the constitution the appellate jurisdiction of this court is limited to the review of errors committed by the trial court from which the record comes. It cannot consider cases de novo and decide them according to its own notions of the law and evidence. It cannot take new evidence or pronounce any judgment except that the trial court did right or wrong in whole or in part. It cannot direct what judgment the trial court shall enter unless the facts be found or agreed to. It does not have the constitutional power to do generally what ought to have been done by judge and jury at the trial, and so end the litigation, and the legislature cannot, under the constitution, confer such power upon it. (In re Burnette, 73 Kan. 609.)

However, before the Territory of Kansas became a state the territorial legislature enacted the following statute:

"The court, in every stage of an action, must disregard any error or defect in the pleadings or proceedings which does not affect the substantial rights of the adverse party, and no judgment shall be reversed or affected by reason of such error or defect." (Code Civil Proc. Sec. 148, Laws 1859, p. 102.)

Before the territory became a state the territorial supreme court adopted the rule that error will not be presumed but must be affirmatively shown. (Otis vs. Jenkins, McCahon, 87.) That statute and that rule have been in force ever since. They are still in force, and have been applied in multitudes of decisions.

It would be too much to say that the spirit of the statute and of the rule has always been observed. It has been lost sight of often enough. Sometimes technicality may have been utilized in an effort to right palpable wrong. Very often it is most perplexing to determine what is substantial. But it is the constant purpose and endeavor of the court to obey the statute and to observe the rule. It must do so in this case precisely the same as if it were one small enough to hav originated before a justice of the peace.

"If it be conceded that the rules of procedure have been violated in this case the judgment cannot for that reason alone be overturned. The legislature has enjoined upon this court the duty of looking beyond defects and erros in pleadings and proceedings to ascertain if they did in fact affect the substantial rights of the party complaining of them. Fixed rules are to be observed and enforced, but not merely for the purpose of vindicating them. Harm must result from a wrong decision or it cannot be reversed." (Hopkins vs. Conley, 75 Kan. 65.)

For obvious reasons the instruction relating to privilege required consideration on its merits. It would be pure speculation to say that other instructions given which do not relate to damages led the jury to make the special findings. Damages was treated independently of all other issues and stood out as a separate and distinct branch of the case; and the court would be obliged to enter upon a "quest for error" indeed to be able to discover that the jury did not understand the question and by its answer merely meant to say that under the instructions the plaintiff had no cause of action for damages. Error must be made to appear in some affirmative way. It cannot be presumed. If the plaintiff suffered no damage, manifestly it is of no consequence whatever what valuation should be used in the purchase of bonds for the school fund, what treasury transactions are illegal, or what the law of conspiracy may be. The substantial rights of the plaintiff couud not be affected by erroneous statements of the law upon those questions.

The judgment of the district court is affirmed.

THE LINCOLN CENTENNIAL ENDOWMENT FOR LINCOLN MEMORIAL UNIVERSITY

New York, N. Y., December 12, 1908.

Dear Mr. Herbert:—I want you to go to the Editor of the *Inter-Ocean* and thank him for the best article that has been written in favor of our Lincoln Centennial Endowment Fund. I really believe if you and he can concert together the *Inter-Ocean,* which used to be my mother's paper, can succeed in raising considerable money for us. Now is the time to work, before Lincoln's birthday comes around—do you not think so? Dr. Stooksbury joins me in hearty thanks for your own effort in our behalf.

I will give you two or three items in the line of news, first, several sums ranging from five dollars to two hundred have been sent in to our account with the Lincoln Trust Company, Madison Square, A. S. Webb, Jr., Treasurer. A friend from Iowa, eighty-two years of age, has bequeathed us one thousand dollars. Another friend here in New York, whose name I would like to give, says he will be one of five hundred to pay the whole amount that we require, namely, half a million. Another says I will give a thousand dollars out and out toward the enterprise; another still said to me this morning, my thousand dollars is at your service whenever you call for it. I [Gen. Howard] have placed my land, valued at three thousand dollars, to the credit of the University. General G. M. Dodge has three thousand dollars on his subscription that will go to the same account. So you see that we have already made a good beginning and will push things until the entire fund is raised.

Very sincerely your co-worker and devoted friend,

Oliver Otis Howard.

Major-General, Etc., Secretary of the above Committee.

P. S.—One of the above thousand dollar subscriptions is from Chicago.

GOOD WISHES AND KIND WORDS.

Mr. B. B. Herbert, National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

Dear Mr. Herbert:—I have read your article in regard to your visit East with a great deal of interest, as I know all of the country you visited very well indeed, and I congratulate you upon being, at your age, in such splendid condition physically and mentally (remembering your terrible accident in Chicago several years ago) that you can perform such duties as set forth in the article.

Assuring you of my hearty appreciation of your offer, and hoping that in the future I may be with you again, I am,

Yours very truly,

E. C. Fuller Co.,

E. C. Fuller, President.

NEWSPAPER ITEMS

Within a few weeks, Kalamazoo, Mich., will have another evening Republican newspaper, known as the *Evening Press*. E. N. Dingley, deposed from the *Evening Telegraph*, has completed arrangements for the establishment of the paper. He has purchased an entirely new plant. A company of local capitalists is backing him in the venture.

At a meeting of the Milwaukee Press Club, President O. E. Remey of the club was renominated for a second term. Other nominations were as follows: Vice-president, Henry F. Tyrrell; secretary, Carl Skinrod, Leonard Mayer, E. J. Williamson; treasurer, Frank Markle; board of governors, two to be elected, Charles Dean, James Fetterly, John C. Karel, A. O. Royse, C. H. Kelsey, John C. L. Schnitzler. The annual election will be held Jan. 6.

Changes are coming swiftly with the new prohibition paper, the Waukegan *Daily News*, for following the recent retirement of Lester Moody who was manager of the paper when it was started, but who was soon succeeded by Ray Dixon, president of the company, comes the announcement that the paper has a new editor. Editor Adair, who has edited the *News* since it started, left for Omaha, Neb., where he came from and after a short time there, he states he will enter newspaper work near Spokane, Wash. He is succeeded by A. B. Hindell, who, until some time ago, was connected with the Elgin, Ill., *Press*.

S. P. Hall, Jr., who has been one of the assistant sporting editors of the Chicago *Examiner* for some time past, resigned his position and accepted a similar one with the Chicago *Tribune*.

A government newspaper to chronicle events of the day and give information in regard to the work of the government is the latest innovation suggested by Miss Lutie E. Stearns, member of the Wisconsin state library commission. Miss Stearns made this suggestion before the Racine Women's Club in an address. She said: "England and Germany have papers which are official organs. If we had such a one it would be a dignified vehicle for the use of the president in getting his ideas before the public." It is interesting in this connection to remember that Richmond P. Hobson, he who was kissed, introduced a bill into congress last winter, as representative from Alabama, providing for the establishment of such an official organ. The suggestion was not taken seriously by Congress, which was inclined to regard it as another of his jokes.

John D. Dautrich has begun the publication of a newspaper at the village of Compton, Ill. The new paper is known as the *Citizen* and is a well-prepared publication, a credit to the editor and to the village where it has its home.

Hubert Burruss, who was William Jennings Bryan's private secretary in the campaign of 1896, died last week at Swea City, Iowa. For the past three years he has been editor of the Swea City *Herald*.

The advertisers' committee of the Milwaukee Merchants and Manufacturers' Association which has upward of 100 members to look after the interests of advertisers, met on the evening of Dec. 3 and discussed the following: "Resolved, That the advertisers' committee propose to the state Legislature a bill to provide that all advertising mediums accepting advertising in Wisconsin be subjected to state inspection as to circulation."

Because of the decision of the United States Supreme Court that trades unions can be sued for damages under the Sherman antitrust law, the official journal of the Amalgamated Meat Cutters and Butcher Workmen of America is to be discontinued. Homer D. Call, secretary, said the journal might contain information to the membership which could be construed as the instigation of a conspiracy against the meat packers, and that the latter could bring suit for three times the damages suffered.

Fleming P. Luce, editor of the Crawfordsville *Review* for years, was found dead in bed in Crawfordsville, Ind. Death was due to heart failure.

Over fifty of the Joliet, Ill., printers' union and a host of other friends assembled at the Auditorium last week to attend the funeral of Thomas C. Davidson, the veteran printer, who died early Monday morning. At the same time all the printing and newspaper plants in Joliet ceased operation for an hour, in honor of the decedent.

Elias Colbert and Harry Scoville ate turkey together as has been their annual Thanksgiving custom for—lo, these many years. Both these men are former editors of Chicago newspapers, having worked here in the '60's. Their dinner at Mr. Colbert's home, 2 Woodland Park, marked the seventy-fifth anniversary of the founding of the first Chicago newspaper—the Chicago *Democrat*.

Mary F. Kenney brought suit in the Superior Court, Chicago, for $25,000 damages against Elizabeth Rodgers, Julia H. McDonnell, Katherine F. Birmingham, Elizabeth McLogan, Mary E. Rayburn and Catherine Donohue, officers, former officers and members of the Women's Catholic Order of Foresters. Mrs. Kenney was expelled a year ago by the officers at the convention held in Milwaukee. At that time Mrs. Kenney was editor of the official organ of the order. She was reinstated at the convention held recently at Detroit.

Governor-Elect B. F. Carroll of Iowa, appointed Charles Nye as the governor's private secretary. Nye is a newspaper man and has been the political and State Capitol reporter of the Desmoines *Capital* for the past year. He has had long experience as a reporter and editor in several cities of the state.

La Follette's Weekly Magazine will be the name of the new publication which Senator La Follette will put out from Madison at the beginning of the new year. The name has just been decided upon.

Elgin Press club members are enthusiastic over preliminary plans being made for holding the first annual literary entertainment, to be held at Elgin opera house in February. One of the most unique programs ever presented to an Elgin audience is being arranged by the committee, of which Dr. R. C. Brophy is chairman. An auction sale of autograph letters received from notable men and women will be the initial number on the program. Invitations to the affair will be sent to leaders in the nation's affairs, including a request for their signatures, which may be sold to the highest bidders.

The Waukegan, Ill., Press Club will shortly give a banquet for the city and county officials.

In order to prevent students giving out news of athletic and other events, the Wisconsin State University has ordered that the University Press bureau be the only source of information for newspapers.

President C. R. Van Hise, of the University of Wisconsin, has scored University students who are reporting on state papers for sending out what he terms "hot stuff" concerning the University. The president told the student conference committee that these reporters should be actuated by a love for the University rather than love for money. He stated that they would never be able to get employment on reputable newspapers and would soon find themselves working at very low salaries with no prospects of advancement. It is believed that the president has taken up arms against the reporters because of the stories which have been sent out concerning the alleged student graft in the sale of freshman class caps, and because of the reports concerning the action of the athletic council in giving out its proceedings through the University press bureau.

It is practically certain that by the first of the year a democratic daily newspaper will be started in Wausau, Wis. When the *Daily Herald,* edited by R. E. Powers, was sold to the Record Publishing Company, there was but one daily newspaper in the field, the Wausau *Record-Herald,* republican in politics. The present local administration is democratic.

The only negro Catholic periodical in the United States, the *Catholic Truth,* is off the press in Milwaukee.

J. L. Sturtevant, for eighteen years editor of the Waupaca, Wis., *Post,* has sold that paper to D. F. Burnham, editor of the Waupaca *Republican,* who will consolidate the two papers under the name of the *Republican-Post.*

A company is being organized by S. Morris Minor, a well-known hotel man, to publish a monthly paper at Milwaukee devoted to the hotel business. The new publication will be issued about the middle of January, and while the Milwaukee and Wisconsin hotel fields will be thoroughly covered in the hotel paper; it will also publish matters of interest to the hotel men and the traveling public generally. Mr. Minor was for many years in the employ of the Hotel Pfister.

The Union printers have won their fight with the Iowa City, Iowa, *Republican,* which now carries the Union Label. Inability to secure non-union printers is the cause of the victory for the printers. The fight lasted two years.

"COULDN'T SEE HOW IT COULD BE IMPROVED ON."

Hon. B. B. Herbert, Chicago, Ill.

Dear Father Herbert:—The December Printer-Journalist is a fine number, can't see how it could be improved on.

With the best wishes of the season and hoping to meet you in god health at Kansas City, I am,

Yours truly, Will H. Mayes.

TRADE NOTES.

Clarence Urban has joined the sales force of the Barnhart Type Foundry, Dallas, and will cover the territory in Southern Texas. Mr. Urban has had long experience in the trade, both as a publisher and as a job printer.

James A. Wood, house salesman of Barnhart Bros. & Spindler, Chicago, recently made the acquaintance of the trade in Detroit and Cleveland, through visits of several weeks.

THE DRESDEN 1909 INTERNATIONAL PHOTOGRAPHIC EXHIBITION

Valparaiso, Ind., December 19, 1908.

Mr. B. B. Herbert, Editor National Printer-Journalist, Ravenswood, Chicago.

Dear Sir:—Will you please insert the enclosed "item" in the January issue of your valuable magazine along with your usual complete selection of good things set before your readers.

Thanking you in advance, I beg to remain,

Very truly yours,

N. S. Amstutz,
Acting Resident Commissioner.

An *International* Photographic Exhibition is to be held in Dresden, Germany, from May to October during next year. The directors have given over a separate building to the display of *Photo-Mechanical* processes and specimens. This has been placed under the exclusive direction of the Deutschen Buchwewerbevereins of Leipsig and the immediate management of Mr. Arthur Woerlein, who is Verwaltungsdirektor. In this building two separate rooms have been set aside for American exhibits of Photo-Engraving. They are 6 x 8 meters (19.68 x 26.24 feet) in size and represent a net wall space of 50 square meters, leaving a display area of 1,076.4 square feet. This space will cost but 12 marks per square meter (3.28 x 3.28 feet for $3.00). Smaller areas of one-half and one-quarter square meter can be secured at a proportionate reduction in cost. The International Association of Photo-Engravers through their president, Mr. H. C. C. Stiles of Washington, D. C., and their secretary, Mr. Frank H. Clark of Cleveland, O., have become sponsors for this entire space and they desire their own members and all others interested to send in duplicate specimens of work, not including individual advertisements of the exhibitors. These are to be marked with the title, name and address plainly typewritten on the back, flat and unframed and are to be sent, all charges prepaid, to N. S. Amstutz, Research Engineer at Valparaiso, Ind. Mr. Amstutz has been appointed Honorary Acting Commissioner by the management. He will select the specimens to be forwarded to Germany from those sent in to him.

All exhibits must be received not later than February 15th ,and it is specially urged that the specimens be sent in *at once.* The cost incidental to the gathering, forwarding, etc., of the samples as well as the space occupied will be divided pro-rata among the exhibitors. It is, of course, understood that neither Mr. Amstutz or the Association can guarantee the acceptance of any specific exhibits, the final decision resting with the management in Leipsig.

In view of the very special consideration shown the American Process Engraving craft, by setting aside the space mentioned, it is believed the members of the craft will not be slow to avail themselves of this opportunity to make a distinctive and representaive display of their products.

For further information, copies of prospectuses, etc., letters of inquiry should be sent to Mr. Amstutz at Valparaiso, Ind., who has also been appointed special representative of the Association and who, in collaboration with the officers and Captain Willis J. Wells of Chicago, has arranged the necessary details.

While the wall space reserved is only available for specimen prints, there is floor space suitable for other exhibits.

All will come out in the washing. Cervantes.

Perfidy often recoils upon its author.—La Fontaine.

An ounce of wisdom is worth a pound of wit.—German.

IN its elegant Christmas issue, on December 17th, the Macon, Mo., *Times-Democrat*,—always noted as a successful, progressive paper,—makes the very "satisfactory" statement: "Our business for the year 1908 has been very satisfactory to us and still it grows."

The *Times-Democrat* is in its forty-fourth year and thriving beyond many in much newer fields. Push, systematic business management, weekly rendering of advertising accounts, with prompt collections and zeal for the community and high faith in a paper and its mission will accomplish wonders.

Now, we made the above quotation, thinking that it was the paper that made the declaration; a second look showed that we had quoted from a half page advertisement of one of the enterprising merchants of Macon. However, the right kind of paper makes enterprising advertisers, as the full and half-page advertisements in this issue fully illustrate: Nearly fourteen of the twenty large pages, including the cover, are taken up with splendidly displayed business announcements. There is an abundance of good reading matter and among the rest, the Santa Claus letters from the little folks (God bless them!) fill liberal space. There is also an extended account of the meeting of the Macon County Society, filled with historical items and appropriate addresses. One of the speakers hoped that Macon will be

"Always fronting around to the light,
Always and always facing toward the right."

Another speaker said of the press:

The editors—I have heard many good things about them. The people generally admit we have here the very best papers of any town of its size in the state. These newspapers are exercising a strong influence in moulding a healthy public sentiment, and in building up a good town. It is like the Irishman's fence, which was built three feet high and five feet wide. Along came a man who wanted to know of Mike why he built such a funny fence.

"Be jabbers," he said, "so that w'en th' win' blows it down it will be higher than it waz before!" [Laughter and applause.]

"But the circulation of our Macon papers is increasing, and we are glad. A good newspaper is like a mirror reflecting the progress and development of the people among whom it circulates. It smiles with us, sorrows with us. Our grief is its grief; our joy its joy.

"The newspaper labors incessantly to build up a good public sentiment."

This shows whence the people have drawn their enterprise, their good fellowship and inspiration.

It is the local press that makes the town, as is most forcibly emphasized in "An Appreciation of the Local Newspaper," by Welsey A. Stanger, in this issue of the NATIONAL PRINTER-JOURNALIST, that should be republished in every home paper in the United States.

A growing demand is largely in evidence for clean newspapers and it comes from no spirit of prudery. There is a great difference between exposing wrongdoing and giving needed information, and the exploiting of low, vulgar crimes, vileness, drunkenness, lust, manslaughter and murders, in disgusting details, for the sake of creating sensation, "raising hell and selling newspapers" as a Minnesota publisher used to say. Men need to be informed of the doings of their fellow beings and to be put on their guard against their passions and criminality, but, so far as possible, all information given in the public press, should be useful, helpful and inspiring. Filth and swill will probably always exist, but should be consigned to the sewers instead of being taken into the homes to poison and render the air, that the whole family must breathe, noisome and offensive.

We fully sympathize with the following from a signed communication that was published in a number of New York City papers, the day before the commencement of the trial of T. J. Hains as an accessory to the Annis murder:

The aim of securing newspapers for our homes which shall at all times be free from lewd or suggestive articles detrimental to morals, offensive to decency and damaging to self respect is one which all admit to be desirable. Some might perhaps say that it is possible to enjoy it at all times by simply buying only good newspapers.

But unfortunately there come periods when overweening public interest and unworthy public curiosity provoke the editors of even some of the best of our journals to overstep the mark and to lay before us and the modest home circle, including the tender children of the schools, libidinous details of criminality which are revolting even to men charged with the punishment of those who prey upon society. We attempt to escape it and close our door to it for a short period, only to find that to keep in touch with our usual social or business needs we must continue our patronage of a journal which we are ashamed to bring home. Then our school children or others must have the objectionable articles and detestable headlines thrust upon their sight in the public conveyances or other places.

Each editor escapes censure by claiming that all his brother editors will surely present the same matter and he cannot be exceptional.

There is very little that is new and less that is informing in the details of crimes that result from hate, envy, jealousy, lust, drunkenness or uncontrolled anger. Sin is not made abhorrent by rolling it as a sweet morsel under the tongue or through the columns of the press.

We have frequently had occasion to refer to the Brooklyn *Eagle*, and have given at considerable length its methods and commended these and the paper as a model, a most instructive, and profit-bringing example, if followed, for all home papers. *Newspaperdom,* of New York, in its issue of December 10th, gives emphasis to some of the points that we have heretofore enumerated, in the following pleasing and strikingly convincing manner:

Why in Heaven's name should a man pay three cents for the *Eagle* when other Brooklyn papers are offered for less money—when he can get any of the New York evening papers, save the *Post,* for a cent?

Why does almost every advertiser who wants to reach Brooklyn put the *Eagle* on his list?

The answer is in the paper.

It is not marvelously beautiful, it is not supremely wise, but *if anything happens in Brooklyn and the Eagle misses it, it is a subject for wonder.*

No matter wherein a man's interests lie—national guard, boating, racing, society, real estate, politics—all that is news is in the Eegle.

And if it's in the *Eagle* it is probably true, for the *Eagle* does not sell its self-respect in order to sell extras.

The *Eagle* buyer pays three cents, for he cares at least three cents for the information the *Eagle* contains and he can't get it for less.

The *Eagle* advertiser is hot foot on the trail of the man who cares enough about a paper to spend three cents for it, especially when circulation comes in such quantities.

The *Eagle* has *something really good to offer.* Therefore, it is full of advertisements for which the advertiser pays card rates, and it holds its circulation against every plan that competition can devise.

The *Eagle* is one of a type. In almost every large city you'll find a daily occupying a preeminent position, self-respecting and therefore respected.

* * *

The Proof is the title of a little monthly in pamphlet form, with covers, gotten out most attractively and artistically, to advertise the Gould Company, Printers, at 1324 Washington Avenue, St. Louis, Mo. It deserves more notice than we can give here, and will be referred to "More Work Through Publicity" department for further review. We simply desire to say that the booklet in get-up and matter is a convincing argument in favor of more advertising for printers who can advertise so effectively, in showing their own work while presenting ad-arguments. The first page contains the following, quoting first the lines from *Judge:*

"Lives of some great men remind us
That we will, if we are wise,
Leave our modesty behind us
And get out and advertise."

"Printed matter that wins attention is that which tells a pleasing story in pleasing characters, supplemented by the pleasing typographical adjuncts that an artist's hand can supply."

* * *

The Gallatin, Mo., *Democrat* showed, on its first cover page, Santa Claus making lightning time in a great red automobile, that was filled high with children's Christmas toys. The old Saint was shown without goggles and was apparently enjoying, with more than his usual zest, the ride beneath the blue sky and shining stars. The paper is up-to-date and why should not its Santa Claus be the same? The first inside page shows, in halftone, a more modern Santa Claus, with refined features, surrounded by toys, but in a modern drawing room, holding two little girls, one on each arm. The Christmas illustrations that adorn nearly every page are very attractive, as are the borders of great variety, from wreath-entwined bells to Teddy bears and winged cherubs. There is a wonderful collection of letters from the children to Santa Claus, and they suggest how much of happiness and anticipation there must have been in the hundreds of homes and in the hearts of hundreds of children during the composing and writing the loving, confiding notes to the old Saint, and with what expectations the arrival of the newspaper that was to contain these missives, — the paper that goes everywhere, and of course reaches Santa Claus,—was awaited. Naturally, the advertisements that filled some twenty-five pages, like the rest of the paper, were rich in Christmas illustrations and suggestions. There was wonderfully good taste and high typographic art displayed in the composition of these advertisements. The *Democrat* is evidently not lacking in a supply of modern type faces and borders, or in the ability properly to handle them for the production of effective and pleasing results. The local news is not neglected and there is an abundance of Christmas stories and poems, and bright, wise Christmas thoughts and sentiments, good and wholesome for all the year and every year.

Two short quotations are given here that will not be found wanting in value to editors of newspapers, through the generous spirit, and the high and broad, intelligent views of mankind, contained therein, and which should be the controlling influence of editors' lives and the inspiration to their work for the men and communities that they serve.

Rev. Robert White says in a contribution under the caption, "Christmas Gifts have their Origin and Incentive in the Gift of Christ;" "One of the chief charms of Christmas is the simple, genuine, generous fellowship that pervades our common life, and which finds expression in the interchange of gifts."

Rev. C. B. Cross writes:

"Man is a bundle of inexpressible, indefinable possibilities. How infinite in number are the hopes, fears, aspirations, and dreams that fill his life! Shakespeare has beautifully expressed the thought in this language: 'What a piece of work is man! how noble in reason! how infinite in faculty! in form and moving how express and admirable! in action how like an angel! in apprehension how like a god.' It was a man as he is that touched the loving heart of God, and man as he might be that prompted the gift of his Son for the redemption of the race. This gift of the Father has awakened every possibility of the human soul, and has made bright and beautiful the pathway of life. Love then is the inspiration, the

beginning of every success, hope, joy, peace, happiness that life can know. There was never a hope that thrilled a human heart, or dream that made bright and beautiful the pathway of life that was not conditioned on love."

The more highly newspaper-makers prize the people they serve and the higher their appreciation of all mankind, the nobler will be their work and the more effective, useful and successful.

* * *

The generous, enterprising, truthful, loving spirit of the Christmas trade, and how the prevalence of kindly goodwill affects business, are shown in an editorial, in the Yazoo City, Miss., *Sentinel*, about its Christmas issue, on December 10th, that well describes the paper and the wonderful accomplishment of the production, as follows:

It is with pardonable pride that this edition is sent forth to our thousands of readers. Recognizing the limitations of even so well an equipped office as the *Sentinel*, we had no idea of making the edition more than twenty-four pages, but the business kept crowding in so rapidly that every nerve was strained to take care of the advertising of the most progressive lot of merchants the sun ever shone on. The result, as you can see, is an edition of thirty-six pages, and not a dull page in the bunch. There is a total of 2,290 inches of paid advertising, nearly twice the amount carried by the *Sentinel* a year ago, and we believe the largest edition ever issued in the State by a country weekly.

We again offer our grateful acknowledgment to our many friends and customers for the splendid patronage given the paper, not only for this edition, but throughout the past year, and it shall serve as a stimulus for renewed effort in the future.

Editor Frank R. Birdsall gets up an excellent paper, and takes pride therein, as is evidenced by the following bouquet by an admiring contemporary, the Hazlehurst *Courier*, as to one of the regular issues:

The Yazoo *Sentinel*, always a "gem of the purest ray serene," reached us last week with sixteen pages of interesting reading matter and well-gotten-up advertisements. What Frank Birdsall doesn't know about getting up an attractive newspaper is hardly worth the while to learn.—*Hazlehurst Courier.*

We not only like the "get-up" of the *Sentinel*, but also its spirit which we heartily commend to all newspaper men and which is indicated by the following extracts and paragraphs:

We heard an epigram the other day. It was this: "It's damned good to be decent." We herewith print it without a dash. It does not demand any apologies. It is too good to spoil with a dash. Think it over. Can you—whoever you are—wherever you are at in life—can you echo its sentiments?

There are men who chafe under the goody-goody, "thou-shalt-not's" of well-meaning but tactless folk, who will heartily coincide with the above. There is something so flesh-and-blood about it that it strikes deep and it pierces the hardest heart. The most degraded will pause and think and accept it, even though their own lot be hopeless. Yes, "it's damn good to be decent."

Graft, trickery, sin in any form of perverted goodness may shackle its victims in untold numbers, but hardly one of them but will lift an ear out of the mire to catch the utterance of the above epigram and give it its dues.

Decency—the reward of being able to look a fellow man in the eye—the ability to sleep at night with a clear conscience. It stands for clean linen instead of polluted rags, a clear eye instead of one bloodshot, the sweet, clear of a Sunday morning, instead of the debauching revelry of a dark Saturday night.

An exchange says, "the time to succeed is when others are failing." Well, fate is against us again. We don't know of anybody that's failing. Everyone succeeds in Yazoo.

Yazoo City keeps right on growing substantially every week—no boom, but a steady, healthful, substantial development that means permanent prosperity.

Don't lavish all your thoughts on the well-to-do, but remember the poor and needy in your Christmas giving.

Instead of whining about hard times, advertise in the *Sentinel* and court prosperity.

Have consideration for the overworked clerks, and do your Christmas shopping now.

The bills that people won't pay are what make hard times.

An ounce of energy is worth a pound of "genius."

The sentiments are not foreign to the American press, but they need to be kept to the front in words and deeds every day of the year. Praise your own town and seek out things worthy of praise. Commendation is more effective than criticism, though the criticism is sometimes an unpleasant duty. "Vinegar never catches flies," is an old proverb, and faultfinding very seldom wins winged, high-flying reforms nor brings improvements. Patient, considerate, untiring praise of worthy undertakings and accomplishment will bring many more to a desire to have an active and effective part therein, than will all the scoldings that can be printed or administered for neglecting the good and persisting in idleness, indifference or wrongdoing.

This issue contains a page of letters from the "young readers to dear, old Santa Claus," and in glancing these over the thought occurred as to how truthfully these letters indicate the habits and customs of the people.

* * *

The Rolfe, Iowa, *Reveille*, issued its Christmas number in magnificent form, fifty-two pages, four columns to the page, in covers. Were you ever in camp to hear the reveille sounded, the beat of the drum or bugle blasts given at the break of day, as notice that it is time for the soldiers to rise? The clean, ringing notes sound especially clear and penetrating in the early morning. They are for awakening. The newspaper should ever be sounding awakening blasts for the arousing of its community, hence the name and its appropriateness. The *Reveille* uses the Santa Claus automobile design, on its first cover page, which seems to have proved very popular this year. It is a bright paper and we like its form, especially for an annual number, which this issue is made, giving an illustrated account of its city and of all the institutions, industries and business concerns, including schools, churches, and fraternal organizations; with an added and most excellent showing of the homes of the peo-

ple. We liked the little say of the editor and proprietor about the paper, from which we quote the following:

Like that little acorn from which the mighty oak grew, the little Reveille of 1888 has grown until today it is one of the best printing plants in northwest Iowa. The office building is 24x80 of brick, with cement block front and cement floor for engine and press rooms. The office consists of three up-to-date presses, newspaper folder, gasoline engine, stapling machine, large quantities of type and fixtures of all kinds of the latest and best designs. The advertising patrons and subscribers alike, are proud of *The Reveille*. The proprietor and three sons appreciate the liberal patronage given *The Reveille* and are always endeavoring to give the best service possible in return. As evidence of the amount of material and the neatness of the mechanical makeup of *The Reveille*, the reader has only to look over this holiday number. Read it; keep it; refer to it in the future.

THE CHRISTMAS NUMBER OF THE WEEKLY PRESS
withstanding lies a cunning virtue
of the Sceptre of this Planet
rugged face, all weather-tanned,
intelligence! for it is the face of

From Christ Church Press, New Zealand

The publisher has made it easy for the subscribers to follow the closing injunction. The paper is in convenient form to keep, and its value will grow with the years, both as a local historical record of a year, of the city's past, its attainments in 1908, and as a means of reviving personal recollections. There are no friends like the old friends, and the memories of those who pass on before grow dearer with the lapse of years, and the children's children of those now in active life will read of the lives and accomplishments, and look upon the likenesses and illustrations of their grandfathers and of their homes, schools and churches, as preserved by well-printed halftones, in these pages, with profit and heightened pleasure.

From Christ Church Press, New Zealand

When we were a boy it would have been considered a great journey from bleeding Kansas or Northwestern Iowa to the banks of the old Mohawk, and there would have been no one to have made the jour-

ney from the West except Indians or a few hardy pioneers, but here next in the heap of bright, joyous Christmas editions of newspapers, on our desk, nestling with those from the far-away Pacific Coast and the shores of the rolling Atlantic, is the Christmas number of that excellent daily, the Amsterdam, N. Y., *Evening Recorder,* conducted for so many years by genial Wm. J. Kline, beloved by the members of the New York press and of the National Editorial Association. We are glad that some of the best dailies have not outgrown the Christmas habit, nor forgotten the inspiring sentiments that surround the Christmas-tide. We need not tell of the excellences of the *Recorder,* for we have told much of these papers in the past, but we can do our newspaper readers good service by quoting the following from the editor's talk on "Christmas and Its Trade":

Inside all the extraneous customs and cares that have grown around the Christmas spirit, the Christian world, in its truly religious feeling, never forgets the first Christmas among the hills of Judea. The star luring the wise men to "where the young child lay;" the young mother who became sacred to countless millions; the Saviour long foretold, who was to stand for all time in his final act of the glorification of the Lord's humanity—cradled in a manger. And the mystery of the angelic voices! Heaven reaching down to earth with a benediction.

Centuries have passed in strife and pain, at times overcoming all acts and sounds of joy, yet all together working out the realization of the divine proclamation "Peace on Earth, Good Will to Men." More centuries may be needed for "sifting out the hearts of men before His judgement seat," for the realization of the Christmas ideal; but it is coming. A helper toward its coming was Saint Nicholas—his name modernized into the German Santa Claus. He let loose the instinct of generosity and kindliness. At first the call "Give, Give!" was for children, for they were the recipients, and who would deny them? Then grown-up people clamored to be let in. Trade saw its opportunity for gratifying a wholesome and humanizing demand.

This voice of holiday trade speaks through a hundred or more columns of this number of the *Recorder.*

The spirit of our Christmas season combines all that was desirable in the old time excesses of the "Merry England" we read about, and the Puritan reaction of three centuries ago; the generosity and gaiety of the first, without its vulgarity, and the virtue and purity of the second without its austerity. This spirit has become at home in by far the greater number of our homes, which are equally removed from shame and from pride of birth, and wherein "Competence is the next door to Wealth, and both are within the daily walk of Contentment."

Wherever there are subjects upon whom the ingenuity of kind and benevolent natures may spend its resources, the good influences of Christmas have made conquests. With so many counter-influences waiting for a chance bye-and-bye, there is no danger of over-doing the true Christmas business in its season, nor of cultivating with too much enthusiasm "the purity which thinketh no evil and charity which suffereth long and is kind."

Some over-wise professor of cold science is said to have recently declared that "religions are man made." All that man has made has been by the discovery and application of laws and forces existing in Nature to meet needs found to inhere in the human body, mind and soul or spirit. The religious instinct is found among all peoples and only the fool says in his heart, "there is no God." The kind of piety and the Christmas spirit manifested in the quoted words, from this splendid, secular daily, are from the same All-wise, beneficent Source. It is a good kind of religion for newspaper makers, and business men, as well as for the children.

The letters of the "*Reporter's* Little Friends to Good St. Nicholas," fill ample space in this issue, and here is one that indicates what the little N. Y. State boys were thinking about in the year 1908:

Dear Santa Claus:—Please bring me an engine, a tender, a milk car, and a passenger car.

Don't forget the tracks and switches, and a blackboard.

I wrote this with my typewriter.

Good bye, Gerdon Dievenodrf.

7 Phillips St.

That boy will probably, in due course of time, be a great railroad superintendent, manager or president, and a good one, too.

* * *

Next comes the *St. Louis County Herald,* of Wellston, Mo., with the same beautiful, bright cover design, in green, red and black on white, shown, by the Amsterdam *Evening Reporter*—the same bright, joyous children, the same jolly Santa Claus and antlered reindeer, and the paper, itself, in other words, expresses and reflects the same noble thoughts and sentiments. Christmas makes us one people, from the Lakes to the Gulf, from the Granite Hills to the Golden sands, and is steadily molding into one view and one heart all the Nations of the Earth. The *Herald* did honor to itself and its town in this issue and one little statement and an incident printed therein, were especially pleasing as presenting a feature of the Christmas home feeling, that unites families and cures estrangements, "With the Christmas spirit comes a longing for home." "It is narrated of May Irwin, who happened to be playing at Christmas-time last year in a Western city. She did her Christmas shopping and sent her presents home, but when Christmas Eve came that inevitable homesickness overcame her. After the performance she called her manager, ordered the theater closed for Christmas Day, and the day following wired her Christmas menu to her cook in New York, took a sleeper, crossed four States to eat her Christmas dinner, and left again that night."

* * *

The Carrollton, Ill., *Patriot,* is always a welcome and partly in remembrance of the "Babe in the Manger," and the instinct of a newspaper-maker of a home visitor at Christmas time, and we are writing these "Notes" the day before Christmas. Editor Bradshaw is a bachelor, said to have remained such through filial piety, a beautiful love for his sweet, old mother, but he loves children, and partly from that affection and partly in remembrance of the "Babe in the Manger," and the instinct of a newspaper-maker of a home paper, he manages to present, nearly every year, a

bouquet, in portraiture, of sweet baby faces, gathered from the homes of his town and county where babes are prized and welcomed as the precious gifts of Heaven. The paper is in magazine form, four columns to the page of the size of the *Ladies' Home Journal*.

"The Annual Postal Reunion" is ever a most attractive feature of the *Patriot* Christmas issue, and this year is given the fourteenth of the series, and it is supplemented by a "First Postal Card Collation," that proved most unique and interesting. No attempt was made to reproduce these cards, sent by former residents, from every portion of the United States, and some foreign countries, affording a wonderful panorama when arranged and mounted. While the cards are not reproduced, a brief description of, and the quoting of a few lines, of the greetings on each, make a most interesting article, covering a page and a half. We give two of the greetings to show the interesting character of all:

Mark C. Bowman, U. S. Naval Academy, Annapolis, Md.—View of Bancroft hall, one of the buildings of the academy; "I gladly take this means to be remembered to yourself and my old friends; am doing well, and Uncle Sam is doing well for me."

Harry B. Chenoweth, Oklahoma City—Colored view of Broadway in that city, with "personal greetings for all old friends from a Greene county lad who has wandered out into the world."

As a plan to keep the old residents, and the boys who have gone out into the world, in touch with the old home, a better way could not be devised, and it helps to keep up a most pleasing interest and the subscription list. The "Postal Reunion," made up of letters descriptive of the present home-surroundings of former residents, are equally attractive, reviving old memories, giving descriptions of different sections of the country and are very entertaining. Our newspaper readers ought to preserve this copy of the NATIONAL PRINTER-JOURNALIST for reference next year. All copies of this paper ought to be preserved and bound. Each volume makes a valuable book and these volumes are already in demand at a premium. If any one has not conveniences for binding, send them in and we will bind at actual cost.

We cannot close without quoting what Editor Bradshaw has to say about the "Babes on the Cover," which we have had reproduced:

With the problem of making the most striking and attractive front cover for his Christmas number, the editor of the *Patriot* has again gone back to the Greene county babies, and asked them to pose for a picture as Santa Claus' reception committee. We believe a survey of the group on this number will satisfy anyone that a repetition of the same theme, even for the fifth time, is justified. The faces and setting are all new.

Each picture in the group was a separate photograph, and all were cut out and pasted upon a large cardboard. The halftone was produced from this large group of photographs. The photographs were all from Weingand's studio. Mr. Weingand's skill as a photographer of babies is well shown, even in this reproduction of his work.

The Muscatine, Iowa, *Daily Journal*, a paper that is older than the state, issued its "Prosperity Edition" on December 11th. It has a special cover design in which is shown the city as it was in 1845, and as it is in 1908. The paper was established in 1840. The truthfulness of a top, side-heading, "Too Busy to Worry About Panics" is fully proven in the forty-four, great, seven-column pages, both as to the city and its enterprising daily. F. D. Throop is publisher and L. P. Loomis is managing editor of the *Journal*, and we believe that the following editorial say, in this edition, will be found profitable to all the readers of the NATIONAL PRINTER-JOURNALIST in their lives and work:

As recounted elsewhere, this paper is intended to signalize the prosperity and progress that have been this city's during the year now so rapidly drawing to its close.

But great as are the Prosperity and Progress, there is a

FROM CHRIST CHURCH PRESS, NEW ZEALAND

far greater factor in the lives of men—the factor which the ideal Christmas day symbolizes: "It is Peace among all men."

This day—which is the anniversary of the birth of Him to whom, argue as we may, concerning His right to other titles, which His followers give Him, all men agree, belongs the greatest of all earthly titles, "The Prince of Peace"—is more than a day of giving, of good cheer and of "good will." It is a day primarily of "peace on earth."

Prosper as we may, progress as we may, it is all in vain unless we, slowly perhaps, but surely, approach a time when this momentous principle—first heralded, they tell us, in angelic song, first exemplified in the life we know, by this man whose birth we thus commemorate—shall be established as the rule of that little part of the universe which we hold as our own.

That this consummation, so devoutly to be desired, is far distant, lessens not our duty that we do what we may toward its establishment. For until then all our boasted prosperity, all our vaunted progress, aye even the life and death of the

Prince of Peace Himself shall as far as this life is concerned, be vain and barren save in that they aid in bringing nearer the advent of perfect peace.

Today we are proud in our little way of this our prosperity and progress. We personally are proud of this paper which symbolizes them. But this we know, if so be it that there are in that day which is to come, newspapers and public prints, the greatest paper in all the history of the world shall be that which relates the story of established peace, world-wide and entailing good will from man to man.

After felicitations as to what had been accomplished, and just congratulations as to this edition being "the greatest and best newspaper ever issued in Muscatine," and stating four tons of paper were required on which to print this record of the city's prosperity and the current news, another editorial continues:

The result we believe we can without vanity say is a magnificent tribute to the splendid equipment of the *Journal* office and to the energy and willing-to-workness of the *Journal* employes.

However, all this is only as it should be.

A good newspaper is presumed to represent the spirit of the town in which it is published, to be the concrete expression of local sentiment and of local characteristics.

The *Journal* would not, measured by this standard, be a good newspaper if it were not progressive, up-to-date and continually surpassing all of its former records.

For that is what Muscatine has been and has done during the year 1908.

After the assurance that all the work, in the business, the news-gathering, the editorial and mechanical departments, was done by the regular *Journal* force, every newspaper-maker or printer can appreciate the splendid equipment of the *Journal* office, and the value of "the energy and willing-to-workness of the *Journal* employes." These are the two elements that make for the success of a newspaper or of a printing office, and such success is just as important and should be just as much the concern, and a matter for pride, of employes as of the proprietors.

The industries and institutions of the city are properly reviewed, but the most satisfactory showings are made in treating of the "Unparralled Building Activity" of 1908, and "Muscatine's Prosperity as Shown by Her Banks." The buildings are of a most substantial character, and not only show an existing wealth that made them possible, and wonderful growth in all lines that created a demand for them, but they will remain as permanent added wealth in themselves and as a means for far greater production and increasing business and enlarged industries. Large bank clearings are always the reliable indices of existing business. The great business, bank and other buildings and churches, shown in illustrations, are occular proofs of the reliability of the figures given, and the bank clearings are indisputable proof as to Muscatine's year of greatest prosperity. It is certainly gratifying to read of "greatest prosperity" for the hard times year of 1908, and the pride of the *Journal* in making this record can be understood. There are stories as to, and portraits of, early settlers. One of the most entertaining and affecting stories is of the "Iowa Band," a company of eleven Presbyterian fellow students of Andover College, Mass., who, after much thought and prayer, went to Iowa together, to work for religion and education in the New Territory of Iowa, only one of whom now survives. There is not one of our cities or states without the stories of the lives of noble pioneers, heroic men and women, worthy the telling and knowing.

* * *

The Dearborn, Mo., *Democrat,* is edited by Mrs. James Watson, since the decease of her husband. "Letters to Santa" are found in the Christmas issue and the old Saint is given large space on the cover and in the illustrations. The paper shows the woman love and spirit as well as that of the Christmas-tide.

* * *

The Fairbury, Neb., *Journal* is a clean, bright paper and its Christmas issue showed that its town is prosperous, wide-awake and progressive, and its business men enterprising and believers in newspaper publicity, the kind that helps build up a town, county and state, as well as business. The editor, W. F. Cromp, writes sweetly of the day, "when, in Bethlehem a babe was born," and the shepherds were told that "peace and goodwill was to reign on Earth;" "Christmas, the season of self-forgetting,—"the children's time;" "the time of marriage, when young hearts are joined and family hearthstones are established"—"Christmas, the time of forgiveness, when the past is forgotten and dead wrongs are buried," and adds an admonition that is not too simple for the mightiest, nor too great for the lowliest; "The present has sufficient of sorrow, and too little of joy—let us increase the latter as we decrease the former by forgetting all the injuries and insults of the past and entering the new time together, as simple and as clean and as innocent as the Babe of Bethlehem, born in the manger, twenty centuries ago."

* * *

The Burlington, Kansas, *Republican,* issued its industrial edition, on Dec. 14th, in seven sections of seven pages each. It was "chuck" full of information as to that city of homes and the fertile region in the midst of which it is located. The residences, as shown from the illustrations, are especially commodious, attractive and beautiful for a city of the size. Among the attractions noted and written about are: "Burlington's fine parks—the beautiful groves (right in Kansas) belonging to the city, and free to the public;" fine schools; pretty lawns; no "tough end; strong sermons; daily newspaper; beautiful fair grounds; progressive business men, two good newspapers, substantial school buildings; free public library," and so on with other desirable things. We would like to add more for the accounts given and the paper in every way, both as to matter and mechanical execution, are worthy of highest praise. This is a glorious country of ours, where cities of 2,500 population, can have such advantages, and newspapers able worthily to rec-

ord the stories as to these for the present and future generations.

* * *

The Gratiot County *Herald* of Ithaca, Michigan, now in its forty-first year, shows it is right in the true newspaper idea of giving extended notice of important local events, especially those affecting the industrial interests of the people. In its issue of December 10th, the Annual Poultry Show by the County Poultry Pet Stock Association was so liberally treated as to require enlargement to twenty pages. There was a wealth of advertising such as to make the publisher's heart glad and to prepare him for the approaching season of giving of gifts and merry-making. The ad-composition and the mechanical execution of the paper, throughout, were worthy of high praise.

The Hillsdale, Mich., *Democrat,* did not resort to any particular embellishment in its Christmas issue on December 18th, but it was throughout an exemplification of the beauty of a clean, bright combination of black and white in artistically-arranged and clearly printed pages. Its Santa Claus was a bright, sweet-faced, regular-featured, old philosopher—a reader of the hearts of young and old—who sat with uncovered head, while a youth and maiden whispered into either ear. The twenty-four six-column pages were filled with local news, much pertaining to holiday entertainments, and events, supplemented with Christmas stories and poems, and a great wealth of well-handled, well composed, well set, in appropriate types and borders, correctly arranged and printed Christmas advertisements. The Christmas Stocking, which we reproduce,

20 PAGES GRATIOT COUNTY HERALD. PAGES 1-8

Our Holiday Greeting

To Herald's 5,000 Subscribers

This Issue Surpasses All Previous Records in Matter, Illustrations and Advertising

was a pleasing novelty which showed genius in composition and skill in typography. We liked, too, the editor's sentiments and views as to Christmas Day, and reproduce therefrom the following extracts that contain thoughts, good for newspaper men all the year, for a home newspaper in no narrow sense, should be a sort of Christmas to its readers, every issue—full of joy, good-will, benevolence, ennobling thoughts and joyous, inspiring incidents, words and thoughts, festooned with ever fresh garlands of hope, truth, love, faith, and the charity that "never faileth," that "suffereth long and is kind," envyeth not," "rejoiceth not in iniquity but rejoiceth in the truth; Beareth all things, believeth all things, hopeth all things; endureth all things":

At Christmas time the normal human looks about him to find those things to do, or those mementos to give which will bring happiness to his friends, his family, his needy fellows; and he does it because of a sense of good will toward all, reflecting the conviction that he has fared well in the year that has gone.

At no other season is one given so much to contrasting his own comparative good fortune with that of the less favored. Scarcely any of us but can find about those whom we know have less of Fortune's smiles than we ourselves enjoy. * * *

And therefore at the approach of one more Christmas tide, the *Democrat* would like to express as simply and sincerely as possible its appreciation of cordial relationship with many friends, and its unbounded good will toward all.

ADVERTISEMENTS, "AFFIDAVITS," AND TRUTH.

In old Greece there was at first no law against parricide. The nation romantically argued: No child will ever kill his parent. A law presuming he will would be a reflection on humanity, besides being unnecessary.

After a while, a son did kill his father. As there was no law against that, he was not punished. The shock, however, secured such a law for future offenders. Safety was conserved, though sentimentality was sacrificed.

The State of Wisconsin as well as other states has no law against newspapers lying about circulation, to get advertisements. The need of one has become apparent and the Advertisers Club of Milwaukee is asking the Wisconsin Legislature to pass such an act as will "define and punish fraud in obtaining advertising by false claims of newspaper circulation and to forfeit any sums agreed to be paid, for such advertising so obtained."

The offense exists. As, however, law has so far not penalized it, the Legislature is now asked to do so. The offense in substance is defined in this way: Any person in any wise connected with a newspaper or claiming in any way to represent such newspaper, who lies about the paid circulation of such paper, to deceive intending advertisers, in order to gain advertisements, shall "be guilty of a gross fraud and be punished by imprisonment for not more than a year, or by a fine not exceeding $500." Any sum, agreed to be paid for such advertisements, but not paid, cannot be recovered; but, if paid, it can be recovered by the advertiser in a suit at law.

Other proposed sections are purely technical and to show the order of legal procedure under the act. They also set forth precisely the difference between real and pretended circulation. Papers printed and hoarded, to reach a claimed figure, cannot be counted as circulation. Those sent back to the paper mill "as waste" are to be excluded from computation. So are those claimed to be sold, but taken back as unsold. Every detail necessary to disclose fraud and to prevent it for the future is minutely prescribed. The measure has been favorably reported. Action on it is ordered for the first Thursday in January, when it is hoped it will be enacted.

No business can long stand or long thrive on fraud. The protectors or practitioners of fraud in advertising are certain of exposure, even by the slow but sure progress of truth; but to the offenders and to the offenses should be denied the immunities which the inaction of the law-making power has hitherto made possible. The room for honesty in newspaper business should be so large, and so lighted, that the violation or evasion of truth should have neither space in which to hide its devices or its actors.

The proposed Wisconsin law not only requires full proof of circulation, when that is made the basis of securing advertising, but it also indirectly takes into account fraudulent

IOWA TO THE FRONT
The two ears of corn, white and yellow, shown herewith are the Champion Ears of Corn of the World, having won the prize at the Iowa State Fair in the greatest corn competition on earth. The yellow ear is the property of Geo. Steen, West Liberty, Iowa, and the white of I. B. White, Oskaloosa, Iowa

devices, to claim such circulation. Those devices are now immune from punishment, for false affidavits are not perjury, in the commercial course of business. They are perjury only in a case between parties in a law suit, and not then, unless sustained by more than one witness and at least by two. The Wisconsin act would make falsehood count as perjury in any effort to deceive advertisers.

This proposed act would not apply to papers which do not publish, or claim figures of circulation and do not solicit advertisements on such a specific base. Many of the strongest papers of the country do not feel called upon to make circulation claims or statements. The public and the advertisers know the superior value of these papers, and do not need to be constrained by the affidavits, so called, of circulation mongers. The quality of the population reached by newspapers is known by business men as well as by readers. It needs neither definition nor defense, but where mere claim of circulation is used to deceive people, it should be subjected to every requirement and test of rigorous examination, but the same disregard of veracity would also suggest a means to the publisher of making an examination substantiate the claims of the affidavit.

—From the Brooklyn Daily Eagle, Dec. 16, 1908.

FIFTY YEARS AS EDITOR OF ONE PAPER

A GOLDEN ANNIVERSARY THAT RESULTED IN A MOST INSPIRING SYMPOSIUM OF GOLDEN IDEALS OF NEWSPAPER MAKING.

ON Wednesday, December 22nd, a complimentary banquet was given at Seneca Falls, N. Y., to Editor Henry Stowell, by his fellow citizens and members of the New York State Press Association, in honor and commemoration of his having rounded out fifty years as editor of the Seneca Falls *Reveille*. It was a notable affair, worthy of so rare and important an occasion. The event is of interest to every newspaper-maker everywhere, by reason of the highly valuable and edifying ideas that were expressed as to the vocation and work of the editor, by men who have thoroughly studied the calling in all its bearings, and many of whom have made it their life work. Many who were present are well known to the readers of the NATIONAL PRINTER-JOURNALIST; among these, most of whom were speakers at the banquet, were the following: Hon. Daniel D. Frisbie of the Schoharie *Republican*, A. O. Bunnell of the Dansville *Advertiser*, Luke McHenry of the Chittenango *Times*, Horace J. Knapp of the Auburn *Daily Advertiser*, W. H. Greenhow of the Hornell *Daily Tribune*, A. R. Scott of the Geneseo *Republican*, Edgar Parker of the Geneva *Gazette-Advertiser*, James G. Simson of the Albion *American*, Elias Vair of the Waterloo *News*, E. F. Bussey of Phelps *Citizen*, Thos. P. Hause of the Interlaken *Review*, Louis L. Ferenbaugh of the Waterloo *Observer* and Charles A. Garnett of the Ovid *Gazette-Independent*.

The banquet was pronounced one of the most enjoyable events of the kind that had ever occurred in the city, and the leading citizens joined heartily therein, all professions and callings, including the ministry, being represented, and all joining in happy tributes to the honored editor and in praise of his work for fifty years. The events of the evening were enlivened by the bestowal upon Editor Stowell of a well-filled purse of gold, Mr. Edgar Parker making the presentation speech, to which the recipient responded, expressing his earnest thanks and heartfelt appreciation.

THE SYMPOSIUM.

We reprint with highest appreciation of their appropriateness, and the value of the suggestions incidently contained therein, the following extracts from congratulatory letters from distinguished friends of this loyal newspaper man upon the completion of fifty years of service to his community.

VIGOROUS, BUT HONORABLE AND RESPECTFUL.

EX-GOVERNOR D. B. HILL wrote from his law office in Albany:

I cannot resist congratulating you on the long and honorable service which you have rendered to the people of Seneca Falls, to the Democratic party and to the State of which you have been all these years an honored citizen. I am quite familiar with the newspapers of the interior of the State of New York, and yours has been for many years one of the best of the country papers. It has always been a clean and model newspaper. In politics it has been consistently Democratic, and while vigorously upholding Democratic policies, it has always treated the opposition with respect. It has been vigorous in its advocacy of men and measures, and at the same time it has given full space to the public news of the day.

AROUSING TO THE LIGHT—OPPOSING EVIL—UPHOLDING RIGHT.

HON. CHARLES R. SKINNER, Late State Superintendent of Public Instruction:

So you are just rounding out a half century of journalistic service! Fifty years of faithful, persistent, successful work of an educator and moulder of public opinion, through a newspaper, which through all these years has stood for high ideals and lofty standards.

For half a hundred years, the *Reveille*, under your inspiration, has roused the citizens of Seneca Falls, and bade them behold the glories of the rising day. Into their homes has gone an influence making them hate the works of darkness, and love the deeds of light. Whatever has opposed evil and evil doing, whatever has upheld the right and made for truth, the *Reveille* made known in its columns. It is a long record of faithful adherence to duty, of sturdy fidelity to principle, to conduct a newspaper in the same place for fifty years. To have that stainless record is a triumph of integrity and honor few achieve in this life. To have exerted upon the minds and hearts of citizens an uplifting agency in the affairs of home, county and State, is to have deserved well of the Republic.

NEWSPAPER SOMETHING BETWEEN A VOICE AND A BOOK.

REV. R. H. HARRINGTON, M. R.:

My Dear Mr. Stowell:—To have honorably discharged the onerous duties of chief editor of the leading newspaper in Seneca County for fifty years is a distinction which comes to few men and of which any man might feel proud.

It is one of the great signs of modern progress that people no longer feel obliged to hate one another for the love of God. There was a day when the discussion of any subject would inevitably give out more heat than light, but among earnest and cultured people, thanks to such influence as the *Reveille* exercises, that day has happily passed.

I think it is Coleridge who said that a picture is something between a thought and a thing. It is not a thought, because it is visible to the eye. It is not a thing, because, beyond a combination of lines, lights and colors, it has no existence. So we may say that a newspaper is something between a voice and a book. It is not a voice, because it speaks inaudibly. It is not a book, because it is a mere sheet or leaf which is scattered broadcast every day, or once a week. He that writes a book studies long, and weighs, and writes and rewrites, finally to lay up his work when the whole is finished. He prints his book and is called a successful author if he sells a thousand copies. Many buy and do not read; many read half and never finish; many read and do not understand. The sphere of the book is small and its fate is the shelf with dust and oblivion.

But a newspaper is like a knock at the door, morning after morning, or Friday after Friday. It is so short that even the idler will read it, and so plain that even the simple can understand. It speaks to thousands and tens of thousands. Mere curiosity will make people read it, and mere dullness will cause comment on what was read. The newspaper thinks for people and they reproduce it in their talk at break-

BENJAMIN B. HERBERT . . . . . EDITOR

Official Paper of the National Editorial Association

PUBLISHED MONTHLY BY THE
OFFICE OF PUBLICATION:
1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

CHICAGO, JANUARY, 1909

January, 1888, the first number of the NATIONAL PRINTER-JOURNALIST was issued at Indianapolis, Ind., by the present editor and proprietor. The publication grew out of the formation of National Editorial Association, and it has been our honest desire and effort, through the past twenty-one years, to serve that organization and all its members, and all newspaper-makers, editors, publishers and printers and members of all allied trades, usefully, fearlessly and sympathetically. The paper is twenty-one years old and enters upon its twenty-second year with as bright prospects as upon any year in its history. There have been many varying experiences, many most happy events, many notable conventions and excursions to record, but all the time there has been kept prominent, above all else, the most practical and successful methods, in every way, for making the best newspaper and conducting the best printing office possible. Thoughts, experiences, plans, systems, suggestions, and all else deemed educative, helpful and inspiring, have been gathered from all over the world every month, and given for the benefit of earnest workers in these responsible callings, in one million, two hundred and sixty thousand separate copies, containing, in the aggregate, about eighty million seven hundredd and twenty thousand pages. It has been a source of great gratification that those who have longest taken the paper and who conscientiously, with a view to improvement and betterment, have read and studied its contents, have most frequently testified to its usefulness and often placed the value of its actual benefits, at from ten to fifty times the amount charged as the subscription price. Yet, a wider field is desired and it has been decided to offer this paper, in lieu of premiums or prizes, at $1.50 a year, and at fifteen cents a copy on news-stands, until February 15, 1909, and at the same rate to all old subscribers who pay up to January 1, 1909, and one year in advance. All payments between the dates named of $2 for 1909 will be credited sixteen months. The future price of the paper will depend largely on the result of this special offer. With a larger circulation, as will be evident to all newspaper publishers, a cheaper price can be maintained. Many friends have cautioned against such an offer, saying that it was well worth, and all who sought improvement, and really wanted the paper, would pay the two dollars a year willingly and that a lower price would only mean just so much loss to the publisher. If these friends are right, the paper will be compelled to stand the loss and will only have to regret the unwisdom of this offer for a larger circulation. The tendency, of late years, whether wise or not, has been toward the lowering the price of all publications, Everything now points to six years of increasing prosperity, and everyone should be prepared to take advantage of the brighter prospects by being fully equipped with knowledge, all the views and experiences of others obtainable and all other means. It is the ambition of the NATIONAL PRINTER-JOURNALIST to help a larger number with practical knowledge, methods and plans that will result in broader success, in improved newspapers and printing offices. If the circulation of the paper can be duplicated, there will be no loss to the publisher, and wider benefit, and all the pleasure that goes therewith, will be secured.

* * *

Speaking of the indications of an era of increasing prosperity: this is no idle talk, yet very much depends on the influence that goes out from and through the printing offices and newspapers. However else they are viewed, all successful men recognize these as the great modern promoters of business and manufactures—and of that public faith or confidence on which all trade and encouragement to greater production very largely rest. Those whose duty and privilege it is to inform, to influence and encourage the people in their undertakings, and favorably to influence trade, must have a sound basis from which to work and must be able to give a reason for the faith that they proclaim.

* * *

It is the duty of the press to be informed as to the substantial reasons for the expecting of prosperous times. These do not seem difficult to obtain. The business stringency of 1907 was almost wholly caused by a destruction of confidence, and this was the result of over-speculation, dishonest dealing, a wild indulgence in luxuries, on account of the unprecedented rapid increase in wealth, and overestimate of possibilities for the same cause.

Production had increased with unprecedented leaps and bounds, and there was a healthy demand at high prices. The condition that exisited is now fully understood, wreckage has been cleared away, confidence has been in a very large measure regained and there are none but the most substantial grounds for its entire restoration. The products of the ground were never

greater. On these rest in the end all prosperity. The development of resources in the South and West, on account, in part, of improved methods and an awakened spirit of enterprise, was never before equaled. Exports while decreased in a measure by the fact of the unfortunate conditions, now rapidly improving, show the balance as largely in favor of this country. Agitation has lead to a better understanding as to the great industries and as to transportation questions and the rights and relations of what are somewhat erroneously termed capital and labor, for in the end labor is acpital, or capital, at most, is only the product of labor and, if honestly acquired and paid for and honestly used, is a blessing. There is nothing the mattter with either labor or capital. It is the dishonesty, the greed, the overreaching, the discontent, the pride, the sloth, the failure to render full value, the injustice, the lack of the recognition of the full rights of others back of either, or both, that cause all the wrong and all the hardship. These things have come to be better and more generally recognized, and there is the brightest prospect of an era of industrial peace. Demagogues who secure positions, live and prosper by stirring up strife and discontent, have lost their power. The verdict of the people has been in favor of honest and sane measures and there is little, if any, danger of any legislation that will work injury to legitimate business or that will prove other than a terror to evil-doers. There has been a short period of husbanding of resources and of recuperation, that cannot prove otherwise than beneficial. There are a score of other indications of improved times, among the greatest of these are the wonderfully increased and improved methods and facilities for production, and the better fittted, equipped, more earnest, loyal, intelligent and better directed workers in every field. There has been, even within a year, a great advance made in the systematizing of effort in production and business, and the utilizing and economizing of forces and resources. All these tend to make doubly sure, a healthy, increased general prosperity that will benefit all alike. There will be fewer great fortunes heaped up, less of the power of predatory riches and reckless, wrecking speculation, but there will be a more evenly distributed increase in substantial, actual property and less that is fictitious or dishonest. Let the newspapers stand to their guns, fight true to the people and all the people, proclaiming confidence, encouraing honest enforcement of laws with a view to the rights of all and each as against selfish classes or monopolies, and 1909 will be the most glorious in the Nation's history and the promised prosperity will be insured for many years to come.

* * *

One thing should be especially avoided in this new year, and that is the being tricked into the outcry against the courts of the land, through prejudice or because such abuse of the courts seems popular. The destruction of business confidence brings financial disaster, but the destruction of confidence in our courts brings not only loss of confidence, but anarchy, crime and the utter uprooting of law and order; abolishes all security of person and property and engulfs men and society in hopeless ruin. Our laws and our courts have been the development of centuries. They are founded on equity, justice and the rights of all and each. If laws in this free country are found to work hardships, on account of changed conditions, the people can change or repeal them or make new laws but so long as laws exist by enactment, or by custom, founded on long experience, "whereof the memory of man runneth not the contrary," it is the duty of the courts to interpret and enforce these laws and no one has a right to treat them otherwise than with respect and obdeience. It should be remembered, too, that laws and courts are for the protection of all in their person, their property, their good will and their good name, and he who attacks either must expect, or at least know that he deserves, punishment. There can not be two co-existent governments of one people. "No man can serve two masters: for either he will hate the one and love the other; or else he will hold to the one and despise the other." Any one who swears allegiance to any organization, society or lodge that interferes with, is antagonistic to, or that does not reserve the right to render, loyal service that he owes his country, becomes either a perjurer or a traitor, though he may not fully realize the fact.

It should be remembered, too, that laws are not for classes, but for all, high or low, rich or poor. All and each are equal before the law and the courts and must obey these or be rightly classed as a criminal or traitor. It must be remembered, too, that no organization of men, any more than an individual, has any right to exercise control over or to interfere with, the property, rights, franchises, good will or good name of any one else. As soon as any organization tries to control, dictate to, or interfere with others, in any of their rights, it becomes so far a treasonable organization, a spurious government set up in antagonism to existing authority, and any one who assents to, conspires at, or attempts to enforce, such rule is just so far a conspirator and a traitor. One Government is enough for any man, and certainly enough for any true, loyal American citizen, where the people can make or unmake the laws, elect the judges, impeach and remove them if they are corrupt, or unjust or incompetent, and can change them, when unsatisfactory, through a popular vote that will change the administration or the laws by which positions are held. It is much better for those who think they have ills, to endure them for the time, and seek a change by legal methods, than to rush into the ills of the subversion of the laws, the disobedience to the courts and, virtually the overthrow of existing Government, bringing in anarchy and dissolution of society and all its obligations.

FIFTY YEARS AS EDITOR OF ONE PAPER

(Continued from Page 41)

fast, at dinner and at supper. It is indeed a voice, and a large and resonant one.

I know of no more prompt, direct, intelligible and certain way of speaking to men in this twentieth century than through the press. It is the nearest approach to the living voice which is universal.

GOOD FELLOWSHIP, GOOD MORALITY, GOOD CHEER AND GOOD CITIZENSHIP.

From Monsignor Joseph W. Hendrick, The Church of the Holy Cross, Ovid, N. Y., December 14, 1908:—

Dear Friend:—It affords me great pleasure to be able to congratulate you on the golden jubilee of a paper so useful as is the Seneca Falls *Reveille*. A great man once said he did not care who made the laws, if he could write the poetry of a nation, and I am sure that idea extends the same to the moulders of opinion, in poetry or in prose. The song expresses the idea, in a form maybe more easily remembered, but the keynote is sounded just the same. Mr. Dana of the New York *Sun*, told a friend of mine, that he considered the *Reveille* and the Yates County *Chronicle*, under Mr. Cleveland, the best two country papers in the State. That was many years ago, and in my humhle opinion, the *Reveille* is like good wine, it grows better as it grows older.

Yet, I am sure the flood of recollections, brought about by fifty years of earnest labor in journalism, are not all of one's rosy happiness, nor of sadness—as all human happiness has the dark, as well as the silver lining to the clouds, sounding the notes of sorrow, the memorial notices, of the noble, the just and the true, or expressing the joy of the merry wedding bells, in sunshine, and darkness, rise up the memories of half a century.

Good citizenship, good morality, good fellowship and good cheer were brought about by the weekly visits of the Seneca Falls *Reveille*. Last, but by no means least, good Democracy, which of course means good citizenship, owes the paper a great debt of gratitude, as like the sturdy oak, it withstood sunshine and storm for the true faith. I hope it will have its present editor, when the Democracy of President Cleveland and Tilden, Governors Hill, Harmon and Johnson, which all signs seem to indicate, will be again triumphant.

FOR LOCAL IMPROVEMENT, EDUCATION AND HISTORY.

From Charles A. Hawley, L.L.D.:—

An unwise lawyer had a motto, "Whenever you have a bad case, abuse the opposing attorney."

When I first began to read the *Reveille*—now more than forty years ago—it was a bright, newsy, acidulous sheet, too much given to following the motto of the unwise lawyer. But advancing years have brought wisdom, mellowness and geniality until now, except for some symptoms of hydrophobia—a tendency to become rabid about water—it is only rarely that the old-time acidity is found in its columns. I have often occasion to disagree with the *Reveille*, but one can disagree and yet admire.

It has always been an enthusiastic advocate of village improvement and of the uplift of our village life.

In matters of education it has always striven for what was highest and best. The high character of our public schools and school buildings is largely due to its influence and power; and to the unflagging and intelligent zeal of its editor as a long-time member of the board of education.

As a collector of that sort of local news and gossip which makes a paper a history of village happenings, it has always stood in the first rank.

Typographically, the *Reveille* has been a model. For years it steadily refused to deface its fair pages with illustrated advertisements, but when illustrations improved, and it was obliged to yield to the inevitable, it did so with such judicious restraint that it remains, as an example of the printer's art, the handsomest village paper in all this region.

I congratulate the *Reveille* on its long and ever-improving career; and you, its editor, upon a half century of successful work.

MODEL OF THE COUNTRY PRESS.

From C. K. Sanders of the Nunda *News*:—

The fact that you are approaching your fiftieth anniversary as editor of the *Reveille*, calls for sincere and hearty congratulations on your half century of highly successful editorial work.

I have often marveled, on looking over the *Reveille*, as it has been my pleasure to do so, every week for the last forty or more years, how you found time to write so much, as the columns of the *Reveille* have ever been filled with matters of interest. Your paper has always been the model for the country press to work up to and as a co-worker in the country press vineyard for about fifty years has always been my admiration.

DIGNIFIED, STRONG, HONEST.

From Luke McHenry of the *Madison County Times*:—

For twenty years of the fifty years the *Reveille* has been edited and published by you, it has come to my desk, and it has been read by me much more generally than any other paper in whose publication town I had no local interest. I regarded the *Reveille* as a paper of the "Old School," written in good English and carrying with the conspicuous personality and firmness of its editor as I knew him, and as I long ago concluded he was regarded in his home community; I looked upon the paper very much as I used to look upon the *Sun*, the *Herald* and the *Tribune*, under the elders Dana, Bennet and Greeley. The *Reveille*, dignified, strong of character and honest, the very opposite of sensationalism and yellow journalism so much demanded today, has been for fifty years at least a great credit to journalism. I shall hope it may continue many years more in the same path before it comes to the "parting of the ways." I have used the shears very liberally on the *Reveille*, and in whole or in part have used the clippings, or permitted them to guide my pen.

CLOSE TO READERS, STANDING BY THE TOWNSMEN.

From John A. Sleicher, President of the Judge Company:—

I had intended to accept the invitation of many of your townsmen, to attend the banquet in honor of your golden anniversary, on Tuesday evening next, but I find it impossible to leave New York on that date. I cannot forego the pleasure of writing to you, however, a word of sincere congratulation on the excellence of your work in the newspaper field. We have been associated together, as members of our State Editorial Association, for many years, and one of my pleasantest recollections of that connection, has been of the friendship it has developed with so many of the bright and shining lights of weekly journalism, men like Brother Bunnell, yourself and others I could name, who in their declining years, can look back upon a record of achievements for their respective constituencies, with the proudest satisfaction. The editor of the weekly newspaper gets closer to his readers than the editor of a daily, because he enters into the home life of his readers and in many instances is a welcome visitor at their firesides. The tribute that is paid to you is therefore a special evidence, not only of the friendship of your townsmen but also, of their affectionate regard for one who has stood with them and by them, in season and out of season. I join most heartily in the felicitations of the occasion and in the wish that is being heard on every side, that you may be spared for many years to continue the work in your chosen profession which you have done so long and so well.

HIGH CHARACTER AND INSPIRATION.

From A. O. Bunnell of the Dansville *Advertiser:*—

As you near your fifty year goal in the editorship of the Seneca Falls *Reveille,* I cannot withhold words of praise for the high character of the work you have done. The *Reveille* has been an inspiration, an incentive to better lives to all who have read it, a measureless power for good in the community in which it has been published. Its influence has widened by its example to brother editors throughout the State, for sincerity, earnestness, courage, wisdom, courtesy and tact. I have felt this in my own editorial work which lacks but two years of equaling yours in point of time.

These fifty years have witnessed great advance in editorial endeavor and accomplishment, but there has been no more sincere devotion to the best in journalism than that given by our early contemporaries who have fallen in the front ranks of the battle for right.

ANOTHER SEMI-CENTENARIAN, GROWS INSTRUCTIVELY REMINISCENT.

From E. S. Averill of the Palmyra *Courier:*—

I very well remember reading the first issue after the *Reveille* passed under your control and I think I have read every issue of the paper since that far-away date to the present time. I bought the *Courier* in 1856, and two years later, Mr. Tinsley purchased the Lyons *Republican,* and about the same time the *Reveille* came under your management. Well, you and I are still in the harness, but our mutual friend and well-beloved associate has passed over to the other side. From the very start your paper took a prominent position in the local newspaper field and it has steadily advanced in popularity and influence to a degree that is very seldom reached by a weekly publication. You have every reason to feel proud of your record dating over so many years; and I am rejoiced to know that these long years of excellent work has been appreciated not only among your own immediate citizens but by friends and admirers all over the State. It is a well understood fact that in its handsome make-up, in its editorials and local matter, the Seneca Falls *Reveille* has no superior between New York and Buffalo.

During our long newspaper career we both can probably recall many pleasant reminiscences, and some that gave us keen pain. Newspaper work has its sad as well as its pleasant side.

CLEAN IN PRINT AND READING.

From Edgar Parker of the Geneva *Advertiser Gazette*:—

You ante-date my beginning nearly four years, for it was in May, 1862, that I became editor of the Geneva *Gazette;* but I have been continuously so since that date. Many have been the times that I have studied your editorials for inspiration, and obtained it. I always admired a clean paper, both in print and reading, and one will have to travel a long way to find another *Reveille* to reach his ideals. God bless and spare you many more years of just such honorable service!

HIGH AIMS AND KINDLY SPIRIT.

From Rev. Arthur Copeland, D.D.:—

Editor of *Reveille:*—Half a century in journalism in this age of light and progress means a vast opportunity, unequaled, lost or improved.

If what we are depends upon the condition of our minds, so that as a man thinketh, such is he—then the press, especially the country press, is vastly responsible for actual world conditions, as a chief source of men's ideas.

Has the American press ever aroused itself to see that it has really a mission? Does it exist to sell papers or to save souls, in the large sense of that term?

The editor or publisher who leaves the impression that he and his publication exist chiefly to please the public in order to be a financial success, is a back number, he is not up-to-date, and his obituary notice can be written in one word, FAILURE.

And here it is that I, with hosts of others, can bear testimony most gladly to the high aims, the gentlemanly and kindly spirit, the broad and charitable vision, the honest and painstaking labors, and the marks of unusual editorial ability, which have uniformly characterized the columns of the Seneca Falls *Reveille,* and the pen of its genial and versatile proprietor. It has helped to lift up, rather than pull down. It has brought the message of good cheer, and in a typographical form so correct and pleasing, as to add to the force of the message.

It has ministered to men, not to make money out of them, but to make better men of them. Faults are upon all that is human, of course; but the general drift, the ruling aim—that is what must be the test. And by that test, the *Reveille* must be judged as far superior to the average of its contemporaries.

May it continue to make for justice, for friendship and for good living, and may its editor, though he has not gained treasures of earth by fifty years of conscientious and arduous work in his profession, be assured that he is already rich in the esteem of those who know a man when they see one, and a paper when they read one.

RELIABLE IN ITS NEWS.

From Rev. H. Grant Person, The Eliot Church, Newton, Mass., Dec. 19, 1908:—

Dear Mr. Stowell:—I am enclosing my check for a renewal of the *Reveille.* I should feel lost without its weekly visitation with a budget of fresh news from Seneca Falls. I also learn with surprise and pleasure that you are just closing fifty years as editor-in-chief. I cannot refrain from congratulating you most heartily on that fact. It hardly seems possible, in these times of changing methods and ideals, for one man to remain at such a post for half a century and keep fresh and up-to-date in the work as you have done. I have read the *Reveille* now for more than ten years and am one of the large number who consider it nearly a model village newspaper. It is attractive in general make-up and more attractive in contents. It is reliable in its news. The unpardonable sin of the modern newspaper is a sacrifice of accuracy in a desire to give the public the news hot. It is really a serious fault. The public can far better wait an hour or a day or a week and be sure that what it reads is true. This has been your policy and it is worth mentioning. A newspaper is something far more than a medium for disseminating the news of the day. It holds a place of power second to none. As a moulder of public sentiment on local and moral issues you have a trust as sacred as any man in the community. In some of these issues you and I have disagreed. It might be strange if two men, dealing in ideals, did always agree.

I hope you will enter upon the second half century with a young heart and happy in your work. And I hope that we may have the news from your pen many years to come.

HAS CONTAINED VOLUMES OF BIOGRAPHICAL SKETCHES.

From Mrs. S. A. Wetmore:—

In today's issue the *Reveille* blows a prolonged blast on the jubilee trumpet, and proclaims far and wide the celebration of Mr. Stowell's fiftieth anniversary as its editor and publisher. All old readers of the paper will wish to commemorate his long and successful management, and to mark the day with a red-letter.

Through fifty summers and winters the *Reveille* has been a weekly visitor, always bringing a budget of news, always bearing the marks of extraordinary care both in its matter and manner.

We have been proud to send it to distant friends, certain that it would find no superior wherever it might wander. The high standard established in its youth has never been lowered, and for half a century it has been a silent educator in neatness, accuracy, correct spelling and punctuation.

In one department the *Reveille* has been without a peer, and its record especially noteworthy. Of the twenty-six hundred members edited by Mr. Stowell, nearly every one has contained several obituary notices, and it is within bounds to reckon as the work of his brain nearly three thousand of these biographical sketches which often filled a half column. To write volumes on a changeless theme, selecting the salient points of individual character and describing them in words at once fitting and consoling to those who mourned, this has seemed to many the most remarkable part of his editorial labors. At times, when the sense of his own personal loss was keen, his hand must have faltered and his pen lagged, but the finished article bore no sign of the struggle.

These word portraits form a most valuable addition to our county history, and will be a lasting memorial to the delineator.

May this year of jubilee prove to our veteran editor, as to the children of Israel in the olden time, a season of rest, festivity and freedom from all care!

"TAUGHT TIME TO STAND STILL."

From Mrs. M. R. Silsby, The Sanitarium, Clifton Springs, Dec. 15, 1908—

My Dear Mr. Stowel:—It is difficult for me to realize that you have been editor of the *Reveille* for half a century.

Though you have in personal appearance, almost taught Time to stand still, your paper has not—but it has been always on the side of progress, and for the betterment of things in your town—as also for the world in general.

As editor, you "have kept your course truly"—and given us a *Reveille* of uniform excellence. Will you allow one appreciative friend and reader to tender thanks and congratulations, on the occasion of this semi-centennial, and wish sincerely that for the *Reveille* and its editor may "Many years of happy days befall."

Very sincerely yours,

M. R. SILSBY.

AN APPRECIATED WEEKLY MESSAGE.

From Rev. E. B. Van Arsdale, *Interlaken,* Seneca Co., N. Y., December 22, 1908:—

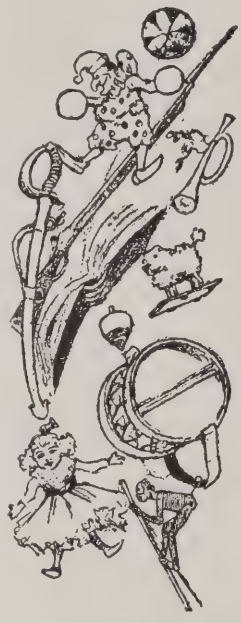
Mr. Henry Stowell:

My Dear Sir and Brother:—It is not often that one has the opportunity of congratulating his friend on the rounding out of fifty full years of service, such as yours has been as editor of the *Reveille* for the past half century. And I gladly seize the opportunity that now comes my way. It is a pleasure to receive the weekly message that comes through your courtesy in the pages of your papers. May I express the sincere wish that you may yet enjoy many years of pleasant activity like those over which your thoughts turn backward at this time.

Each of these letters closed with the kindliest good wishes. We have printed these testimonials to a model home newspaaper more fully than we intended at first, but we found so much that must prove useful and inspiring to newspaper-makers all over this land, that we did not have the heart to cut out anything that bore in any way upon the editor's work, knowing that in the whole, every one must find something directly bearing upon his own life as a member of so responsible a calling.

The Christmas Stocking

A Parody by FRANK J. BONNELLE



How dear to this heart is the stocking of childhood when fond recollection presents it to view! On Christmas St. Nick came from frost whitened wildwood with every loved toy which my infancy knew. The wide spreading chimney, the sled which stood by it, a horse and some books—I remember them all—a doll for my sister, and baby house nigh it, and then the full stocking which hung on the wall—the Santa Claus stocking, the bountiful stocking, the Christmas morn stocking which hung on the wall! The well stuffed envelope I hailed as a treasure as early that morning I opened my eyes and found there the source of an exquisite pleasure, the purest and sweetest that nature supplies. How ardent I seized it with hands that were glowing and back to my white sheeted bed went with all, then soon, with the emblems of love overflowing, was happy in what to my lot did befall—the Santa Claus stocking, the generous stocking, the Christmas morn stocking which hung on the wall! How sweet through its round open top to explore it as poised on my knee it inclined to my view! Not a hot, tempting breakfast could make me ignore it for longer at most than a minute or two. And now, far removed from the loved situation, the tear of regret will intrusively fall as fancy reverts to my youth's habitation and sighs o'er the stocking which hung on the wall—the Santa Claus stocking, the plethoric stocking, the Christmas morn stocking which hung on the wall! But grown people find there's a later sensation as grateful as any they felt long ago. It comes when they witness the glad exultation which on Christmas morning their own offspring show. And now, dear old Santa Claus, let me petition your favor for children, both large ones and small. Bring all the bright hopes to the fullest fruition that rest in each stocking which hangs on the wall—the wealthy child's stocking, the poor urchin's stocking; yes, fill every stocking which hangs on the wall!

(From the Hillsdale, Mich., Democrat. See Page 39)

ADS OFF FRONT PAGE.

A gardener who kept his wheelbarrow, his truck-cart, his mule and his manure pile in front of his pretty cottage would be looked upon as one devoid of appropriateness and taste. Just so with a newspaper man who ruins his front page effect with advertisements. There is room elsewhere for ads. Treat all customers alike by admitting no front page positions, Your troubles on this score will be short-lived.—*Western Publisher.*

"A GREAT HELP."

DREXEL, Mo., December 30, 1908.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed find check for $4.00, for which please credit me with back subscription and send me the NATIONAL PRINTER-JOURNALIST for another year.

I have found the NATIONAL PRINTER-JOURNALIST a great help to me and I look forward each month with pleasure for it to arrive.

Wishing you a happy and prosperous New Year, I am,

Yours truly, GEO. W. RHEA.

Jas. A. Wood, salesman for Barnhart Bros. & Spindler, Chicago, called on the printers of Cleveland last month.

IMAGINARY COMPETITION--ITS EVIL EFFECTS

BY LUTHER C. ROGERS, OF ROGERS & HALL CO., AS DELIVERED BEFORE THE BEN FRANKLIN CLUB OF CHICAGO, AND PRINTED IN THE BEN FRANKLIN MONTHLY.

BEFORE discussing imaginary competition, it is probably fitting that we get our bearings. There may be some difference of opinion as to whether what I shall say, in part at least, is really true, or misleading imagination. It is recognized, I believe, in the trade and outside, that there are printing firms who encourage and solicit a class of customers who are not disposed to be over fussy or over critical, and who from beginning to end of a transaction have no designs on their printer.

Again reputation or character of work a firm does, or professes to do, may naturally attract the most desirable class.

For these and other reasons some of us may seldom meet that shrewd cunning man of commerce who believes that all is fair in business, as in love and war. However, do we not agree that in every business, profession and calling there is a place for the imagination? If any man present has pushed through the crowd and is successful in his business without drawing largely upon his imagination for assistance, allow me to say, fate has been kind. He can be thankful indeed.

Should any one present, representing a favored printing firm, if there be any such, think before I finish that I go to the extreme, let me assure him that what I shall say has been learned in the school of experience; from trying to do printing with a press thirty years old, with material, employes and for a class of customers such a press would naturally attract, to doing printing with the latest improved equipment, up-to-date methods and their corresponding attractions.

The purpose of the discussion thus far is that we may better understand each other, with reference to the subject, and I have endeavored to make this point that some of you through individual experience, may disagree with the argument in some particular, though I dare say, that not a statement will be made but has been the experience of more than one present.

Now for a thought on that faculty of the mind—imagination. The student of human nature attempts to read actions as well as words. He thinks, he studies, he learns facts, he imagines, and when he has learned how to think, how to study, how to acquire and use facts, *how to imagine,* he has a knowledge that is almost, if not quite essential, to the man who hopes for a reasonable degree of success in dealing with his fellow-men. The imagination, when properly cultivated and wisely used, is a great mental power. In my judgment it is one of the greatest gifts God can give to a business man. It will guide him through many a storm and enable him to escape many a shoal. On the other hand, the imagination poorly cultivated and unwisely employed, has probably caused as much sorrow and failure as any other one mental faculty.

The imagination plays an important part in the transaction of business. It helps materially—very materially—the business man or business men of a trade who understand and intelligently emyloy it. Of all businesses there is probably no greater field for an unfailing imagination than the printing business.

In our discussion we may give for our meaning of unfailing imagination this: A knowledge of human nature or the ability to see or know or find out what is in the other mind.

In order to act in our own favor or even only to be fair, we must be able to size up the other man. We must know what he has done, what he is doing and thinking, and what he intends to think and do. We must focus the imagination on all his thoughts and actions, and in some measure at least arrive at the goal of correct conclusions. But the great trouble is, our imaginations too often do not work correctly and consequently do not act effectively for our personal and rightful interests.

If our imagination always served us wisely and faithfully, there would be no cause for discussing imaginary competition. One reason why a knowledge of human nature is so necessary in business is because many buyers and many of our business men—yes, good business men, are not strictly or rather technically honest. They may have excellent reputations, be good citizens, good husbands and fathers, they may be ever solicitous of the purity of the home and that their sons and daughters do right and be honest, and yet these very men in business are misleading in the use of their words in their actions and otherwise. The business world does not call them bad citizens—they are not dishonest men. They are fine fellows, the world needs them. They are a credit to the community. The world is better off that they have lived and live, but as the poet with language has his poetic license so the business man has his poetic honesty. For example, Mr. Customer asks Mr. Printer to give an estimate for printing a certain catalogue. Mr. Printer makes the price $300 and goes through the usual formalities of trying to secure the order, but finally is informed that the business has been placed at a better figure, which statement may not, and very often is not, true. The honest customer, as well as the other class who has a spark of the finer feelings in his make-up, the man, I believe, who is loved most by his fellow-men, chooses the smoothest and easiest way to dismiss the subject and Mr. Printer. It may not be lower price. The customer prefers to say anything that comes to his mind that will least embarrass or offend—and the Printer does not get the facts. This order may be placed for $325 with Mr. Competitor, who happens to be keeping company with Mr. Customer's sister. Mr. Printer who does not secure the order goes back to his own office and on the next estimate figures on a 10% smaller margin than before. The Printer's imagination working wrong has deluded him into thinking that he figures too high and that his Competitor is figuring lower than he. The Printer's price of $300 may have been right, so far as the price goes, but there are other and different reasons why his Competitor gets the order very often at a higher price. Personality may win it; capacity for quick service may win it; reputation for quality may win it; a particular style of type shown may win it; a cover design may win it; persistency of the salesman may win it; a proprietor's interest may win it—there are a hundred things any of which might win business for a Competitor at a higher price, and yet with the first Customer and the second Customer and even the fiftieth Customer the Printer hears the same parlor pleasantry, "Placed at a better price."

These parlor pleasantry men are good fellows, but they have done, and are doing, a great deal of harm to our printing business, and though sometimes there is not much comfort and cheer in knowing the facts, yet after all, we must admire the business man, call him cold if we please, who is not afraid of the truth, and who will say to Mr. Printer, your price is right, but we prefer, for reasons, to place the order elsewhere.

I fancy some one has in mind where he has seen a Competitor's low price, and has been asked to meet it. Judge not that ye be not judged. Is it fair to a competitor or the printing business to hear or see evidence presented by one side, and by an interested party at that, and pass judgment? A case in mind is where a Customer had made up his mind to give a certain catalogue to a certain Printer. Mr. Customer gives his Printer the exact specifications and instructions as to good style, good quality, etc., and asks for price. His Printer's price was $475. The Customer calls in Mr.

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

I AM aware that there's many a newspaper man at times bowed down in despondency and self-disgust over the fact that it seems to have been his destiny to be the maker of a small country paper rather than publisher of one of the greater weeklies or dailies. And how frequently do we hear it said of one or another of the more gifted among us, "What a pity, indeed, that he is not in a larger field!"

But why this despair? Why this pity? Does it not require more true greatness to succeed under trying circumstances, in cramped and poverty-ridden quarters, than under the auspices of power, oppulence and popularity? Is it not a far more stupendous task to successfully edit, publish and print the more insignificant of country weeklies, than to be the proprietor of one of the greater, wealthier publications? Which, may I ask you, takes the more true grit, energy and determination, which takes the more genuine genius, worth and ingenuity, the more fine diplomacy and real executive ability—which is more clearly and certainly the crucial test that calls to the surface more of the true steel of a man's makeup, the little position or the greater one—the little position, without men, means or machines, or the greater one, with all these, the machines to do the work, the men to operate them, and the means to provide and pay for both?

Conclusively the former position is the mill in which real greatness is made. The grind is forsooth monotonous, at times, but the reward is sure to those who excel. The greater positions are but higher rounds within the reach of him who is faithful in little. Therefore, let none of us despair. Let us "love our work" at least to such a degree that we can perform the drudgery of our present lowly places with the same care and consideration that greater things seem to merit, so that in the end, if Fate shall have apparently cheated us of our legal goal, we may have this cheering thought to solace us in our hour of lamentation: "I did my best."

The Shelton, Nebraska, *Clipper* is not a new publication in my hands. But it is one of these kind of papers that one is always glad to see again—yea, again every week in the year. Exhibit 1, being a reproduction of the initial page, bears me out in the claim that the *Clipper* makers appreciate a clean front page and know pretty well how to make it up attractively. There is one important thing, however, which should not be overlooked in the making up of a front page of a newspaper or in the composition of any page of type, and that is the center of balance. This center of balance, as nearly all good printers must feel instinctively, is just a trifle above the real center of the page. The darker mass represented in the "Matters Personal" heading in this reproduction, is away below center, a defect that might have been overcome by using shorter headed articles above it. The news-service offered by this publication is especially praiseworthy, and the editorial work is highly pleasing. The advertisement composition is evidently the work of a skilled and experienced hand, and the press work gives similar evidence. The arrangement of the matter in the other pages, however, might easily be materially improved by the inauguration of the system of throwing all the displayed work

to the right hand side of the pages, and carefully graduating the same, starting with the largest space at the bottom, as I have so often explicitly indicated in past installments.

There is much to commend in this copy of the Danbury, North Carolina, *Reporter,* even though, as we proceed in its scrutiny, many faults may come to view. It is an eight page, six-columned sheet, with a single sheet supplementary insert, all of which is home set and home printed. In so large a paper the appearance of a single displayed ad, even though that ad's display may be somewhat subdued, is wholly inexcusable on the first page. I think, too, that if the *Reporter's* force of workers would devote a little study to the better class of newspapers they ought surely to get suggestions in the way of makeup and styles of headings, etc., that would work a needed improvement in their own sheet. There is an abundance of advertising matter in this big paper, along with the abundance of reading, and all of it has been treated in a fairly pleasing fashion, De Vinne faces predominating.

A feature connected with the publication to which the foregoing paragraph pertains, and one which deserves special mention, is the inclosure with the main paper of two supplements, each of which is gotten out to cover, and especially for, another separate field or territory. One of these has been mentioned as "the single sheet insert," and is entitled "The Madison Special," while the other, entitled "The Greensboro Drummer" is another six-column quarto, fully as large and replete with news and advertising matter as the main sheet. These papers surely represent an enormous amount of work, a remarkable business and much enterprise on the part of the publisher.

Exhibit 2 is an advertisement specimen from the Shelton *Clipper*, which demonstrates both the ability of the compositor and the utility of the old-time De

Vinne series. There is but one prominent defect in this piece of work, namely the setting of the words "Half Price" in too large a letter.

I wonder how many readers of this department of the NATIONAL PRINTER-JOURNALIST received a copy of the *Barnhart Flyer*, a publication the initial number of which was dated October, 1908, and which was gotten out by Barnhart Bros. & Spindler, presumably to exploit their type faces. I supposed at the time of receiving this initial copy that the thing was to be a regular feature of that firm's advertising plans, but I have since failed to see any succeeding copies, and therefore conclude that it was but temporary. The contents of this publicity sheet were excellent, much of this being of benefit to members of the printing craft, well selected with the intention to instruct and entertain. The mechanical makeup was well nigh ideal, too, as was also the impression. The only feature anent which I could reasonably offer adverse comment was the typography, especially as pertains to the selection of head-faces, etc. This is, too, the very point in which it seems to me such a paper should have excelled, where the choice of type was surely as nearly unlimited as it practicably could be. The *Flyer* was made up as nearly in duplicate of the real country newspaper as possible, being a seven-column folio, with some extremely creditable advertise-

ments in it. Since many of these are exactly what readers of these columns come daily in contact with, I reproduce the best as Exhibit 3. In following out the style of composition shown herein, the compositor cannot go wrong.

I have a note from Van V. Boyce, foreman of the Dallas County *News*, of Adel, Iowa, in which he says:

DEAR BYRON:—Am sending you copy of above paper, containing full-page ad of "The Leader." Please point out its

weak spots in the N. P.-J. I certainly appreciate your work, and wish you would dissect this ad, also any others you may find.

Now, Friend Boyce's note is dated November 15, whereas the copy of the *News* to which I take it he refers, bears date of January, just a year ago. And the ad he calls my attention to, if I am correct in securing the proper paper, is a corker. I do not believe it is the work of Mr. Boyce himself, because I know he can do better work than this. I dislike to cause the NATIONAL PRINTER-JOURNALIST to spend money and devote valuable space in the reproduction of such work, and therefore shall satisfy myself with briefly pointing out that which I consider the "weak spots." In the first place, this specimen has been built of material that is scarcely inspiring to the compositor nor conducive to attractiveness; and in the second place, nearly every panel and column in the ad has been too snugly filled up, thereby producing that crowded effect that lends a degree of ugliness above everything else. The absence of leaders in the long price lists is another extremely objectionable feature, and the manner in which the signature has been composed is amateurish and unsightly. There are better advertisements in this same copy of the *News*, for instance, that of H. V. Rickerson on the opposite page.

What a great paper the Dakota *Republican* of Vermillion, S. D., continues to be! I still have my artist's eye hurt, however, by those ads on its excellent front page. Publishers Willey & Danforth are stubborn in-

Hammered Copper and Brass.

We have a fine line of these goods, made by the Benedict Mfg. Co., and the only goods of the kind made in the U. S. Fashioned into all sorts of useful and ornamental designs—fine gifts

Hand Painted China.

Painted outside of the studio by expert artists. Selections made in this line are always appreciated; there is nothing mother, or wife or sister would like better. Some fine choice pieces at very low prices

Books! Books! Books!

Here is where your selection will be an easy one. Former showings cannot compare with our stock this year. . . . Fine Gift Books. Leather. Celluloid and Plush Books, and all the new novels.

Military Brushes, Clothes Brushes, Hair Brushes, and Mirrors.

In Sterling Silver, Plated Silver, Stag, Ebony, Alligator and Cocobola. A fine assortment, and at low prices. Look them over.

Our Cut Glass Department is Wonderland In Itself.

There is nothing in this line but what we can supply. The new designs are beauties and appeal to the particular buyer.

Studio Hand-Painted China—White's Art and Pickard's,

We present an excellent display of Studio Hand painted China, choicest of patterns and places.

Burnt Leather in Pillows, Full Skins and Novelties

A high class grade of goods for high class presents; an article to fit any purse, and appropriate for any person

Fancy Papeteries of the Highest Grades are in Stock.

These fancy boxes of stationery offer a happy solution to the holiday shopping question; prices low.

Be An Up-to-Date Santa Claus!

THERE are no difficulties in the way if you make your selections from our Profuse Array of New Christmas Novelties shown for the first time this season. Our stock develops in the highest degree Pleasure and Profit in Buying, Delight and Satisfaction in Receiving, insures a Merry Christmas to all.

Christmas Buyers' Opportunity

We are offering our patrons the advantages that come from the happy combination of a Superior Stock, a Large Assortment and the Fairest Prices. Make your selections from this stock and get Better Results and More Satisfaction than ever before.

Presents to Please One and All!

In gifts for old or young you will find your wants anticipated. We place at your disposal pretty remembrances at small cost, or more elaborate articles if you prefer them.

tention to the uniform typography, the sane whiting out, the symmetrical layout, the control of display. Brother Van V. Boyce can especially appreciate my foregoing criticism of the specimen he submits by comparing his ad with this one.

O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—Under separate cover I am sending you several copies of my paper, the Horton *Headlight*, for

inspection and criticism in the NATIONAL PRINTER-JOURNALIST, of which I am a subscriber. I enjoy reading your criticisms very much. Yours very truly,

CHAS. H. BROWNE.

The Horton *Headlight* is a well impressed, and well edited, six-column, all-home-printed, quarto weekly of Horton, Kansas. The local news service is thorough and the editorial work creditable. The mechanical makeup is generally tasteful, with the exception of the disposition of the displayed ads. The defect in this is that they are scattered here and there throughout the various pages, instead of being systematically collected to one side of the page. The appearance of the displayed advertisements on the first page is also to be deplored, especially in a paper affording so much available space on inner pages. The *Headlight* carries the Union label and is alive and modern in every respect.

As I have remarked before, I am always glad to have the old friends drop in again upon this department, but especially does it please me to greet a new face occasionally. Such is the Shawano County *Advocate*, of Shawano, Wisconsin, in whose introduction Editor E. J. Scott writes as follows:

SHAWANO, WIS., December 9, 1908.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR AND BROTHER:—I just received my Christmas NATIONAL PRINTER-JOURNALIST and noticed some of the ads there. I believe that some of the ads in the *Advocate* will compare with those published. Under separate cover I am sending you one or two copies of the *Advocate*, and if you think they are worthy of any notice, why say what you think of them. Am also sending a blotter which we got out a few days ago, calling attention to our new holiday borders.

Yours very truly, E. J. SCOTT.

The *Advocate* is a seven-column quarto on ready-prints, but even these four spacious home-printed pages are insufficient anon to hold all of the stuff for the

Where a Dollar Does Its Duty
This is, always has been, and always will be the store of the people, where a dollar does its duty—ITS FULL DUTY. Does all you may expect of it, does all that any dollar can do in any retail store in this state. You will always find the lowest prices prevailing here on dependable merchandise, and no matter what you see in print about the MATCHLESS OPPORTUNITIES happening elsewhere and continually challenging customers, you will find equal merchandise here for the same money, or better merchandise for less money. And while this store exists we will carry out these principals.

No. 9

readers know about it. Generally the mechanical makeup is creditable, with the exception of the arrangement

of the advertisements, which comes far short of the plan as advocated from time to time in this department. The composition of the ads in this paper in the main are good. Specimens 7, 8 and 9 are evidences. The only objectionable feature in the first of this trio is the extreme underscoring of the two chief display lines. These heavy rules under lines of type weaken rather than strengthen them, as is sometimes supposed. This design is rather novel and attractive. The next specimen is a better ad. The only thing unlikeable in this is the abrupt and senseless change from short measure and large face of type to a longer measure and smaller face of type in the introduction. A compositor should always strive to use as few faces of type, even of the same series, as he can possibly get along with. The last of the trio is probably the best of all, although there has been an insufficient amount of white allowed between type and border. The blotter mentioned in the letter quoted above, while an excellent idea in the introduction of the new seasonable material, so far as typography is concerned, is inferior in merit to these advertisements.

Probably one of the most interesting contributions ever submitted to this department of review is this from the department of journalism of the University of Missouri, accompanying which comes the following letter from Editor Walter Williams, which, because of its explanatory nature is especially valuable enough to be included herewith:

December 7, 1908.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—I am sending you, under separate cover, today some sample copies of the *University Missourian,* the daily newspaper issued by the students of the Department of Journalism of the University of Missouri, thinking they would be of interest to you. I am also sending you a copy of the special announcement bulletin of the new Department.

The Department has enrolled this first year 66 students in a four years course, leading to the degree of Bachelor of Science in Journalism. The newspaper is issued by these students, under the direction of the faculty, who are experienced newspaper men.

Appreciating any constructive criticism from you, I am,

Sincerely yours, Walter Williams.

The University *Missourian,* the little daily issued from the Department of Journalism, is a seven-column folio, replete with the happenings of the day in real practical shape. As proof that it is as esthetic as it is practicable, I take pleasure in reproducing the first page of the edition of November 23, 1908. (Exhibit 10). Adepts will surely agree with me in the verdict that there are hundreds of dailies in the land far below this students' sheet in excellence of standards. And this pertains not only to mechanical features, but to news service and reportorial and editorial work as well. Truly, there is nothing more gratifying to the level-headed members of the calling than this fine fact of modern advancement—this stride toward the making of better newspapers through the training of students in journalism. Of course, in a paragraph or two, such as I must devote here, it is not possible to do this subject justice, but to more clearly explain the object and character of the work of this commendable department of the University of Missouri, I take the liberty of quoting this editorial from the *Missourian* itself:

THE PURPOSE OF THIS PAPER.

The *University Missourian* is for the training of students in journalism. It is the laboratory, the clinic, the practice school of the department of journalism of the University of Missouri. The work upon this newspaper—other than mechanical—is to be done by the students, under the direction of the faculty, experienced newspapermen, as part of the regular course in this department. In the pursuance of this purpose it will be necessary for the *University Missourian* to cover the entire news field, not limiting itself to University news, in order that the training the students receive will be sufficiently broad to be valuable. It will give, of course, all the University news, but in due relation to the general news of the day. With this news there will be editorial interpretation and comment upon public questions.

The *University Missourian* is not established to conflict with or supplant any publication. Its own purpose is well-defined—that of affording, on advanced educational lines,

training for journalism. The laboratory is a necessity for this training. How to do must be taught by doing. Student publications and the local press will not have their fields invaded by intention or design, as such journals serve purposes and occupy fields with which this newspaper is not directly concerned.

The *University Missourian* will accomplish its purpose well if the men and women trained by work upon its staff are, by such training, better furnished for public service; if they shall go forth into the vocation of journalism better equipped to know and print the news of the day, the unbiased news, attractively, accurately, helpfully; if they shall be better enabled to make comment upon this news fairly, intelligently and with high ideals; if they shall learn that American journalism is, in its highest realization, schoolhouse and forum, teacher and tribune, a foe to wrongdoing, an aid to education, a force for moral progress, an exponent of true Americanism.

Dows, Iowa, December 11, 1908.

O. Byron Copper, De Soto, Wis.

My Dear Mr. Copper:—Having been a careful reader of your newspaper criticism department for some time, and taking a great deal of interest in your inspiring remarks, I take the liberty of sending you the three last issues of my paper, though I know it will hardly come up to the standard of those upon which you are called to pass judgment. These are, however, no special issues. They have been gotten up

(Continued on Page 64)

THE NEW MONOTYPE KEYBOARDS

BY LEWIS C. GANDY.

The four-page insert of the Lanston Monotype Machine Company in this issue of the NATIONAL PRINTER-JOURNALIST is one that should be carefully read by every newspaper publisher. The announcement by this corporation that its 'Style D" keyboard is ready for the market means the beginning of a new era in the printing industry.

The Monotype has always been in a class by itself so far as quality or versatility is concerned, and this new improvement now places it on a par with any machine on the market for quantity. The reason for this is because of the correct and rational arrangement of the letter-keys, which is the same as that of the standard typewriter. The keys of a typewriter are not placed on the board in a haphazard manner, or to humor any mechanical limitation, but solely for speed in operating. Measured by the yard-stick of experience, the standard typewriter arrangement may be considered perfect, and when the Monotype Company selected it for the fundamental principle of its new keyboard, it undoubtedly chose the fastest arrangement possible. This is proven by the fact that no composing-machine speed-records equal those of the typewriter. The reason for this is that all fast typewriter-operators use the "touch" system, which can be more readily acquired with the typewriter arrangement than any other.

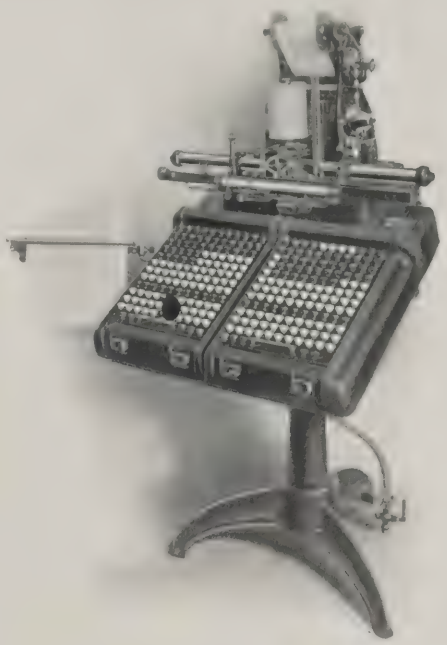
The Monotype Company has given its new keyboard an exhaustive trial in book and job offices and newspaper ad-rooms before placing it on the market. This was done, not to try out the key-button arrangement, for this had already been thoroughly tested by typewriter manufacturers, but merely to see if the mechanical operation was what the designers claimed for it. The results were most gratifying, and even exceeded the hopes of the manufacturers. Persons who were but indifferent operators on the old style board, developed surprising speed; experienced ones made records that were heretofore deemed impossible. There is a limit to the speed of a typewriter mechanism which many operators can exceed, but it was found that the escapement of this new board was too nimble for any pair of hands. No matter how quickly the keys were struck, the mechanism was faster. An operator must do better than 20,000 ems an hour to "hang up" this board.

This new keyboard does not in any way hamper the freedom of the Monotype user has heretofore had in arranging combinations of matrices for special work. By a clever mechanism that couples the key-buttons to the punches, entirely different arrangements of matrices can be used without in any way changing the button arrangement. For instance, should the operator desire to substitute bold face for italic, it is only necessary to slip under the right, or italic button-bank, a "key-bar frame" and go ahead—the buttons remain unchanged. The operator is never required to learn a new arrangement; when he has mastered the lower case he knows them all, for the caps, small caps, italics, and bold face are all the same.

Because of its versatility, its ability to handle any and all kinds of composition, the Monotype is the only machine to be considered by the owners of combination newspaper and job offices. Its sorts-casting feature alone is an asset that no user who has it would think of doing without. To anyone who is sufficiently interested, the Monotype Company is prepared to demonstrate that with its machine the user is as well equipped as a type-foundry to handle any kind of composition.

The "Style D" keyboard was constructed for fast work under ordinary conditions, but for those specialists in printing who demand it, the Monotype Company has produced that wizard-like mechanism, the "Style DD" keyboard. Here is a machine that is absolutely unique, for it will do two things at once. Designed for use in the Government Printing Office, to do away with double composition on patent-office specifications, its utility in other lines of work was at once recognized.

Except that it has two paper-towers and two sets of punches, the "Style DD" keyboard is the same in all respects as the "Style D," for it has the same key-button layout, the same key-bar frames. Striking a button on this board operates both sets of punches, or by means of a small lever, either set can be disconnected. With this board, it is possible to compose the same copy in two different sizes and measures of type at one operation. This is not all the "Style DD" board will do. Some of its feats are beyond belief. For instance, by disconnecting one of the paper-towers, a paragraph can, for example, be composed in 12 point type 60 picas wide. Disconnecting this paper-tower and bringing the other into action (as quickly done as striking a key), the next paragraph can be set in 6 point type 10 picas wide *and 6 alphabets can*



STYLE D.

be used in each point size, or 12 alphabets in all. Contrast this with hand composition, or the old machine method of setting the various point sizes, measures and faces, on different machines.

Aside from the merits they possess in design and operation these keyboards rank high as examples of thorough and painstaking construction. Even such a minor point as the adjustment for tall or short operators has been carefully thought out, for they can be raised or lowered the same as an office chair.

Before a Congressional Committee, Mr. Charles M. Schwab stated a few days ago that the high price of steel was mainly due to the fact that the makers were continually replacing large and expensive plants with more improved ones. This condition is particularly true of the printing industry. One of the greatest expenses the publisher has is the purchasing of improved machinery to replace otherwise good equipment. It is to this principle that American industrial supremacy is due however, and in designing the Monotype it was kept in mind that it should be so made that it would never be necessary to send it to the scrap-pile, but that any improvement could be added without rebuilding the remainder of the mechanism; and also that the burden of any new improvement should not be all borne by the purchaser. In line with this policy, the Monotype Company is prepared to make an extremely liberal allowance for its earlier style of keyboard in exchange for the new.

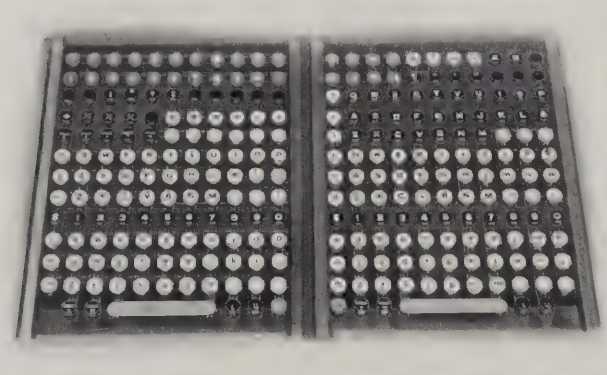
Without doubt a large share of the success of the Monotype is due to this extremely liberal business policy of its makers and the fact that they have always shown the utmost consideration for their earliest customers and co-operated with them in every way to keep their Monotype equipment up-to-date and to obtain under most favorable terms the improvements made to that machine.

Probably no machine manufacturer in the country has given more attention to this important point than the Mono-

Style D[1].

type Company. An examination of their price-list shows that every improvement made to their casting machine has been in such form that it could be applied to the earliest machines. Whenever an improvement is made, a loose leaf describing it is sent to each Monotype user, calling attention to its advantages and also quoting a special price for it. Thus, a few years ago when the display-type attachment was added to the Monotype, increasing its capacity as a type-caster to 36 point, this improvement was so made that it could be applied to any Monotype, and a special price was made on the necessary molds and the attachment.

In these days, when trade papers are full of articles by cost experts on the importance of printers charging off a



Double-Bank Keyboard.

sufficient amount for depreciation in their machinery because of its being made obsolete by improvements, it is especially interesting to note that at least one manufacturer of printing machinery has guarded its customers against this loss, so that instead of charging off a large amount for depreciation the Monotype user can, at a small cost, purchase all improvements and keep his equipment strictly up-to-date.

"The best of prophets of the future is the past." The printer need not therefore hesitate to install the Monotype for fear later improvements may make this machine out of date, because the Monotype Company has demonstrated by its actions that it is constantly striving to improve its equipment and that it is quite as anxious to share these improvements with all Monotype users.

Lewis C. Gandy.

IMPROVEMENTS BY CHANDLER & PRICE.

Cleveland, Ohio, November 16, 1908.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—In reply to your inquiry of the 14th, would say that the Gordon mechanical movements were so simple and direct they have never been improved upon in constructing a job press and probably never will be, but the Chandler & Price Job Press of today is far in advance of any job press heretofore manufactured, because while using the Gordon movements, the workmanship and design have been greatly improved.

Experience has taught us how to balance the parts of the press to obtain the greatest speeds with the least power and wear. Years of usage have disclosed the most vulnerable parts and enabled us to fortify such parts.

The machine as now designed will admit of a heavy squeeze on the impression without risk, and this, with the accuracy special tools have made possible in the finishing of parts, saves the pressman on make-ready.

The size of the discs, the travel of the rollers, and the size of the platens, have all been increased to help the pressman.

With the advent of halftone printing on job presses has come the Vibrating Riding Roller, giving the necessary increased distribution to the machine.

Therefore, we are able today to offer a press having mechanical movements that have been tested by many years, from which movements our designs have been developed to meet the requirements of high speeds, heavy forms, and halftone printing, with special care in manufacturing that the cost of the machine should—through a large output and special machinery, be kept down to a reasonable figure for the benefit of the craft.

Yours truly,
The Chandler & Price Co.,
Per R. J. Frackelton, Treas.

AN ITEM OF LAST AUGUST TO BE REMEMBERED FOR THE SUMMER OF 1909.

The largest gathering of children ever seen in Topeka, marked the Topeka *Daily Capital's* Children Day event. Seven thousand of them flocked to the local amusement park, Vinewood, with coupons clipped from the *Sunday Capital,* admitting them to the gates and also to all the inside attractions. Seven thousand post cards were distributed at the park, showing the picture of a little girl holding a copy of the *Capital,* with the words, "My mama let's me read it."

Two watches were given to girls and two to boys, for the best short stories on the subject, "How I enjoyed the *Capital's* Children's Day at Vinewood."

This typifies the sort of activity that gives Publisher Arthur Capper of the *Capital* his hold on the Kansas people.

It pays the publishers of home newspapers to keep in active, friendly relations with the people and now that 1909 has been ushered in, it is time to be looking forward to and planning events for the coming spring and summer.

IMAGINARY COMPETITION—ITS EVIL EFFECTS.

Continued from Page 47.

Competitor, to whom he does not intend to give the business. He gives Mr. Competitor the specifications loosely and says he does not want to pay much for the printing, that it can be a cheap affair. There will be no run-arounds of cuts. Exact amount of matter will be furnished for each page. He says there will be no altering required, in fact, he will furnish less matter than shown by sample, and that he need not figure on having any trouble with the composition. He can use a cheap ink, presswork only fair. The cuts must show up, of course, but it's not a very particular job, won't require much make-ready. He will furnish paper. He says he doesn't know whether the public will be interested in his proposition or not, so doesn't want to spend too much money. If it takes well he will have a lot of printing; but on this order he wants the price just as low as possible. He is not in a great hurry for the job, will be ready to place the order next week, but Mr. Competitor can have two months in which to fill it. Now for the written estimate. He says to Mr. Competitor this, "when you make your price, just say so many copies, so many pages, size 6x9, and write the title in estimate, so I won't get it confused with anything else. Don't bother me with any detail now. I know you will fill the order right." Mr. Competitor's price comes in $420. The price of the other printer to whom he intends to give the order you will remember was $475. Then the customer rings up his Printer and says he would like to see him. The Printer calls. The Customer informs him that he would like to give him the job but his price is too high. After a little discussion the Customer shows his Printer the Competitor's price of $420. Mr. Printer has all sorts of thoughts about his Competitor. He can not understand how his Competitor could fill the order for $420. Mr. Printer being quite persistent for his price of $475, the Customer finally says that he would be willing to pay some more to him, but he didn't see how he could give him the order when such a difference in price existed. The Printer finally agrees to take the order for $460, and goes away, harboring unkind thoughts for his Competitor, whose price was $420. The Competitor, when he calls, is told by this Customer, that his price is too high and the deluded Competitor goes away wondering how it is that the other fellow can print that catalogue for less than $420, when as a matter of fact he gets $460. This sort of thing, gentlemen, is going on all the time, and will continue to go on, and remain a great obstacle to our success in the printing business, unless we understand each other and understand men, and their thoughts, actions and motives. I contend we can never safely or justly criticise a competitor's estimate even if we see it, however much it may be made in detail. There is the meeting between buyer and salesman, the talking, the understandings, the personality that enters into the making of a price. When I see a price that looks low, experience has taught me, if the competitor is successful in business, that there must be some conditions I do not see through or understand. I could keep you here all afternoon citing similar cases and many that have other angles of deception. What I have said has and does happen and it nourishes thoughts that are nothing but imaginary. There is then such a thing as imaginary competition. In my judgment many a man has failed in business through his inability to recognize imaginary competition. Some of us in the business are just keeping our heads above water and others who are climbing up the ladder of success will never reach the top round unless we understand that the whole business world is permeated with imaginary competition. We should study human nature, we must cultivate our faculty of imagination. In dealing with customers, no matter in how high esteem we hold them, we should bring into play every part of our being and imagination. We should be able to see right through actions, read thoughts and consider motives. I dare say any man who keeps before his mind the phrase, "Beware of imaginary competition," and is thoughtful in handling it is climbing up the ladder of success, if only round by round. Those men are exceptional and few who can go faster or from bottom to top in a single bound.

But to our subject again, our imagination if not working correctly, leads us astray. Specifications are very often interpreted differently by printers and very often the inexperienced customer innocently gives them out differntly. Possibly one printer thinks 100-lb. paper will do and another figures on 80-lb. Possibly a sample of paper is given by the customer to each printer and the one calls it 70-lb. while the other calls it 60-lb. It requires no argument to show what results would arise from this difference of opinion as to weight of paper. The man who figures on the heavier weight will be inclined to wonder what can be the matter with the competitor whose price appears to him to be very low, and all on account of the paper. A great stir is caused in printing circles through an apparently low price when his price may be the right one per his specifications and understanding, so was the other price right per specifications and understanding. Now the question is, do we employ what God has given us as often and effectively as we should? Do we get our thinker to working? Do we imagine that this or that might be true? Do we remember that our competitor is in business to make money? Do we study conditions, specifications, prices, motives? Do we analyze words and actions? Do we know men? If we can know all these things, we will find that 95 per cent of what we have called too keen competition is after all only imaginary.

If a business man takes too seriously everything he hears and holds all words as conscientiously spoken, he will get into much mental trouble at least and think his competitor the worst man on earth.

A word on credit: Many a time a printer is told that a Competitor will give four months' time and is very hard after the business, when possibly the Competitor would give no credit at all. Just so with so many things that come up between printer and customer. Many customers, as I have said before say whatever seems to be the thing to say to gain their ends. They are fine men but they forget part of the time some of those ten commandments their mothers so anxiously taught them. However, and after all, to what extent should we complain—they are only practicing the poetic honesty. Right and wrong in this discussion, I leave to you, my argument is based on what seems to me to be existing conditions.

Now from the customer to our competitor. My experience leads me to think that we are too prone to wonder what our competitor is doing and will do. A Printer is asked to estimate on Linotype composition and learns that his Competitor is not very busy on Linotypes. The Printer thinks that while he would ordinarily charge 45c. per one thousand ems for the character of matter submitted, under the circumstances he will make the price 40c. per one thousand ems. But the fact may be the Competitor he has in mind may not be asked to estimate. This is imaginary competition. Again here comes another seeking a price on press work. This time a certain large pressroom Mr. Printer understands is idle and thinks probably is very, very hard after this order. So down goes the price to $1.25 per one thousand impressions, at which price no printer can make money and the experienced and successful printer knows it. Possibly that large pressroom is not aware of the order and is not figuring.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

GOING about the country, as I do occasionally, one sees all kinds of printing offices. And it is not difficult to make a fairly correct guess at first glance, as to the class of work which a shop is turning out.

Did you ever go into the back room of a second-hand store? If so, you have seen all kinds of worthless truck stacked around in distracting confusion—dust-covered, musty-smelling, antiquated. You have asked for some particular article, and the proprietor—who, by the way, is usually an unattractive individual, so slow-going that the very fact of his existence might almost be open to controversy—has assured you that he had it, but after a vain search has been obliged to acknowledge his inability to locate the desired object.

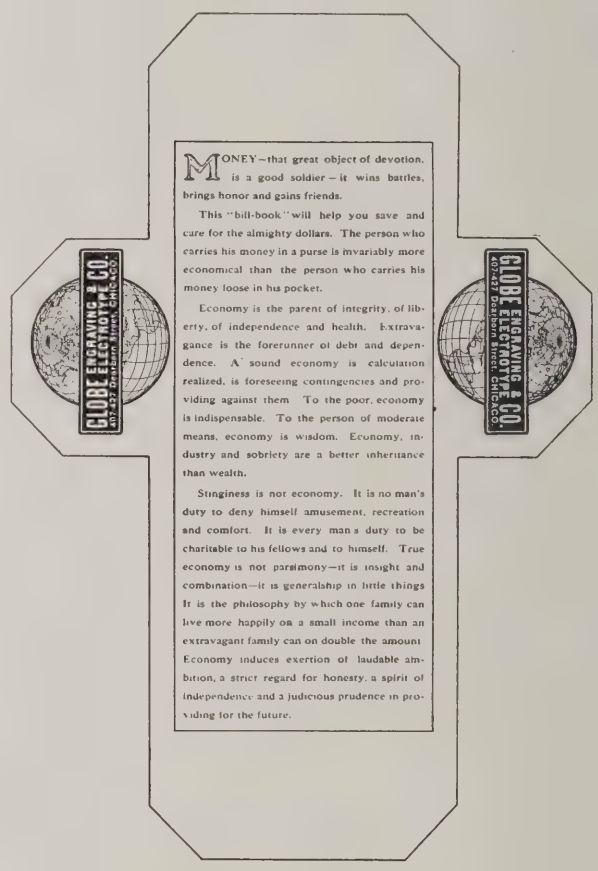
And so with many a print-shop. Cases of old type are piled up on the paper cutter and the table of the cylinder press. They have been accumulating dust for many months. You ask for the bellows to blow them out; but a search of a half-hour fails to disclose them. Workmen come and go as they please, do such work as actually has to be done, get through it any old way, and then sit around and discuss the ball game or give their views on how the "old man" ought to run an office.

It is idle to expect anything worth while to come out of such a place.

Not long ago I found some time on my hands in an Iowa town, and I bethought myself of the printing offices and started out to find them. The first one I came to was on a fair way to reach the junk-shop stage; but a new proprietor had just come into possession—a wide-awake, enterprising young man, who knew how things ought to be and was working toward a better order of things. In the meantime he was not anxious to have strangers see the place, and I was not invited to stay. So I looked up another place, and seeking out the job foreman, asked him if he did not have some work which he would be glad to have shown in the NATIONAL PRINTER-JOURNALIST. He had a dirty pipe in his mouth and his hat over one eye; and viewing me disinterestedly from the other optic he ventured the assertion that he "hadn't a d—n thing." My view of the shop led me to believe that he told the truth. There was one other shop in the town, but my experience thus far had been so discouraging that I went back to the hotel and waited until train time.

As I receive specimens of work from all parts of the country, I often conjure up a mental picture of the shops from which they come. I am writing just as the Christmas time is approaching, and that old question comes to my mind, "Can any good thing come out of Nazareth?" In that case good came from an unexpected source, it is true; but so miraculous was it that those who asked the question have not yet come to believe.

In general, we can judge things by their surroundings and the sources from which they come. And so, when I get a bunch of work that breathes a spirit of high endeavor and modern ideas, I picture an office with clean floor, cases dusted and in orderly arrangement, dead type thrown in, presses free from grease and dirt, and order and system generally prevailing.



GLOBE ENGRAVING & CO. ELECTROTYPE CO. 407-427 Dearborn Street, CHICAGO
MONEY—that great object of devotion, is a good soldier—it wins battles, brings honor and gains friends.
This "bill-book" will help you save and care for the almighty dollars. The person who carries his money in a purse is invariably more economical than the person who carries his money loose in his pocket.
Economy is the parent of integrity, of liberty, of independence and health. Extravagance is the forerunner of debt and dependence. A sound economy is calculation realized, is foreseeing contingencies and providing against them. To the poor, economy is indispensable. To the person of moderate means, economy is wisdom. Economy, industry and sobriety are a better inheritance than wealth.
Stinginess is not economy. It is no man's duty to deny himself amusement, recreation and comfort. It is every man's duty to be charitable to his fellows and to himself. True economy is not parsimony—it is insight and combination—it is generalship in little things. It is the philosophy by which one family can live more happily on a small income than an extravagant family can on double the amount. Economy induces exertion of laudable ambition, a strict regard for honesty, a spirit of independence and a judicious prudence in providing for the future.

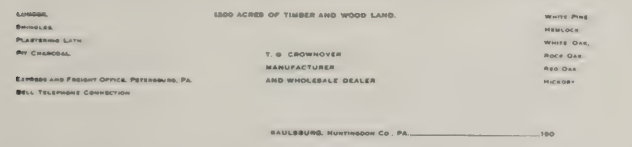
Some good philosophy on a little folder which the Globe Engraving Company is sending through the mail.

And I am willing to wager that I am right ninety-nine times out of a hundred.

Suggestions are coming in from some of our friends regarding a contest. They are good ones, and will no doubt help in framing up the final plan of action. In the meantime, let us hear from others. These letters are being kept on file, and when the time comes for announcing the contest they will all be gone over carefully and the line of the contest mapped out from them. This is to be your contest. I am simply taking care of the details for you, and I want it pulled off very largely after your own ideas. Just a few more letters of suggestion from readers of the department, and then we shall lay out the course and start the contestants on a lively sprint. I should like to be able to make full announcement in the February number. Let me hear from you.

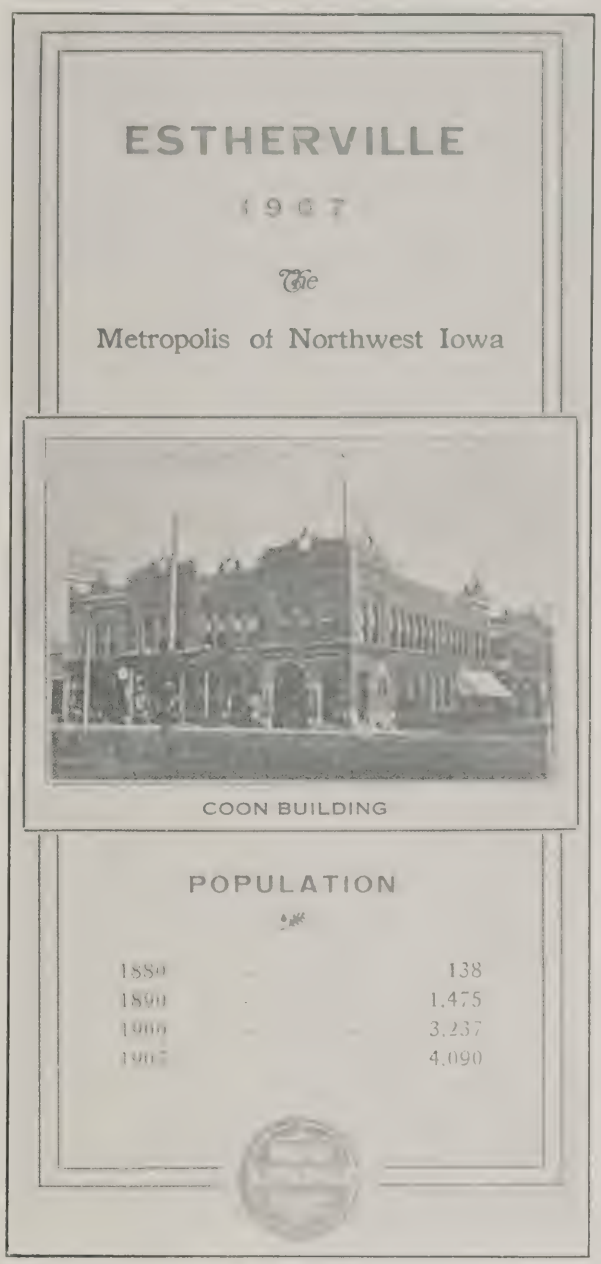
I have on my desk a little booklet entitled, "Engraving as Related to Creation of Advertising." It is gotten out by one of the big engraving houses, and is a delightful piece of work; but I have not taken it up to enlarge upon its beauty, but rather to use it as a text for a little talk to those of you who care to listen. My point, bluntly stated, is this, and it is one which I have hinted at before in these pages: The printer must constantly study to improve his work, or else see a large part of his business taken away from him by the engraver. I believe that in a great many cases the only reason the engraver gets the business is because there are not enough good printers to do all the work. The printer is too often content to take the cheap work, which can be taken in the morning, "slapped together" without taste, run through the press without make-ready, jogged up without drying, and delivered in the afternoon. And lo! with each printed job of this description the business of the engraver grows apace. The "go-easy" printer is the best friend the engraver has. It is not a difficult matter to convince even a careless customer of the superiority of an engraved job over a printed one of the "slapped together" kind. The intelligent, painstaking printer is the one who not only keeps the best business in the hands of the trade, but who gets prices for his work more nearly approximating those which the engraving house charges.

E. M. Krug, Huntingdon, Pa.—To my way of thinking the least satisfactory piece of work in the lot you have sent is the statement for H. E. Steel. And I probably should not have chosen it for censure had it not been in such good company. Your work is almost uniformly of a very good grade, well designed, well composed, well executed on the press. And I am pleased to learn that the jobs are your own work from start to finish. You say that you were limited in your choice of type to a very few styles, yet you have succeeded well in concealing the meagerness of your equipment. Much of your type is not of the latest design, but this is a fact which even a printer will scarcely notice, so well have you handled it. And



I might say for the benefit of those who see some of your specimens only in reproduction, that much of your beauty of handling lies in the smooth, clear-cut presswork you have done. I do wish, however, that you could have a different style of script to use. The one you have is rather inclined to "get on my nerves," no matter what the excellence of your presswork. The Crownover letterhead, which I am showing, was, I imagine, set in accordance with the eccentricities of the customer. It is certainly an odd piece of work, but could be rendered into a very acceptable head by the change only of the name into a larger size of the same series. There is an occasional point in your jobs which might well be omitted.

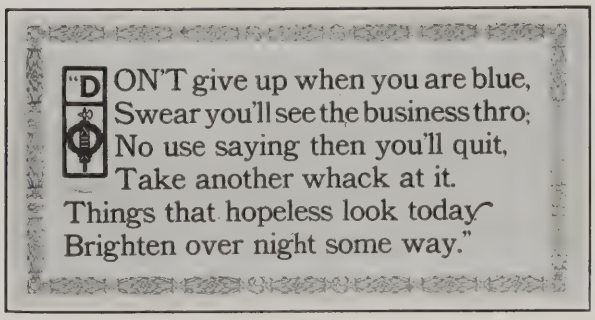
The *Democrat*, Estherville, Iowa, sends for criticism, a little booklet of twelve pages and cover, descriptive and illustrative of that little city, which is characterized as "the metropolis of northwest Iowa." The booklet came to me a few days after my return from an Iowa trip, in the course of which I spent a very few hours in Estherville. The time was long enough, however, for me to see something of the town, so that I recognize many of the illustrations shown.



The little book is a creditable production in every respect and ought to help materially in bringing new industries and new residents to the town, as its purpose seems to be. I think I have spoken before of the necessity of sending out printing which makes a favorable appearance in such literature as this, but there is no reason why it should not be emphasized the progressiveness of its industries, from such pieces of printing as this. They may be mistaken, to be sure; but the impression is there just the same.

Milton P. Morgan, Stockton, Cal.—Your wall card is another instance of the use of the union label as a part of the general design, which I spoke of last month. Its location under the decorative initial is a happy thought. The entire card is very well gotten up, though I should have liked it better with an initial from the same series as the body of the matter. Your bill head for the Sperry Transfer Company is very satis-

factory, though I believe I should have omitted the rules under "Draying and Forwarding" and put a heavier rule under "In All Its Branches." This latter



"DON'T give up when you are blue,
Swear you'll see the business thro;
No use saying then you'll quit,
Take another whack at it.
Things that hopeless look today
Brighten over night some way."

phrase, by the way, is scarcely an appropriate wording for this business; but that was probably not at the option of the printer. Your letter head in two colors is an odd mixture of old and new styles in type faces, and I do not believe the added color helps it in the least. It might be well to try taking out all the green except the double rule at the top over the names of the officers. I am sure you would like this much better. Your head set entirely in Bradley text might have some alterations which would vastly improve it. One or two lines

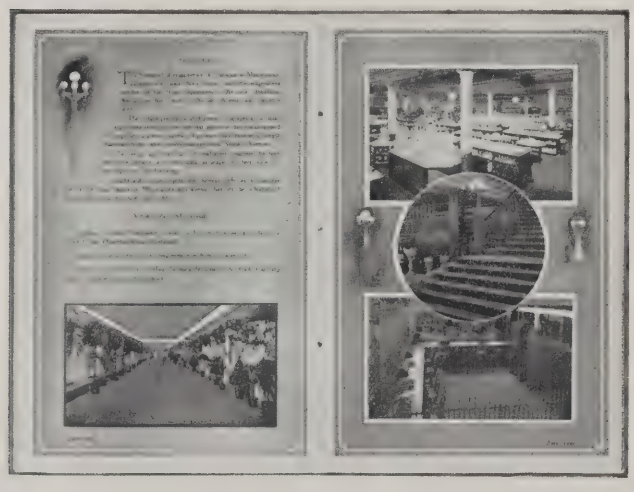
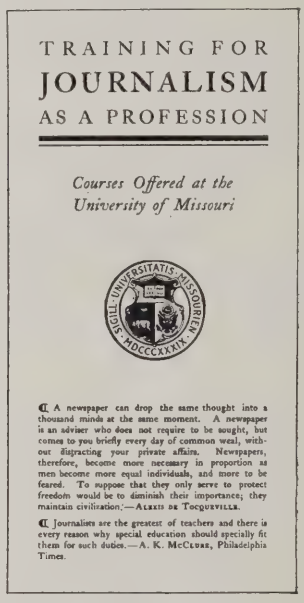
of this type are usually sufficient for any job. It is so condensed that much of it gives a job a decidedly striped, "up and down" effect. And especially where all the lines are short, as in this case, the result is not pleasing. Instead of the two boxes in the corners, two straight rules running clear across the paper, the lines set between them in a plainer and more extended type, would be much better, as well as taking less time in the composition. Then set "General Merchandise" in 10-point Jensen caps, or something of that kind.

The Hahn & Harmon Company, printers, Minneapolis, and the Barnes-Crosby Company, engravers, Chi-



cago, are collaborators on the book here shown. It is descriptive of the Donaldson store in the famous Glass Block at Minneapolis. The engraver has apparently been given carte blanche to follow out his every desire, and the result is a handsomely ornate piece of work. The stock is heavy white enamel, and the printing is all on a buff tint background. The cover is a heavy blue stock of cloth finish, embossed in white enamel.

My thanks are due to Walter Williams, editor of the *University Missourian*, for a couple of copies of that clean-looking daily, gotten out by the department of journalism of the University of Missouri. This first year the department has enrolled 66 students in a



TRAINING FOR
JOURNALISM
AS A PROFESSION

Courses Offered at the University of Missouri

¶ A newspaper can drop the same thought into a thousand minds at the same moment. A newspaper is an adviser who does not require to be sought, but comes to you briefly every day of common weal, without distracting your private affairs. Newspapers, therefore, become more necessary in proportion as men become more equal individuals, and more to be feared. To suppose that they only serve to protect freedom would be to diminish their importance; they maintain civilization.—ALEXIS DE TOCQUEVILLE.

¶ Journalists are the greatest of teachers and there is every reason why special education should specially fit them for such duties.—A. K. MCCLURE, Philadelphia Times.

course covering four years, under a faculty of experienced newspaper men. The paper is, to my notion, a model little sheet for the purpose, though I am sending it on to Mr. Copper for expert criticism. A little announcement of the course which was also sent me is cast in such a chaste professional mold that I must reproduce the cover. It is all on Alexandria deckle-edge book paper, the pages set in Caslon, with wide margins, and delightful little paragraphs set in the margin at unexpected places.

Sam H. White, Rock Hill, S. C.—Your design for the Love & Co. letterhead is certainly an ingenious one, and you are to be complimented on having worked it out so successfully. I am just enough of a croaker, however, to wonder if it is worth while. As I cannot reproduce the job, I ought to explain for the benefit of other readers that the head has the word "L U M B E R" in large letters extending a large part of the way across the sheet, on which is a panel containing the name of the firm. All except the firm name is built up out of brass rule and printed in a very light green. There will, I imagine, be a number of men who see it, who will be just obtuse enough not to catch the idea. And the job must have taken an amount of time out of all proportion to the price it brought. Mr. White says, however, that this cost less than making a cut, which was the customer's first desire; from which I take it that he was willing to pay at least a part of the price of a cut. Mr. White is making a special effort to educate his customers up to a desire for color work, in which he is meeting with much success.

PAST-PRESIDENT VARNER CONDUCTS ANOTHER SUCCESSFUL VOTING CONTEST

IT is a cold day when Past-President Varner, publisher of the Lexington, N. C., *Dispatch*, has not something in the air to keep up a lively interest in his paper. He has taken most of the prominent clergymen of his section of the State to New York as the results of voting contests, always going along, himself, as chaperon, and introducing them to all sides of life, in the great metropolis, and returning them safe and untainted and filled with new thoughts, to their flocks. That the columns of his paper have been enriched by the observations and comments of these educated and intelligent gentlemen, has been fully shown, at different times, in former issues of the NATIONAL PRINTER-JOURNALIST.

This fall, the contest was for the most popular six ladies of the six different counties covered by the paper. Those showing the highest votes were chaperoned on the trip by Mr. and Mrs. Varner. They visited Richmond, Washington, Philadelphia, Baltimore and New York, to their great delight, and were pictured and written about in the New York *Herald*, the New York *World* and other dailies, and the *Dispatch*, as a result, was most thoroughly advertised among all Eastern advertisers. There is nobody in New York, who read the great daily papers, that has not learned about the Lexington, N. C., *Dispatch* and its publisher. There is no necessity that we repeat, here, the methods that Editor Varner uses. These voting contests have been fully described before; if anyone wants further information, a letter to him will, doubtless, secure the same, for, though he is a very busy man, he is also generous, especially to newspapermakers. As he has just put aside the burdens of public office, after eight years of signally useful, successful service, he will possibly have more time for other affairs.

DECEMBER 13, 1908.

Seven Pretty Pilgrims Here from South

PARTY OF POPULARITY CONTEST WINNERS FROM NORTH CAROLINA.

We give a reproduction of a group portrait of the members of the party that appeared in the New York *Herald*. Of course, a reproduction from a newspaper print does not do justice to these Southern Beauties—bright intelligent, winsome young ladies, such as are the product of the States of genial temperature, where there is more of outdoor life the year around than farther north.

While a description of the contest is not deemed necessary, the following letters written by three of the young Misses will be found interesting, and suggestive of the educational value of such a trip to those who win the opportunity of participating therein and the useful service rendered the paper in awakening a real, active, kindly, business-bringing sentiment for it and its publisher:

WILL NEVER REGRET HER EFFORTS TO WIN.

Miss Clatie Foster, of Davidson County, says: "I must say that such a trip is a treat to any one, and I shall never regret the effort it cost me to win. I enjoyed the historic scenes in Richmond very much, and especially the sights at the city of Washington, our capital. Meeting the President of the United States was something worth while. Baltimore, which we visited after leaving Washington, is a beautiful city, and I only wish we could have had time to see more of it. I was happy to see the old Liberty Bell in Philadelphia, and the Independence Hall, where the Declaration of Independence was signed. I cannot describe New York except to say that it is the busiest place I have ever seen. The Hippodrome is the best show in the world. One of the most interesting places was Ellis Island, where immigrants from foreign countries are landed. I cannot tell all, for my letter would be too long, but I must say that my outing was a delight in every respect, and when we left New York for home, I thought how nice my trip had been and how fine it was to make such a trip without it costing a cent to me. Truly, I thank Mr. and Mrs. Varner and all those who helped me."

WASHINGTON THE BEST.

Miss Pearl Lyon, of Cooleemee, Davie County, gives Washington the place of honor among all the cities visited. "Washington is the prettiest and most interesting city of the five we visited, and the most interesting visit we made while in Washington was to Mt. Vernon, the home of Washington. While in Baltimore and Philadelphia only a short time, what we saw there was very entertaining. In New York, I enjoyed the trip trough the Singer building, the tallest in the city. We went to the top of the dome and viewed the whole city. If I had space I would like to write of other matters that impressed me. Mr. Varner proved a guide of the best kind. I have been greatly benefited by the outing and will always feel under great obligations to those who helped me secrue the tour. In conclusion I want to thank again the *Dispatch* and all."

MISS NENA KOONTZ' IMPRESSIONS.

Miss Nena Koontz, of Davidson County, says first and foremost: "I wish to thank each and all who helped me in the contest conducted by the *Dispatch* for the free outing tour," and continuing, in speaking of what she saw in Richmond, says: "We went through the medical college and saw all kinds of skeletons, and then into the dissecting room, which was the awfullest sight I ever saw! From the top of the city hall we viewed historic Richmond, and then took up the city in detail, going to many places. In Washington the first thing that impressed me was the magnificent union station, the finest in the United States, built of solid marble and stone. In the National Museum we saw everything imaginable. Washington's home at Mt. Vernon is a beautiful old place. It was very interesting to me to see Fort Washington, where the great battle was fought; to see the very home of the father of our country; the old kitchen where he ate, and where his fine dog carried off the ham; the room where he died; his grave, which is near at hand; the old barn, the dog kennels, built in 1733, and many other things. We met our Tarheel representatives, Congressman Page and Senator Simmons, and they introduced us to President Roosevelt, who is a jolly fellow and a fine president. We saw Congress in session and heard Joe Cannon speak, tell jokes and have a good time. The Congress art gallery is filled with all sorts of pictures. The Zoo Park is a lovely place, where every variety of living thing is to be seen. I will try to tell more some other time about New York and its wonders."

THE WHIRL OF NEW YORK.

Friday at 5 P. M., having been in three cities that day, the young ladies arrived in the metropolis, America's greatest city—New York, with its teeming life and manifold activities. New York is a world that must be entered and seen and felt before any idea of its bigness can be gathered.

The first night in New York, "The Three Twins," was seen at the Herald Square Theater; from there the contestants went to Madison Square Garden, and viewed the six day bicycle race, where 20,000 people were seated, deeply interested in the continuous race.

Saturday afternoon the ladies were taken to the Liberty Theater, to a matinee, and witnessed the play, "Via Wireless," a beautiful love story dramatically presented showing how wireless telegraphy is used on ships at sea. There is a storm; a boat is sinking, and is calling for help. Vessels receive the message in mid-ocean, hurry to the rescue, and save the perishing.

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH,

Address all communications for this department to 314 Linden Street, Scranton, Penn.

The busy buyers shun his store—
Its sleepy precincts they despise;—
He rests in quiet evermore,
Because he doesn't advertise.

MEN who succeed are unwilling to admit that there is any such thing as luck. Men who fail are sure that luck has been against them. The truth, probably, lies somewhere between the two extremes. But there are more lucky advertisers than there are unlucky ones; failures among persons who do not advertise than among those that do. This is especially true of printers.

Much money is wasted through bad advertising; but this fact is no argument against advertising. The lesson it teaches is that bad advertising does not pay and therefore should not be done. No arguments are required to prove that good advertising pays. It will not pay to tell one story in your advertisements and another in your shop. If your statements disagree, your customers will discover it without the aid of a detective.

Opportunities are not usually labelled.

The brightest ideas are not always found in the biggest ad.

An idea is of no value, no matter how practical it is, unless it is put to practical use.

Many a man who claims to be self-made owes his success to competent subordinates.

"Good wine needs no bush" may have been true once, but the proverb is so no longer. Good merchandise of any kind needs good advertising.

The buyer of a worthless article soon forgets the smallness of the price.

Here (1) is the design on the manila envelope which carries marked copies of the *Housekeeper* of Minneapolis, Minn. Doubtless, the picture of the young lady was taken from a cover design of that magazine, but how she graces the envelope, with her red ribbon and roses! The design is a good example of whiting-out, and is, for the most part, delightfully dainty. And as the line, "Marked Copy," is in red, the grossness of the extended Gothic in such company is largely removed.

An ad is judged by the company it keeps.
A printer is known by the advertising he does.

THE UNITED STATES MAP IN PERIODICAL ADVERTISING.

Of course it is perfectly right and proper that the United States flag should not be used for advertising purposes, but let us hope the United States map will never be barred. Some of the railroad maps naturally are somewhat different from some of the others in regard to the shortest distance between two points, but this may serve to cheer the traveler on his way. Such maps as those shown here as 2a, b and c should, however, give a good many of the people of the U. S. A. new pointers about their country, which have won marked popularity of late. The third map (2c), the most elaborate of all, is contained within two great green covers with no printing on the outside, but with considerable information about the *Woman's World* on the inside. And yet in no place in the booklet is it mentioned where the *Woman's World* is published! Over this map is a sheet of transparent paper, with a big red oval, in the center of which is this information: "Over 80% of the 2,000,000 circulation of the *Woman's World* is within this circle, [a "circle" whose radii are by no means equidistant from the center thereof] and surrounds the centers of all the great industries of the United States." Needless to say, both Scranton and Chicago are within this oval space. It can scarcely be studied to excess.

Success Magazine, which, according to a mighty bright advertising phrase-maker of years agone, to be successful you must read, shows a map rather more roughly drawn than would be expected from a magazine employing so many top-notch artists. And yet it tells its story to the prospective advertiser pretty well. That of the *American Farm World* (b) gives us rather more definite information as to the States, and may be taken as the second lesson. This forms the center of a very attractive poster-circular—a sort of advertising comparatively cheap as compared with the booklet, which is becoming popular with many discriminating advertisers.

TO BE FAIR, THE LETTER-HEAD SHOULD BE SHOWN, IN COLORS, BUT MERE BLACK WILL NOT DO IT JUSTICE.

This (3) is the envelope design of Haag & Parris, of Philadelphia. It has the outer rule, the "H" and "P," the rules under "Printers and Publishers," and the line containing the street address in red. And the remainder is green. Not a very original style of design, perhaps, but a worthy arrangement of a style that has not outlived its usefulness yet. The color-scheme is out of the ordinary for such a piece of work, and the whiting-out, in connection therewith, gives an addition to the brightness of a job where the glossiest of carmine and the greenest of green are used. How different the style from that of the expensive letter-head. This is in red embossed lettering bordered with gold, and black curlycues bordered with gold, and a green border around the firm name, with white embossed fancy work running over it, and a buff background, and heavy Gothic type in black, and heavy Gothic type in red, and a light-faced type of which I forget the name in black, and a black embossed "Philadelphia" on black, and all around it some fearful cloud and scroll designs in black, and other things in red and green and black, the whole design taking about half the width of the letter-head. Think of the cost of it—and yet to my mind, it is altogether too ornate, too full of too many incongruous parts. Now, why wasn't the man who set this simply strong envelope design allowed to do the letterhead?

The expression, "When you think of printing, think of us," is fine. Would it had been put in straight printing!

A WEDDING IN THE PUBLISHING FIELD.

There has been a consolidation of those two excellent papers, the *Farmers' Advocate* of Topeka, Kansas, and the *Kansas Farmer* of the same city. The announcement of this event was made in the December 10th issue of the *Kansas Farmer*, on the first page. At the bottom of the page was the striking cartoon

There has been a Wedding in Our Family.

No. 4

shown herewith as 4. The cartoonist is Albert T. Reid, though you might not know it from his eccentric signature. He is one of the great cartoonists of the United States, and has proved himself, during the last few months, to be one of the most prolific. I think his tendencies have been mainly Republican—some of his syndicate work having regularly appeared during the late campaign in the *Tribune* of this city. But, speaking of this particular cartoon—is it not an especially felicitous piece of publishers' advertising upon such an event?

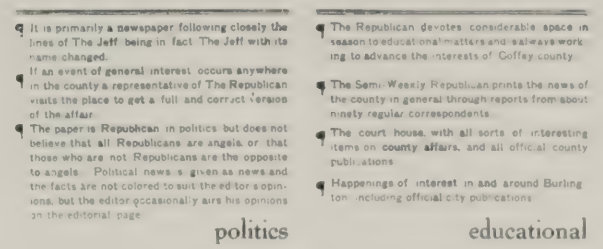
LOOKS AS IF M. E. BUDD HAD SOMETHING TO DO WITH IT.

This (5a) is the first page of a folder issued by the *Republican* of Burlington, Kas. The wording is red, and the old familiar picture of the antique lamp upon

A Little Light
on a Great Newspaper

5a

the book is green. But here the lamp has a modern attachment— looks like a very superior gas mantle, judging from the illumination—and it and the illumination are red. The folder, which is deckle-edged, measures 4x14. There are three folds, which make eight pages all told. Two of these are shown as (5b), and give a good idea of the general layout of the pages. The rules, the paragraph marks, and the lower-case explanatory lines are red; the remainder is green. There is a



¶ It is primarily a newspaper following closely the lines of The Jeff being in fact The Jeff with its name changed.

¶ If an event of general interest occurs anywhere in the county a representative of The Republican visits the place to get a full and correct version of the affair.

¶ The paper is Republican in politics but does not believe that all Republicans are angels or that those who are not Republicans are the opposite to angels. Political news is given as news and the facts are not colored to suit the editor's opinions, but the editor occasionally airs his opinions on the editorial page.

politics

¶ The Republican devotes considerable space in season to educational matters and is always working to advance the interests of Coffey county.

¶ The Semi-Weekly Republican prints the news of the county in general through reports from about ninety regular correspondents.

¶ The court house, with all sorts of interesting items on county affairs, and all official county publications.

¶ Happenings of interest in and around Burlington including official city publications.

educational

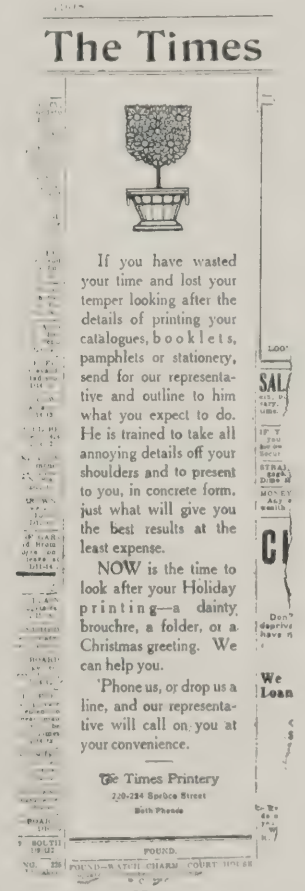
wide, wide margin at the bottom, but very little at the top and sides. Methinks this production beareth ye earmarks of one Most Easy Budd. Hope to hear from him direct this Xmas.

GOOD PRINTING—ADVERTISING IN A GOOD NEWSPAPER.

The *Times* Printery of Scranton, Pa., uses the want page of the *Times* newspaper of the same city on alternate days, (why not every day?) to show what that portion of the great *Times* establishment can do in the line of reaching the public. The ad always looks particularly dainty and debonnair in the midst of solid nonpareil want ads and the other small advertisements which in-



The Times

If you have wasted your time and lost your temper looking after the details of printing your catalogues, booklets, pamphlets or stationery, send for our representative and outline to him what you expect to do. He is trained to take all annoying details off your shoulders and to present to you, in concrete form, just what will give you the best results at the least expense.

NOW is the time to look after your Holiday printing—a dainty brouchre, a folder, or a Christmas greeting. We can help you.

'Phone us, or drop us a line, and our representative will call on you at your convenience.

No. 6

cline to a heavy display—and the wording of these ads is certainly a most attractive feature. Here is one example (6). In such brief width, it often happens that a word must be spaced between the letters. Here the words so spaced are appropriate, as the *Times* Printery makes a particular specialty of booklets, and is certainly a worthy exponent of the art of printing.

The words "The Times" have nothing to do with the ad. It is simply part of the across-the-page daily announcement of the *Times* newspaper..

FROM THE HOOD ART PRESS.

As my good brother Hanson appears to be getting the most of the printing advertising lately, and as he likewise appears to have missed a worthy production of an old friend, J. Albert Hood of New Jersey, I am constrained to review the elaborate menu he recently prepared for the Monmouth County Dental Society. It is enclosed in light brown covers with a gold seal and protruding bits of red ribbon. The inside title-page, (if the expression be correct as regards a menu card) is shown as (7a). The ornament is of a brown which in-

at Eight O Clock

7a

clines to orange. The wording is brown. The rule border is green, and there is a nice wide margin on the cream stock. The booklet has eight pages (but you must understand that the second and third, and the sixth and seventh, are blank, and that the leaves are uncut. But wait!—we are really forgetting the menu itself. This is contained within another eight pages of the same style, in the center of the other pages. The other pages, let it be explained, are 9x6, and are contained by a cover rather larger. The small pages, which have the list of members, the officers, and, on the two central pages, the menu, are at the top of the booklet, and if there is a black mark in the center of the reproduction, you are to

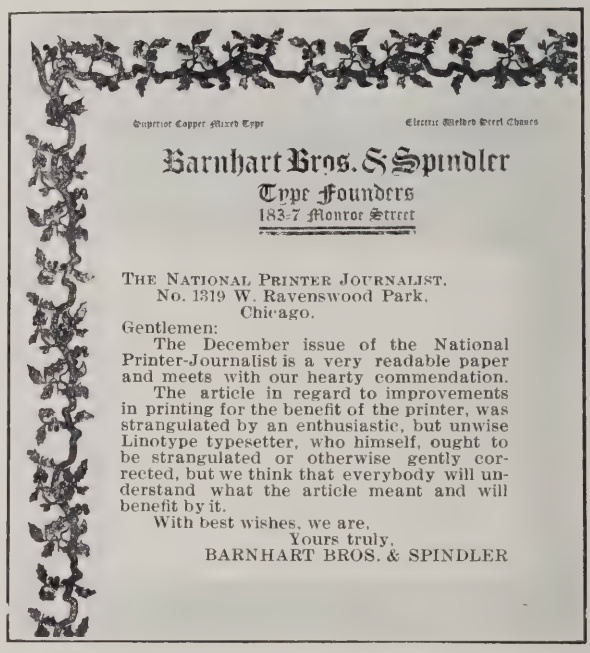
understand that it represents the cord. The center of the booklet is shown as (7b). The rules and the ornament are green, the remainder brown. I never thought much of that particular ornament at the bottom of the smaller pages; but if ever I liked it, it was here.

It is certainly a splendid piece of job work—artistic as to choice of type, color of inks and stock, style of pages, and every other detail. Mr. Hood made a marked success as a newspaper publisher before he ventured very far afield in job work, but he is certainly right at home in his new line of work—and blessed is the man who has found that his work lies in two lines.

"HEARTY COMMENDATION"

BENEFIT THROUGH UNDERSTANDING



Superior Copper Mixed Type — Electric Welded Steel Chases

Barnhart Bros. & Spindler

Type Founders

183-7 Monroe Street

THE NATIONAL PRINTER JOURNALIST,
No. 1319 W. Ravenswood Park,
Chicago.

Gentlemen:

The December issue of the National Printer-Journalist is a very readable paper and meets with our hearty commendation.

The article in regard to improvements in printing for the benefit of the printer, was strangulated by an enthusiastic, but unwise Linotype typesetter, who himself, ought to be strangulated or otherwise gently corrected, but we think that everybody will understand what the article meant and will benefit by it.

With best wishes, we are,

Yours truly,

BARNHART BROS. & SPINDLER

INFORMATION FROM VAN ALLENS & BOUGHTON PROMISED.

NEW YORK, November 16, 1908.

National Printer-Journalist, West Ravenswood Park, Chicago, Illinois.

GENTLEMEN:—Replying to your 14th instant favor, we are making many changes from time to time in the construction of our presses, and sometime in the near future we may send you a circular that will give you some idea of what we are doing. As to writing a special article, we could not think of it.

Thanking you for your courtesy, we are,

Very truly yours,

VAN ALLENS & BOUGHTON,

By C. F. Boughton.

"CANNOT AFFORD TO MISS A SINGLE COPY."

NEPONSET, ILL., December 31, 1908.

National Printer-Journalist, Chicago, Ill.

DEAR SIRS:—Please find enclosed check for $4.00 to balance our subscription to December, 1909.

I wish to keep posted on the matters pertaining to the National Editorial Association and cannot afford to miss a single issue.

With kind regards and with the compliments of the season to yourself and family, I am, Fraternally yours,

A. E. STETSON.

John Wedda, former city editor of the Milwaukee *Kuryer Polski*, has accepted a position as general manager of the *Dziennik Narodowy*, a Chicago Polish daily.

PAST-PRESIDENT VARNER CONDUCTS ANOTHER SUCCESSFUL VOTING CONTEST.

Continued from Page 59.

EATING CHOP SUEY.

The wonders of Chinatown came in for inspection Saturday night; the joss house, or Chinese church, was explained; a Chinese theater was visited, and the young ladies were informed that it takes six months to complete a Chinaman's play on the stage, and weeks are consumed in presenting a single act. The play wasn't especially interesting and the party went to a Chinese restaurant, where the dishes of the Celestials were tasted, chop suey, too, and Chinese tea. Then down to the Bowery, where the other half dwells, and then to bed.

Sunday, the 13th, a Catholic cathedral was visited, and in the afternoon all went to Coney Island, the greatest amusement resort on earth. That night an effort was made to hear the noted Gipsy Smith, at the Fifth Avenue Presbyterian Church, but the building was packed, the doors locked and enough people on the outside to fill two such churches. Hence no sermon. The remaining hours till bedtime were taken up with a tour of the St. Regis hotel, from kitchen to roof, where rooms are worth from $5 to $125 a day, and where, in a private dining room, there is the only solid gold tea service in the world. And the ladies saw that.

On the 14th the party took the only and original "Seeing New York Automobiles," and went everywhere. What was seen would fill a book. Suffice it to say, they saw New York.

AN IMMENSE PLAYHOUSE.

In the afternoon the Hippodrome was visited. Now the Hippodrome is a wonderful playhouse. There are 5,200 comfortable seats in it, and it is filled with sights. One thousand persons take part in the plays. There is a genuine circus under the roof. It was shown how, in 1950, the nations' airy navies will grapple in the central blue—fight in the air, in other words; and how, so wonderful will be the progress of science, that a man walking along a street may stick his staff into the ground, ring its telephone bell, and talk to all the world. Hello, London," he will say, to a man in that city, and London will answer on the waves of electricity! In the Hippodrome, there is a band of elephants—not a herd, but a band, for the pachyderms play on musical instruments, and dogs and horses perform, and animals of all kinds cut capers that make the brain reel with astonishment.

Monday night the *Dispatch* party occupied boxes at Belasco's Stuyvesant Theater, and witnessed "The Fighting Hope," in which Blanche Bates stars, and this was greatly enjoyed.

Tuesday morning a skyscraper was "done." This was the Singer Building, 612 feet high, with 54 floors. It is a feature of New York.

It was discovered that Mr. J. C. Buxton was chief engineer of the electrical equipment, but he was not the big Winston lawyer. Mr. W. R. Warner was the guide and he carried the party from the basmenet to the 53rd floor. Everything was shown. From the dome of this building points in New Jersey and far inland could be seen. All New York lay spread out beneath; the shipping, the rivers, the contour of the islands, etc. Every point was explained by the guide. The trip costs 50 cents; it is worth ten times that much and no sightseer should leave New York without going through the Singer Building.

Tuesday afternoon a trip to Ellis Island, where the immigrants land, seeking new hope and life in the land of freedom, and a tour of the skyscraper district and Wall Street, home of money lords, took up the time.

Tuesday night the party was taken to see a modern newspaper, the *World*, and through the courtesy of Mr. Don C. Seitz, went all over the Pulitzer building. The *World's* presses have a capacity of 1,200,000 8-page papers an hour, as many as the *Dispatch* turns out in three years! It takes 65,000 pounds of paper to start the *World's* presses, and 40,000 pounds of metal are used in a single edition. One single edition of the *World*, if spread out, would reach 6,380 miles! If a year's supply of paper were loaded on trucks, six tons to the load, the trucks would make a procession 77 miles long.

Such is the *World*—such is New York. Everything is as big as all out doors—and then some.

From the *World's* building all went to the American Theater, and saw high-class vaudeville. The American is on West 42nd street, and the management was exceedingly kind, as were all other theater managements whose plays the party saw. Fact is, nowhere in all New York did any one of the party meet with any unpleasantness and no unkindness. The newspapers teemed with notices of the party, some made of the fancies of idle but humorous brains, and others written to laugh at provincials, but all were kind, for a' that, and folks knew the party of southern ladies was touring their little old town.

BOUGHT NO DIAMONDS.

Wednesday morning Tiffany's, Tiffany's of the diamonds, was paid a visit, and one diamond was gazed at which is worth a round hundred thousand dollars. Beautiful, but, whew! One hundred thousand for a stone the size of your thumb! Nobody wanted it at such a price, and hence let them keep it.

One of the biggest features of the whole journey was a tour of R. H. Macy & Company's immense department store, where you can get anything you can think of and lots of things you can't think of. Is it a bushel of peas? Or is it a threshing machine- Bear meat? Sugar cane? O, anything! Seven thousand people work in that one store—more than all the men, women and children, horses, cats and dogs in Lexington township! This store is owned by Nathan Strauss, a good democratic gentleman, who tried to elect Bryan in New York. Mr. D. Weisberg, an employe, most courteously guided the party.

Wednesday, at 4:25, New York was left and the ladies boarded No. 37 for home, arriving next morning about 8. On the way, the party ate supper in the same diner as Mrs. Taft and a party of friends, who were en route to Spray, N. C.

THE GREATEST TRIP.

Thus ends the greatest trip the *Dispatch* has ever given to its subscribers. It was carefully planned, and executed according to plans. There wasn't a hitch, not a jar. The entire journey was a continual round of pleasure, information, sight-seeing, education. The trip was worth ten times its cost. The guests of the *Dispatch* enjoyed it no more than did the *Dispatch* representatives along with them. The *Dispatch* is proud of its fifth annual contest, and takes pardonable pride in the fact that it ends a series of free trips that have given more than 100 men and women a rest from toil, a chance to see the world, to acquire education, and to make their lives happier and brighter. We are looking forward to more of the same kind of work.

EDITOR VARNER'S METHODS WIN SUCCESS—A MUTUALITY OF HELPFULNESS AND OF BENEFITS.

The following extract from another page of the *Dispatch* shows that the methods used by Editor Varner bring continued success and good will:

The *Dispatch* takes pleasure in announcing to its subscribers that it will add a new Standard Babcock press to its equipment and that the addition will be made within three weeks. This improvement is on account of increased business, and also because it is the aim of the management to make a better paper during the year 1909 than has ever been made in the past. As fast as money is made out of the paper, it is turned back into the office, new equipment added and better service furnished our subscribers and readers.

The new press will make a paper seven columns wide, instead of six, as now; and this will add eight columns to each eight-page paper. It will give our readers much more reading matter, and we can carry more of the week's news each week. We feel sure that the change will be appreciated. We take pride in making it. The one aim of this paper is to give to the public as good a weekly paper as it is possible to give; and we feel that we have been doing that with our present equipment. With the new equipment we can do much better.

At the same time the press is placed, a new folding machine will be put in.

In this event we shall expect our loyal subscribers to help us out. When we placed the Linotype machine at a cost of about $4,000 nearly two years ago, we called on our readers to help us out, and actually they responded so liberally that we paid for it within a few months—with subscriptions. The *Dispatch* has the best clientele on earth.

What we wish to do is to give the folks a perfect paper. What we wish them to do is to help us carry out this ideal. If they will help us, we will give them a better paper; and coming from each one of the thousands of readers, the payments will fall lightly on all. The more help we get from our subscribers, the more help we can give them, and the better paper we can make, and the more good we can do.

In other words: Every cent paid into the treasury of the *Dispatch* goes back to our readers in the shape of a better newspaper.z

NEWSPAPER CRITICISM

(CONTINUED FROM PAGE 52)

under most strenuous circumstances, amid a rush of job work and shortage of help. The mechanical work is all done by my foreman, F. M. Black, beside which he has a full line of job work to attend to and the looking after the mailing list. I do claim, however, that for a paper published in a village of nine hundred people, it will come up to the average. Our average publication for the year ending December 1st, has been fourteen pages, and we have never issued a special or souvenir number since I have been running the paper. I must crave your leniency on my local page, as I know the small cap features are a trifle back-numbered, but in my case I can devise no better make-up for that page.

Fraternally yours, H. G. ZIMMERMAN.

The Dows, Iowa, *Advocate*, shows the "strenuous circumstances" referred to by Editor Zimmerman in the above letter, all right, but with the clean front page, the excellent local page, the abundance of headed articles and news stories, together with the correspondence letters and editorial department, my verdict could not be wholly adverse. That which keeps the average down in all the various departments of the country newspaper making, is too much work for each man to handle, more than any thing else, I believe, and if there is anything wrong with this little paper, I should judge that were truly the cause thereof. It is a deplorable condition, but it will continue to happen so long as newspapers continue to be made, I suppose, under present systems. I have seen many worse papers, however, than this one—yea a thousand times worse, Brother Zimmerman, and while Foreman Black's ads might not win him any medals for looks, some of them are creditable as rush specimens. You say you cannot find anything to take the place of the featuring of your locals with small caps. Why don't you try setting them exactly as you do your personal mention columns? The small caps are a time-killer both in composition and distribution, and the appearance is so strictly suggestive of an obsolete fad that there is really no advantage in the practice, no more than in that of using the brass dashes between the locals, which is altogether superfluous, extravagant of time and hardly ornamental. There may be other features of your paper deserving censure, and if you will favor this department with another copy or two in the future, I shall be pleased to consider them then, as I find it hardly practical here to devote too much of my time and space to the discussion of a single specimen in one installment.

Circulation is what counts in giving advertisers results. The bigger the circulation, the more infallible and the quicker the results. That's why the Philadelphia *Bulletin* enjoys such an enviable reputation as a "never failing" quick business producer for advertisers. From their latest mailing card I note the circulation for October was 229,589 copies a day, exclusive of all damaged, unsold, free and returned copies. Forsooth, that's growing some!

GRAVETTE, ARK., December 10, 1908.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Have been reading your criticism on newspapers and display ads in N. P.-J., and have decided to send you a copy of a full-page ad—from which we also ran a few thousand bills—to see if it was worthy of your consideration. I set the entire ad in a rush and did the best I could in an office where brass rules are short.

Hoping to have the pleasure of learning from you through the N. P.-J., in a little while—or by letter—I beg to remain,

Yours truly, JOHN D. SWEENEY.

It affords me pleasure to reproduce Brother Sweeney's advertisement specimen herewith as Exhibit 11. First of all this specimen shows good constructive ability, tasteful selection of type and much care in composition. The spacing (or distribution of white) has

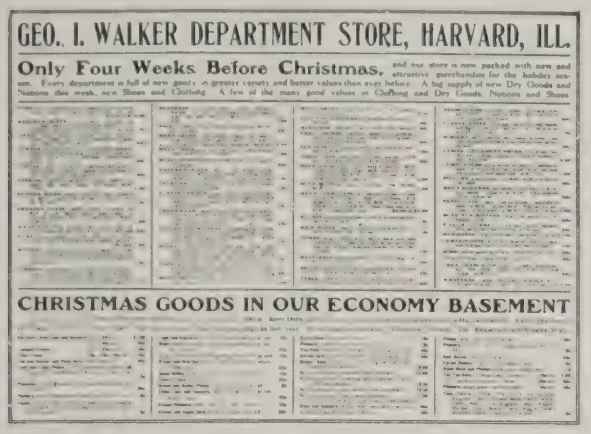
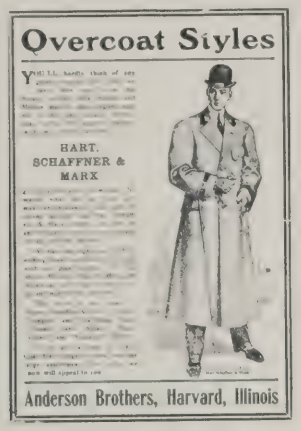
struck some at the time that I was saying a good deal; but I am sure I scarcely did the subject justice. I have

never gotten a neater, more cleanly impressed paper, nor one with a more modestly made-up front page. And as for contents there is none can excell the Har-



No. 13

vard, Illinois, *Herald*. I am pleased to think, too, from my inspection of the several copies at hand that the *Herald* of today is somewhat better in point of makeup and advertisement composition than the *Herald* of a few months back. I hope to see it soon made up strictly in compliance with the plan of this department—all ads to the right of the pages, graduated with the smaller specimens toward the top. This month I content my-



No. 14

self with the showing here of three strong, neat advertisement specimens from this handsome paper. (Exhibits 12, 13, 14.)

OLLIE, IOWA, December 7, 1908.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Am mailing you under separate cover some marked copies of my paper, the *Observer*, for your perusal and criticism. Have marked several ads for your special notice and criticism. Am not now a subscriber to the PRINTER-JOURNALIST, but hope to be soon—as I saw my first copy only a day or so ago. It's a dandy. I am located in a small town of about 275 population—with a small outfit. Am a printer-editor, doing all my own ad and job work. I "plead guilty" to the charge of having ads on front page, but can not help it at present. Wish I could, and assure you that I intend to reform as soon as possible. If any of my ads reach your approval and can be used in PRINTER-JOURNALIST for public criticism and to the benefit of the craft, you certainly have my permission, in fact, would be pleased to see some of them in this valuable journal.

Am enclosing stamp for personal criticism and reply upon those ads marked; also general criticism of my publication.

Fraternally yours,
B. F. WNOROWSKI.

It is evident that Brother Wnorowski is laboring under difficulties, as so many of us have had to do in the earlier part of our careers—or during the earlier years of our paper's lives. The *Observer* is a five-column quarto, the outer folio being home-printed, with a ready-printed folio inside. Editor Wnorowski is printing his little paper—or rather that part of it which he does print—on a press which, I take it, is not large enough to take a full sized five-column page, so as a consequence the home-printed type pages are much shorter than the stock would admit, much shorter, in fact, than those which are ready printed. This of a certainty does not add to appearances. Another disadvantage strongly in evidence is the fact that an inferior lot of type is necessarily in use, which makes really

pleasing, or at least wholly pleasing, work hardly to be anticipated. And so I might go on enumerating the causes, as they appear to me, of defects. But what is the use? The *Observer* is not up to eminent standards, which can all, or nearly all, be reasonably explained by some natural cause—a cause for which the proprietor and workman are not responsible. What is true of one department of this little sheet is pretty nearly true of another, and, therefore, any extensive discussion of the advertising specimens in the *Observer* becomes pur-

poseless and without effect, simply because in the main better results would probably be hard to accomplish without better conditions, and it is not always possible to have better conditions immediately in small offices. I am going to show, however, what I consider the two best ad specimens in this little paper, namely Exhibits 15 and 16. In the first of these there is manifest a good idea of design, but a nice massing so as to produce sufficient contrast has not been attained. This is achievable only by the contraction of the darker masses with-fluent distribution of white about them. The second specimen is better as to design and treatment, although here, too, we find the matter set in such a large face and with so much white between lines that the general effect is an even gray throughout, whereas the object should be contrasting black and white. Now that the *Observer* has gotten over the formalities of an introduction, I trust it will make frequent future visits, during which every effort shall be extended to instruct its makers and improve its tiny pages.

THE PASSING OF H. C. PAGE, AN HONORARY MEMBER OF THE NATIONAL EDITORIAL ASSOCIATION

ALL who attended the memorable convention of the National Editorial Association at Asbury Park, N. J., in 1894, will remember Col. Harry C. Page. He delivered the address of welcome on behalf of the Govenor of the State, and struck a keynote of fraternity and patriotism that had its full force later at Freehold and the Monmouth Battlefield. Among other things, he briefly said: "You come from the far West, the sunny South, the busy East and the vigorous North to this city by the sea. You will find our State rich in Revolutionary reminiscences, teeming with industries, and blooming agriculturally. Its history, its career as a commonwealth of our common country need no eulogy from me; its record is written in letters of living light. To this State and its patriotic surroundings, you are more than welcome."

The members of the convention, numbering between five and six hundred, passed July Fourth at Freehold and on the Monmouth Battlefield. At Freehold the party was escorted to the Soliers' Monument by the Sons of the Revolution, where words of welcome, throbbing with patriotic sentiments and the related memories of noble deeds, were spoken and equally patriotic words in response were said. Then the Field, where representatives of every one of the original Thirteen Colonies fought side by side, led by Washington, Lafayette, Green, Wayne, Knox and the other great generals, fought that here might exist a free and independent Nation. Then in the old Tennent Church, on the Battlefield, the pean of patriotism, the keynote of which had been struck by Col. Page at the opening of the convention, rolled forth in full volume, in "America" and "Old Hundred"—voices of men and women from every State in the Union joining in unison. Patriotic speeches followed. Col. Page's introduction to the members of the Association was propitious and he attended regularly the annual conventions until ill health, which had been of several years' continuance, prevented. Then he was elected an honorary member and still continued in active touch with the Association, though deprived of the privilege of being present. He had always enjoyed the travel and the social side as well as the routine work. We remember his presence and comradeship at the Denver Convention in 1897. We traveled to the summit of the great Pike's Peak, and beheld, with awe, Nature's sublime and inspiring panorama spread out before our vision, but he has passed to the beyond, to the broader view. He was loyal to the N. E. A., and prized very highly the honor of having been elected honorary member.

Mr. Page was publishing a Democratic daily in New York, the *Era*, at the time of the election of Abraham Lincoln, and though he had opposed his election, when the time of contest and trial came, he stood by the President and was proud of the fact that his work and loyalty received personal recognition by that great American, who was as kindly considerate of those who had opposed him, as of his friends. The American *Press* in its issue of December 5th, gave the following brief sketch of the deceased editor's eventful life:

Colonel Harry C. Page, one of the oldest newspaper men in New Jersey, and editor and owner of the Bayonne *Herald*, died November 26th, at his home in Bayonne.

Colonel Page was born seventy-five years ago in Troy, N. Y. When he was fifteen he was working for the Schoharie *Republican*, and when he was nineteen he was editor of the Schoharie *County Sentinel*, the first newspaper in Cobleskill. He managed the *Workingman's Advocate* in Washington in the administration of President Pierce, and then succeeded William Caldwell as editor of the *Democratic Freeman* at Hudson, N. Y. He was connected with the Hudson *Gazette* and then moved to Albany, where he corresponded for New York papers. Among his repertorial co-workers was Daniel Manning, who was secretary of the treasury under Cleveland.

Late one night, while Colonel Page was in Albany, there was a big fire in Troy. All trains had stopped, and he rode a horse to Troy, swimming the river with it. He got his facts, wrote the story on a tombstone in a cemetery as a desk and sent it in by telegraph.

He was commissioned as a captain in the national guard by Governor Morgan and in 1859 was admitted to the bar. He founded the Livingston *Sentinel* and was appointed collector of the port. In 1860 he established the New York *Era* in the interests of Stephen A. Douglas, aspirant for president, and William Kelly of Rhinebeck, aspirant for governor.

In 1881 he purchased the Bayonne *Herald*. He was elected president of the Democratic Editorial Association of New Jersey and vice-president of the New Jersey Editorial Association and was instrumental in securing a donation from Andrew Carnegie of $50,000 for a Bayonne library.

MAJOR O. J. SMITH DECEASED.

To some men it comes to work silently, still to exercise a very wide influence that is not likely to be fully appreciated until after they have passed to final rest. Such a man was Major Orlando Jay Smith, founder of the American Press Association that came in the end to reach and to influence many more millions from day to day and week to week than has any score of other publications in the land.

He shaped the character of this great agency of wide information and enlightenment along the lines of truth and honor. There is scarcely a paper in the United States that has not been served to a greater or less extent by the news, miscellany, stories or syndicated matter of the American Press Association, and all this has been of high character and quality, noted for reliability. We remember well, when starting a daily in Red Wing, Minn., how invariably highclass was the news, and prompt and reliable the news-service that we received through the American Press plates by express from Chicago. It was a frequent cause for congratulation and pleasure to see in the morning dailies of St. Paul on the next morning, a news story that had been published the evening before, appear as a special telegram from Chicago. This showed that the service was as prompt in the gathering, preparing and forwarding as in its reliability and the Association was then only three years old.

Major Smith had been a newspaper man and fully appreciated the value of news as well as the importance of accuracy and prompt publication. Mr. Smith was born on a farm in Indiana, June 14, 1842, and was a graduate of De Pau University. He entered the Union Army as a private soldier and was a Major of Cavalry at 22 years of age. He served in the armies of the Potomac, the Ohio and Cumberland. He was wounded and captured and passed several months in a Confeerate prison. After the War, he passed three years on a cotton plantation in Mississippi, and then returned to Indiana and entered upn the publication of a newspaper in Terre Haute at the age of twenty-seven years. In 1878 he moved his paper, that had proved signally successful during the nine years of its publication, to Chicago. In 1882 he started the American Press Association, of which he continued the head until the end. Of late years he has lived at Dobbs Ferry, N. Y., on the beautiful Hudson, the place of so many delightful homes. It was there on Sunday evening, December 20th, at 6:07 o'clock that he passed away. James A. Edgerton, a close personal friend in these later years, says of him:

Major Smith was soldier, newspaper man, political reformer, author, organizer and executive; lover of nature and, above all, one who wanted to do good, to add to the world's light and to help others. * * * There was not the slightest element of cant in his nature. Whatever else may be said of him, he was genuine to the core. He did his own thinking. He was as utterly scientific in formulating his religious philosophy as the most rigid member of the materialistic school. In his books, "A Short View of Great Questions," "Eternalism," "Balance" and "Agreement Between Science and Religion," he sought to establish by scientific processes the immortality of the soul, the conservation not only of energy, but of experience and the rule of absolute balance and justice both in the material and the moral worlds. He was brave enough to state freely whatever he thought to be the truth, and that only for the truth's sake, regardless of how any school might regard his words. He reasoned that since there is absolute equilibrium in the physical there must be the same equilibrium in the moral. This is justice. His constant cry was of justice, which he spoke not only in his words but lived in his life. But all souls do not gain justice in this world. Therefore, that this law of equilibrium may be fulfilled, there must be life beyond the grave. Is there conservation of energy and yet not conservation of the soul, the most precious and real thing we know? Each individual is accountable to the uttermost farthing. He reaps as he sows. In Major Smith's serene assurance of the eternity of everything that is and of the individual soul as the unit of being, death seemed only an incident. That he held this utter faith imparts some of it to those that loved him and, if possible, takes a little of the edge from their present grief.

BUSINESS NOTES

The Queen City Printing Ink Company is one of the very oldest, in its line, in the United States and for twenty-one years has advertised in the National Printer-Journalist. That the Queen City has held the full and advanced course, while so many others have retired, is no small commendation and a strong assurance of the high quality and adaptability of its manufactured products to the needs of the best and most progressive printers. For some years past the Queen City, keeping up with best advertising methods as well as with its manufactures, has been educating the printers as to the possibilities of accomplishment in the use of their inks by the showing of inserts printed therewith. These have all been worthy of highest commendation, and vastly instructive as to the strong points of the inks shown. The insert shown in connection with the Queen City's advertisement this month is no exception in quality to its predesesors. These inserts will repay study for the strength and beauty shown in the inks as well as in the designs. Analysis or comment is unnecessary; each insert speaks for itself to all pressmen who understand the demands that are to be met by the quality of the inks for the obtaining of the most satisfactory results.

P. S. Pease, who for many years, represented the Chicago Branch of the American Type Founders Co., through the Middle West, is now connected with the Spokane, Wash., Branch of that Co.

John J. Knight has purchased the plant of the Samuel Jones Printing Company, at Dallas, Texas, and will continue to conduct the business under the same name.

Barnhart Bros. & Spindler, Chicago, announce that the Southwest Printers Supply Co., Los Angeles, California, no longer represent them in that territory. Arrangements are being made for the customers of that house by which they will have their wants promptly supplied.

H. T. Chandler, President of the Chandler & Price Co., Cleveland, has recovered from a very serious illness, and recently delighted his friends in the trade in Chicago with a visit.

H. W. Helm, credit man for Barnhart Bros. & Spindler, Chicago, recently visited the Pacific Coast, including San Francisco and Los Angeles, in the interest of his house.

Ault and Wiborg of Cincinnati have become celebrated for artistic advertising no less than for their excellence and popular makes of inks. The Ault & Wiborg insert, shown in this issue of the National Printer-Journalist, next to the frontice piece, is a gem in itself, no less to be prized as an illustration of what can be accomplished with inks of high quality, when properly used or laid on correctly as a work of art. Its study is well worth while and will give real pleasure.

The right kind of advertising pays; it creates and brings business, as Ault & Wiborg have fully demonstrated by pursuing a liberal and well directed campaign from the first, making their advertisements educative as well as attractive. The profit in advertising depends largely in quality or character of the goods back of the advertisements. Ault & Wiborg have made good, have kept their ink products up to the high standards shown by their advertisements that are ever attractive, convincing, instructive and inspiring. No other ink manufacturing establishment has shown greater, more satisfactory or more continuous and permanent growth in popularity, increase, widening and extension of business.

The New Lisbon, Wis., *Times* and the *Juneau County Argus* have been consolidated and will be conducted by Donald M. Leicht.

PRACTICAL JOURNALISM

A Complete Handbook of Modern Newspaper Methods

By EDWIN L. SHUMAN

Author of "Steps into Journalism"
Literary Editor of the Chicago *Record-Herald*

Illustrated, 12 mo. Cloth $1.25 net; postage 12c additional

THIS is the most comprehensive treatise on newspaper work that has thus far appeared. It explains the organization of a newspaper staff, the best way to enter journalism, the usual steps of promotion, the salaries paid, etc. There are practical chapters on how to start and run a country newspaper, and for workers on the country press there are valuable suggestions on how to make connections with large city papers. There is a chapter for the country correspondent.

Mr. Shuman's method in regard to the large journals has been to tell what each department does, and the best methods of doing it. We get a view of the reporter at work, coupled with clear instructions on how to write a news story. The question of how to get a start is answered in regard to every department. For the experienced editor there is much valuable information in the chapters on errors, libels and copyright. There are chapters for artists, ad writers, women and special writers. The book covers the whole field of journalism with a thoroughness never before attempted.

The Babcock Optimus
The Babcock Optimus

Slip-sheeting is often unavoidable in cold weather. It is one of the terrors of the press-room. On some work it is inevitable, regardless of the weather. Ordinary presses make it expensive and a nuisance.

With the Optimus a patented slip-sheet board is furnished at little additional cost. This fits on the delivery carriage, and moves back and forth with it. On this board the slip-sheets are placed. As the carriage reaches the front an attendant lightly seizes the top sheet, the carriage retires, and the sheet drops almost automatically on the printed pile, and is jogged into place. This simple procedure is repeated for every printed sheet. There is little effort, and no loss of speed. Space, time and stock are saved, and slip-sheeting ceases to be the bother everyone dreads.

Besides, the Optimus exposes every printed sheet to the air through the time of three impressions. Because of this extra drying not so many jobs need slip-sheeting as when each sheet is covered at each impression, as is always done by every other machine.

Without change the Optimus delivery is always ready for sheets of any size possible on the press. Time is not lost in adjusting it for every job. The harmful fly is no part of it.

The Babcock Optimus

"I am blowing because I feel 'chesty'"

TWO-LETTER
JUNIOR
No. 321

W. C. PRICE, Publisher,

Princeton (Mo.) "Post,"
Writes under date of December 10, 1908:

TALK TO NO. WEST MISSOURI PRESS ASSO.

GENTLEMEN: Replying to yours of the 1st instant, regarding my talk about the Junior Linotype to the Northwest Missouri Press Association, will say that I told only the truth about it. Could not recommend anything to brother publishers unless I thought it was really commendable.

A DANDY

My Junior Linotype is a dandy. Six months' use by green hands, without so much as breaking a single matrix or spaceband, and, consequently, not costing me a cent for repairs. Worked six days a week, putting up on an average twenty-four galleys a week for the newspaper, and doing job work and setting matter for other parties. How's that for a record?

FEELS PROUD

I feel proud of this, especially when you consider that we had no one to start us off with it. We had to learn it as we went. No one in the office but myself had ever before seen a machine, and I had never worked one. The machine has not delayed us ten minutes since starting it. This may open the eyes of some of the wise fellows who claim that it requires a machinist to run a Junior Linotype—as many of them told me before I bought one.

OPERATOR A BOY OF SIXTEEN

My operator is a boy sixteen years old. He runs it all day long without any help, taking the place of three compositors. He also cares for the machine.

FOOL PROOF

I consider the Junior Linotype about as near fool-proof as such a machine could be. The only thing is to keep it clean, and keep the blacksmith with his cold-chisel away from it.

FELT SHAKY

Being in quite a small town, I was a little shaky about buying a machine, having some doubt about meeting the payments. Have lost all that feeling now. Have all the work I can handle, and am doing work I could not touch before. Am also setting stuff for other papers. And the notes—well, they are paid more than a year ahead.

REFER 'EM TO ME

I am blowing because I feel "chesty." Think the Junior will make me a capitalist in time. Refer 'em to me. As long as the Junior Linotype keeps up its good behavior—and they enclose stamps—I'll tell 'em what it will do.

Yours truly,
(Signed) W. C. PRICE.

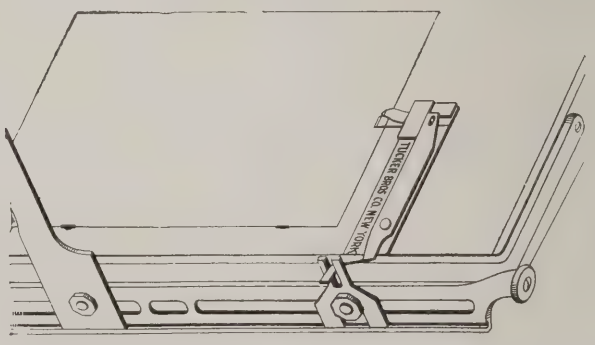
The Tucker Automatic Register Gauge

A Time and Paper Saver—You Cannot Afford to Do Without It



This is positively the only gauge used on platen presses that PULLS the sheets to a register. Every pressman knows that you cannot PUSH a thin sheet of paper to a register mechanically. This gauge does not push the sheet, as all others do; it does not matter how fast your press is run it does not "kick" a stiff sheet away from it, but, on the other hand, it pulls it to it and gets a register. If a sheet is placed within ⅜ of an inch of the gauge it will pull it to it.

It works independent of the grippers, and can be put on or taken off instantly.

Write your dealer.

Linotype Magazine Cabinet

An economical addition to the equipment of a machine office. Provides a place for all parts and accessories which go with the Linotype outfit. The valuable magazines are stored in dust-proof vertical drawers where they can not be damaged and are always accessible.

This Cabinet is built of Hardwood throughout, with heavy hardwood working top, and all nicely finished. The back is paneled.

Equipped with twelve matrix drawers, providing storage room for 128 running feet of matrices.

Two Liner drawers which will take any size Liner and three blank drawers for tools and small accessories.

Three shelves of Ejector Blade racks, providing room for 51 Ejectors, held securely in an upright position.

Compartment fitted with steel runs which will hold eight standard Sorts Trays, enclosed by roll front.

Eight vertical Magazine drawers, with wheel bearings at the bottom. Each drawer will hold a Magazine securely suspended on Bracket lugs.

Galley shelves for 28 standard size double column Galleys 8x24 inches.

Large Cupboard secured by door and fitted with adjustable shelves.

Occupies floor space 35x74 inches; height 38 inches; weight, 1,000 pounds.

List Price $160.00, subject to all regular and special discounts.

Special Magazine Cabinets built to order; prices and drawings furnished promptly.

The Bold Litho Series

Isn't it a beauty? Notice the superb cut of both the caps and lower case. Wouldn't your customers be delighted with it—particularly those people who have been paying high prices for lithographed stationery?

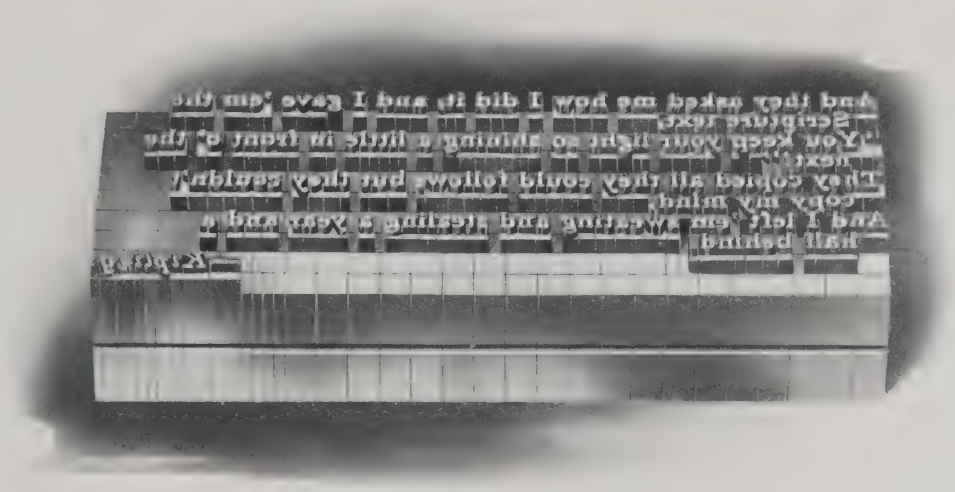
THE MONOTYPE LOW-QUAD MOLD

Casts any size type (5 to 14-point, inclusive) in justified lines with quads and spaces (both justifying and fixed size), either high or low, as required



PRODUCT OF THE LOW-QUAD MOLD

This cut shows low quads at the beginning and end of the lines, low fixed spaces (3-em) between the words and low justifying spaces after the last word in each line

The Monotype is the only machine that makes and sets type on ordinary galleys; its product is identical with new foundry type set by hand and perfectly justified

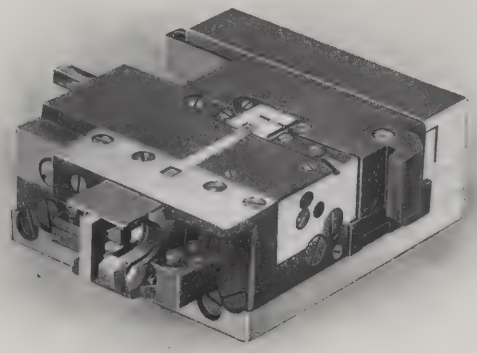
Lanston Monotype Machine Company

1231 Callowhill Street, Philadelphia, Pa.

12S

Set in No. 78 Roman and No. 781 Italic. Monotype Borders

THE *LOW-QUAD* MOLD

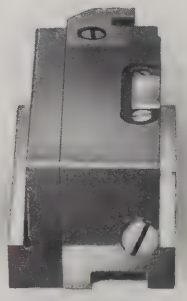


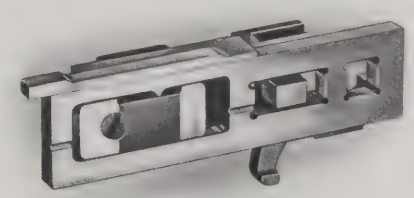
This is the Low-Quad Mold

A separate, self-contained unit for each point size; thus the accuracy of the type depends entirely upon the mold and is not affected by wear of trimming knives (there are none) or even wear of the machine itself. All parts reciprocate—no hinged joints to wear loose. Ample water circulation and positive lubrication make possible the casting of perfect type from the hardest metal at high speed.

This is the Improved Cross-Block

Note the wide base, and that the block is held down, both front and back; therefore the operator cannot affect the parallelism of the type by incorrectly adjusting the shoe that holds the cross-block against the type blocks.



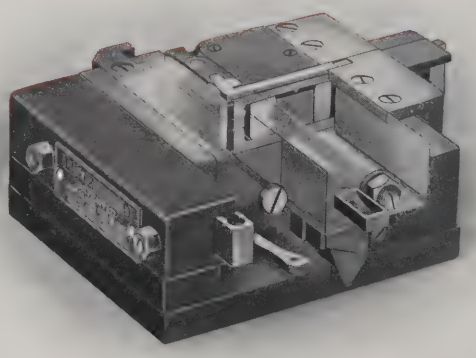


This is the Split Mold-Blade

When casting low quads and spaces (of any size) the top blade projects beyond the lower blade as shown. When casting type, or high spaces and quads, the top blade is pulled back and works as one piece with the bottom blade.

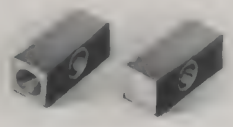
This is the Position of the Blades when Casting Low Spaces and Quads

When casting low spaces, the top of the mold is closed by the upper blade, instead of by a matrix—as when casting type and high spaces and quads. The space cast with the top blade forward is low, because the top of this space is cast against the bottom of this blade; while the space cast against a matrix resting on the upper side of the top blade is high.



Set in No. 78 Roman and No. 781 Italic. Monotype Borders

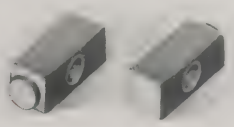
THE *LOW-QUAD* MOLD



This is the Matrix for High-Space Material

Note the cone hole in the upper end of the matrix; the centering pin seats in this to hold the matrix against the mold when the cast is made, and also when casting type to accurately position the face of the type on its body.

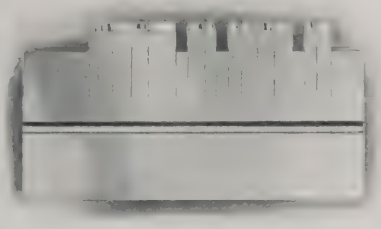
This is the Matrix for Low-Space Material



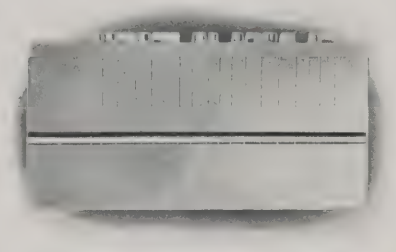
Unlike the matrix for high-space material (see above), this matrix has no cone hole, and consequently, when it is presented in casting position, the centering pin is prevented from making its full stroke. Thus checking the down stroke of the centering pin causes the top mold-blade to move forward and close the top of the mold.

This is the Product

Three different kinds from the same keyboard ribbon



Matter cast with matrices for low spaces and quads; that is, space and quad matrices without cone holes.



The same matter re-run from the same ribbon with high spaces and quads.

The same matter re-run from the same ribbon with high spaces and low quads.

This is One of the Special Uses of Low Quads

Monotype quads are so perfect in height that they present an absolutely uniform surface upon which cuts may be mounted, avoiding the use of blocks and saving the time of fitting in cuts. The keyboard operator sets the matter around the cut and after the type and quads are cast, the cut is fastened to the quads.

Set in No. 78 Roman and No. 781 Italic. Monotype Borders

EVERY printer admires a beautifully printed illustrated booklet or catalogue, and if he has not yet learned how to equal the grade of work he admires, he naturally strives to do so.

Among other essentials, it is necessary that the cuts and electrotypes he uses enable him to secure high grade results without exceeding difficulty. In other words, he must have plates that will print well easily.

Printers throughout the country are more or less familiar with the high grade work produced by the Hollister Press. We furnish practically all the plates and engravings they use, and working in close touch with their press room, we know the natural troubles and give them plates that print right and without difficulty.

All printers who read this advertisement can demonstrate for themselves by sending us a trial order.

NATIONAL PRINTER JOURNALIST

A Journal for Printing and Allied Trades

Volume Twenty-seven | Chicago, February, 1909 | Number Two

THE COMMERCIAL VALUE OF PATHOS OR HUMAN INTEREST

IN a recent interview, Mr. Frank Munsey, who has a wide and successful experience in magazine and, more recently, in newspaper publishing, gave a classification of the commercial value of the emotion-awakening elements for increasing sales and circulations of publications. He placed "pathos first, love second, adventure third, humor fourth." He added, "you can manufacture love plots and adventure and, to an extent, humor, but you can't manufacture pathos; it must come of itself." Pathos is included in what is generally classed as "human interest" and rests on incident. It has its foundation in a univarsal human sympathy, that reaches to all individuals of the race and even to the domestic animals, and to those of the field and forest and to the birds of the air, in so far as they may manifest or be endowed with or related to those emotions of love, joy, pain and grief, common alike to humanity and to all living things.

Pathos is derived from a Greek word meaning "to suffer," and still this suffering through sympathy, for sorrow and catastrophy, is sought after in our reading more than anything else and is never shunned. It is arranged in the very constitution of man as a wise provision for the mutual protection and conservation. Pathetic human stories are the most popularizing elements in a newspaper. A certain degree of pathos is found in all the little things of life as well as in the great events. Read Burn's lines to the Mouse, whose home his plow had destroyed and see how moving and sweet is the picture in the incident and in the philosophy with the conclusion:

"The best laid schemes o' mice an' men,
Gang aft a-gley!"

TO A MOUSE, ON TURNING HER UP IN HER NEST, WITH THE PLOUGH, NOVEMBER, 1785.

Wee, sleekit, cowrin, tim-rous beastie,
O, what a panic's in thy breastie!
Thou need na start awa sae hasty,
Wi' bickering brattle!
I wad be laith to rin an' chase thee,
Wi' murd'ring pattle!

I'm truly sorry man's dominion
Has broken Nature's social union,
Which makes thee startle
At me, thy poor, earth-born companion,
An' fellow-mortal!

I doubt na, whyles, but thou may thieve;
What then? poor beastie, thou maun live!
A daimen-icker in a thrave
'S a sma' request:
I'll get a blessin' wi' the lave,
And never miss't!

Thy wee bit housie, too, in ruin!
Its silly wa's the win's are strewin!
An' naething, now, to big a new ane,
O' foggage green!
An' bleak December's winds ensuin,
Baith snell an' keen!

Thou saw the fields laid bare an' waste,
An' weary winter comin' fast,
An' cozie here, beneath the blast,
Thou thought to dwell,
Till, crash! the cruel coulter past
Out thro' thy cell.

That wee bit heap o' leaves an' stibble,
Hast cost thee mony a weary nibble!
Now thou's turn'd out, for a' thy trouble,
But house or hald,
To thole the winter's sleety dribble,
An' cranouch cauld!
But, Mousie, thou art no thy lane,
In proving foresight may be vain:
The best laid schemes o' mice an' Men,
Gang aft a-gley,
An' lea'e us nought but grief and pain,
For promised joy.

The destruction of a mouse's nest with a plow in the Fall is a very common, seemingly trifling incident, yet Burns saw and felt the pathos that it contained from the human interest view as well as the deep philosophy from human association and relationship, and he made the story of interest to all mankind and to live for over two hundred years with a promise of continuance for untold centuries, in the literature of many nations, to be read and reread by many hundreds of millions, so long as men shall live, sympathize or suffer on this earth.

Only those who are without feeling, who are as dry as dust in their conceit, religion, philosophy or learning, can fail to sympathize with little things of life, that touch the individual, the home, near relatives, friends and the community.

Metropolitan newspapers, and some others, and even ministers, and learned Professors—with a capital P—are inclined to cast a sling at the little incidents and personals that appear in home papers, and the country papers have equal opportunity to retort upon the metropolitan papers for the personal items printed therein

about society and club people, about the rich, and the members of the sporting and theatrical fraternities. Yet our lives are all made up of little things, and human interest and pathos come from the connection of these events with daily life. The record of the fact, in John 21st ch. 3rd v., that, "Simon Peter saith unto them, I go a-fishing. They say unto him, We also go with thee. They went forth and that night they caught nothing," would seem scarcely worth while, disconnected from surroundings, let alone the handing of the record down through centuries in the Book of all books, but how important, pathetic, dignified and glorious, when joined to the miracle and the teachings that followed. The killing of a pet cow or of a pet poodle are certainly trivial events in themselves, but if the affections and many of the happy associations of a human being or of a family have gathered around these pets or if they showed great intelligence and love and manifested these on dying, or if the cow was in a degree the support of a family, their takings off might have well been so hinged with pathos as to make the takings off worth the telling, in a newspaper.

Then often when a beast is accidentally killed, it might have been a human being.

George B. Lockwood, editor and general manager of the Marion, Ind., *Daily Chronicle*, recently had an editorial, that, incidentally, illustrates the point which we have reached in the discussion of this matter of pathos, that must be existent in the incidents related or in the relations of these incidents bear to human beings, men, women or children. He says:

An Indiana college daily quotes a college professor of rhetoric as follows:

"Speaking generally, American newspapers are deplorably edited. The 'Mary McAllister went to Jimsburg and John Jones' brindle cow was hit by an automobile at 4:15 yesterday afternoon' class of journalism utterly disgusts me. It's a fact that most of our country newspapers are without merit so far as good writing is concerned, and the same thing may be said of some of our larger dailies." Then more of the same sort.

One of the rather curious features of the newspaper business is that those who know how to conduct newspapers as they ought to be conducted are presumably never engaged in the business, and those who know just what genuine journalism is never indulge in newspaper work. Sometimes one wonders just why this is, and the only illumination one gets is when some one who knows just how newspaper work ought to be done tries his hand at the uplift. Then it becomes evident that the newspaper field is no place for a man who really knows what a newspaper ought to be. Through some perversity of fate newspaper work must of necessity be left to the bungling illiterates who grate on the nerves of the Browning interpreters and the Ibsen experts.

TASTE OF READERS CONSIDERED.

Perhaps the perverted taste of the people may have something to do with it. It is of course below the comprehension of those who enjoy the occupation of figuring out just what Spencer and Chaucer were driving at—this vulgar curiosity of Mary McAllister herself, which finds gratification in the chronicling of the fact that Mary has gone to Jimsburg. But, after all, Mary McAllister is a personage of quite as much consequence to the people who know her and are interested in her as Ward McAllister was to the social circles of Newport and New York, and there is quite as much rhyme and reason in the local newspaper's notation of her trip to Jimsburg as there is in the columns upon columns of matter printed in the metropolitan newspapers about the doings of the so-called society people whose names are more widely, though not any ways more favorably, known. The disaster to John Jones' brindle cow is not a thing to set the world agape, but those who know John Jones and to whom his cow is a familiar spectacle, there is just as much human interest in knowing what this local landmark did to the automobile or what the automobile did to it as in discovering through the more pretentious press that the Emperor of Germany has been skylarking around in an airship. And perhaps the adventures of Mary McAllister and of the cow which is the properey of John Jones—we are trying hard to be rhetorical—create about as much disturbance among the gods on high Olympus as the eccentricities of Emperor William, the post election observations of William Jennings Bryan or the opinions of this college professor about the country newspaper. Who knows?

The purpose of the newspaper edited with a view to its being read—and if it is not read what's the use of publishing it at all?—is to keep the community's record of events—the record of events which interest the people of the community as well as of those which instruct them. A country newspaper, or a city newspaper either, which devoted itself to the discussion of abstractions and which sought to be a department of rhetoric rather than what its name implies, a newspaper—i. e., a paper recording the events of human interest which fall within its special jurisdiction—might be read with avidity in the college libraries of the country, but it would have a mighty restricted circulation and influence among the people it sought to serve.

COUNTRY PRESS DEFENDED.

Personally the editor of the *Chronicle* has never had much sympathy with the effort to turn a laugh out of the country correspondent because such newspapers and such correspondents devote themselves to telling in a simple way, full of local color, what is going on at home. Usually these faithful home historians tell things that are a matter of knowledge to them. Would that all newspapers and all magazines and all rhetoricians and orators would do the same. What of the value of what they write? Who can tell? It may have been the first time Mary McAllister's name was in the paper. The item which seems so unimportant to the college professor is read and reared, and the paper is then laid away, and, though Mary McAllister may grow up and marry a French count or something equally as good and have her name in wood type in the Chicago *American*, the moment of pride, that comes with the first knowledge that she is a personage, is worth a lot to Mary and may induce the old man to pay up arrearages and renew his subscription. And as for John Jones' cow, why wait until she becomes a fossil animal dug up out of the submerged strata of an archaic civilization to introduce her to the public through the columns of the *Scientific American?* There are those to whom a live cow is an object of quite as much interest as a fossil of the mesozoic administration, and this is particularly true when one runs an automobile into a robust Holstein while not intending to molest anything more ambtious than a dog or a chicken.

Did you ever sit in the debris of a garret and look over the ragged files of the local newspaper twenty, thirty or forty years old? If so it has brought trooping out of the past the memories of almost forgotten years, memories tragic and tender, as the dead come to life again through the resurrection of these yellowing pages. Simple the chronicles and simply told, but instinct with that which stirs and touches the heart. Where are Mary McAllister and John Jones now? Perhaps already the alumni of the Sorbonne are looking for the episode of the trip to Jimsburg and the collision with the red devil!

The recognizing and gathering the incidents that contain pathos or human interest and then so writing these as to make the most of this pathos, and to awaken the greatest possible interest, requires great kindness of heart, the deepest human sympathy, the broadest possible understanding of human nature and of the relations of the people to and their dependence upon all surrounding objects and influences, and to fill a paper each week or each day with all such incidents in a community, demands unflagging industry and a great capacity for earnest, sympathetic work, for the most valuable element in a newspaper, "pathos," as Mr. Munsey well says, cannot be manufactured. A broadly-informed, ready-writer can sit down and write columns of a disquisition, of stories of love and adventure, in a comparatively brief time. Memory and imagination are the only requisites, but as editor Lockwood who, by the way, is an excellent newspaper man from a noted newspaper family, clearly indicates, these would not constitute news, would be devoid of interest to the great multitude of readers, and an earlyy demise of the paper so edited, or the bankrupting of its owner, would furnish an incident of pathetic interest for true newspaper men to chronicle.

PAST-PRESIDENT W. W. SCREWS AND THE MONTGOMERY ADVERTISER

IT has become a custom for the employes of the Montgomery, Alabama, *Advertiser*, once a year, to act as hosts and to banquet the head of the paper, Major W. W. Screws, editor-in-chief and his able co-worker, Frank P. Glass, the General Manager of the *Advertiser*. It has become a sort of annual love feast, or family reunion and dinner of all the workers on the splendid paper, concerning which, its methods and successes, we have had much to say in the past, for the instruction, encouragement and inspiration of the readers of the NATIONAL PRINTER-JOURNALIST, both by way of example and precept. We can not do better service this year than to quote from the interesting account given in the issue of the *Advertiser* of January 2d, at considerable length, as throughout there are valuable points, facts stated and suggestions to be gathered by the showing of the conditions that prevail in this wonderfully successful daily. It is a pretty complete picture, so to speak, of all that tends to make for the paper's success and the splendid spirit that prevails in every department and is the great vitalizing principle:

It will be an item of interest to many readers of the paper to know that within the *Advertiser* building there are between eighty-five and ninety persons, business office employes, editorial writers, reporters, machine operators, make-up men, telegraph operators, writers and machinists. It may interest them to know that without exception this labor is skilled and trained, and that each man engeged in it receives a salary high above the average, such as goes to skilled labor, and men of trained thought.

A UNIQUE OCCASION.

The occasion is unique and peculiar. There is no other paper of the country, on which the employes once a year assert themselves as hosts and have with them as honored guests the owners and the head of the paper. The custom, which is maintained and which is held in such high esteem is now seven years old, and each year, it has grown in enthusiasm and in pleasure. It is doubtful if in the entire country there is such an *esprit du corps* as that which characterizes the Advertiser and its force and certainly in no other office does it find such an expression.

The *Advertiser's* annual dinner is really a notable event in the journalistic news of the South, and during the dinner yesterday night, Editor Bruce Kennedy read telegrams of good wishes and good will from leading newspaper men of the South.

The *Baby Advertiser*, the family paper of the employes, made its seventh annual appearance during the dinner, and its coming was hailed with joy and appreciation by the members of the force. It was more than up to the usual standard. It was greatly enlarged, and the office jokes were duly appreciated. It was especially illustrated with cartoons and already there is a great demand for the little paper of twelve pages, which is not permitted to get into general circulation. It is probably the most unique paper published.

WHAT THE DAY MEANS.

And while there is laughter and fun at the *Advertiser's* great annual celebration, there was also a certain seriousness that goes with the sincere expression of appreciation and affection. In these words, the *Baby Advertiser* sought to express the indescribable atmosphere and affection which characterizes the *Advertiser* office:

"The *Advertiser* has an *esprit du corps*, that is perhaps known in no other newspaper office of the entire country. Brains could not build that up and money could not buy it. It comes of sympathy, of understanding and of consideration. And of such is the atmosphere in the *Advertiser* office made. It is as natural for loyalty and faithfulness to blossom into service under Major Screws and Mr. Glass as it is for the hillside to grow green and bloom under the kindly rays of the spring sun. Loyalty and faithfulness are not paid as a right, but with Mr. Glass and Major Screws they go as spontaneous expressions of appreciation, for remembered kindness.

"A year has slipped backward into the waste of time. It has been a good year for us; we believe it has been a good year for the owners of the *Advertiser*, but of that we can not judge; we hope, in our appreciation and in affection, that it has been a good year for them. May the coming year bring to them the measure of good that shall equal their deserts. If this should be done, they will lack no good or perfect gift.

"So say we all."

A genuine ovation was given Major Screws, who has for nearly fifty years been the editor of the paper and who has given, as one speaker said "The *Advertiser* the splendid character which has made it notable." It was some minutes before he could proceed, so enthusiastic were the men about the long tables and so determined were they that they should in some way express the affection of the entire office for him. There was a pathos in the brief speech of Major Screws in which he said that every man who was connected with the *Advertiser* when he became associated with it in1865 was now dead. And there was pathos, too, in his expression of the regret that he has always felt that the files of the *Advertiser* from the date of its founding in 1831 to 1865 were lost or carried away during the occupation of Montgomery by the Federal troops. Those parts of Major Screws's address in which he paid his tribute to the wonderful energy and splendid business ability of Mr. Glass during the twenty-three and a half years in which he had been with the paper were heartily cheered.

The men and women on the paper honored, too, in enthusiasm, the allusions to Major J. D. Barron, the vertran associate editor, who is now the oldest employe of the *Advertiser*, for his connection with the paper begun thirty-three years ago.

MAJOR SCREWS'S SPEECH.

In responding to Toastmaster Finnigan's happy introduction Major Screws said:

"There are several reasons for this being a day of more than ordinary interest to me. It is the day for changing the volume number of the *Advertiser*, and on the first page of this morning's issue you will see that it today enters upon the eightieth year of its long and useful career. Within the time covered by its existence it has recorded in its columns stirring events that have taken place at home and abroad. The history of the removal of the Indians from our fair State to homes across the Mississippi were reported in its columns and there were many scenes and incidents depicted calculated to soften the hearts of the most stoically inclined. Thousands of these children of the forest took their departure on boats at our city wharf. Our city was one of the principal points for the transmitting of news of the war between the United States and Mexico, for we had no fast trains and telegraphs and telephones those days.

"Montgomery was a very small town then, but it was a very advantageous transportation point, because of the Alabama river, which was the main artery of travel and commerce from the East to the Southwest. Pony expresses were the main ways of communicating news from the seat of war and the time on horse back from Mobile to Montgomery, made in those days has never been equaled since. From Montgomery the news was carried in a similar manner until faster lines were reached.

"The *Advertiser* was among the first to have particulars of what had happened. The manner of receiving and exploiting news today is the best commentary on the crude ways of our fathers. The great disaster which befell San Francisco a few years ago was known the world over even before the people of the stricken city themselves realized the extent of their misfortunes, and now the hearts are bowed down everywhere because of the appalling tragedy that has swept away thousands of lives and homes in Italy.

"Touch a key in a telegraph office and in a moment we know what is transpiring in our own and in the most distant lands, and warm and sympathizing hearts are at once moved to do what they can to relieve the sorrow and mishaps of the unfortunate.

"It is a great misfortune for Montgomery and the State of Alabama that the files of the Advertiser from its beginning in January 1830, until the close of the war, '61-65, were destroyed. It is due to the truth of history to say that they were not burned by order of any Federal officer when their troops came into the city in April, 1865. The presses and other material of the paper had been shipped to Columbus before the troops arrived here and this property was burned in that city. The files were left in the office, as it seems no one was thoughtful enough to have them removed to a place of safety in this city, and they were common property for any who might choose to take them. They can never be replaced.

"Another personal reason for my interest in this day is that it marks another anniversary of my making this city my home. Fortunate is the man who can claim a residence of so many years in so good a community—a city composed of so many lovely women and brave and loyal men. As said at our last gathering, all but seven of the years I have lived here have been spent in connection with my duties on the *Advertiser*. It is a sad thought that of all those who started out with me in those troublous hours in July '65, not another one remains, but true and loyal souls have made me feel that I am not by any means alone. We have one with us here now who began service on the *Advertiser* over thirty years ago, and off and on, principally on, he has been with us ever since. His name is a familiar one in Alabama and the people if the *Advertiser* who know him best, love and honor him most. He has passed the Ostler age, but has none of the marks which Ostlerism would indicate. He has had his share of the ups and downs, the sunshine and shadows of this life but in the midst of the greatest trials, he has been as gentle as a woman and as uncomplaining as a saint. You all know I refer to our dear, good friend, Major J. D. Barron. May his years still be long in the land.

"The next in service came to the *Advertiser* in June, 1885, and his work and worth shine forth in every department of the paper. His mastery of details, his good judgement, his quick perception of needs and grasping of opportunities have been of untold value to the paper, the community and the State. It is needless to say to you who know him so well that I refer to Mr. F. P. Glass. It is said that he and I are of different temperaments, but if so, two men of opposite types never worked better in double harness. One or the other, in parlance of the day, may be 'the wicked partner,' but certain it is that there has never been a jar or hitch between us.

"There are others who have been with us so long as to be parts and parcels of the household.

"A third reason for hailing this day with gladness is the recurrence of this annual gathering. No event is looked forward to with more pleasure and not one ever gives me more genuine delight. It is calculated to make the public at large think that the *Advertiser* is a big family of congenial spirits, when they thus meet once a year, with the announced purpose of paying a tribute to those who are the heads of the establishment. I know of no other instance in the newspaper world where employes thus honor employers. I thank you for this manifestation of your good will and beg you to feel that it is reciprocated to the full and running over by Mr. Glass and myself.

"History shows that the leaders of armies have been most successful who could feel in their hearts that they were upheld by men true to every obligation and ready to meet any call upon them. We feel that the *Advertiser* would not be what it is today without the cordial, hearty co-operation of those who have had to fill important positions in its daily life. They have been the indispensible cogs in the wheel without which there could have been no motion or progress.

"If we could have signalized the day by moving into the new quarters and starting into life the great 60,000 per hour new press and its electrical appliances and appurtenances, it would indeed have been a day of days for all of us. Again I thank you for kind words and acts and hope that the New Year may bring, to each and all of you and your's, happiness and prosperity."

THE ADVERTISERS GROWTH.

No less hearty reception was given General Manager Frank P. Glass, when as the second of the honored guests, he arose to speak, notwithstanding, he should have held some terrors for the assembled employes, being, as the *Baby Advertiser* had dubbed him, "the man who hires and fires."

Mr. Glass spoke with some feeling of the formation of the business partnership between Major Screws and himself more than twenty-three years ago, when he came from Selma to assist in building up the *Advertiser*. He felt a pride in the fact that in the twenty-three years in which he and Major Screws had been associated on the *Advertiser*, there had never been a difference, never a misunderstanding between them.

Of special interest to the assembled *Advertiser* men were the figures showing a comparison between the *Advertiser* of 1902 and the *Advertiser* of 1908. The *Advertiser* moved into its present home on the corner of Dexter Avenue and Lawrence Streets, at which time it was thought the building would be adequate for many years, but this building was practically doubled in the last few weeks, and the value of the paper's costly machinery was almost doubled. Mr. Glass quoted figures to show that the bill for composition in 1902 was $19,402. In 1908 the annual bill for composition in the *Advertiser* office had increased to $32,999.12, an increase of more than 60 per cent.

Mr. Glass's figures showed further, that the total of salaries paid the *Advertiser* employes in 1902 was $29,629.02. In 1908 the paper paid more than this for its circulation department alone. In 1908 the circulation department alone had cost $31,409. On the other hand the total salaries to the employes of the Advertiser footed up to $53,600, an increase of more than 150 per cent. Mr. Glass observed that for a paper which was sometimes misrepresented as an enemy of labor the *Advertiser* appeared to be doing pretty well for the laboring man.

In 1902 the paper spent $15,000 for blank paper. In 1908 this expense had more than doubled, for the *Advertiser* was spending more than $33,000 anually for paper. In 1902 *the* Advertiser had in its building sixty employes, but in 1908 this number had increased to eighty-five, and in 1902 the paper had only twenty city carriers, but in 1908 the total of city carriers had increased to thirty-five.

EMPLOYES' LOYALTY.

Mr. Glass voiced his appreciation of the *Advertiser* employes for the loyal way in which they had assisted him and Major Screws in building up the paper's success. He said, too, that the Advertiser had just erected a new building and had installed more costly machinery. In this the management was relying first on the growth and development of Montgomery and of Alabama which would demand and support such newspaper investment, and they were relying on the loyalty and faithfulness of the employes in the future as they had displayed in the past for maintaining the paper's high standard. And in closing he spoke feelingly of the pleasure he felt in the annual entertainments of the employes.

Charles I. Finnigan, Circulation Manager of the *Advertiser* was selected by his associates as toastmaster. Mr. Finnigan in the past has worn no medals as a toastmaster, and he has had no nickel cigars named after him as an after dinner speaker, but he surprised his friends by the admirable way in which he acquitted himself. He carried the fun and speaking features of the banquet along in excellent style and he deserved the compliments he received.

To Major J. D. Barron, veteran editor of the *Advertiser*, the honor of a silent toast was drunk by all, and that right heartily. Major Barron, because of the affection in which he was held was granted the unusual indulgence of not being required to make a speech. The general regret felt that Victor H. Hanson was absent for the first time in seven years on account of ill health was expressed by more than one speaker , who in his absence paid tribute to him.

THE EVENING'S SPEAKERS.

In the speaking nearly everybody had a hand, and though "we say it ourselves, as shouldn't say it" there are some pretty good after dinner speakers among the men who go to make up the *Advertiser*. Night Editor Bruce Kenedy described the peculiar and affectionate relations existing between bosses and employes on the *Advertiser*.

Cashier George McCombs, who has a local reputation as an after-dinner speaker, made an excellent little speech, bright with humor. Associate Editor Will T. Sheehan was presented by the toastmaster as a man who had been published in the *Advertiser* as being an eloquent speaker and he demanded that the Associate Editor make good before his assembled associates. He did. W. W. Waldo, in charge of the mechanical department, delivered a happy talk, for which he was roundly applauded, and in which he quoted from letters from former employes, regretting their inability to be present. Charles L. Harold, City Editor, spoke on reporting and bossing, and H. S. Crawford, the superintendent of the building and the mailing room, delivered himself well. Pressman F. M. Kennedy, Engraver J. M. Engler and V. E. Bowick, head of the Printers' Fraternity, delivered happy little talks. Albert Hanson spoke well for the Advertising Department, as did J. B. Massey for the Sterotyping Department. Mrs. Thomas M. Owen, in charge of the Womans' Department, spoke happily and was heartily cheered. Short talks were made by Purnell and Frank Glass, Jr., and Messrs. Wasler and Rippinhagen, who are in the city superintending the installation of the*Advertiser's* big new press, and Harry Berry of the Kohler Electric System delivered short addresses, in which they said they never knew of such another custom as the annual dinner with its various features on any other newspaper.

ADVERTISING AND CIRCULATION

ADVERTISING and circulation are closely related. The *Daily Press* of Riverside, California, published a talk on advertising in its issue of January 1st that contains thoughts worthy of consideration. We think, however, that the minimum rate given for the first thousand of circulation is placed too low, that is, where a thousand circulation properly covers the field. A paper that has only one thousand subscribers where it should, if meeting the demands, have four thousand, is worth very little. A one thousand circulation in a four thousand field indicates that the paper has not the full appreciation that it should command, and such a circulation as it has is apt to be scattered and to show good nature of the people rather than any real live interest in the publication. One thousand subscribers, where that number represents or includes nearly all the desirable customers sought by an advertiser, make a paper worth while, and advertisers can reach the people more effectively and profitably through the really popular newspaper than in any other way, and can well afford to pay the publisher what the space costs him with a fair margin of profit. We do not believe that any publisher can afford to furnish space in a live paper, that gives the news, properly works for the promotion of local trade, local institutions, interests and industries, in a way to be acceptable to and popular among its patrons, can afford space at less than ten cents an inch. It costs money to make a good paper in a small community and the advertisers get the advantage of the influence of the paper and can afford to pay for the same. The quality of, and the good will of, and real, active interest commanded by, a paper anywhere must be taken into account. The *Press* says:

To the modern merchant in the large cities the handling of his advertising is one of the most important departments of his business. The work is attended to by experts and a careful study is made of the relative value of different mediums, in placing advertising in weekly or daily papers their circulation is what fixes the value of the publicity and every well trained advertising man will insist that the price paid for the advertising correspond to the number of papers circulated.

In the smaller cities and towns many of the merchants have not yet learned the advertising business. They recognize the value of advertising, but to them a paper is a paper and they are constantly being worked into paying rates far beyond what the circulation warrants.

We know of one newspaper man in this county who continued to collect for advertising in Riverside, rendering bills and receipting them, for several months after his paper was dead. That is an extreme case, but it shows how little attention some men pay to their advertising and how easily it is to hand them a gold brick.

Some man will start a little weekly and print perhaps a hundred copies; he has no established circulation and only a handful of readers. And yet there are merchants who will pay a publication of that transient character as high a rate as they will an established country weekly, representing a good field and having several hundred subscribers. And they will pay a daily paper with a little over 2,000 circulation as high a rate as one with nearly 4,000 circulation.

They would be indignant if they were asked to pay as much for a half a sack of potatoes as for a sack or for a half yard of cloth as for a yard; but they will pay the same price for their advertisement in two papers when one has twice the circulation of the other.

The readers of newspapers are more discriminating. They are the people who furnish the classified ads—the "for sale," "for rent," "wanted," etc. And they gravitate to the paper that has the largest circulation. They know where they get results and they put their advertisements where they have the greatest publicity. Compare the classified columns of the Los Angeles *Times* with those of any other daily paper in that city and you will have no trouble in telling what daily there has the greatest circulation. And as a good illustration of the small city daily, compare the classified columns of the *Press* with those of any other paper in its class, and you will have an added proof of the correctness of our circulation claims.

On small city dailies the generally accepted basis of figuring display advertising is from four to five cents per inch for each 1,000 of circulation. The paper of 2,000 circulation would therefore be entitled to about 8 or 10 cents and of 2,500 to about 10 to 12½ cents per column inch per insertion. The paper of 3,00 circulation should be entitled to charge 12 to 15 cents, of 3,500 14 to 17½ cents, and of 4,000 16 to 20 cents. And merchants have as good a right to know what circulation they are getting for the money they pay as they have a right to insist on receiving a pound of butter instead of half a pound, when they pay for it.

Any paper that has a legitimate basis for its circulation claims courts investigation; the paper that makes flamboyant statements about its big circulation but never publishes any sworn statements and never invites advertisers to inspect its books is usually putting up a bluff. And it is poor business policy for an advertiser to pay out his good money on a bluff. He might learn a whole lot by calling the bluff.

PABOR QUITS NEWSPAPER

WILL GO BACK TO DEVELOPING PABOR LAKE COLONY LANDS.

W. E. Pabor, who has been editing the Farmer and Fruit Grower department of the *Semi-Weekly Times-Union* during the year, leaves for his home at Pabor Lake, near Avon Park, Fla., this evening, his engagement for such service closing with the last issue on Dececmber 25. He will take up his former work of developing the Pabor Lake colony lands, in the lake region of South Florida. There is a prospect of the Haines City branch of the Atlantic Coast Line being built ere long, Mr. Emerson, president of the road, having written him that the proposed extension has not been abandoned by any means, but will be taken up and the line constructed, for which a survey has been made and right of way secured, as soon as financial conditions justify it. This road will run within half a mile of the Pabor Lake colony lands, where there are several orange and grapefruit groves planted and being cared for by Mr. Pabor and his two sons for non-resident owners, and others will be established.

In addition to this, Mr. Pabor has signed a contract with a well known Atlanta publishing house to write special articles on Florida farm and fruit-growing topics, which his long residence in the State and his practical experience has made him familiar with. He has been engaged for some time in preparing a book on Florida as an agricultural State, which will be utilized by the Atlanta publishing house in connection with a projected Florida winter colony book, to be published during the coming year.

Twenty-five years ago the Orange Judd Company, of New York, published a book on, "Colorado as an Agricultural State," written by Mr. Pabor, while he was editor of the *Colorado Farmer and Fruit Grower*, at Denver, Colo., which had a wide circulation at that time and aided materially in developing the resources of the Centennial State.—*Jacksonville Metropolis.*

NEWSPAPER MAKING AT UNIVERSITY OF MISSOURI

THREE special editions of the *University Missourian*, an afternoon daily newspaper published by the Department of Journalism at the University of Missouri, at Columbia, have been issued for the training of the students. They do the work for the newspaper, which is the first publication of its kind, under the direction of experienced newspaper men. Thus it is intended to supplement their class-room training with "laboratory" work. It is the Missouri idea in full working order.

The special editions were issued the morning following the last national election, the afternoon of the football game between the Washington University and University of Missouri football teams, and December 11, when Dr. Ross A. Hill was formally inaugurated president of the University of Missouri.

Hundreds of educators from all parts of the United States were in Columbia, where the University is located, to attend the inauguration, and they expressed astonishment when the *University Missourian*, containing a full report of Dr. Hill's 11,000-word address and a description of the exercises, was delivered to them by yelling newsboys as they left the hall where the ceremonies took place.

The *Missourian* is ordinarily a four-page, six-column newspaper, but it was enlarged to six pages, for obvious reasons, on that occasion. Dr. Hill's address was obtained in advance, and with the headlines it just filled two pages. These were printed as pages three and four of the "extra" and the regular edition, issued later in the day, at the regular hour of publication.

The exercises in honor of Dr. Hill began December 10, and continued two days, but the formal installation took place the morning of December 11. Students in the Department of Journalism were assigned to report the proceedings in relays, one reporter taking one speech, and leaving the hall as soon as it was finished to write it. Another member of the staff wrote the "lead."

The headlines had been written in the class-room in advance, and in consequence it was possible to close the "forms" soon after Dr. Hill, the last speaker on the program, began delivering his address. It was in reality the easiest "extra" to get out the Department had undertaken but the visitors declared they thought it remarkable. Columbia is a town of 10,000 population—aside from the University community of 3,000—and the visitors had not anticipated any evidences of so-called metropolitan journalism.

The cool-headedness and ability of the students were really tested, however, when the *Missourian* issued its "football extra." The extra appeared on the streets twelve minutes after the game was over, and was sold to spectators at the game as they walked from the athletic field down-town—about half a mile. But if any one of the reporters at work on the "story" had "fallen down," this record probably would not have been established.

The game took place November 14th. In advance, students in the Department of Journalism wrote headlines covering three possible contingencies—victory or defeat for the Tigers, or a draw.

Students were assigned to report the game play by play, telephoning the reports over a special wire strung for the occasion from the gridiron to the printing plant. The other end of the wire was run into the plant beside a Linotype machine, and a student there, during the earlier part of the game, wrote out a description of the plays on a typewriter and handed them to the operator. During the latter part of the game he "talked off" the plays to the Linotype operator, so that they were put into type within about two minutes after they were executed on the gridiron.

The students who telephoned the description of the game to this reporter were housed in a sound-proof telephone booth, constructed for the occasion and set up on the "bleachers." Undisturbed by the enthusiastic "rooting" of the spectators, and able, through the glass front of the booth, to watch every play as it was executed, they gave an accurate and rapid description.

Other students collaborated on the "sideline notes," and "picture story" of the game, and none of them lost his head, as a newspaper man, sent by a metropolitan newspaper to report the game, cynically predicted they would.

In consequence of the rapidity with which the students worked, the extra, containing the detailed story, the descriptive narrative and the notes, was being sold on the streets just twelve minutes after the game was completed. It should really have been only five minutes, because one of the "make-up men" in the printing shop, in his excitement and hurry, put a half-tone into the form upside down. The mistake wasn't discovered until the first paper was run off, and it took four and one-half precious minutes to remedy it.

The earnestness of the students and their interest in the work was well illustrated when the *Missourian* issued its first extra edition. This was the night of November 3, and the extra appeared at 7 a. m. the following morning, giving the election returns to that hour.

It was announced in advance that no student would be required to work on this extra, as it would involve losing a night's sleep, but that anyone who wished to volunteer might do so. Of about thirty students who were taking laboratory work—there are sixty-seven in the department—half volunteered. The others had gone home to vote.

There was not work enough to keep so many men busy, nor even to give each something to do, and at midnight they were told that all who wished could go home. None went. At 3 a. m. this announcement was repeated. Still none of the students left the newsroom. They wanted to stay and help get out the extra. And stay they did. They were present when the first copies left the press at 7 a. m. and they went home to snatch a nap with the damp sheets hugged in their pockets.

The chief purpose of these editions is to teach the students how newspapers handle news under pressure, and how, when an extra edition is foreseen, preparations are made in advance for it.

LOOK FORWARD TO ITS COMING EACH MONTH WITH GREAT EXPECTANCY.

El Paso, Texas, Jan. 5, 1909.

National Printer-Journalist, Chicago, Ill.

Dear Brother Herbert:—Enclosed find my check for $2, in payment of subscription to National Printer-Journalist to May, 1909. I have been reading the Journalist for the past five or six years, and look forward to its coming each month with great expectancy. Not only does it keep me in touch with the newspaper fraternity throughout the nation, but also with the many friends I made among the membership of the National Editorial Association. While not now actively in the newspaper business, I still take great interest in everything pertaning to newspaper publication, and find the N. P.-J. of constantly increasing interest to me.

Wishing you a prosperous New Year and with greetings to all my old friends and compatriots in the N. E. A., I am,

Very truly your friend,

W. J. Buie,
Ex-Pres. Texas Press Ass'n.

THE EDITORS LEARN LESSONS OF CITY UPBUILDING FROM MINNESOTA'S DESIRABLE CITY

IT was impossible, at the time, to give reproductions, from the hundreds of newspapers of all the good and instructive things said about Minnesota and its progress and entertainments. Here is an extract from the Jeannette, Pennsylvania, *Dispatch*, that has given the editor of this paper much pleasure and that we believe will still prove profitable and pleasing to all readers of the NATIONAL PRINTER-JOURNALIST:

The entertainment feature provided for the National Editorial Association during the week's stay in St. Paul were such a constant succession of new features that it would be difficult to say which was the most delightful. "Red Wing Day," however, had an added charm for the editors by reason of the fact that this growing city is fondly regarded by them as the "Cradle of the National Editorial Association." It was while Mr. B. B. Herbert, the honored "father" of the N. E. A., occupied the editorial chair on the staff of the Red Wing *Republican*, that he conceived the idea of a national organization of newspaper men. He saw his dreams realized in the permanent organization of the National Editorial Association at New Orleans in February, 1885, and Red Wing, Minn., witnessed his zealous labors for the perpetuity of the organization during its years of struggling infancy. Its future strength and success were no uncertainty when other fields of labor enticed Mr. Herbert from the little city which is inbedted to him for the organization of a number of the manufacturing enterprises which have contributed so much to its growth. Thus it came about that when Red Wing decided to have an Old Home Coming celebration, the invitation to their former respected citizen included all his co-laborers in newspaper work attending the convention at St. Paul.

Eight o'clock Saturday morning, August 22, found the editorial party aboard the steamer Rutledge at her dock at St. Paul. Perhaps in deference to the memory of Chief Red Wing, the party decorated themselves in true Indian fashion with red wings provided by the entertainment committee and when the boat started on her way down the Mississippi, every desirable nook was occupied by a congenial little party of friends intent upon the full enjoyment of the beautiful scenery and the perfectly ideal weather. During the trip down the river, the party had the opportunity of observing the work done by the government to preserve a navigable channel. The shores have been covered with stones—technically—riprapped, and wing-dams are constructed at frequent intervals. One of the women of the party had noted what seemed to her, obstructions in the river and to her query as to the "why," the one who knew, said they were wing-dams until the boat accidentally ran into one, and then the name was reversed.

Red Wing, the county seat of Goodhue County, about forty miles distant from St. Paul, is delightfully situated near the head of Lake Pepin, which is a widening of the Mississippi River. Those who are familiar with the whole course of the "Father of Waters," say this portion of the river is the most beautiful. Huge natural amphitheaters indent the high bluffs and Chief Red Wing chose one of the loveliest of these spots for the home of his tribe. Red Wing is taking his last long sleep on the crest of a great bluff overlooking the beautiful valley and the spot is marked by a huge red wing erected by the people who have taken possession of his domain.

Red Wing, "the Desirable City," was once a great wheat market but since the world's "bread-basket" has been moved further to the northwest, it has become quite a manufacturing center and is still growing.

The entertainment for the editors included a very substantial dinner served in the Armory immediately after our arrival. The party then assembled in the splendid public auditorium which was presented to the citizens of Red Wing by the executors of the estate of one of its public-spirited men, Mr. T. B. Sheldon. A handsome sum was bequeathed by him to provide a suitable public memorial and an up-to-date amusement place was chosen by the people. After the mayor's welcome and suitable responses, we enjoyed a camera-phone entertainment. After addresses and the ceremonies incident to the laying of the cornerstone of a fine new home for the Red Wing *Republican*, carriages and automobiles carried the party through the principal business and residence streets and the suburbs where several educational institutions are located.

While Red Wing has many praiseworthy features, its Civic League is worthy of special note. This organization has 1,500 members who are pledged to individual effort to keep the city clean and add to its beauty. It encourages competition among school children in tending flower beds, lawns and gardens and has accomplished much in removing unsightly signs and other objects which so mar the beauty of a town or landscape. Many of the party returned to St. Paul by rail. Although it was one o'clock A. M., when the boat reached St. Paul, none who waited for the boat, regretted the long ride up stream. The day was crowned with just as glorious a sunset as that into which Longfellow's "Hiawatha" disappeared. Then came the deep peacefulness which one enjoys only when far removed from the din of industry and the deepening shadows shut out the sights of the busy world.

It is certainly well, as the executive committee enter upon arrangements for another annual convention, to recall the lessons and enjoyment, of the preceding year. We believe in members of the same calling getting together for conference and an interchaning of views and also in legitimate co-operation. It is now believed that N. E. A. has reached a point where business co-operation will be deemed advisable.

THE N. P.-J. "GETS NEXT TO ITS READERS."

PLAINDEALER, MARSEILLES, ILL., Dec. 29, 1908.

National Printer-Journalist,

Mr. B. B. Herbert, National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

Enclosed find $2 for renewal of my subscription for another year. Kindly receipt for same. The December number of PRINTER-JOURNALIST was indeed a fine one. Getting next to your readers is the important problem all editors must solve if success worthy the name is desired. The N. P.-J. does this in large measure.

The season's greeting to Editor Herbert and the whole force. With respect, TERRY SIMMONS.

TO THE NEWSPAPER MAN, "LIKE BLOOD TO HUMAN LIFE."

THE GAZETTE, EAST HARTFORD, CONN., Jan. 2, 1909.

Brother Editor Journalist.

Your reminder received yesterday, and I enclose check for another year to keep in the family of those who want to be up-to-date. The JOURNALIST to me is like blood to human life; couldn't live without the JOURNALIST, that is to say while I am in the newspaper profession.

Wishing you a prosperous New Year, I am, as ever,

Yours truly, H. B. HALE.

ITEMS OF INTEREST—INFORMING, INSTRUCTIVE OR SUGGESTIVE

FOR nearly five hours New Year's night, three hundred and eighty-six men and women made merry in the big, new building built, owned and occupied exclusively by Arthur Capper, the well-known publisher of the Topeka *Daily Capital, Farmers Mail and Breeze, Missouri Valley Farmer, Household Magazine* and *Kansas Weekly Capital;* the occasion being the Fourth Annual Reunion and Housewarming of the employes of the Capper publications.

The floor of the huge business office which occupies the entire main floor of the building was transformed into a mammoth banquet hall. With one or two exceptions, more people sat down at this banquet than at any other similar gathering ever held in Topeka.

Mr. Capper's talk was the closing one on the program. It went right from the heart of the employer to the hearts of the several hundred employes. The keynote was sounded when he said: "I would rather occupy the commonest one-story shop on a back street and have my employes satisfied, than the grandest business palace in the town if filled with mutterings of discontent."

The semi-weekly Batavia, Ill., *News* is no more and there is some doubt whether even a weekly will be issued in future from the plant owned by Clark Lewis, according to the announcement made from the office. William Wrightman, who for several months has been lessee of the plant and owner and originator of the semi-weekly paper, has quit cold, announcing his sudden decision, to go out of business, to have been caused by a failure to arrive at a satisfactory understanding regarding the ownership of the busintss and plant, still retained by Mr. Lewis.

To publish a Sunday supplement or magazine for circulation with Sunday papers a company of business men formed in Des Moines has purchased the *Literary Magazine* of Chicago and will publish it at Des Moines. John J. Hamilton is president of the company, C. L. Gilcrest vice-president, A. M. Piper secretary and C. C. Proper treasurer.

After an exciting campaign the Chicago Press Club elected the following new officials: Henry Barrett Chamberlin, president; Frank M. Morriss, vice-president; Duncan M. Smith, second vice-president; Wright A. Patterson, third vice-president; Frank W. Smith, treasurer; Henry J. Bohn, financial secretary; E. W. Pickard, recording secretary; Joseph F. Henderson, George W. Weber, J. Newton Nind and J. E. Defebaugh, directors.

Among new Illinois corporations is the De Kalb Chronicle Publishing Company of De Kalb. Capital, $30,000; general printing, lithographing, engraving and advertising business; incorporators, Edward J. Raymond, Frank W. Greenaway, John K. Newhall.

For the purpose of boosting the circulation of newspapers throughout the west, T. P., Louise M. and George S. Myers of Waterloo, Iowa, have formed the Western Circulation Company. According to the articles of incorporation filed in the office of the secretary of state, the company will engage in the general business of increasing circulations of newspapers and other publications by advertising and securing new subscribers. The company is incorporated for $5,000.

The Litchfield, Ill., *Weekly Herald*, published by the Litchfield Printing House, and edited by J. Stanley Cline, has suspended publication. It has been in existence for twenty-eight years, and was at one time one of the most prominent papers in that section of the state.

W. W. Watt, city editor of the Janesville, Wis., *Recorder*, and alderman of the third ward, will locate at Reno, Nev., where he will engage in the insurance and real estate business.

A deal has been closed whereby S. B. Roach, of Mason City, Ill., becomes associated in the editorial management of the Kankakee *Republican* with W. H. Bassett. A block of stock in the corporation has been purchased by the Mason City man.

A. E. Johnson, owner of the Milwaukee Swedish newspaper, *Hemlandet*, the oldest Swedish-American newspaper, has received for a New Year's present from King Gustav V. of Sweden, the honor of being created a commander of the Royal Order of the Vasa. Mr. Johnson formerly lived in Chicago.

Geo. H. Benedict, of the Globe Engraving & Electrotype Co., presents an 18x28 blue-print, a diagram showing the cost of half-tones,—a graphic illustration of the varying cost of the various sizes.

For the good of the craft, one of these diagrams should hang in every photo-engraving office in the United States—for use in explaining to clerks, salesmen and customers that any half-tone sold for less than $1.75 carries with it a loss that is equivalent to a cash contribution. It has been demonstrated that the square-inch rate is the curse of photo-engraving, because it puts the manufacture of cuts on a speculative basis—on large cuts the engravers win—on small cuts they lose, and the profit on the large cuts is the "gold brick" that has started more photo-engraving plants, in every city, than can be profitably operated. There has been a considerable cost in getting up the diagrams, the blue-prints, the explanation and the postage, that will be barely covered by a charge of 25 cents, but Mr. Benedict will supply the diagram to all who send for it—for that amount. He asks nothing for his own work. Address—Geo. H. Benedict, 407-425 Dearborn St., Chicago, Ill.

Mr. Chas. Metzger, 9018 Exchange Ave., Chicago, Ill., was the leading prize winner for Illinois in a recent prize contest for new students of the illustrating and cartooning course of the Correspondence Institute of America, Scranton, Pa. This Institute has many students and graduates who have won success as illustrators and cartoonists. Their work has been published in leading newspapers and magazines. Mr. Metzger is only a new student and his success is most promising. Other prize winners from Illinois were: Miss Nellie Whitmore, 1070 E. 56th St., Chicago; Mr. Lewis Mathews, 216½ E. State St., Jacksonville; Mr. Anton J. Vezinsky, 490 Herndon St., Chicago; Mr. John Brewer, Box 195, Lebanon.

James A. Wood, for many years salesman for Barnhart Bros. & Spindler, Chicago, widely and favorably known throughout the middle West, was married Dec. 16th, 1908, to Miss Edna Mae Brink, daughter of Horace Brink of Chicago. During his many years of service with Barnhart Bros. & Spindler, Mr. Wood has acquired practical experience and most valuable knowledge of type, material and printing machinery. He has visited nearly all of the largest printing offices in the Central West and has a very extensive acquaintance in Southern Ohio and Tennessee. There are many friends in the trade, who are acquainted with "Jim," who send heartiest congratulations.

The News-Mail Co., Charleston, W. Va., has purchased a very complete equipment of material, type and machinery of Barnhart Bros. & Spindler, Chicago. It included a new Oswego power cutter, Chandler & Price presses, and a Brown folder.

The News Pub. Co., Des Moines, Iowa, has installed a Miller Saw-Trimmer purchased of Barnhart Bros. & Spindler, Chicago.

The Old Time Printers' Association held its 24th Annual Banquet and Ball at the Sherman House, Monday Eve., Jan. 18th, in honor of the 203rd Birthday of Benjamin Franklin.

C. K. Eberts, who covers Kentucky and Tennessee for Barnhart Bros. & Spindler, was suddenly called home to Chatham, Ontario, during the holidays by the sudden death of his brother.

Among the recent Chihcago trade visitors were C. W. Graham, who represents Barnhart Bros. & Spindler in Iowa, and W. R. Small, who covers for the same firm the state of Indiana.

R. T. Brooks, Buenos Ayres, South America, who is manager of the branch house there of the National Paper & Type Co., New York City, called on the trade in Chicago the latter part of December.

Twin City Printing Co., Champaign, Ill., has installed a new Oswego power paper cutter and a Chandler & Price Gorden, bought of Barnhart Bros. & Spindler, Chicago.

An idea worthy of the careful consideration of every business organization was brought out at the annual Social Session of the Welfare Council of the Cramer-Krasselt Co., held at the St. Charles Hotel, Milwaukee, on the evening of December 5th. Mr. Cramer, president of the advertising house, declared that the success of the company during the year of comparative depression just past, was due in very large measure to the welfare spirit maintained in the organization. The mutual concessions and sacrifices as well as the full co-operation of every department and individual composing the company, made possible the maintenance of the full effectiveness of the organization through the months of comparatively poor business, and insured full capacity to meet the demands of the commercial revival now so apparent. The family spirit made for unity and safety and for real, permanent and satisfactory success. The annual Social Session was simply a gathering of the friends of the company to the family table, the family hearthstone and the family good will and good cheer of the Cramer-Krasselt Co.

C. M. Lee has purchased the Banner County *News* at Harrisburg, Nebraska, of N. M. McKinnon. The paper will hereafter be edited by him. Mr. Lee is a young man 19 years of age who has had five years' experience in the printing and newspaper business. He was formerly of Holton, Kansas, but for two years has been employed as foreman on the paper that he has now purchased.

"The Railroad Red Book," a time-table publication of the Denver & Rio Grande Railroad, is devoting considerable space to articles descriptive of the varied agricultural, horticultural and mining resources of the territory served by its lines in Colorado, Utah and New Mexico. The January issue has a series of articles contributed by undisputed authorities on these subjects, the whole forming a review of the accomplishments for 1908 and a forecast for 1909.

CHICAGO SCHOOL OF JOURNALISM

Chicago has a Practical School of Journalism, of which more complete notice will be given later. It is conducted on the correspondence plan which has its advantages.

The Dean is Edwin L. Shuman, Literary Editor, Chicago *Record-Herald;* Author of "Practical Journalism," and the Associate Dean is Robert H. Holden, and Instructors are all active editors on large Chicago papers.

The announcement of the school contains the following: The General Course covers the whole range of journalistic writing in thirty-two exhaustive lessons. Each lesson consists of a printed lecture and a practical "assignment" for the student to write. Every lecture is full of concise directions as to the best methods for winning success in journalism.

PRACTICE IN ACTUAL REPORTING.

For each lesson the student writes an article as if it were for a newspaper. His manuscript is corrected by an experienced editor and returned with a letter of advice. Thus the student gets real practice in reporting, combined with the personal aid of an expert to point out his errors. This is the only system by which journalism can ever be taught satisfacorily. It is based on the actual usage of the city editor's room.

LECTURES BY VETERAN EDITORS.

The General Course is prepared by Mr. Shuman, who has had twenty years of experience in newspaper work. Along with his lectures are others by veteran editors, including the following:

Mr. George P. Upton, author and editorial writer, Chicago *Tribune.*

Mrs. Elia W. Peattie, novelist and literary editor, Chicago *Tribune.*

Mr. John J. Flinn, head editorial writer, Chicago *Inter Ocean.*

Mr. Trumbull White, former war correspondent, Chicago *Record-Herald;* now editor of the Red Book.

Mr. James O'Donnell Bennett, dramatic critic, Chicago *Record-Herald.*

Mr. Herman L. Reiwitch, city editor, *Record-Herald.*

Mr. F. M. S. Brazelton, former telegraph editor, *Chronicle.*

MAKES COMPETENT REPORTERS.

Students who finish this course satisfactorily are competent to begin work as reporters on any newspaper. In fact, the course is so comprehensive that many active young reporters and correspondents find they can increase their chances of promotion by taking it. It is recommended to every one who wishes to write good, straightforward English, whether he intends to enter journalism or not.

REPORTING.

For men and women in newspaper work the Practical School of Journalism offers advanced courses by which they can prepare themselves for promotion. There is not one country correspondent or reporter in ten who could not increase his income by taking one of these courses.

The Advanced Course in Reporting is prepared by Mr. Reiwitch, whose years of service as city editor of the *Record-Herald* have fitted him to give expert instruction in news-gathering. The methods of practical drill are the same as those used in the General Course.

TELEGRAPHIC CORRESPONDENCE.

The Advanced Course in Telegraphic Correspondence is by Mr. F. M. S. Brazelton, former night editor of the *Inter Ocean.* This is an admirable course for country correspondents who wish to learn how to increase their pay.

REPORTERS' CRITICAL COURSE.

Helpful criticism on the regular work of reporters and correspondents is given in the Reporters' Critical Course. It is in charge of Mr. Holden, formerly city editor of the *Chronicle.* This is worth many times its small cost to writers who wish to rid themselves of unconscious errors.

ESTIMATING

ONE of the most difficult things in the printing business is the furnishing of accurate estimates in advance that will prove profitable to the printer and fair to the customer. No two jobs can be done for exactly the same cost or at least there is no way of being absolutely certain, in advance, as to this fact. There are always varying conditions. The time that will take to set up, to read proof, to correct, revise, show proof, impose and make ready is always attended with uncertainty. No two printers will do any of these things on a job in exactly the same time or at the same expense. It is doubtful if the same printer will ever be able to repeat any of these operations in exactly the same time, twice in succession. There are a score of possible and varying conditions, that need not be ennumerated for the enlightenment of any experienced printer, making it impossible to say as to the exact time that will be taken. To look at copy presented and say that to put it into type ready for he press will take a certain length of time, is merely a guess. Experience helps in the guessing, but even then, untoward circumstances or conditions may arise or accidents happen that will upset the calculations of the most expert. In the face of all these difficulties, printers are constantly asking for the high privilege of making estimates. The folly of all this is most clearly shown in a communication from a paper salesman, who has evidently well learned the ways of printers, in a communication to the San Francisco *Ben Franklin Printer*. The writer says:

> The writer believes that one of the greatest faults with the printers of this community is in sending out literature, and also business cards, on which the following appears: "Estimates cheerfully given." This is something that should be eliminated from all classes of advertising issued by printers. The following is part of a circular letter sent out by a well-known firm in San Francisco, and particular attention is invited to the line set in italics:
>
> "As the supplies used in your office are an item of expense, we believe it is to your interest to *seek quotations on same before placing your orders.*"
>
> You will note that this firm calls particular attention to the fact that the consumer of printing should seek quotation on same before placing his order.
>
> The average printer does not know the cost of producing work, and therefore it seems to be the thought of the printer to see how cheap he can do a piece of work, and not how good. For illustration: A short while ago a printer called on a certain paper house with a copy of a letterhead. This letterhead was for a well-known firm of attorneys of this city and the copy was printed on No. 21 Crane's bond. The printer asked for a quotation on this paper and the salesman told him the cost for 2,000 letterheads. The printer's reply was: "Gee! this firm won't pay any such price for 2,000 letterheads. Haven't you got some paper just as good as Crane's?" On being told there was no paper that would take the place of Crane's, he answered: "Well, let me see some other bonds and I will select something I think will suit." After looking through several kinds of bond papers, a high-class bond stock was selected, a paper selling for about 25 cents per pound. The printer bought this, printed the letterheads, and made delivery to his customer. The customer refused to accept the order, for the reason that it was not printed, as specified, on Crane's bond. The printer again returned to the paper house and bought No. 21 Crane's bond, and said to the salesman who again waited on him: "This firm of attorneys know what they want; they won't stand for anything but Crane's bond, and they are willing to pay the price."
>
> Now, the above relates an actual occurrence, and something of the kind is happening every day. The moment the printer can get away from the idea of thinking that the buyer of printing does not know what he wants, the sooner he will make a success of his business.

In the same issue of the *Franklin Printer*, the official paper of the Ben Franklin Club of San Francisco, is an especially practical article in demonstration of estimates and the methods at arriving at prices in five different offices. This is for a 144 page catalogue, ten thousand copies, but the same principles and largely the same methods apply in estimating on any job of printing, large or small, so that the study of these different estimates will be of educational value to the conduct of printing offices of all grades. The editor prefaces these estimates with words of explanation, and then gives the estimates as follows:

> In the last issue of this magazine we published the following specifications and asked our readers to submit detailed bids on same, using their own estimate blanks if possible. These same specifications had been submitted to printers in several Atlantic Coast States, and one of the principal objects we had in view in adopting these specifications for an estimating contest was to ascertain how Western prices and methods of estimating compared with the East:
>
> SPECIFICATIONS: Ten thousand copies 144-page catalogue, size page 7½ x 10½ inches; type page 6 x 8¼ inches; 24 full-page halftones with one-line captions scattered through book; 6 pages display; 114 pages of descriptive matter set in ten-point, each page containing small vignette halftone; all cuts furnished by customer. Stock for inside, basis, 25 x 38, 80-lb. coated book at 9 cents a pound; cover, basis 20 x 25—65, costing 17 cents a pound. Inside printed in black; cover in two colors on first page only. Binding wire, to be trimmed flush. Delivery to be in packages of 250 to express offices, except 1,000 copies to be delivered to customer. Payment 60 days from receipt of bill.
>
> Of the many estimates received, only one was sent in on the bidder's estimate blank.
>
> The bids received in the East varied from $1,935.27 to $2,935, the average being $2,230.67.
>
> The Western bidding runs from $1,862 to $2,300, the average being $2,115.06.
>
> This comparison shows that the standard of prices in the East is above that of the West. One reason for this condition is that our Eastern brethren have, for some time past, been organized for the purpose of studying costs and conditions. While they have not, as yet, reached a state of uniformity in estimating, their investigations and discussions have assisted materially in elevating the standard price.
>
> We have selected five estimates for comparison and comment, and also a letter on the subject from another firm. Some of the bids submitted represent conscientious effort; others do not:
>
> EDITOR FRANKLIN PRINTER.
>
> *Dear Sir:*—I note the request in the October number for an estimate on a 144-page catalogue. On examination it looks like a "catch" proposition. The paper-stock catalogues that we have do not show any paper that will fold so as to make a page 7½x10½ inches. Paper 28x42 folds to 7x10½, which is the nearest to specifications. The next size is 32x46, which would cut to waste. In arriving at the proper weight from the basis given we used the catalogue of ————, which gives the weight on the 28x42 as 100 pounds, and on the 32x46 as 124 pounds. If the type page were a half inch narrower the 28x42 size would do the work. In dealing with customers I always show them where it is to their advantage to have their jobs made to a size to suit the paper, to avoid waste. Very often specifications are given me to figure on wherein the stock does not cut to advantage, and in taking the matter up with the customers they are always willing to allow some change to save them money.
>
> I might say that I always add 50 per cent to the cost of stock in figuring on all kinds of jobs; machine composition on large jobs at 50 cents per thousand ems, display composition at 75 cents per thousand ems, measured as eight-point; time composition at $1 per hour; presswork at $1 per hour.
>
> The specifications given were identical with those published in the East. They were published in this journal with the full knowledge that the page size would not conform to the standard size of Western papers. Our object was to see how our readers would handle the matter, as it is something they should be prepared for at all times. The author of this letter had reached the correct solution and we are sorry that he did not proceed with the estimate on the basis of 28x42—100. The basis for stock given in the specifications, 25x38—80, equals 28x42—100 and 32x46—124. Without allowing for spoilage, the job actually takes ninety reams. The

difference between the two sizes amounts to 2160 pounds of paper, which, at 9 cents per pound, makes the tidy sum of $194.40. Where is the customer who would not prefer to sacrifice one-half inch in the size of his catalogue page and save this amount of money? We therefore recommend the 28x42 size, without question. We can not agree with our correspondent in adding 50 per cent to the cost of stock on *every* job that comes along. There are instances where it is necessary to add 100 per cent, and, again, on large quantities, where 10, 15, or 20 per cent is sufficient and reasonable. The other prices contained in this letter do not relate to the subject under discussion and will be commented upon at a future date.

ESTIMATE A

Cost of inside stock	$103.68	
Cost of cover stock	110.50	
Total cost of stock, approximately		$ 215.00
Cost of ink, 175 lbs. at $1.50 per lb., approximately		275.00
Presswork and make-ready		450.00
Composition— 6 pages display	$ 6.00	
24 pages halftones	2.50	
114 pages 10-point	239.40	
Total cost of composition, approximately		250.00
Cost of folding cover, gathering, counting, binding		125.00
Cost of trimming		5.00
Folding inside		10.00
		$1,330.00
Add 40 per cent profit, etc.		532.00
Total cost of job		$1,862.00

Estimate A is a case where the printer gives an "approximate" figure. It is absolutely impossible to figure the inside and cover stocks at less than $873.75, and this does not allow one sheet for waste or one cent for handling. The man who supplies ink to printers is certainly well provided for with an allowance of $275, and the 40 per cent for profit (etc.) looks mighty good, even to the member of a printers' "trust." The estimate is confusing on account of the indiscriminate use of the word "cost." If the total price, $1,862, is intended as total "cost," we say "Brother, you made a good guess," *although* it was accidental. If this price is the selling price, drop out the word "cost," for surely you don't intend to submit your cost price to the customer.

ESTIMATE B

Cover Stock: 22x28—80, 4 to sheet, 2,500 sheets net, add 55 sheets for waste; total, 5 55-100 reams, or 400 lbs., at 17½	$ 71.60
Inside Stock: 28x42—100, enameled book, 90 reams net, add 2 reams for waste; total, 92 reams, or 9,200 lbs. at .09½	874.00
(NOTE—Waste allowed as follows: 10 sheets for make-ready and 10 sheets for each 1,000 impressions on each form.)	
Composition.	
Linotype: 114 pages 10-pt., 40x60 picas, 2,400 ems to ems to page; total, 273,600 ems at .45 per M	112.60
Six pages display: At $2.50 per page	15.00
Hand and Make-up: Including 1-line caption under cuts and 1 page cover; total, 145 pages, 24 hourse at .90	21.60
Lockup: Nine 16-page forms and 2 cover cuts, 2 hours for each 9 forms and 2 hours for cover; total, 20 hours at .90 per hour	18.00
Proofreading and revision: 24 hours at .90 per hour	21.60
Presswork.	
Cover: Two colors and scored.	
Make-ready	$ 2.50
Running, 20 M. impressions	20.00
Scoring, 10 M. impressions	7.50
	30.00
Inside: Nine forms, 16 pages each.	
Metallic overlays, average per form	$ 1.08
Make-ready, 3 hours per form, at $2	6.00
Running, 10 M at $2 per M	20.00
Total, per form	$27.08
	243.72
Ink: Eight lbs. per form, total 72 lbs. at .40	28.80
Binding.	
Folding: Four hours per M, including slashing; total, $1.60 per M, or $16 per form, 9 forms	144.00
Folding Cover: Ten hours at .40	4.00
Pressing: $2 per signature, 9 signatures	18.00
Gathering: Ninety M signatures, at .20 per M	18.00
Stitching: Ten M at $1.50 per M	15.00
Covering: Ten M at .80 per M	8.00
Trimming: Ten M at $1.50 per M	15.00
Tying and Delivery: Forty pkgs. at .30 per pkg	12.00
Total cost	$1,670.92
Add 20 per cent	334.18
Selling price	$2,005.10

The bidder of Estimate B explains some of the details, as follows:

This is a job where all the items may be estimated, such as ink, proofreading, etc. It is to be supposed that the firm ordering such a job wants a good job, and no one estimating on such can be too careful to get all these items entered on their estimate sheet. One item in the binding may need a little explanation for some, and that is the pressing at $2 per signature. I have found that to press the sheets after folding greatly facilitates the stitching, covering, and the trimming, and makes a much neater job. Some prefer pressing before gathering; I prefer to press after gathering.

Also it may be necessary to explain why paper is estimated at ½ cent per pound more than the specifications in *The Franklin Printer* require. The price in the specifications is taken to mean the catalog or paper-house net price to the printer. The printer must add enough to that to care for handling while in the shop, taking wrappers off, taking out of crates, carting to presses before printing, and to bindery after printing, and ½ cent per pound is not at all too much and should be added to all jobs.

The bidder expresses his views regarding the necessary change in size of page to conform to standard size of stock in the following unique manner:

November 21, 1908.

PROSPERITY, PROFIT & CO.:

Gentlemen:—Herewith we beg to hand you estimate as per specifications published in the October issue of *The Franklin Printer*.

We have taken the liberty to change the size of the page on account of the standard sizes of paper, which will make only a slight change and one which we are sure will cause you no inconvenience. Your specifications call for paper page to be 7½x10½, which would necessitate a sheet 30x42; this we have changed to 28x42—100 enameled book, and will make a page 7x10½ and a type page 5½x9.

All work will be strictly first class and especial attention will be given to the printing of the halftones.

The price for the 10,000 catalogs will be $2,005.10, sixty days, with 2 per cent for cash in ten days.

Respectfully yours,
WISH-IT-WERE-SO PUBLISHING COMPANY.

It will be noted that Estimate B is figured on a cost basis all the way through, and when the total cost has been reached a percentage is added for profit. The estimate shows extreme care and deserves commendation.

In the matter of stock, spoilage is allowed for by extra sheets, and one-half cent per pound added to the dealer's price to cover handling. This is supposed to represent cost. In this case the extra ½ cent added to the specified price means an addition of $48 to the price the printer paid the dealer for the stock. Don't lose sight of the fact that at the end this price is still further increased 20 per cent. We prefer to figure both lots of stock at the dealer's price and add 5 per cent to the total, making $45, practically the same result, but we believe easier done and one that would prove more popular.

The price allowed for linotype composition may conform to the present market rate, but we believe it too low. The time allowed for hand composition and make-up we consider insufficient. It is at the rate of six pages per hour, with a cut and possibly a caption on each page, which is more than will be produced in the ordinary course of business. If distribution is provided for, we have failed to note it. The make-ready time of three hours to a sixteen-page form with sixteen cuts looks too low. We are glad to note that ink has been provided for, but we would suggest less quantity and a better grade. We believe the price for gluing on covers should be raised.

ESTIMATE C.

Inside.

Stock: Ninety-three reams 32 x 46—120 at .09 (waste included), $1,004.40; add for handling and profit, $245.60; total	$1,250.00

Composition: One hundred and fourteen pages, about 270,000 ems 10-pt., at $1.75 per page.	$200.00	
Six pages display, at $2.25 per page	13.50	
Captions	6.00	
		219.50
Imposition: Including proofreading, stonework and corrections, 9 forms, 16 pages each, at .75 per page		110.00
Make-ready		75.00
Presswork: 9 forms, 10 M impressions each		250.00
Cover.		
Stock: 7 rms. 22 x 28½—110 (3 out of sheet), at .17.		160.00
Composition		2.50
Presswork: Black, $7.50, color, $10.00		17.50
Binding and Delivery.		
Folding, wiring, trimming, etc.		35.50
Wrapping, 40 bundles		7.50
Delivery, about 6 tons		15.44
Selling price		$2,142.50

Estimate C should have figured on 28x42—100 stock inside and 22x28—80 for cover (four out), which would materially reduce these items. Ink has not been allowed for. Composition and presswork on cover are both low. The total amount set down for binding is not more than enough to charge for pasting covers. We are pleased to note the delivery charge, which we think about right.

ESTIMATE D.

Inside Stock: 90 rms. 28 x 42—100 enamel, 9,000 lbs., at .09	$810.00	
Cover Stock: 5 rms. 22 x 28—75, 375 lbs., at .17	63.75	
	$873.75	
Add 25 per cent for spoilage, handling and profit	218.44	
		$1,092.19
Composition: Type pages 6 x 8½ inches, set 36 ems wide; 144 pages 10-pt.; total, 461,000 ems at .70		322.70
Composition, stonework, etc., on cover		5.00
Make-up and Lock-up: 9 forms of 16 pages each		85.50
Distribution		64.00
Presswork: Make-ready and running 9 forms, 16 pages each, 28 x 42, at $46.50 per form		418.50
Presswork on Cover: 2 forms at $16.75 each		33.50
Folding: 40 M sheets of 32 pages each, at $2		80.00
10 M sheets of 16 pages each, at $1.50		15.00
Gathering: 50 M sections, at .50		25.00
Stapling: 10 M, side stitch, at $2.50		25.00
Pasting Covers: 10 M, at $3.50		35.00
Trimming and Cutting		30.00
Total		$2,231.39

Estimate D is the only one received with a specific amount set aside for distribution. In changing the paper size of the job from 7½ to 7 inches it will be necessary to change the size of the type page from 6 x 8¼ to 5½ x 9, which allows for the same number of square inches of type, therefore the job should be set 33 ems wide. Ink has not been specified, but we believe the price allowed for presswork is enough to includ this item.

ESTIMATE E.

Stock.

Inside Stock: 95 rms. 32 x 44—120, at 09	$977.40	
Cover Stock: 6 rms. 22 x 32—92, at .17	93.84	
(Spoilage included	$1,071.24	
Add 10 per cent for handling	107.12	
	$1,178.36	
Add 10 per cent for profit	117.83	
		$1,296.19
Composition.		
24 pages halftones, setting 1-line captions and make-up, at .50		$ 12.50
Six pages display, at $2.50		15.00
114 pages 10-pt., about 2,250 ems to page, approximately 256,500 ems, at $1.00 per M.		156.50
Running type around cuts, at .25 per page		28.50
Make-up: 144 pages, at .25 per page		36.44
Composition on Cover and breaking up for press, two colors.		5.00
Lock-up: 9 forms of 16 pages each, 14 hrs., at $1.00 per hour		14.00
Make-Ready: 9 forms, 7 hrs. per form; total, 63 hrs., at $1.80		113.40
Presswork: 9 forms, 11 hrs. per form; total, 99 hrs., at $2.		198.00
Ink for inside: 55 lbs. at .75		41.25
Presswork on Cover: 20 M impressions on jobber		20.00
Ink for Cover		5.00
Cutting cover stock		1.00
Binding: 10 M copies, at $8.00 per M.		80.00
Bundling and shipping		5.00
	$2,137.34	
Selling price	2,300.00	

Estimate E has most certainly been generous in allowance for spoilage. The 32 x 44 size is not common on this Coast. This is the only bid received where mention is made of running type around cuts, which is a point to be remembered. We think that fourteen hours will not lock up and unlock nine forms of sixteen pages. Two and a half hours to a form is little enough to allow. The charge of $1 for cutting cover stock seems to the writer to be in the nature of an afterthought affair, a "soak-it-on" proposition. With a liberal allowance made for 10 per cent for profit, we believe this $1 item could be eliminated with perfect safety. We think the price for binding too low, and certainly the charge of $5 for bundling and shipping is inadequate for handling forty bundles, and, all told, 9,000 pounds of paper.

If the job figures $2,137.34, why make the price $2,300? To make the price even, why not say $2,140? That looks all right. This idea of having to throw in $163 to provide for mistakes, errors, discrepancies, omissions, commissions, etc., is all rot. Let's adopt a uniform method of estimating, have an estimate blank with every possible item printed thereon to refresh our memory, and when we have made a price and revised it carefully, let's stick to that price.

No attempt has been made to point out all the defects in these estimates. There is ample opportunity to comment at great length, but it is believed that enough has been suggested to warrant careful thought. It is not expected all readers will accept our criticisms; some may consider we have discussed unimportant items and overlooked the principal features. We merely ask for careful consideration, and if you feel we are in error, give us your point of view, and without prejudice your ideas will be placed before our readers as freely as have been our own. This is a common cause. No one man knows it all, but each one should contribute his ideas and thus assist in creating more uniformity in estimating.

JAPAN GUARDS AGAINST PAPER FAMINE

The Japanese also have looked over the contents of their industrial stores and have decided that something be done toward conserving their remaining supplies of raw material for paper making.

In Japan, paper is used for almost everything from the silver-figured partitions of the Buddhist temple to the rude hut walls of the laborer; from the silk-like vestments of the priest down to the rain-proof shield of the traveler. In fact, the ingenuity of the Japanese is only matched by the varieties of uses to which paper may be adapted.

The work of the United States Government toward determining the amount of paper materials used and the source of future supply, is being followed by the Japanese, according to an advice from U. S. Consul John H. Snodgrass, at Kobe. The imminence of the danger is apparent from the fact that the Japanese authorities have requested the paper mills department of the Mitsu Bishi Kaisha to take over some 7,500 acres of the bamboo forests of Formosa.

It is known that the bamboo tree has been the raw material from which the Japanese have recently made the larger portion of their paper products; so it is thought that, by introducing the improved methods of forest cultivation and harvesting, this tract of woods will furnish yearly 10,000,000 bamboos, adapted for conversion into paper pulp.

No matter whether the paper company will establish its mills in Formosa or ship the bamboo to Japan in a partly finished state, the development of this new source of raw material will be of high importance and may overcome the necessity of the Island Empire looking to foreign countries for the future supply of paper pulp.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

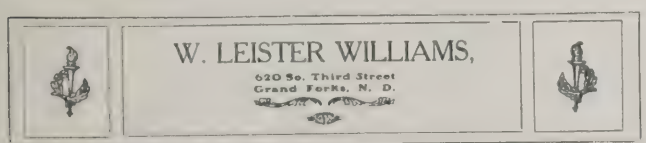
ONE of our contributors this month has raised again that question of whether or not the customer's word is supreme in matters of style. But in the last analysis it all depends on the printer. If he has developed to the point where he is sure of his ground and can afford to dictate to his customers—then he may do so. But it is a far journey in getting to that point. Most of us must be content to get out work as the customer thinks he wants it, regardless of the violation of the laws of style, or the introduction of all manner of freakisms and other things which jar upon our sensibilities. Of course we are not compelled to put our imprint on anything which does not measure up to our ideals.

It all depends on whether we must take the position of the customer's "hired man," ready to do his bidding, or whether we have progressed to the point where we can justly claim for ourselves the position of professional experts, capable of giving our clients expert advice in our particular line, and dictating to them more or less the course they should follow, just as the physician or the attorney gives advice.

But how few there are who are capable of doing this, or are in a position to do it from a business point of view. The most that the majority of us can do is to suggest, attempting to lead the customers around to our ideals by showing him samples of work which might be followed in the execution of his own.

I know one shop which has the counter where work is taken in covered with a sheet of plate glass, under which are tastefully arranged a large number of the best specimens turned out by the place. These have been of great value as suggestions for customers.

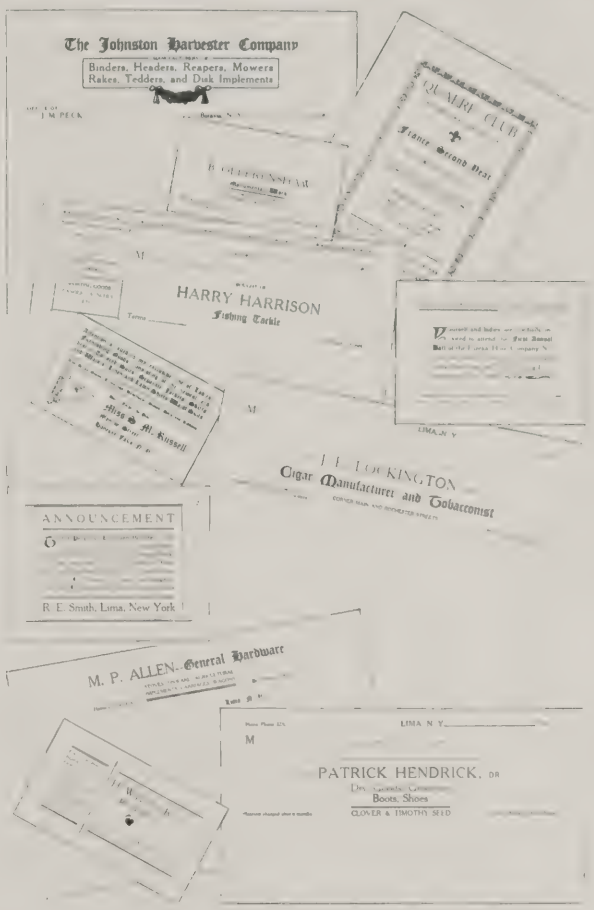
W. Leister Williams, Grand Forks, N. Dak.—Here again on your letter head is the union label worked into the ornamental scheme. The ornaments above the label might well be lighter, otherwise the job is a fairly good one. The space between rules at the ends—that



is, between the outer and inner panels—should be less, but slightly more than the space at top and bottom. Your circular should have more side margin. It is set more after the style of a newspaper advertisement than a hand bill.

Harvey J. Hartley, Yazoo City, Miss.—You certainly are making rapid strides in your work for a boy only 13 years of age. Both composition and presswork are better than many specimens from much older men which come to my desk.

Some months ago F. A. Van Gelder, Lima, N. Y., sent in some specimens upon which the severest criticism I could pass was that Mr. Van Gelder's office needed some new faces of type. He has followed my suggestion, and sends some more samples of his work,



which are much more satisfactory to me, and I doubt not are to himself, as well as to his customers. What new life a few additional fonts will give to an office, anyway!

Mr. E. S. Hanson, Wilmette, Ill.

DEAR SIR:—I am sending you under separate cover three shipping cards which I would like to have you criticise. A customer of ours brought in the one numbered one and wanted something like it in size and wording and I got up and printed a few of the one numbered three. When I showed them to my customer, he was not at all pleased but said he much preferred the one numbered one. So I duplicated the job as near as I could with the material I had and the result was number two and a pleased customer. The pleased customer is, of course, one of the things we all want but I would like YOUR opinion as to the relative merits of the three. Very truly,

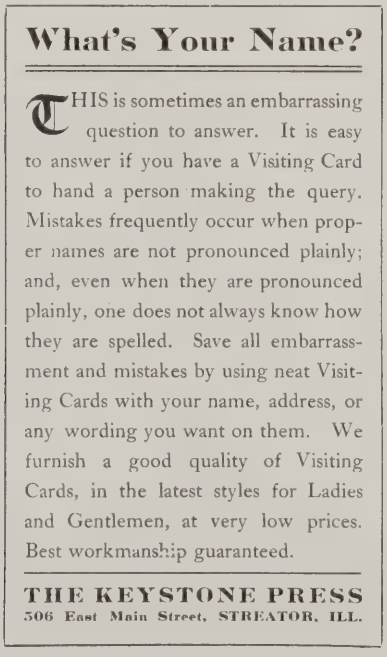
Shelton, Neb. W. W. MALTMAN.

Of course there is no disputing which card has the most merit. In fact it will be safe to say, and I think Mr. Maltman will agree with the statement, that No. 3

is the only one which possesses any merit at all. Perhaps I can offer a suggestion which may help in future dealings with this customer. I imagine that had his name been displayed a little more prominently you would not have had so much trouble with him. I have

at times been up against men who demanded all kinds of changes in their work, and yet on getting at the bottom of the matter their main purpose seemed to be to get their names to stand out more prominently. It may be worth trying if the matter comes up again.

Just a few days ago I was wondering what had become of our friend Weitlispach of Streator, Ill., and now, by some process of mental telepathy, possibly, he has been moved to send in a bunch of specimens. They



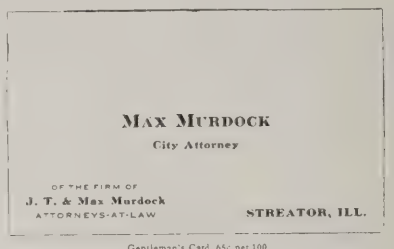
What's Your Name?

THIS is sometimes an embarrassing question to answer. It is easy to answer if you have a Visiting Card to hand a person making the query. Mistakes frequently occur when proper names are not pronounced plainly; and, even when they are pronounced plainly, one does not always know how they are spelled. Save all embarrassment and mistakes by using neat Visiting Cards with your name, address, or any wording you want on them. We furnish a good quality of Visiting Cards, in the latest styles for Ladies and Gentlemen, at very low prices. Best workmanship guaranteed.

THE KEYSTONE PRESS
506 East Main Street, STREATOR, ILL.

give every indication that there is something doing down his way. He is evidently making a strong pull for business, not only by sending out some strong and catchy advertising of his own, but by making the quality of his work such that it "will be remembered long after the price has been forgotten."

One of his pieces of advertising is shown here. The only thing I object to is the lowness of the prices quo-

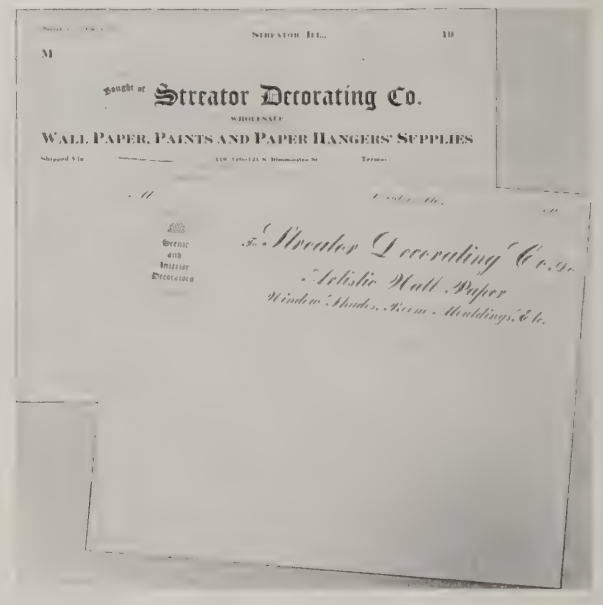


Gentleman's Card, 65c per 100

Ladies' Card, 50c per 100

ted on visiting cards. They could just as well be made a little higher, I should say.

I am also showing two bill heads for the same firm, for the purpose of noting the contrast between them. The one in script is almost an exact counterpart of a job which I myself set at one time, using the same backgrounds and the same styles of type. And I am



willing to admit that I was never proud of it. Script does not seem to lend itself readily to this style of treatment. Then, too, the large background is not, in my judgment, a good one. It has no beginning, no ending, is "without form, and void." It adds nothing to the artistic effect, if indeed it does not detract from it. On the other hand, note the background on the other job. It has a little scroll for "Bought of," and a circle to give prominence to the initial letter. The shading is also such as to give prominence to the line, and to lead the uninitiated to believe that the printing was

done from one plate. I doubt, however, if anyone would be thus deceived by the other head.

I do not like to see a coarse newspaper halftone on a nice card such as that for Peter Reinhard. Of course

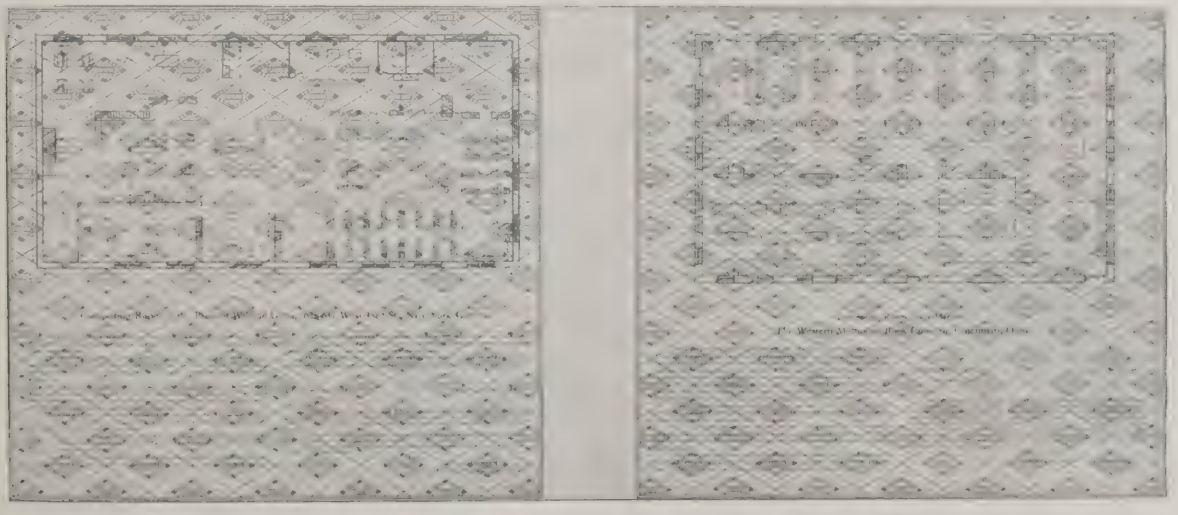
Mr. Weitlispach does not, either, but no doubt was unable to persuade the customer to go to the expense of another plate. This should be done whenever possible, however.

Harry W. Osgood, Franklin, Pa., sends the Christmas number of a publication called *The People* which is printed at his office. There are appropriate typographical reminders of the season throughout the issue, which is a very creditable piece of work in every respect.

Stuart L. Brown, Chambersburg, Pa.—The advertisement you send might have been set in a style of type more appropriate to the season, if you had any such. The heads scattered throughout the matter should be much stronger. The name at the bottom might have been in a slightly smaller but, more extended type. If you had no other suitable type for this line, it might have been better spaced.

Lofton Jones, Sylacanga, Ala.—I am showing your letter head; but unfortunately I have lost the original, and cannot therefore comment upon your color scheme as you desired.

A book of real worth from every standpoint has been received from the Hamilton Manufacturing Company, Two Rivers, Wis. It is entitled "Composing Room Economy," and its purpose is to give to printers who are starting newly into the business, or who are rearranging old plants, ideas along the line of convenient and economical arrangement. This is done very largely by showing a number of floor plans. These are not imaginary layouts, gotten up by the company's draughtsmen to see how much of the company's goods could be got into a given space; they are plans of actual composing rooms, comprising some of the best known names among printers and publishers in the country. A few that may be mentioned are Phelps Publishing Company, Springfield, Mass., Henry O. Shephard, Chicago., Butterick Publishing Company, New York., Woodward & Tierman Printing Company, St. Louis, Curtis Publishing Company, Philadelphia, W. P. Dunn Company, Chicago, and many others. With each plan is given something of a description of the layout. The book is decidedly instructive and reflects much credit on the Hamilton Company, who I presume will send a copy to any employing printer who asks for it.



Two pages of "Composing Room Economy" (The reproduction does not show what was intended, but send for book and see for yourself.)

THE AD MEN AT KANSAS CITY

ORGANIZATION, and the association of men in the several callings for mutual improvement and the promotion of business is the one great characteristic of this age and country. It would be impossible to estimate the untold benefits that have already resulted. The handling and preparation of advertising, as a separate calling, has been recognized scarcely a score of years, yet advertising clubs, composed of advertising experts and managers, exist in all of the greater cities of the country, and the recent annual convention of the Associated Advertising Clubs of America in Kansas City, which was in every way a great success, represented a total membership of over 2,800 in these different organizations.

The following, appearing in the Chicago *Inter Ocean*, will be found of interest:

It was decided to hold the next national convention at Louisville, and it was predicted that at that time the membership of the association will number 5,000.

The largest delegation at the convention was from Chicago, and everywhere the prestige of Chicago as an advertising and commercial center was recognized and commented upon.

Various members of the Louisville, Cincinnati, Indianapolis, and New York delegations returned on a special train and were entertained by the Chicago club at its headquarters. The visitors were given automobile rides about the city and shown the boulevards and parks and the industrial establishments of the city.

The Chicago Advertising association members were jubilant over their success in securing the election of one of their number to the presidency of the Associated Advertising Clubs of America at the convention recently held in Kansas City. The coveted honor was awarded to Edmund D. Gibbs, vice president and general manager of the Patterson-Gibbs company, advertising specialists in the Heyworth building.

Mr. Gibbs, prior to his present affiliation with the Patterson-Gibbs company, was for many years in charge of the advertising department of the National Cash Register Company at Dayton, Ohio. He was also a charter member of the Sphinx Clubs in New York and London.

CONVENTION ATTENDANCE LARGE.

Delegates representing 2,800 members were in attendance at the convention, and the impetus given to the cause of advertising by the convention will, in the belief of the members, result in material good to the business. Attendance upon all the sessions of the convention was uniformly large, and the prominence of the speakers, eighteen in number, representing the different classes of the buying and selling ends of advertising, lent much interest to the convention.

Among those who delivered addresses were William Jennings Bryan, Democratic nominee for President; T. T. Crittenden, mayor of Kansas City; Arthur Brisbane, New York; Thomas Balmer, street railway specialist; O. H. Wernicke, Grand Rapids, Mich.; A. W. Lawshe, Third Assistant Postmaster-General; James Rodgers, president of the Quoin Club, New York; Walter Williams, Missouri University; Mayor Clayton of St. Joseph, Mo.; A. F. Sheldon of Sheldon University, and John Barrett, director of the Bureau of American Republics.

NEXT CONVENTION AT LOUISVILLE.

The new officers of the national association elected at the convention were Edmund D. Gibbs, Chicago, president; Andrew G. Samuels, St. Joseph, Mo., vice-president, and Leo Landau, St. Louis, treasurer.

CHICAGO ASSOCIATION OFFICERS.

The officers of the Chicago Advertising Association are as follows: President, W. R. Emery, western manager *Everybody's Magazine;* first vice-president, T. W. LeQuartee, president *Illinois State Magazine;* second vice-president, Edmund D. Gibbs, vice-president The Patterson-Gibbs Company; third vice-president, John Budd, Chicago manager Smith & Thompson; treasurer, Charles Touzalin, Lord & Thomas; secretary, A. G. Langworthy, advertising manager Fairbanks, Morse & Company; financial secretary, E. D. Wheeler, western manager *Gates' List of Railway Employes' Journal.*

The newspapers are the promoters of knowledge, of the industries and of business and the advertising men are the promoters of that commercial publicity by which and through which the newspapers largely exist, and are enabled to exercise their benign and ever-broadening influence as the chief agencies in aiding trade, manufacturing and the progress of the people along all lines that help to build up the highest civilization with all that pertains to the use and enjoyment of all those innumerable products of hands, brains, skill and inventive genius that bring the better conditions of modern life, greatest possible comfort, enjoyment and all-around production and prosperity.

GREATER RELIABILITY

Along a similar line to what we have said on positive knowledge and accuracy, we notice a contribution in the *Editor and Publisher* of New York City, to the editor of that paper, from Robert H. Davis, editor of *Scrap Book* and associate editor of *Munsey's Magazine,* and associated in the capacity of advisor with Munsey's newspaper publications, the Washington *Times,* Baltimore *News,* Philadelphia *Times* and Boston *Journal,* a newspaper man, who entered his present broad fields, after twelve years' experience in daily newspaper work. Mr. Davis writes:

In both journalism and magazine-making, there is surely to be an upheaval. The dailies will begin to pay a little more attention to accuracy and the business of discrimination in news, and the magazines will extend their activities to the point where they will deal more intelligently with current events. A great many newspaper proprietors, at the present time, are laboring under the impression that party victory is a sign of journalistic power—especially those organs that are known as and claim to be partisan papers. They stand or fall on the popular vote representing public sentiment according to its voting strength. They display the instincts of henchmen in their editorial columns and are swayed by immediate cause and effect in the game of politics. They lack ideals and are not inspired by the doctrine of the greatest good for the greatest number, but are content with being regarded as the mouthpiece of certain organizations that may or may not be for progress.

It is a significant fact nowadays that very few newspapers, exercising to its fullness the denunciatory power, have any influence whatever with the public. A united protest on the part of the press against some particular trickster is impossible for the reason that a daily is restrained by the limitations that are purely local.

The magazines, even the weeklies, being less perishable, the endowment of longevity will take advantag of this heritage and make the most of it. True, they cannot lift their voice as often as a daily, but it can be made clearer and louder and more in tune with the circumstances that occasion it. It is for this reason that I look toward a general improvement in all the periodicals—an improvement that will increase their power, their circulation, and their importance. The weeklies, fortnightlies, and monthlies, observing the opportunity, will make the most of it, and the dailies will become more potent and more accurate throughout the zone they aim to cover.

"EXCELLENT."

THE TELEGRAM, HARTFORD CITY, IND., Jan. 4, '09.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed find check for $2 in payment for subscription to your excellent journal. With kindest personal wishes for 1909 for Mr. Herbert, Senior, and "you all," I am, Respectfully, E. E. Cox.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.

MAKING announcements and advertising impressive and making the impression pleasing and lasting, are essential to effectiveness. The *Dispatch* of York, Pa., seems to have accomplished these ends in the following circular letter and card which are reproduced with similar objects in view:

We might have set up the contents of these in type

(SEE SUBSEQUENT PAGE)

and saved the reproduction, but the impression would not have been as forceful, pleasing or lasting. Now our readers have before them not only the matter but the picture of the forms, ready at hand, for imitation. All people, whether from Missouri or elsewhere, need, and like to be shown and the more an advertiser can take those whom he wishes to reach and win into his confidence and show them, the better will be the results.

* * *

On account of the higher cost of production and the advanced price of print paper, the Trenton, N. J., *Evening Times*, has advanced the price of the publication from one cent to two cents a copy, and ten cents a week by carrier in the city. The *Times* is a splendidly conducted paper of twelve pages, eight columns to the page, and has the true idea as to high quality. The publishers give the following, in the announcement of the advance in the charge, that is worthy of careful reading and consideration by all newspaper makers:

The owners of the *Times* believe the people of Trenton are entitled to the very best, and no expense has been spared in making a first-class newspaper. This same policy is to be continued. But the time has come when provision must be made to meet the growing cost of producing such a newspaper. * * *

The actual cost price of the white paper has increased fifty per cent, while the amount of paper used, due to the enlarging of the *Times* and the circulation growth, has been one hundred per cent. In addition there have been very great increases in all departments and materials used in newspaper making.

That the *Times* is appreciated by the reading public is best evidenced in the fact that the circulation of the paper has increased upwards of 8,500 copies a day in the past six years. The *Times* will continue to honestly give to its readers an unprejudiced record of the doings of the world, and to stand for those things that make for the betterment of the community.

The price of the two morning newspapers of Trenton will also be increased to two cents a copy on February 15th.

The New York *Herald*, in commenting editorially on the step taken by the Trenton, N. J., papers, says:

Mr. Alexander, who recently purchased the *True American*, tells its readers in an editorial that the troubles of that paper, ending in a receivership, were due to an ill-advised reduction in price to one cent.

In announcing the resolution to advance its price to two cents, the Trenton *Evening Times* states that the change is made necessary by the increased cost of producing a newspaper, and the same reasons for the change are recited by the *Daily State Gazette*.

The Trenton publishers are to be congratulated upon their good sense. It is the height of folly in publishers to wail for help from other sources to enable them to go on doing business at a loss when the remedy lies in their own hands. White paper may or may not be too high, but, after all, the white paper is only one of many elements in the production of a newspaper that have enhanced in price.

Quality, not cheapness, is what insures worthy and permanent success. It is quality largely that makes the columns valuable to advertisers. People of financial ability, the best patrons of the stores, are those who want good goods and are able to pay for them, and they also want merit and high quality in the paper that comes to their homes. We have frequently cited the Brooklyn *Eagle*, which has always sold at three cents a copy, and that gives what the people of Brooklyn want, and spares no pains or expense in securing the same and in keeping in pleasant, useful, active, friendly touch with them, as a striking illustration of this fact.

* * *

The Montreal *Star* is one of the best examples of newspaper push on the continent. It features, advertises, thoroughly covers its field and keeps at it everlastingly.

* * *

The Topeka *Daily Capital* makes much of every improvement and advance in the paper and keeps these constantly before its constituents. There is nothing in Kansas foreign to the *Capital*. The "New Year Night House Warming," the story of which is elsewhere briefly told in this issue of the NATIONAL PRINTER-JOURNALIST, was made a great event, and the full story of the same entertainingly and pleasingly told in the paper for the information of all the paper's readers. The visit to Topeka of the members of the Executive Committee of the National Editorial Association and of the Kansas State Press Association, on February 2d, is to be signalized by a banquet in the *Capital's* new $160,000 building. As should ever be the case, the *State Capital* leads in all affairs that partake of the character of hospitality, publicity and promotion. There is scarcely anything more important, outside of

giving all the news, than this kind of worthy leadership, to a newspaper, and next to this, with a state paper, is the keeping in close and friendly touch with the newspapers of the entire State, quoting from them with due credit, and discussing with them, in a friendly, considerate manner, all matters pertaining to the interests of the State.

* * *

We have had frequent occasion to refer to the *Evening Wisconsin* of Milwaukee, as a model of best newspaper making in all departments. Its make up and its general news service are worthy of highest commendation. The editorials are on live topics and ably and clearly written. The affairs of its city and State are never slighted or neglected and there is always an abundance of human-interest stories. It is in a word, a live, up-to-date newspaper—the greatest power on earth today.

* * *

The Macon, Mo., *Times-Democrat* is an example of the profitableness, and, undoubtedly, of the great satisfaction and pleasure, of publishing a bright, well printed paper, with a clean front page, and filled, throughout, to overflowing, with live home news.

* * *

The pages of the Plainview, Minn., *News* show, and have shown, a very satisfactory prosperity for months past. The advertising indicates that the business men appreciate prosperity and that the paper knows how to secure and handle the advertising.

* * *

Publishers who wish papers criticised or reviewed should send the same to Editor of Newspaper Review Department, O. Byron Copper, De Soto, Wis. If there are any special features to be noted, they will be welcomed, by the editor, at the publication office, 1319 W. Ravenswood Park, Chicago.

* * *

The *Republic Monitor* of Republic, Mo., is a neat paper and evidently takes a commendable pride in the appearance of the front page.

* * *

The Brillion, Wis., *News,* is a worthy home paper that gives a liberal amount of local news which is made prominent by position on the first page, and, though published in a small city, has opinions of its own, as should every newspaper. The editorial department gives individuality and personality and should never be neglected. In a recent issue the *News* says:

If the newspapers of the country intend to persist in their evident determination to muzzle officials who show a disposition to reply to vilification of themselves or their actions, by newspapers, they are laying out for themselves a pathway that must ultimately lead straight to a government press censorship. The New York *World* is a dirty, vilifying sheet that has slung mud for years at some of our best men, its latest eons comprising stuff that the democratic national committee spurned to use because it could not be proven true. Because our President resented it in his usual vigorous way, as he was justified in doing, thereby opening up the whole subject for general discussion and investigation, many of the leading newspapers of the country are rushing to the defense of the New York paper and denouncing the President for attempting to muzzle the press. If replying to false publication, comprises a muzzling of the press, we believe that the people of our nation will be able to endure it tolerably well. We believe in free speech as well as a free press.

You are right, Editor Zander. Every newspaper publisher or editor should hold himself open to criticism or correction as to anything that appears in his pages and be just as ready to take blows as to give them. He should court, instead of repel, replies and, if found in the wrong, should be manly enough to confess his error and to make amends. An attempt to terrorize or to tyrannize through the press is un-American, unpatriotic, ungentlemanly and destructive. It injures not only the paper resorting to such an attempt, but the entire newspaper press. We hear a great deal about the power of the press, but it is a power that can only be retained through fairness, sanity and honesty. The inconsiderate, heated, apparently prejudicial or interested attacks and bitter hostility of some newspapers, in a couple of our large cities, have destroyed their influence, so that it has come to be said that the man who has their opposition is most fortunate—instead of their being a scourge to corrupt politicians and bosses, they are made subjects of derision or are openly defied. There is such a thing as being too strenuous even in a good cause.

* * *

The Estherville, Iowa, *Democrat,* deserves credit for its very neat appearance, its cleanliness and brightness, and artistic arrangement and excellence in printing, but what has attracted our special attention at this time, is the appearance on the first page of a halftone cut of a new farmhouse, and the portraits of a family who have recently moved to the place.

Many of our home papers do not give sufficient attention to the farms and farm improvements, while the farmers are their most valuable supporters, and their prosperity is the foundation on which the growth and well-being of cities and the villages rest secure. Every improvement in the farming community—the introduction of better methods, of improved stock or grain, the building of better barns and of better homes—concerns all the people of the whole county and of the State and Nation. The article with regard to the model farm, the new buildings, on which are shown, is by a former newspaper man, who says:

Twenty-five years of active newspaper work in Iowa has so instilled into the heart of the writer a ruling passion for the work that he finds it not an easy matter to throw it off. While now engaged in other pursuits, I constantly find my mind reverting back to my first love, with a desire to write something for the newspapers of my native state. Every day I find myself attracted to marked features of the wonderful development of this section of Iowa, many of which

would make excellent stories for the press, and without any desire for notoriety or compensation I desire to tell your readers something about the marvelous development of this section of Iowa, and more especially of what I regard as a model Iowa farm.

He then proceeds to describe the model stock farm, devoted to "the breeding thoroughbred stock, including Percheron horses, Shorthorn cattle, Yorkshire swine and Shropshire sheep," and the new residence, which, built in colonnial style, cost $15,000, with horse barn, hay barn, cow barn, modern hog house, granary to hold 4,000 bushels of grain, etc.—all the buildings equipped with the compressed air water system and lighted with electric lights, and the "interior of the home beautifully finished in cherry, with hard wood floors, while the barns are substantially erected, with cement foundations and cement floors." The story of the farm is worth telling for itself alone, but doubly valuable as a lesson, an encouragement and an inspiration to others.

As a boy, we lived in Iowa in 1855, when the story of such a farm, with such buildings, would have been considered a wild romance, discounting any dreams in Arabian Knights. The improvement has come rapidly, and the home papers, that have heralded abroad every advance made in agriculture, have had no little part therein. Then this idea of the welcoming, paying attention to and introducing worthy newcomers, and making them to feel at home and that they are appreciated and wanted, is something concerning which we have had occasion to remark on previous occasions. Fortunate the people who have a live newspaper man among them, taking notes of all things that are worthy, that tend to upbuilding and the bettering of conditions and the printing of them in the papers.

* * *

As we had occasion to note last month, Past-President Varner of the N. E. A., manages to always have something in the air, to keep the people of his section of the State interested and incidentally to add names to his subscription list. He is now arranging to take fifty farmers, of his home county, on a free excursion "to Charlotte and Mecklenburg County, to see good roads, model farms, and progressive farmers." In addition to the free trip for information with all the extensive, profitable, practical, educative possibilities, he offers $229.50 in prizes, consisting of plows, harness, furniture and other valuable articles. Winners are apportioned to townships on basis of voting population. The contest opened January 6th and closes February 20th. Here is what the *Dispatch* proposes to show these winners in this novel contest and thereby confer a lasting benefit on the farmers themselves, and do a most useful and patriotic service to its own county and to all the inhabitants thereof:

The fifty successful contestants will be carried on a special train to Charlotte about the first of March. On arriving there they will be taken in automobiles, under the management of the Osmond L. Barringer Company, through Mecklenburg county in view of the model roads where they know how to build them. Mecklenburg county has more miles of macadamized roads than any other county in the United States. The guests of the *Dispatch* will see roads in actual construction, see the road-builders at work. They will also be taken to the improved farms of the county, to model school houses and churches, to the modern farmers' homes and outhouses, to the stock farms and dairies. They will meet the best farmers in Mecklenburg and at noon when dinner is served out in the country, leading farmers will make short speeches, and we expect to have such men as Messrs. D. A. Tomkin, C. C. Moore and Sidney B. Alexander to address our guests.

The one receiving the highest number of votes in the county has choice of the first or highest prize and so on. Only one contestant in each township gets a prize, and only actual farmers can contest, but the door is open to all those who wish to try and those receiving the highest votes, in the respective towns up to the number apportioned—running from one to ten—according to the voting population in each town, will be taken on the trip. The prizes are all offered by enterprising merchants and are on exhibition in their respective stores, and evidently the merchants will get double the value of the prizes offered in the advertising incident to the contest, besides which new business will be created; there will be a revival and increase of trade throughout the county and dull times will give place to prosperity. The prizes run all the way from $3.50 pair of men's shoes to a $10 plow, a $15 corn-planter, a $20 iron bed with wire springs and mattress all complete, a $30 set of home-made double wagon harness to a $40 suit of furniture—fine quartered oak, rolled on foot and head of bed, full swell dresser and mirror, and so on. The offering of these prizes affords the *Dispatch* publisher an opportunity to turn some very happy and telling compliments on the donors who are advertisers in the paper. Here are the rules of the contest:

Each contestant must have at least 4,000 votes, representing ten yearly subscriptions, if elected.

Every dollar paid in gives 400 votes, whether on new or old subscriptions. The paper each week will contain a coupon good for 5 votes.

All matters in dispute will be settled by the editor of the *Dispatch*.

Only one contestant in each township will be eligible for a prize.

No commissions will be allowed on subscriptions while the contest is being held.

Candidates in any township may secure votes anywhere in or out of the county—in any other township if they wish to work outside of their own.

No person can be a candidate who is not a farmer.

Here is a chance for home publishers all over the country to swell their subscription lists, to do good service for their people, to help on local improvements, promote better methods in farming and road building, and push forward the promised prosperity and aid in making it permanent. Go and do likewise, or if not likewise, as near as you can considering the condi-

tions of the field or territory that you serve. It will help to wake the people up to a deeper, more active and kindlier interest in your paper, as well as in those things that most nearly affect their own interests and those of their useful callings and of the public. It is worth trying.

* * *

The Lawrenceburg, Ind., *Press* adopted in 1895 a flat rate of 10 cents an inch for advertising, and seems to have found the plan satisfactory and profitable. As a minimum rate in a paper of 1,000 circulation or less for advertisers running for three months or more, and occupying three inches or more, this may be deemed fairly profitable, but we have never thought it paid to give as low rates for transient advertisements. We have a local, neighborhood weekly right here in Chicago, of 1,200 circulation, and we never take any advertisement for less than 25 cents, and never for less than 15 cents an inch by the year. The rate for advertisements for three months is 18 cents an inch, though full page advertisements are taken at fifteen cents an inch. The handling, setting up, finding place for and distributing an advertisement that runs only one time costs the office more than ten cents, for any space less than ten inches. Regular, continuous advertising is more profitable for advertisers and they should be encouraged to advertise regularly. Such continuous advertising is more profitable to the publisher. A flat rate is said to encourage small advertisers who as a result of such encouragement grow into larger and more permanent advertisers. This may be in a measure true, but we have never found it profitable to encourage business by doing any kind of work at a loss. There should be the same rate to all who take the same space for the same length of time, and an inch-rate is better than a complicated table of rates.

* * *

Socrates, having been proclaimed by the Oracle of Delphi as the wisest man, conscientiously sought the reason, and, after much faithful inquiry, concluded that it was because he knew that he did not know, while every one else, whom he interviewed, only thought they knew those things that they did not know. That was several centuries ago, when traditions, speculative philosophy and theories ruled, and experimental knowledge, or exact science, founded thereon, had made very little if any progress. This is an age of experiment, of putting everything to the test and still the lack of positive, accurate knowledge, in all the industries and callings of men, is so general as to sadly cripple most lives and hamper highest accomplishment and all progress. To know and to know that one knows, requires close observation and study, investigation, experience and actual trial or test. In their work both newspaper workers and printers are brought in contact with every problem of business and of life and in no other callings is positive knowledge—the first knowing and then being positive that one knows—so important. The mistakes of the printer and of the editor can not be canceled; they are recorded in black and white, or, in this day of colored illustrations and printing, in many colors, to be seen and known of all men. Besides this, printed or published matter is designed to inform others and if the information be wrong, the knowledge, not positive, not only is the work marred, rendered ineffective or offensive, subject to criticism or ridicule, but those who do not themselves know but seek knowledge, are misled to their hurt—by the blind striving to lead the blind, both fall together into the pits of error and misfortune, injustice and wrong. The man trained to know, to test knowledge, to select the true from the false, to discern and to go straight to right conclusions, is the only kind of a man who can safely be trusted to conduct a newspaper or printing office.

* * *

We have frequently had occasion to dwell on the fact that all advertising should be not only attention-attracting and pleasing, but entertaingly and usefully informing. Advertising may not only be all of this, but may be a means of real benevolence and be filled with human interest. Supposing that you have a room that you do not use or need and by a want ad, you open the way to the occupancy of the same by a young man or young woman who is in need of just such a room with all the home life and home surroundings, that go therewith, not only may the advertisement prove a channel of real good and benevolence, but of profit to both. The same thing might apply to a score of articles which one does not longer use and that could be offered through the newspaper's department of classified advertising, at prices to bring the same within the means of those in need thereof. All legitimate advertising tends to the meeting of wants, supplying comforts and aiding progress. It is well to urge these and similar reasons for the securing of advertisements. These thoughts were suggested by the following appeal for classified advertisements, under the caption of, "The Call of the Want Ad," on the first page of *The Jeffersonian*, a neighborhood paper, "devoted to the General Interests of Northwest Chicago":—

Have you ever stopped to consider that the most human part of a newspaper lies not in the editorials or in the great mass of current news happenings, but in the hundreds of little items which go to make up the great volume of the Classified or Want, advertising? Each of these little items has its own story to tell, briefly, compactly, but a story of real, genuine human interest just the same. Perhaps some one has lost a prized possession, or has found one and wishes to return it to the anxious owner; perhaps a house is wanted, or a flat, or a servant, or an apartment, or work of some description. These little items appear under two-score of different classifications, but each one is genuine, human, heart compelling. And no part of a newspaper is of greater interest or more widely read than the Classified, or Want, Columns. And when you read these little items, you are answering the Call of the Want Ad. Sooner or later, you, too, may

need to advertise for a lost possession, or for a servant, or an apartment, or a house, or a room, or any one of a thousand and one things. And whenever you do, bear in mind that you can put it in the *Jeffersonian*, the Home Newspaper—of the Twenty-seventh Ward.

* * *

We had occasion, some months since, to say some deservedly laudatory things and to give sustaining facts with regard to the Duluth *News-Tribune*. On Dec. 20th, this successful paper fully sustained its reputation for enterprise and keeping up with the spirit of the times, by issuing a Christmas edition of sixty-eight pages. It was a demonstration of prosperity and of the growth and progressiveness of Duluth.

* * *

The best service to advertisers is in quality rather than in quantity of circulation. Of the Ten Lepers that were healed by the Great Teacher only one returned to give thanks. In this work-a-day world, about one in ten or ten in a hundred are really worth while, the other nine or ninety live as do the brutes of the field for themselves alone—a mere sordid animal existence seeking not worth or progress, but only to exist, to eat, drink and be amused or to amuse. Improvement, duty, the highest ideals for attainment, the conquering of circumstances and reaching up to the highest possibilities furnish no incentives in their lives and callings, or even in their religious professions. Nine out of ten professing Christians know little of the Scriptures on which their faith is founded, read little, meditate less and are not at all partakers of that higher spiritual life that was taught and lived by the fathers, hence they are easily blown about by every wind of doctrine and blast of unbelief, and are of little value or responsibility either in church or business. In what should be, in a free country, the most responsible calling of law, the underlying principles of justice and all the accumulated wisdom of the interpreters of men's rights are neglected by the ninety out of every hundred, and only enough of practice acquired, with no feeling of responsibility, to eke out a living often through aiding wrong-doers to evade the results of their wrongdoing. It is largely the same in all other pursuits of men. They do not strive to service or to attain but merely to exist. All such are of very little value to those who have products to sell above the mere necessities of existence. The progressive men who read, think, investigate, acquire, improve, extend their desires to things of highest worth, in their lives and callings, are the men of value to the producers, as well as in the lines of the directly useful industries, from the makers of implements and instruments in every calling, to the builders of machinery and residences, factories or business blocks, and the creators of works of art, of books, of worthy journals for the advancement of the trades and commerce, of reliable newspapers and magazines. In some fields, like that of the newspaper, quality ought to bring quantity, but frequently brings nothing of the kind. Some of the best newspapers in the country and some that receive the highest rates for advertising space, have only about one-tenth of the circulation of flashing, sensational papers, in the same field, that appeal to the low and sordid, to the ignorant and prejudiced, who exist but do not think or advance.

People who spend ten times as much for things that they do not need and that are positively hurtful, than they do for books, papers, instruments, appliances and machinery of their callings, or even for their families and homes, are worth very little to legitimate advertisers. The things that they most seek do not need advertising. In view of these facts the wise newspaper maker seeks the approval, in his field, of the quiet voices from the hearthstones, or the voices from intelligent, conscientious, progressive workers in the useful callings, rather than the wild acclaims from the hustings from blatant place-seekers, from the curbstone or the bar-room. Get all the circulation possible, but get it through merit, through that which helps the helpful, rather than through that which panders to the slothful, to the frivolous, vicious and depraved, or that tends to anything that does not uplift, inform, inspire and improve.

* * *

No country at any time, anywhere, now or ever, offered such opportunities as does free America today. The New York *Trade Review* well says:

> No people were ever so bountifully helped by nature as are we. No people ever had the great natural resources, so advantageously placed, as have we. No people ever had such colossal and magnificent payrolls as have we. No people ever had such absorptive power within their own domain. No people ever had such courage, such enterprise, such determination. No people ever had such opportunity for general uplifting and upbuilding. No other people ever had a government more helpful in sympathetic touch with its industrial development.
>
> No honest business honestly conducted has aught to fear from interested officials—the judicial departments are only protectors, the executive only a good friend. There can be no more insurance scandals, no recurring of corruption in financial circles. The air is clarified, the situation clean. There is nothing to dread, nothing to interfere with wondrous growth, magnificent expansion, enduring results.

With such conditions, assurances and opportunities, on every hand, it is evident that all that is necessary is for every one to go to work, with the zest and enterprise that high opportunity and well-founded confidence inspire.

* * *

Publisher Orno Strong, Tacoma, Wash., has favored this office with a copy of the Seventeenth Annual New Year issue of the *West Coast Trade*. It is filled with beauty, grandeur and countless wonders. As a work of typographic art and illustration, it is par excellence. Washington and all the Pacific Coast, for that matter, is a region of wonders. The city of Ta-

coma, and the whole State of Washington are fortunate in the possession of a publication that fittingly sets forth and portrays all the marvelous resources, beauty and grandeur of scenery, and boundless opportunities, as well as all the magnificent accomplishments and attainments. The first if not the most attractively captivating illustration is of the "Tacoma High School Stadium," overlooked by the splendid building itself, builded on a hill commanding a magnificent view of the city, harbor and mountains and unexcelled in size and architectural proportions by any similar institution in the United States, if not in the world. We wish that we could reproduce all the illustrations of this issue. It would be well worth while. The paper truthfully says:

> To the great domain that fronts upon the North Pacific Ocean, the marking of time carries with it but added steps in progress, population and wealth. Conditions naturally influence the degree to which these attainments are achieved, but nothing may intervene to stay the forward movement. Nature has here dedicated to man a heritage that accords a fruitful response to his energies.

The primary aim of this number is declared to be "to record the measure of development that has occurred during the year closed and to point out the matchless opportunities extant for the prosecution of successful endeavor." All this is done, through most convincing statistics and facts, carefully collected, accurate and unvarnished, and concisely, clearly and pleasingly presented and accompanied with most enchanting and forcefully telling illustrations. Pictures of improvements, stock and views in halftones, from excellent photographs, are incontrovertible demonstrations of the statements and figures. If duty and our work did not keep us in Chicago, we would move to the Northwest Pacific Coast. It is God's country.

* * *

Waterloo, Iowa, is justly celebrated for its newspapers, as well as for its civic spirit, that has led to the city's improvement and beautifying, and concerning which we have had occasion to write, from time to time, by way of example, instruction and inspiration, for the leaders have been the excellent dailies, to their own profit as well as that of the city, and in their work have furnished most practical and profitable lessons for the home press of the whole country. On January 18th, the *Daily Courier* celebrated its fiftieth anniversary with a "Golden Anniversary Number" of sixty-four pages, that, in many ways, is a model, especially in the enterprise shown and the all-around completeness and thoroughness with which the work undertaken has been carried out. The *Courier* was established on January 18, 1859, as a modest, seven-column folio weekly paper. The entire material or mechanical equipment for the paper was moved on a pair of bobsleds from Cedar Falls by Mr. W. H. Hartman, the father of John C. Hartman, the present editor of the paper, which has been practically under the control of the family, father and son, ever since. The daily was established in December, 1890. There is scarcely a more interesting study, especially to a newspaper maker, than the history of the growth and development of a newspaper from the little beginnings to a great and prosperous daily and, with it and with its aid, the growth of the little country village with its few log cabins and frame cottages, to a great and prosperous city with extensive commercial, financial and industrial establishments, great business blocks, and factory buildings, splendid residences, magnificent school and church edifices. Such is the history of the Waterloo *Daily Courier,* and its beautiful, prosperous and wealthy city.

The following pen-picture, given in this issue, of the founder of the paper, is especially inspiring and will be fully appreciated by those who have been long connected with newspaper offices all over this country, especially in the West, where the memories are still fondly cherished of pioneer days and of the noble, heroic men who helped to lay the foundations of existing prosperity, worthy institutions, industries and wealth:

> The life of William H. Hartman, the father, was peculiarly interwined with his newspaper—the Waterloo *Courier.* It was the pride of his heart. No mother doted more fondly over her infant than Mr. Hartman did over this creation of his own brain, muscle and heart. It is not overstating the fact to say that he gave his life for the *Courier,* He was not an old man when death called him—only 57. But he had labored early and late to place the Daily on a permanent basis. He was the first at the office in the morning and the last to leave in the evening. His brain was busied with both the mechanical department and the business office, and because of his large acquaintance and kindly interest in his friends he had many callers, all of whom he received into his "sanctum" and gave generously, not grudgingly, of his busy hours. The business of those who called was never too trivial for him to give them a respectful hearing, and he spent hours visiting with his friends, though this usually made it necessary for him to spend extra hours at his work in the office. It was Mr. Hartman's misfortune, if such it might be termed, to have too wide an acquaintance among his subscribers. There was an intimacy, close fellowship, between this long time editor and those who took his paper, which is not possible in present day journalism, when the editor is shut away in his woorkroom and the clerical labor is left to others.
>
> His old friends and subscribers insisted on seeing the editor, and no one but he, according to their view, could answer their questions.
>
> As a writer, the older Hartman was humorous, graphic and pointed. He wasted no words, but proceeded directly to the very core of the matter under discussion.

Many of the early day editors were able writers who dearly loved the wielding of the pen for the establishment of the right and the overthrow of the wrong. There were deep convictions, and grave principles and questions were up for discussion, settlement and enforcement in national affairs as well as in laying the foundations of a new State, and of all its institutions.

The following motives that have actuated and the policy that has been pursued by the paper, in the past,

as set forth in this issue, should ever be kept in mind and can not be too frequently enforced:

During the fifty years of its existence under one management, the *Courier* has been actuated by one motive—to serve the city and the country and the state to its best ability. Every movement, whether commercial, educational or religious, which has had for its object the better serving of the community, has had the earnest, hearty endorsement and co-operation of its columns. Fifty-two weeks in the year when a weekly, and 312 times a year, when a daily, the *Courier* has never ceased to say something to build up the various interests of the community, and there is no way of measuring the good that has been done by the paper for the city. The *Courier* claims some part in making the Waterloo of today, but it likewise recognizes that Waterloo has done much to make the *Courier* what it is today. Their interests have in a measure been identical; both have grown and prospered and made a name together.

If the *Courier* should remain another fifty years under its present management, it will take pleasure in contributing what it can, as it has earnestly and honestly endeavored to do in the past fifty years, to build up the commercial, educational and religious interests of the city, county and state.

Useful service is the highest and truest ideal of the modern newspaper. It is what gives character, permanent goodwill and lasting success. A paper that is honestly, efficiently and acceptably serving its community, the city and State, can not be supplanted. Such a paper has a hold upon the affections of the people that is enduring.

Every interest of the city is covered in this issue and the business men have shown the right kind of appreciation by a liberality in advertising seldom equalled.

Under the caption of "How Industry in Waterloo has Grown," is given under each year from 1859 to 1909, a brief summary of the improvements, trade and growth of each year. The improvements for 1908 aggregated $2,075,146. The issue is fully indexed, which is an excellent feature. There was no attempt at art, but the city's story is well told, the text being illustrated by halftones of many views from photos taken in the early days and the present year, showing at a glance the wonderful growth. The names of all those who have lived in the city over fifty years are given.

* * *

A law compelling the publication of newspaper circulation, has been introduced into the Kansas Legislature, of which the *Topeka State Capital* gives the following synopsis:

It provides for the monthly publication of a sworn statement showing the actual number of papers printed and sold—the number of regular subscribers and the number of outside sales. It also provides for a fine of $500 for a declaration of a paid circulation, larger than it really is, for the purpose of effecting advertising rates.

The publication of circulation has been found a very profitable and effective method of advertising by prosperous newspapers, and, while advertising value does not depend, by any means, on the quantity, but rather on the quality of the circulation—provided the field of profitable customers is covered—yet it is an important item to be reckoned in fixing the value of advertising space to advertisers, and should not be considered a trade secret. We doubt the wisdom of too much legislation looking to the regulation of private business, yet the law is likely to work to the advantage of all worthy newspapers that deserve to live and prosper. Such a law would act as a spur to greater efforts in the matter of circulation getting. Some newspapermakers, like members of other callings, are prone to lazyness if only a living amount of business is secured, seeming to lack any adequate incentive to reach out for more than this, in efforts to extend their usefulness or to do wider and better service for their patrons and the community. They are cumberers of the ground bearing little fruit, but standing in the way of the more worthy. If such can be weeded out it will be a benefit to the calling.

* * *

The daily *Herald* of Missoula, Montana, did its city and all Western Montana valuable service in a thirty-two page, illustrated edition on Jan. 1st. The *Herald* is one of those clear, clean, bright papers that it is a joy to look upon. It does one's heart good to glance through its well-filled, well-arranged, well-printed pages, that deal with the development of a new and growing country and with all the affairs for the informing and up-building of the people. "It tells of what has been accomplished, describes the many evidences of an abounding prosperity and tries to tell a little of the brilliant future which lies before."

The record of $1,125,000 improvements in this new city, during the past year, seems almost incredible, yet such is the record and the buildings shown would do honor to any city of fifty thousand population in any part of the Union. The new residences, too, are numerous, and pleasingly rich and attractive in appearance. To be able to boast of 1908 as far the most prosperous year in a city's history, with still brighter prospects for 1909, seems good, but then the West has hardly realized that times have been disastrous, and the Western prosperity is rapidly extending eastward. The well-equipped building is a very effective feature of this improvement addition and we were much pleased with an article entitled,, "Education Not Population." There has been too much of a struggle, through emigration departments and other agencies, to secure new residents regardless of their fitness or their training, or their ability to succeed in a new country. One of the most pathetic stories in connection with the early settlement of Ohio, was that of a French colony, made up of trades people, shopkeepers, jewelers, etc., who settled in the woods and fought for a foothold, dying through want, accidents, disease and exposure, until less than one in ten survived. This writer says:

It has come to be a popular idea that settlers ought to be brought in by whatever inducement employed and dumped helter skelter to shift for themselves as best they can. Anyone not in line with this idea is apt to be regarded by these enthusiasts as an obstructionist.

I am not of this opinion. I do not want to see the history of Nebraska, Kansas and North Dakota repeated in Montana. Such doings involve too much suffering. By far the greater majority of people who take up homesteads have but limited or practically no means at all. If they do not succeed, it not only means loss to them, but to the business community as well, because every poor man attempting to make a home for himself is extended more or less credit by the merchants. If the settler "burns out," the business man is "in the air."

These thoughts are worthy of consideration, throughout the Nation, by both the press and the people: Only self-supporting, self-respecting people, who are able to make their own way, are needed or should be admitted to this country as emigrants, unless the States or the Nation prepare to receive and support them and give them a period of tutilage, at Government expense, until they are able to make a living. This comparatively new land is very enticing to those in distressed or humble circumstances in the Old World, and their migration hither, under false expectations and without the ability to work, brings only greater want and misery, unless they are in some way fitted to meet the new conditions. To induce people to settle in a new country under false illusions, when the only possible result must be failure, is a crime. Such a policy has filled our cities with mendicants and criminals and brought failure, want and misery in many sections of the country.

* * *

"Rulers are not a terror to good works but to the evil; and they that resist shall receive to themselves damnation," or as "No man can be a law unto himself," nor can any set of men in a free country, where freedom means obedience to the laws and courts established by all the people. The attempting to canonize or to make a martyr of such an one and compare him to Christ, and the judge who attempts to enforce the law, under his solemn obligation and oath, to Pilate, who violated the law of yielding to popular clamor, is to prevent the truth, to the glory of the evil-doer and the overturning of all constituted authority. Let not the press be guilty of Pilate's sin, by yielding to popular clamor, in the permitting or encouraging the violation of the laws and the overthrow of the courts and all regularly constituted authority.

Break, break, break,
On thy cold gray stones, O Sea!

And I would that my tongue could utter
The thoughts that arise in me.
—Alfred Tennyson

OPINION OF THE DEAN OF THE UNIVERSITY OF MISSOURI.

DEPARTMENT OF JOURNALISM.

COLUMBIA, MO., Jan. 4, 1909.

Col. B. B. Herbert, National Printer-Journalist, Chicago, Ill.

MY DEAR COL. HERBERT:—I am glad to send you my subscription to the NATIONAL PRINTER-JOURNALIST for the new year. The long and useful service which you have rendered the press of the United States would alone entitle your magazine to the support of American newspaper men, if it did not deserve this support because of its constant increasing interest and value to makers of newspapers everywhere.

With sincere regards,

Yours fraternally, WALTER WILLIAMS.

WILLIAM OSMAN, DECEASED

MORE THAN FIFTY YEARS EDITOR OF THE OTTAWA, ILL., FREE TRADER AND SEVENTY-FIVE YEARS A PRINTER.

BY the death of William Osman of the *Free Trader*, of Ottawa, Ill., one of the sturdy pioneer editors of Illinois is removed from the ranks of the calling which he highly honored. His life-work remains as a worthy study and inspiration. He was a man of pleasing personality, and a worthy type, in appearances of the philosopher, and statesmen whose portraits adorn the pages of the history of the early days of the American Republic. His life and character and bearing measure up to highest standards of the Christian gentlemen, statesmen and thinkers of the times when knowledge, courteous bearing, duty conscientiously and work well and faithfully performed were the ideals toward which all honorable citizens strove.

He was ever looking forward to the good that was before and alive to all interests of the present. His was the true habit of living. He referred to the past only for its teachings and inspiration and met every day's duties with cheerfulness and made work his highest pleasure. Constant, useful employment and satisfactory accomplishment contained, for him, the true elixir for the preservation of life to the years of perfect fruitage and ripening. We can not furnish the printer-journalist readers of the NATIONAL PRINTER-JOURNALIST, in this second month of this year of 1909, with any matter more useful than that contained in the too brief accounts of the lives of the two pioneer editors, Andrew J. Aikens of Milwaukee, Wis., and William Osman of Ottawa, Ill., whose deaths are recorded in this issue. Both came to the then new West at about the same time and did their shares toward the developing of this great region, and in solving the great questions that involved the perpetuity of the Republic. We had the pleasure of meeting Mr. Aikens and of experiencing something of his personality. We do not remember of having ever met Mr. Osman but those who knew him, tell with evident affectionate regard, of his long and industrious life and we are glad to gather and to place before our readers the following, from the Daily *Republican-Times* and the Daily *Free Trader*, of Ottawa:

William Osman, editor of the *Free Trader* for the greater part of the years since August, 1840, died at his home in Illinois avenue, at 6:15 o'clock last evening, the immediate cause of death being Bright's disease, from which he had suffered for about a year. Such, however, was his remarkable physical strength that he continued his habit of going almost daily to his editorial desk and furnishing "copy" until about the first of December last. And even after that date he continued to take an active interest in the world's affairs, and almost daily sent more or less "copy" from his home to the printers until about Christmas, when he ceased to do so, not because his mind was clouded but because of the physical difficulties he found in writing. During the succeeding days and after he was confined to his bed he was at all times perfectly conscious and clear-minded, even to the last. Rarely has great age been accompanied by such remarkable physical vitality and mental clearness and vigor.

Mr. Osman was 90 years of age, but until six weeks ago went regularly to his office and assisted in the daily grind of getting out a newspaper. His mind was bright and clear, and even after he found himself unable to get to his office he continued to write editorial matter, and occasionally a news story at his home, and a messenger was sent daily to carry his articles to the office.

After being confined to his home Mr. Osman grew constantly weaker, and, finally, after more than two-thirds of a

WILLIAM OSMAN.
June 18, 1819. January 18, 1909.

century he was compelled to give up expressing his thoughts on paper, and this, it may be said, was one of the severest blows that could have befallen him.

He realized that his time was near, and this must have come to his mind frequently, but he never complained. While he was one of the oldest men in the city, and his mind could wander backward over happenings that have long since been chronicled in the histories of the nation, he seldom referred to the past. He lived at the very minute of the present. Always optimistic, he looked upon the bright side of life, and was a most cherished husband, father, employer and friend.

Until after the Linotype machines came into use in Ottawa for setting type, it was Mr. Osman's pride to walk into the composing-room of his newspaper office and put into type his leading editorial. This he did every day for many years, until after he was past 80 years of age. Less than two months ago the writer saw the old gentleman running to catch a car, displaying the agility of a man many years his junior.

The home, like most farm homes in central Pennsylvania at that time, was a simple one, and the boy built up his remarkable constitution by ranging as a boy over the mountains

NATIONAL PRINTER JOURNALIST
A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter

BENJAMIN B. HERBERT . . . . . Editor

Official Paper of the National Editorial Association

PUBLISHED MONTHLY BY THE
OFFICE OF PUBLICATION:
1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

CHICAGO, FEBRUARY, 1909

Everybody, and especially newspaper makers, who are natural promoters of the upbuilding of all sections of our great country, and of every worthy means to that end, will be interested in Seattle, and the great Northwest Pacific region, this year, by reason of the wonderfully attractive and educative exposition to be held there. On this account we have felt justified in holding back this issue of the National Printer-Journalist in order to give, at the earliest possible date, the arrangements for holding the Twenty-fourth Annual Convention of the National Editorial Association. Never again, in a lifetime, will there be such another opportunity at comparatively small expense, of visiting the great Northwest and viewing all the assembled wonders of the products of farms, the stock ranches, forests, mines, streams and of old ocean itself, in short, all the wonders of the growing States of California, Oregon, Washington, Montana, Wyoming, Idaho, and of the Islands beyond and Alaska in the far North.

The members of the Executive Committee of the National Editorial Association deemed, after much careful consideration, that it would be folly to permit this opportunity to go unimproved. Other cities presented most flattering invitations, backed by wonderful attractions, and these were fully appreciated and carefully considered, but these remain open for another year and a more convenient season. Many thought that Chattanooga would be desirable for the next convention, but it was too late to arrange for a convention in the spring and it was not thought desirable to go South in the summer. All our people, especially those living in the more southerly States, seek northern latitudes at that season of the year. Chattanooga, it was thought, would be an ideal place for meeting about the first of May next year, or on some early subsequent year.

The trip planned at Seattle, to Tacoma and up into Paradise Valley, to Victoria and to Alaska, for a summer vacation, cannot well be surpassed anywhere in the world. However, we do not intend to dwell on these arrangements at this time. All interested should read the proceedings of the Executive Committee given in this issue, and be prepared for the announcements to follow, later on, as to arrangements and program. President Mayes, upon whom the work was placed, of preparing the literary and business program, will be pleased to receive suggestions from members of the Executive Committee and of the Association, as doubtless, will also, Secretary Parrott, as to routes, trains, and itinerary. Especially fine train service is being arranged and the managers of the different trunk lines are showing a commendable interest in arranging for the taking care of delegates to the convention in a manner unsurpassed in the past. The train time from Chicago to Seattle, will be seventy-two hours, and the equipment and service will be superb.

* * *

Arthur Capper, of the Topeka *State Capital,* has achieved a great success and is to be congratulated thereon, but much more important and worthy of praise are the splendid thoughts that he voiced in his banquet speech—given elsewhere in this issue—they contain the true ideals of all worthy accomplishment and are educative alike to employers and employes, to all who work together in the production and distribution of a great paper, from proprietor to newsboy. Harmony, unity of purpose and effort, loyalty to and pride in the business, with truth and right in view, and useful service the aim, are the grand essentials.

PRESENTATION TO PRESIDENT VARNER.

Chicago, Ill., February 1, 1909.

President H. B. Varner, National Editorial Association, % "Dispatch," Lexington, N. C.

Friend Varner:—Accompanying this letter is being forwarded to you, by express, a solid silver tea set, of five pieces, Colonial in design. It was intended to have presented this set to you at the meeting of the Executive Committee at Kansas City, but finding that you can not attend, although your brothers would have been delighted to greet you and extend their kind wishes and good will, which the present represents, we forward the same to you, and hope it will be pleasing to you and Mrs. Varner, and ever a happy reminder of the pleasant associations in St. Paul.

With sincere regards.

Yours respectfully, B. B. Herbert,
Chairman Committee.

Lexington, N. C., February 6th, 1909.

Col. B. B. Herbert, 1319 W. Ravenswood Park, Chicago, Ill.

My Dear Col. Herbert:—I received by yesterday's express the handsome solid silver tea set presented by the National Editorial Association to me as retiring President, and while I value it for its intrinsic worth, yet I value far more the friendship that sent it; and if I could but express the feelings in my heart, I would write you such a letter of thanks as no mortal man ever received before. My relations with the National Editorial Association have ever been the most pleasant possible; I have formed lasting friendships; have enjoyed the companionship of some of the choicest spirits in the land; have at all times been glad that I was with the Association, with you, with your committee, with all; but I have never before experienced such keen pleasure on account

of my relationship as I did when this beautiful token of real friendship came to me. Nothing surpasses that tie which binds together newspaper men; it is closer than that which binds brothers; and when it prompts what you and your committee have sent me in behalf of the membership of the Association, the sum of this world's happiness has been augmented beyond degree.

I thank you, I thank the committee, I thank the members of the Association, from the fullness of a grateful heart, and in return I send greetings of good fellowship and best wishes to all.

Very sincerely and fraternally yours,

H. B. VARNER.

REFORMS IN THE POSTAL SERVICE

BY HENRY A. CASTLE, FORMER AUDITOR FOR THE POST-OFFICE DEPARTMENT.

SIGNIFICANT feature of the United States Postal Service, as revealing its increasingly beneficial educational influence, is the annual growth if its revenues per capita. This is an unfailing inedx of the augmented prosperity and intellectual activity of the whole people.

In 1870 the Postal revenues per capita were 51 cents, and the increase to 1880 shows but 16 cents, while from 1880 to 1890 it jumped from 67 cents to 95 cents, an increase of 28 cents in the decade. The greatest improvement appeared in the years following 1900. In that year the per capita revenue in the postal service was $1.18, and in 1903 stood at $1.64, a gain in three years of 46 cents, almost as much as the entire per capita revenue of 1870. For 1908 it was $2.10, notwithstanding a period of temporary business depression.

This is a striking illustration of the fact that improved facilities always result in increased business at the postoffices. In 1820 the mail service was used only when it became a matter of great importance, and in that year the per capita revenue amounted to but 14 cents. Today, mail is delivered at the doors of 40 million city residents two or three times a day, and 30 million farmers once a day, the result being that the per capita revenues are fifteen times as great as in 1820, although the rates of postage have been reduced 90 per cent.

Few persons not directly connected with the operations of the mail system have any adequate conception of their magnitude, especially of the staggering array of figures required to express its money transactions, and its volume of expert work.

From the Department Reports for the year 1908, these impressive facts have been collated:

Average Financial Transactions	$8,000,000 a day
Average Gross Earnings	530,000 a day
Average Losses (deficit)	46,000 a day
Average pounds of mail handled	3,000,000 a day

The question of the deficit is one of concern and perplexity to the heads of the Postoffice Department. There seems no way of reducing expenditures, for they inevitably grow with the expansion of the country's business. Hence there is constantly sought some way of stimulating the revenues, or "earnings."

One promising method of doing this, now being considered, is that of a new system of "return postage."

Under present conditions, a writer who wishes to receive an answer on some business of his own, such as an advertisement or an inquiry in regard to business matters, seeks to assure reply by enclosing a stamp, thus relieveng his correspondent from any outlay for postage. This is a trifling matter in an ordinary correspondence, but many lines of business can only attain the best results by addressing a large number of persons in the hope that a few of them will reply.

In such cases, it is quite common to enclose an envelope having a printed address, and with the needed stamp affixed. Any broadcast distribution of this kind of mail is obviously very expensive, since only 10 per cent of the envelopes sent out ever come back.

It follows that if a simple and effective way could be found by which the postage of the desired replies could be paid with practically no loss by reason of nonuse of stamps furnished, an extensive field of usefulness would be opened at once to the business public.

The "Return Postage" device, now being considered by the Department, has the double aim of greatly conveniencing the business public, and enormously increasing the postal revenues—even wiping out the obnoxious deficit, if its advocates' claims are realized.

The object of the proposed system is to furnish postal cards and envelopes designed solely for reply purposes, bearing the printed address of the party sending them out, the erasure or alteration of which will render them unmailable. This would prevent them from being diverted from the purpose of the original sender, insure their return to him if used, thus requiring him to pay postage only on such as actually come back through the mail.

It must not be inferred that whole generations of postal officials were blind to the possible advantages of a scheme of "return postage." Vague plans for establishing it, and liberal estimates as to its probable influence in adding to postoffice receipts, were hinted at in reports and writings many years ago.

Postmasters General Hatton, King and Vilas were among those so far in advance of their environment as to comment favorably on the subject, without reaching concrete recommendations.

At a later date, five or six successive Postmaster Generals commended the principle involved, but were slow to take decisive action. To these a commendable feature was that the cards and envelopes are not to be mailed without prepayment of postage, and that there is no syllable of suggestion which undertakes to prohibit or in any way interfere with other parties mailing anything that the law and regulations of the Department may now or hereafter permit them to mail.

Former Postmaster-General Charles Emory Smith, in a letter to his successor Mr. Payne, thus stated the conclusion at which he arrived:

"As I proceeded with my inquiry, one consideration presented itself, and with reflection gained strength, which pointed to the advantage of doing the work through a Company under proper control, and this consideration was that such a method would undoubtedly bring more revenue to the Government. The Government can do the business, but cannot stimulate it. It does whatever is brought to it to be done, but does not go out to seek customers. A company doing the work would have a direct interest in increasing it, and would have the agency for that purpose, and the greater the business the greater the revenue accruing to the Government."

The return postage scheme is only one of many devices for the improvement of the mail service, now under consideration at the Department. More modern methods of administration, and new mechanical inventions to expedite the work, are sought with commendable zeal.

THE ABRAHAM LINCOLN CENTENNIAL

ONE hundred years ago, the 12th of this month, of February, 1909, was born, amidst most humble conditions and surroundings, in Hardin Co., Kentucky, a boy, whose name, as a man, a patriot and a martyred President, has come to stand for the highest ideals of the true, typical American. In his life the whole world has come to have a common share and his memory calls forth a love, deeper, broader and more sympathetic, than that of the memory of any other man of the past century. He came from among the lowly, but he stood among the wisest, the mightiest, the noblest and greatest of Earth, in position, power and honor, yet in all humility, with undiminished love for and loyalty to and sympathy with all conditions of his fellow countrymen. From farm laborer, rail-splitter, country storekeeper, legislator, country lawyer, occasional writer for a country newspaper, he arose to the highest plane of statesmanship, and the position of President of the greatest Republic of all time. The members of every calling may find in his life something from which to learn, and every citizen high example, purpose and inspiration.

To the members of his chosen profession, that of law, there can be no higher or more useful or more needed example than Abraham Lincoln. He pursued the calling of law, as above mere gain, as a means of establishing justice and preventing wrong, just as the loving, loyal family physician practices medicine, lovingly and at the sacrifice of ease, to prevent disease, to relieve suffering, to heal the sick, rather than for the riches it will bring.

Lincoln would not knowingly take up an unjust cause, he would use no deceit, would never badger or browbeat witnesses, but sought ever to win through seeking the right alone, and the inspiring of confidence, ever urging just settlement out of court rather than the glory of battle. He was a life-long student of the principles and books pertaining to his profession as well as of men and the art of enlightening obstruse points by illustrations, so that he was no less successful before the judges than before juries. He was recognized as being actuated by a desire to establish the right, as being thoroughly informed and sincere. He worked conscientiously and won through that clearness of logic that in part was a gift and in part acquired through familiarity with the masters and being right in his premises and ambitions, and that honest intent and entire freedom from the mercenary spirit, that taught courts and juries to trust, believe in and rely upon him.

The clergy could learn valuable lessons from his love for men, the humility that made him the friend of all and that true spirituality and deep communion with God, that needed neither forms, ceremonials or church relationship, as intermediaries or helps to this higher communion. Religion aids piety, but piety is above and higher than any religion, and Abraham Lincoln was deeply pious. William H. Henderson, Lincoln's law partner and biographer, says that at times "Mr. Lincoln's soul seemed fresh from God," and James A. Edgeton, in a recent sketch sent out by the American Press, says:

> No man had more of the substance; none felt a greater faith in divine righteousness, justice, truth, mercy, and guidance.
>
> There were times when all who saw Lincoln felt that he was like one of the old prophets—that he was filled by sudden and overwhelming inspiration. His face at such moments seemed transfigured until its homely features grew beautiful, being suffused with a great inward light.
>
> Who can observe Lincoln's faith in God and the common people, his fealty to truth and justice, his unselfishness, his charity, his rectitude in the untried ways through which he had to walk and not feel his nearness to the Eternal? If the formal in religion did not appeal to him, neither did the formal in law nor in politics. He was utterly merciless in exposing shams. He was impatient with technicalities and went straight to the heart of a question. He was intellectually honest, which, after all, is necessary to any real spiritual advancement.
>
> Lincoln's tenderness for animals and many other points in his character suggest the most Christlike monk of the middle ages, St. Francis of Assisi. Francis was the preacher and exemplar of poverty, the friend and helper of the unfortunate, was noted for meekness and patience and gained undying fame by his kindness to animals.
>
> Schuyler Colfax stated that Lincoln had two ruling ideas—hatred of slavery and sympathy with the lowly and humble, whom he desired to lift up.

Colonel Henry Watterson said, at the time that the cabin, in which Lincoln was born, was at Louisville, to be returned to the farm from which it had been removed, for exhibition:

> He was inspired of God, for nowhere else could he have acquired that wisdom and virtue. Where did Shakespeare get his genius, Mozart his music? Who wrote the lyric of the Scotch peasant? As God raised up and inspired them, so did he Lincoln. When, a thousand years hence, the truth of history shall have left no room to doubt, no drama will be followed with deeper feeling than that which tells the story of his life and death. God laid his hands upon these rough hewn logs, and they brought forth a nation's hero.

If there was much in the life of Lincoln to be studied by lawyers and clergymen, there is much more that will be found useful, instructive and inspiring to the editors of American newspapers, that go to all the homes of the American people, and serve every citizen, and every interest from the lowliest to the highest. The first distinguishing characteristic of Lincoln as a boy, and that remained with him throughout life, was not only his desire to know, but thoroughly to understand and then clearly and pleasingly to impart the truth, and his understanding thereof, to others. He was a great relator of anecdotes, but his stories, like the parables of old, were not for the pleasure in telling or in the hearing by others, but to illustrate and enforce some truth or moral or to settle a dispute or save a difficult situation.

During all his career from boy to President and through all the honors and burdens of that position, is to be noted, the high value that he placed on all the little affairs, all the common things of life and the common people, whom he said God loved because he made so many of them. All that he read was made interesting and dear because through it all, he saw the relation that it bore to humanity, to the common human life. It is said that one of the first books that Lincoln ever read was a volume of the "Statutes of Indiana," and while the statement of his biographers, that he devoured the contents with as much zest as most boys read Robinson Crusoe, has been questioned, we see no impossibility in the matter at all, for back of every enactment his mind saw the people, the men, women and children to be affected or governed thereby. It is this great, broad sympathy, this clearness of discernment, this desire to know the whole truth and its interpretation, and to interpret the same to others, that American editors should study. Like the first great editor in this country, Benjamin Franklin, what he read he tried not only thoroughly to digest and understand, but to reproduce. He in this way acquired a clearness of style, a strength and beauty of expression that was extolled and placed above anything possible to himself by one of the most learned collegians, scholars, and finished writers and orators of his day, Edward Everett. As editors are, in an important sense, the advocates of the people, all that was notable and worthy of Abraham Lincoln as a lawyer is worthy of the editor's study. There has been a revival of higher ideals during the past decade and the newspapers of America owe it to themselves and to the country to see to it, that so far as it rests within the power of the press, the general and patriotic observance and celebration of Lincoln's Centennial Anniversary should be made wide as possible for the forwarding of this needed revival and the advancing of good citizenship which places useful service above money profit, and work for the common good above the thought of salaries, mercenary gain, or mere political position or power, all of which bring, in themselves, no substantial good, glory or honor, but, selfishly sought and used, are oftener a curse than a blessing or pleasure to individuals, besides bringing shame and calamity to children and to the country.

ABRAHAM LINCOLN

THE NATIONAL EDITORIAL ASSOCIATION

TWENTY-FOURTH ANNUAL CONVENTION, SEATTLE, WASH., JULY 19-25, 1909—SIDE TRIPS TO TACOMA, VICTORIA AND ALASKA—MEETING OF THE EXECUTIVE COMMITTEE AT KANSAS CITY.

THE Annual Meeting of the Executive Committee of the National Editorial Association was called to order at 12 o'clock M., Feb. 3rd, in the Baltimore Hotel, Kansas City—President Will H. Mayes in the chair. In the absence of the Recording Secretary, R. H. Thomas, Jr., *Journal,* Mechanicsburg, Pa., was, on motion of Past-President B. B. Herbert, chosen secretary pro tem.

The roll call showed the following members present:—President, W. H. Mayes, *Bulletin,* Brownwood, Texas; Second Vice-President, R. E. Dowdell, *Advocate,* Artesian S. D.; Third Vice-President, F. P. Hall, *Journal,* Jamestown, N. Y.; Corresponding Secretary, W. F. Parrott, *Reporter,* Waterloo, Iowa; Treasurer, Will Curtis, St. James, Minn.; Past-Presidents:—B. B. Herbert, NATIONAL PRINTER-JOURNALIST, Chicago, Ill.; Walter Williams, Dean of the University of Missouri, School of Journalism, Columbia, Mo.; P. V. Collins, *Northwestern Agriculturist,* Minneapolis, Minn; John E. Junkin, *Bulletin,* Sterling, Kansas. Honorary Life Members:—R. M. White, *Ledger,* Mexico, Mo.; Will A. Steel, Seattle, Washington. State Executive Committeemen:—Indiana—Will E. Beeson, *Journal,* Winchester; Iowa, State—E. F. Medary, *Democrat,* Waukon; Kansas State—Sheridan Ploughe, *Independent,* Hutchinson; Kansas, Southwest—W.M. Glenn, Greeley Co. *Republican,* Tribune; Kansas, Northwest—W. L. Chambers, *Record,* Stonton; Kentucky—R. R. Perry, *Sun-Sentinel,* Winchester; Michigan—L. A. Sherman, *Daily Times,* Port Huron; Minnesota, State—H. C. Miller, *Free Press,* St. Peter; Minnesota Home Print Association—W. R. Hodges, *Herald,* Sleepy Eye; Missouri, State—Homer D. Gray, Sturgeon, Mo.; Missouri, Northwest—Wes L. Robertson, Galatin; Missouri. Northeast—J. W. Jacksen, Montgomery; Missouri, Southwest—Ben F. Wood, *Tribune,* Laredo; Nebraska, State—L. A. Varner, *Sun* Sterling; Pennsylvania—R. H. Thomas Jr., *Journal,* Mechanicsburg; South Dakota, State Press—R. E. Dowdell, *Advocate,* Artesian; Texas—J. P. Chambless, *Daiy News,* Ennis; Washington—W. A. Steel, *Nome Daily News,* Seattle.

President Mayes stated that the first business of the meeting would be the considering and acting upon the question of the next place of meeting, under the resoution adopted at the St. Paul Convention, leaving a change from the place selected, Seattle, Wash., if any lack of suitable arrangements made such a change, in the view of the committee, desirable. Mr. W. A. Steel made a full statement as to arrangements of entertainments, excursions and meetings at Seattle, as follows:

PROPOSED ENTERTAINMENT FOR MEMBERS OF THE NATIONAL EDITORIAL ASSOCIATION.

MONDAY, July 19—10 A. M. to 12 M.—Business Session.
2 P. M. to 4 P. M.—Automobile ride about city.
8 P. M. to 11 P. M.—Theatre Entertainment.
TUESDAY—10 A. M. to 12 P. M.—Business Session.
2 P. M. to 6 P. M.—Boat ride to Navy Yard and inspection.
8 P. M. to 11 P. M.—Reception and Entertainment.
WEDNESDAY—10 A. M. to 12 P. M.—Business Session.
1 P. M. to 6 P. M.—Viewing the Exposition.
6 P. M. to 8 P. M.—Dinner at Exposition Grounds.
8 P. M. to 11 P. M.—Visiting attractions on "Pay Streak."
THURSDAY—10 A. M. to 12 P. M.—Business Session.
2 to 5 P. M.—Closing Business Session of Convention.
8 P. M. to 11 P. M.—Press Club Smoker.
FRIDAY—9 A. M.—Take steamer for Tacoma.
Automobile ride about city.
Luncheon at Point Defiance Park.
Ride on railroad toward Paradise Valley, to view glaciers, mountains, canyons, waterfalls and forests.
Dinner at Tacom and return to Seattle in evening.
SATURDAY, July 24—S. E. and S. W. Alaska 20-day Excursion, Alaska Steamship Co.
8:30 A. M.—Those not going in the Alaska trip, take steamer for Victoria.
Automobile ride around this quaint English city.
Dinner at Victoria, on return from moonlight excursion, arrive at Seattle, 10 P. M.

Mr. Sinchfield of Chattanooga, Tenn., presented an invitation, from the Mayor and Council, the Commercial Club and other civic bodies, for the holding of the 1909 Convention in that city. He fully set forth the historic and other attractions, and spoke of the wonderful improvements that had been made, the entertainments and excursions that would be given and of the wonderful scenery to be viewed. He was ably sconded by representative railroad men of the South.

Secretary W. F. Parrott made a full statement of conditions and urged the importance of thorough consideration.

WILL A. STEEL,
Who represented Seattle and won the convention.

The Committee then went into executive session and, after thoroughly canvassing the subject, decided in favor of leaving the place of meeting at Seattle, as had been voted at the Convention.

Past-President Walter Williams offered the following resolution which was duly seconded and adopted. Resolved, That the Executive Committee formally select Seattle as the place for the 1909 Convention, and that the Corresponding Secretary be instructeed to make all necessary arrangements. The Committee then adjourned until 5 P. M.

During the recess the members were tendered a complimentary banquet by the Kansas City Commercial Club and an automobile ride over the splendid boulevards of the city that

have been constructed at a cost of $8,500,000. Both the banquet and the ride were greatly enjoyed. At the banquet there were a numbr of addresses made that showed how highly Kansas City had come to be prized. The day before, the members had attended a meeting of the Kansas State Editorial Association and a banquet tendered by Arthur Capper, proprietor of the *State Capital* at Topeka, an account of which is given on another page.

At 5 P. M., the committee again assembled at the Baltimore Hotel.

After a thorough discussion, Mr. Dowdell, of South Dakota, moved that Monday, July 19th, at 10 A. M., be fixed as the date for opening the Twenty-fourth Annual Convention. The motion was duly seconded and carried by a unanimous vote.

Mr. W. A. Steel reported from the Committee on Increasing Revenues, appointed at the St. Paul meeting. Under motion duly seconded and carried, it was resolved that each person accompanying a delegate be assessed $4.00.

Upon motion, the following resolution, prepared by committee duly appointed, was adopted by unanimous vote:

RESOLUTION OF THANKS.

The Executive Committee of the National Editorial Association, after a most pleasant meeting in Kansas City and visit to Topeka, wishes to return its thanks to those who have so generously contributed to the success and the pleasure of the meeting. We enjoyed the hospitality of the Kansas Editorial Association and the citizens of Topeka, and especially that of Mr. Arthur Capper of the Topeka *Capital*, and cannot express in words our appreciation of all the favors extended us. Our stay today in Kansas City has been made one of unusual pleasure through the courtises shown us by the Commercial Club of the city, and we were especially delighted at the evidence of growth and prosperity in this remarkably progressive city as seen on our ride through its beautiful parks and magnificent boulevards. We wish to hereby give an expression of our appreciation to all those who have contributed to make this the most pleasant two days' session yet enjoyed by this committee. Topeka and Kansas City will always be held in fondest recollection.

B. B. Herbert,
W. F. Parrott,
Committee.

It was moved and carried that the President be asked and authorized to arrange the literary and business program and that the members of the Executive Committee, from all the affiliated associations, be requested to encourage and aid the President in this work by suggesting subjects, names, and as to business matters that should be brought before the Convention for consideration and action.

ANOTHER EDITOR PASSES AWAY

FIFTY-FOUR YEARS WITH THE EVENING WISCONSIN.

IN the death of A. J. Aikens, on the morning of January 22nd, the newspaper press of this Nation lost one of its most useful members. He was a man of universal sympathy and took an active part in the development of his city and State. Away back in 1863, he did a real service to the newspapers of the middle West, that were then largely printed on hand presses, by originating the plan of ready prints, the printing of one side of newspapers at a central office and the other side at the place of publication. In those days of little telegraph and of very slow mail service, and of few dailies, it enabled the printing of much better papers, filled with general news, the record of all important events and well-selected miscellany, than could otherwise have been possible, even had facilities for press work been adequate. His life, studies and character are of value to newspaper makers. He was a lover of Nature as well as of men and a great reader of books. He kept himself young by out-door recreation, fishing and hunting. He was especially fond of astronomy and of general history and particularly interested in mechanics, physics and natural history. He studied birds and fishes and knew of them from books as well as from observation. He was early brought into contact with men of ability and noble hearts—an association especially valuable to a newspaper man. He was gentle and kindly in his bearing, thoughtful and retiring as against any self-asserting obtrusiveness. His universal sympathy made to him a life of service natural and happy. The great paper with which he was so long connected, showed the benefits that came from his character and from his work for which he had early and most helpful training.

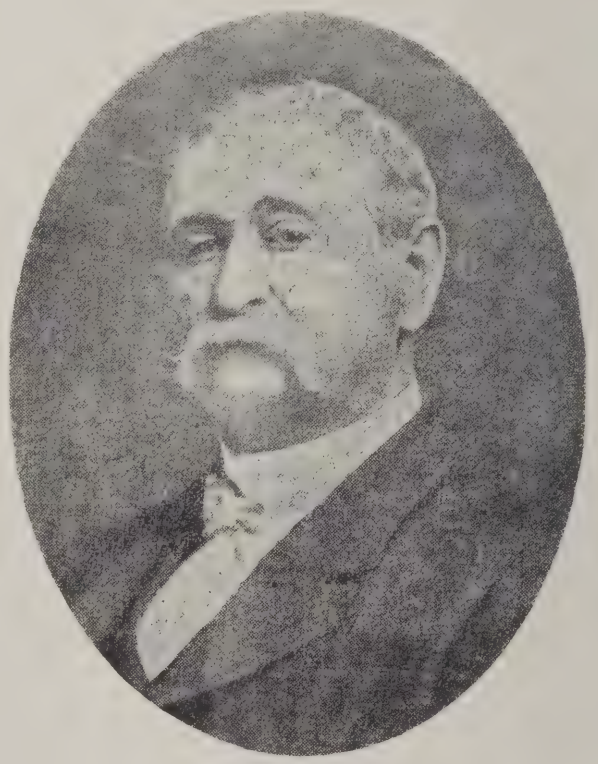
For all these reasons the following sketch of his life that appeared in the *Evening Wisconsin*, the evening after his decease, will prove of interest and profit to all our readers:

Andrew Jackson Aikins was born at Barnard, Vt., October 31, 1828. His paternal ancestors were Scotch, from Montrose, who settled in Massachusetts in 1660, and on his mother's side he was descended from John Howland, the last survivor of those who came over in the Mayflower. He left the high school at the age of 15 years, and served an apprenticeship in a printing office, rising to the position of editor. He afterwards edited a weekly paper at Bennington, Vt., and later a weekly at North Adams, Mass. From North Adams he went to Boston, where he became a reporter in the legislature, and served as proofreader in the state printing office. He took an active interest in politics and his ability as an organizer and campaign speaker was recognized by his selection as a delegate from Massachusetts to the Free Soil National Convention at Pittsburg, in 1852, which nominated John P. Hale for president. His adherence to the Republican party had always been steadfast, and he remained a vigorous advocate of its principles until his death.

Going from Boston to New York, he was engaged upon the New York *Evening Post* in 1853, and was sent to the western states as a special correspondent. He visited Milwaukee in the spring of 1854, settled here in the early summer, and soon after became connected with the *Evening Wisconsin*, with the late William E. Cramer. On the 1st of January, 1857, he assumed the business management of the newspaper and printing department, and later was admitted to partnership in the firm. Mr. Aikens was a man of broad culture, thoroughly familiar through daily reading with the books of his private library, which consisted of several thousand volumes. Although advanced in years he was in daily attendance at his office up to within a comparatively few days of his death.

The method of printing newspapers on one side at a central office and on the other side at the office of publication (commonly called "patent insides") originated with Mr. Aikens in 1863. Mr. Aikens' improvement upon the English method of printing auxiliary newspapers consisted in the addition to the general news of the paper of a page for general advertisers; the compensation for this advertising partly, and sometimes wholly, paying for the cost of the white paper to the publisher. The firm began the publication of the "patent insides" with advertisements in 1864, being the pioneer house in the business. There are now more than 10,000 papers printed upon this plan in the United States—more than one-half of the weekly newspapers—at a saving of millions of dollars. Mr. Aikens founded the Newspaper Unions at Chicago, New York, Cincinnati, Nashville, Atlanta and Memphis.

For three years previous to his assumption of the business management of the *Evening Wisconsin*, Mr. Aikens was city and commercial editor of the chamber of commerce and published for three years a compilation of the statistics of the



A. J. AIKENS, Deceased.

trade and commerce of Milwaukee. Mr. Aikens was a charter member of the Milwaukee club, which was organized in his business office. He was also one of the oldest members of the Chicago club, and a member of the Milwaukee Press club. He was connected with the Associated Press as an officer and adviser from its organization.

In his youth Mr. Aikens had a varied experience which tended to broaden his knowledge and impart confidence in his own powers at an early age. His occupations brought him into association with interesting and notable men. Before leaving Vermont he had formed the acquaintance of the poet Eastman, whose writings at that time were widely admired. As proof reader at the state house in Boston he carried through the press the reports of the constitutional convention of Massachusetts and came into daily personal contact with the members of that distinguished body. He preserved pleasant recollections of Rufus Choate and of Charles Sumner, the latter of

whom was afterward, on the occasion of a lecture engagement here, a guest at his residence in Milwaukee.

As a reader Mr. Aikens was omnivorous. Among the subjects which fired his mind were astronomy and general history. He was particularly fond of histories of the Puritans. Poetry was also interesting to him, and he was strikingly familiar with the scriptures. His extensive library grew up around a stock of well-selected volumes purchased when he was a boy, which had for him associations that made him prize them far above later editions of the same works printed and bound in much more pretentious style.

Business engrossed his time in his later years, but when occasion demanded he possessed the art of clear and forcible writing. Letters in which he described his journeyings in Europe in 1874 and 1877 appeared in the *Evening Wisconsin* and attracted much attention.

Those who knew him will never forget the charm of his personality. His mind was stored with information, he warmed with enthusiasm in company, and no matter what subject came up in conversation, he could usually add to it something of interest.

The *Evening Wisconsin* said, editorially, of Mr. Aikens, giving a brief resume of his life as follows:

He had been associated with the publication of the *Evening Wisconsin* in different capacities for nearly fifty-five years, and for forty years had held a proprietary interest. Though eighty years of age on the 31st day of October last, he remained active till the end, and the paralytic stroke on the afternoon of Tuesday, the 12th inst., which has finally proved fatal, came after an arduous day's work, while he was in his office.

Mr. Aikens notably illustrated in his personal character traits which have made Vermonters and Scotsmen conspicuous wherever they have gone. He had a practical knowledge of the newspaper business in all its departments. He was enterprising and energetic in a remarkable degree. A young man when he arrived at Milwaukee, he quickly gained recognition as fertile in ideas and indefatigable in bringing them to a realization.

His connection with the *Evening Wisconsin* began on the day after the destruction of its office in the fire of August, 1854, still remembered by old settlers. He made himself invaluable assisting the late William E. Cramer in the restoration of order out of chaos. He had come to the city with no expectation of remaining, but accepted an invitation to take charge of the department of city news. When the Board of Trade was organized he became its first secretary, holding the position for three years, but not relinquishing his newspaper work. His idea which led to the establishment of the "ready prints" wrought a revolution in the business of publishing country newspapers.

Mr. Aikens was one of the pioneer members of the Associated Press and was well known among newspaper men throughout the country. He was for many years active in the social life of the city and was one of the founders of the Milwaukee club, the first organization if its kind in Milwaukee.

Those who knew him will remember him as a man of alert intelligence, strong will, tremendous energy, strict integrity, and a heart kind and generous to a degree that is rare among men.

Our young men and students in newspaper-making should be encouraged to study the lives of workers in this important calling. It has been said by some that a special training is not necessary to a newspaper editor and publisher, but the study of the lives of such men will show that those who have attained success enjoyed thorough training and their minds were enriched by broad, deep study.

LITTLE TALKS ON ADVERTISING

BY ARTHUR CAPPER OF THE TOPEKA, KANSAS, STATE CAPITAL

There was a gentleman in Darkest Missouri struggling homeward in the pale moonlight on the night before Christmas. Over his shoulder was a gigantic turkey. As the outraged fowl made vain efforts to free himself his captor said:

"Lookee hyar! Wot's de use ob yo' all kickin'? Among such a large cullu'd population yo' ought to know dat it am only a question ob which nigger gets yo'!"

I opine that advertising to the modern business man is not merely a question of "which nigger gits yo'." Neither is it a matter of philanthropy on the part of the benevolent publisher. It's a matter of business wih you, cold, hard, dollars-and-cents business, and the man who advertises in any other way or for any other reason, is not wise.

The retail merchant has on his shelves and in his storerooms goods which he has placed there in the confident expectation that his public will buy them—after they know that he has them for sale. Being a sane business man he does not expect the public to get out a search warrant to find them.

He wants therefore, to let the public know that he has the articles for sale; he wants to persuade the public that it needs the articles and he wants to induce the public to come and see the articles.

He has found from experience that advertising is one of the best methods of accomplishing his purpose—an economical, safe and sure method if rightly employed; an expensive, uncertain and dangerous method if used unwisely.

When he is confronted by the advertising solicitor, then, the question is not whether the solicitor needs the business or the publisher the money; it is not whether the publisher is the embodiment of benevolence; it is solely whether or not the solicitor offers space that the business man can use to advantage at the rate asked.

And that ought not to be a difficult question for the business man of average intelligence to decide. Let him ask himself this:

What means shall I employ to reach the people whose patronage I am seeking, the salient facts about my business? What proposition can I make them that will most readily loosen the padlocks of their pockets? What inducement can I offer to compel them to come into my place of business and meet me face to face? What advertising medium will carry my message to the largest number of possible customers at the least possible expense per customer.

If the merchant asks himself these questions and answers them judiciously he will have little difficulty in deciding upon the many advertising propositions submitted to him. The intelligent solicitor will be a welcome visitor in his private office, because the live merchant who is reaching out for trade is just as anxious to find means of increasing his business as the publisher is anxious to sell space.

But it will be a little tough on the lad who bases his plea for business on the whine that "you're giving it to the other fellow."

If a Topeka *Capital* man comes into your office or shop with that sort of plea, I hope you'll drop him out of the window, or at least, assist him—as gently as your feelings will allow—to the front door.

AS NECESSARY AS THE HOME PAPER.

OFFICE OF THE REPUBLIC.

BERESFORD, S. D., Jan. 4, 1909.

National Printer-Journalist, Chicago, Ill.

Enclosed I hand you $2, for which please send the N. P.-J.; would as soon think of advising a customer to get along without his home paper as to think of trying to run a print-shop without the NATIONAL PRINTER-JOURNALIST.

Respectfully, H. A. STURGES.

BANQUET IN NEW STATE CAPITAL BUILDING

AT TOPEKA KANSAS, BY ARTHUR CAPPER.

MEMBERS OF THE EXECUTIVE COMMITTEE OF THE NATIONAL EDITORIAL ASSOCIATION AND OF THE KANSAS STATE PRESS ASSOCIATION.

REMARKABLE and vastly gratifying has been the growth of the Topeka, Kansas, *State Capital* and of publications connected therewith, under the direction and ownership of Arthur Capper, who commenced less than 25 years ago, as a printer at the case, in that State and city of recent wonderful growth and enrichment. We cannot now, but hope at an early day, to tell the interesting story of the building up the business with such unparalleled success and the why.

Mr. Capper now has five publications housed in the splendid new structure, erected to accommodate them and an extensive job printing business. We will, later, give an illustration of the building and expect to give a full description of its arrangement. Mr. Capper has just installed a new Cottrell Magazine Press at the cost of $30,000, and a Goss Newspaper Press with the capacity of fifty thousand complete newspapers per hour, folded and counted, at a cost of $50,000. This much will indicate that there is something to tell, but this month we have to do only with the banquet given by this remarkably successful publisher, to his fellow newspaper workers in and outside of Kansas. Mr. Capper's five papers are:

	Circulation.
Topeka Daily Capital	27,000
Kansas Weekly Capital	52,500
Farmers Mail and Breeze	79,000
Missouri Valley Farmer	210,000
The Household	300,000

The business office is on the first floor and accommodates nearly one hundred employes in the business department, advertising managers, clerks, bookkeepers, stenographers, cashiers, ladies in charge of subscription lists, etc., etc. This room was cleared of desks and transformed into an elegant banquet room, seating three hundred and fifty guests. The tables were tastefully arranged, and together with the room trimmed and decorated with flowers, flags and bunting—the electric lights were abundant and of the brightest. The scene was enchanting, as the bright, intellectual, high-browed editors of Kansas and their beautiful wives, together with the visitors, took their seats for the enjoyment of the feast and the flow of jest, wit, humor, and eloquence that followed, interspersed with songs, for four and one-half hours.

Everybody loves Mr. Capper, the editors had elected him President of the Kansas Press Association by unanimous vote, and his worthy competitor, of the Topeka *State Journal*, was there in person to say kind words of congratulation and tell the story and so well did he acquit himself in regard to the latter, that we are saved from the effort of writing out the account for the National Printer-Journalist. We take the story of the banquet from the *Journal's* account, with a few brief quotations from the *Capital*, as follows:

T. A. McNeal, dean of the toastmaster's department, presented the speakers. Before the evening was over he was referred to as Mr. Roastmaster, but it was all in the game, so to speak, and only added to the enjoyment of the occasion.

One of the many features of the banquet was the singing by the famous Modocs, of Topeka. This organization was in excellent vocal condition, and the songs sung during the evening gave many visitors their first opportunity to hear the club.

John McDonald, editor af the *Western School Journal*, Topeka, led off with a characteristic toast. He was in no danger of getting out of breath at any time, as prolonged laughter at frequent intervals gave him plenty of time to rest.

"I came for inspiration," he said, "but if I keep talking I may get perspiration.

WHEN KANSAS WAS A CINDERELLA.

"Once upon a time Kansas was the Cinderilla of the sisterhood of states. Her sister states looked down upon her, but Kansas has married the Prince of Prosperity, and now they all look up to her. Once we were down in the valley of humiliation, but Solomon in all his glory was not arrayed like we are at the present time, and the end is not yet.

"Kansas is better known today across the seas than any of the other states except six, and I know whereof I speak. Kansas is being talked of in London tonight—our sister, Carrie Nation, is there. Kansas has no respect for precedent or tradition, but we go on just the same. She is the laboratory of the United States, and performs her own experiments."

Senator J. L. Bristow prefaced his remarks on the "Relation of the Newspaper to the Politican," by discussing railroad capitalization and rates.

"I, and you gentlemen believe with me in these matters, have no desire to injure railroads, but only to prevent the evils which have grown up and aroused the people, which ought to be righted," he said. "While I admire railroad attorneys for their loyalty to their clients, yet I believe it the duty of a man who represents the American people to be as faithful to his clients as the railroad attorneys are to theirs.

"Newspapers constitute the strongest influence in moulding public thought that there is in civilized government, but a paper not intelligently edited cannot command the attention of thoughtful people. I am proud of the newspapers of Kansas. The independent press of the United States is the hope of this country. During the last 10 years there has been a greater moral awakening than in any other decade in history, and behind it is the press."

"One of the most noted guests at the banquet was Benjamin B. Herbert, founder of the National Editorial Association and editor of the official paper, the National Printer-Journalist, of Chicago, who spoke on "The Service of the Newspaper to the State and City."

"There is much that is news outside of accidents and crimes," said Mr. Herbert. "The great idea of a newspaper should be to look into all events and interpret them correctly. The greatest thing in running a newspaper is to have the right kind of heart, to aim to help others. There is not a word printed in a paper but what lives forever. We have the grandest calling ever given."

"Mr. Herbert complimented Mr. Capper on his new building and said that he viewed it with great pride, not from the standpoint of dollars and cents, but as a monument to the newspaper profession in Kansas. Mr. Herbert is an interesting speaker with a voice much younger than his years.

A number of interesting reminiscences concerning the early days of Kansas newspaper men were told by Charles S. Gleed, of Kansas City.

"I stood with Major J. K. Hudson when the first *Capital* was taken from the Press," he said. "I gave Arthur Capper the first item he ever wrote in this town which was something like 'Dr. Roby has returned.'

"The main difference between those days and the present ones is that the old men were fighters in a sense that the new men are not. They fought with gun and sword, but worst with the pen. The problems that men have to solve today are complex, difficult ones. They must be solved just as we solved a hard puzzle in school days. Settle down to careful, patient, reasonable solutions of the problems presented to you. Be for or against everything, red hot."

MR. MACLENNAN CALLED UPON.

Frank P. MacLennan, of the *State Journal,* being informally called upon, congratulated Arthur Capper upon the fine building which houses his many newspapers and printing and engraving establishment, saying that he was proud of the edifice also, that he considered the structure one of the monuments to the growth and progress of his own calling to which he had devoted the greater part of his life and expected to devote the remainder of his days. "Mr. Capper and I," said he, "have been in the same, the newspaper business, in this city for more than twenty years and in that time we have stood on common ground for the welfare of our town and state. We have not always, to be sure, agreed upon statements of circulation, or advertising rates, but our differences have generally been immaterial and unimportant ones, our harmonies essential and important; we have both always agreed that we live in and work for the best city in the best state in the Union." He disagreed with Senator Bristow, who had stated that he feared the advent of displayed political advertising in the newspaper would lower the standards of the business. The speaker declared that in his opinion "the primary law which had elevated politics, would also elevate political advertising; the reader knowing by its very nature that the advertising was paid for. Formerly the principal amount of political advertising was done through the editorial and news columns of the papers, and oftimes the reader must have been in doubt as to whether the editorial expressions were the honest sentiments of the newspaper, or were in the case of suspected papers, the paid advocacy of candidates; under the new plan all candidates have an equal show. The fair newspaper will hardly dare deny its space to reputable candidates who present their cases in a proper manner whatever stand the paper may take editorially."

Fred Vandegrift told one litlte story when pressed into service by Mr. McNeal, of a Methodist presiding elder, who after he had delivered a three hour discourse on the prophets dropped the interrogation, "What shall we do with Malachi?" when he was greeted by the following remark from one of the audience: "He can have my place, for I am going to dinner."

R. E. Dowdell of the Artesia, S. D., *Advocate,* made some impromptu remarks on current issues, but was just a little shy of a correct application when it came to Kansas. He almost started some heated railroad discussions.

W. F. Parrott of the Waterloo, Ia., *Reporter,* complimented the Kansas Association, told a little about the National Association and related some incidents of Iowa journalistic life.

W. A. Steel of the Nome *News,* Seatle, Wash., made a short talk in which he told the Kansasans that he was trying to secure the national convention for his town this year, but that he was not confident of ultimate success.

Walter Williams of the Missouri University School of Journalism was pressed into service by the toastmaster and responded all right, all right, but much to the latter's regret. Mr. Williams is a wit of the highest type and is an equal for Mr. McNeal.

Thomas Rees, publisher and proprietor of the Springfield, Ill., *Register,* spoke for a short time and Mr. Capper was congratulated on his building. Mr. Rees started throwing carnations at the host and succeeded in getting all of the banquetters to follow.

N. H. Loomis took a minute of the program to make a statement in the defense of the railroad. The slams on the roads by Bristow and Mr. Dowdell of South Dakota, Mr. Loomis thought misleading.

Mr. Capper made a short address in which he thanked the delegates for his selection as pesident of the association. He also thanked the delegates for the interest they had taken

Arthur Capper, Topeka, Kanass, State Capital

in the banquet and in his new building. As the host of the evening, his remarks received prolonged applause.

Mr. Capper said:

"I have been overwhelmed with congratulations from our visitors on this beautiful newspaper home and the grand success which has come to us and I want you to know what has made it all possible. I claim no great honor or praise myself for what has been accomplished, but I say to you that you cannot give too much credit and glory to the splendid army of men and women—now nearly 400 in number—who are employed in the making of the newspapers issued from this building. I say without hesitation that the greatest factor in the success of my business has been the ability and loyalty of these people—people who love their work and who work as if they owned the business. It is this beautiful conscientious service, this cordial and earnest co-operation, the value of which cannot be measured by dollars and cents, which has been the most potent factor in the development of these publications. There can be no real or permanent success in any business enterprise without mutual confidence and in this big office more than any other in Topeka I believe you will find employer and employees like members of one big family.

"There are no doubt larger newspaper buildings, there are offices with larger presses and better and more complete newspaper equipment, and more elaborate facilities for news gathering, but no where in all this wide world, I assert, will

Continued on Page 126

WILLIAM OSMAN DECEASED.

(Continued from Page 113)

and along the creeks during the day while at night by the fire-light of the pine-knot he studied his spelling-book.

At thirteen he went to Harrisburg as apprentice to a printer; but the man to whom he was indentured proving a cruel master who misused his boys, he betook himself to another printer of the same city, one Jacöb Baab, then state printer to the legislature. Here the spoken German tongue familiar to him at home, became equally familiar as a written language, the laws being then printed in both English and German, and the apprentice's work being on the German side. He never thereafter neglected his German which was always to him a working language and a keen intellectual pleasure; and in all his subsequent years he frequently spent many hours reading the best German classic authors in their own tongue, the poet Heinrich Heine being a special favorite with him.

On concluding his apprentice years, he went to Gettysburg College for a term or so of study, and then went to Philadelphia to obtain work as a journeyman printer. While in the Quaker City he was employed chiefly by the famous type foundry of McKellar, Smiths & Jordan, one of the historic foundries of the country.

It was while he was living in Harrisburg that in 1840 William Osman was asked to come West to take a position as printer in the office of the *Illinois Free Trader,* which had but recently been established by John Hise and George Weaver, two young men whom he had known as fellow apprentices in Harrisburg, and who had come to Illinois in 1838 or 1839. The West was then drawing to herself much of the best blood of the East, and he accepted the call. Leaving Harrisburg behind him, he crossed his ancestral State of New Jersey to New York and started for the West via the Hudson River. Arriving at Albany he transferred himself and his effects to the new railroad then built as far West, we believe, as Syracuse, where he changed to an Erie Canal packet to Buffalo. This part of the journey he often referred to in later years as one of the most delightful experiences of his life. The weather in mid-summer was ideal, the scenery interesting, and his fellow passengers, both ladies and gentlemen, most congenial. A lake steamer then brought him to Chicago, where he found a Frink & Walker stage that brought him to Ottawa, the latter conveyance landing him at the Mansion House hotel, then standing on the corner of Main and Court Streets. The date was August 1 (or thereabouts) and election day; and true to his hereditary political principles, he promptly exercised his manhood suffrage, and cast his first vote for the Martin Van Buren electors. His cash resources on dismounting from the stage were 10 cents.

He went to work at once as a compositor; had his turn with the fever and ague that made life a burden to many in Illinois in those days when the settlers were breaking up the rich soil of the prairies; he hunted and he fished and made his friends among the fine young fellows who in those days were building up this great country of La Salle both physically and politically and making it by virtue of their merit, one of the preponderant counties of the State.

He was enrolled in the company commanded by the late T. Lyle Dickey and at the rendezvous at Alton in the spring of 1847 the company became part of the First Regiment of Illinois Volunteers, commanded by Col. John J. Hardin, who was killed at Buena Vista, by Mexican stragglers who were hiding in a dry water course after the battle was over. Hardin was one of the most brilliant and promising young men of his time in Illinois, and his friend, William Osman, always felt that had Hardin returned from Mexico, he would have become one of the leading men of the State.

It was during the period of the Saltillo occupation that William Osman and his younger brother, Moses, who also was a printer and had come to Ottawa to "set type" in the *Free Trader* office, and who had joined his brother in the army—published a paper for the army called the *Picket Guard.* In those days Uncle Sam's mail service to his soldiers in Mexico was confined strictly to letters, the cost of newspaper transportation being prohibitive, Gen. Wool being the only man in the army who received any. In consequence, the news the soldiers had of the other operations of the war was exceedingly limited and uncertain, coming a long way around "Robin Hood's barn," by letter from the States. Having discovered in his movements through the city an abandoned Spanish printing office, William Osman conceived the idea of printing a weekly paper for a soldiers' benefit; and obtaining Gen. Wool's consent thereto and being supplied by that considerate commander with his entire newspaper mail, the two brothers, with the help of another printer, detailed by Wool to help them, the *Picket Guard* appeared.

It was a folio sheet, with pages about 9 x 12 inches, and contained news of the operations in other parts of Mexico, some political news from the States and some of the printable jokes of the soldiers. It sold "like hot cakes;" and never an issue appeared of which a sufficient number could be printed, because the paper could not be obtained, or because of the physical impossibility of producing the copies on a hand-press which would print but two pages at one impression. Eight numbers were issued in all; and the profits far exceeded the entire pay of the year for both, including all allowances.

This year in Mexico was one of the dear recollections of William Osman's life. It was a veritable "picnic"—that was the word he always used. Some of the dearest and most lasting of his friendships, though originating mainly in Ottawa, were cemented and deepened by this year's experience together under the blanket of the soldier; and the memory of that year was always a peculiar pleasure to him.

Returning to Illinois after the war, the brothers took possession of the *Free Trader,* which by that time had become the Ottawa *Free Trader,* John Hise retiring to his farm.

For the legislative session of 1852 William Osman was elected enrolling and engrossing clerk of the house, his friend, R. E. Goodell being Secretary of the Senate. Here he met on familiar terms all the great men in Illinois politics during a most momentous period of the nation's history. He knew well Abraham Lincoln, who, with many others, then made the clerk's office a convenient lounging place, because it was always open house there when hotels were not entirely adequate. John A. Logan, then a young and fiery Democrat from Egypt, was, we believe, an employe of the office, while Burton C. Cook, John M. Palmer, Norman Judd and many others were members of the house or senate when the West was getting ready with the rest of the Nation to make history.

After this session he went to Washington to take a clerkship in the general land office. Here, by introduction of Stephen A. Douglas, a fast friend for many years, he met Hon John ("Long John") Wentworth, then publisher of the Chicago *Democrat* (afterward merged in the Chicago *Tribune*), who pursuaded him to come West and become his editor. He did so, buying a residence on the west side of the present Fifth Avenue, Chicago, about three doors north of Washington Street.

The work was strenuous. There were but two of them, his assistant being the late Joseph Forrest, for more than forty years one of the best known newspaper men of Chicago. There was some little telegraphic news which the editor-in-chief edited amid the nightly leisure available after writing column after column of editorial and selecting other matter to fill the great folio pages; while Forrest collected the market news, walking from Twelfth and State Streets, to State

and Twenty-second Streets, the old Ulrich's Hotel, where the stockyards were then located, with the Rock Island tracks on the west.

After about a year, the work proving too exhausting and confining, William Osman resigned, and returning to Ottawa with his brother Moses, repurchased the *Free Trader*, which thereafter always remained in his possession.

As a citizen of Ottawa he was always interested in its growth and at one time was a considerable owner of its real estate in its business center. He and his brother built the old postoffice block now standing opposite the Clifton Hotel, where until 1865 he occupied the upper floor with his office. Other lots on Madison Street facing Court Street were built up by him; but for various causes not entirely due to himself, they passed out of his possession. He was not a money-maker, he never "chased the dollar;" money being to him only a means, not an end.

Late in the '60s, when the project to create a water power at Ottawa assumed definite shape by the vote of the people to issue bonds to the amount of $60,000, to be given to the late Col. W. H. Cushman, who had agreed to build the dams and otherwise finance the scheme, William Osman, then a member of the City Council, was delegated to make the presentation of the bonds to Mr. Cushman, which he did at the latter's home. Col. Cushman afterwards transferred his contract with the city to other parties, in whose hands the project became a failure; and so one of the greatest of Ottawa's opportunities was lost.

Later William Osman and the late Dr. J. O. Harris organized the Ottawa Building and Homestead Association of which they were the first president and secretary respectively. It would be hard to exaggerate the beneficent influence of that institution, which still exists.

After his retirement from the Council he never sought any elective office in Ottawa although he afterwards served the city as member of the Reddick's Library board for a number of years.

His experience as a churchman he has himself told in a paper read at the late semi-centennial celebration of the Congregational church of this city. The son of Christian parents, he was familiar from earliest boyhood with the Bible and the doctrines of the Christian church; nor does it appear that he was ever other than a pius man; much moved by the preaching of an evangelist in Ottawa, he joined the Congregational church and remained a consistent member until the partisanship of his fellow members, during the anti-slavery agitation of the '50's drove him from that congregation. His wife being an Episcopalian, he turned to that ancient communion and found there the church home of his heart; and there for more than fifty years he was a communicant and warden. His religious convictions were strong and were the guide of his daily life; but he was to all men and to all opinions tolerant to the last degree, yielding to others to the uttermost the same right of opinion that he asked for himself, and was broad enough to believe there are other roads than his own to man's assurance of peace with his God, which he himself found early and never thereafter lost.

His eulogy let others write. To his own, he leaves the sweet memory of a blameless, Christian husband and father who died in the fullness of life, at peace with his God and secure in the hope of the life everlasting.

"God accept him, Christ receive him."

At Manitowoc, Wis., the *Daily News* has installed a number of improvements in its plant, including a new press. It will also enlarge its news service.

C. A. Leicht, formerly of New Lisbon, Wis., will issue a paper at Marathon City, Wis., called the Marathon *Times*.

ITEMS OF INTEREST

The *Railway Record* is Chicago's newest paper devoted entirely to railroad news. It is a bright, sparkling publication, chock full of crisp items of interest to all the many railroad men in Chicago, and also containing the cream of the news, in this line of industry, throughout the country. The paper is edited by Martin T. Dunn, who is considered an authority on railroad news in the Western territory. He is assisted by a staff of writers. Particular attention is to be given to the roads in and about the city, "Greatest Chicago" being the motto of the publication.

The Galien, Mich., *Advocate* is no more. The village paper, for some time edited by R. J. Burch, has suspended publication, and the village is now without a weekly carrier of news. Mr. Burch takes up similar duties at Buchanan, and is busy disposing of the stock and fixtures of the Galien office. Of late years the *Advocate* has had many editors, and each in turn has left for other fields. The last issue was published last week.

Illumination is the name of a new magazine that will make its appearance in Chicago about the middle of February. The name indicates the field it will cover, for it will be devoted to everything that has to do with lights, fixtures and lighting from the Sun's Rays and the tallow candle to the present day wonderful flaming arc electric light, and incandescent gas lamps. It will take in every possible phase and corner of the field of lighting and will be original in a number of ways. H. B. Shontz a well known Chicago newspaper man, will be one of the publishers, and Wesley A. Stanger, formerly a daily newspaperman and now one of the best known trade paper men in the country, will be Editorial Director. The new magazine will maintain its general offices in the Monon Building, and although Mr. Stanger is at present editor of the *Office Outfitter*, and will retain his connection with that magizine, he will direct the work on *Illumination* with a vim and vigor, sure to make it a thoroughly high class proposition in every way. The first issue will contain some strong articles by men high up in the field, and on the whole will be a pacemaker in the realm of trade journalism. The cover design for the magazine is an especially striking one, and in its self tells the story of what the publication purports to be.

The building and plant of the Fairfield, Iowa, *Ledger*, were wrecked by fire December 2nd. Editor Junkin and wife were in Chicago and were called home by wire. The fire broke out at noon, while no one was in the building. Four pages of a sixteen-page paper were on the press for the last run. Editor Junkin writes: "I moved things out next morning, completed that edition, after drying the paper, getting it out Saturday. Haven't missed an issue; am now back in my own building, which has been patched up until spring. Then I will remodel it and have a good and commodious office. My loss was about $4,000. It was partially covered by insurance, and my loss was satisfactorily adjusted."

The entire ownership and editorial control of *Masonic* Tidings, a monthly paper of Wisconsin, published at Milwaukee now in its twenty-third year, has been purchased and passed into the hands of Ralph E. Perry, son of W. W. Perry, grand secretary of the Masonic bodies of the state, and for a year past joint owner and editor with Jacob Dreher, grand lecturer, under the name of the Masonic Tidings Publishing Company.

A man drunk on the egotism of ignorance should not add thereto the intoxication of drink.

BANQUET IN NEW STATE CAPITAL BUILDING.

Continued from Page 123

you find a newspaper family more loyal, more conscientious, more faithful.

"I am of course proud of this building; and fine newspaper homes and mamoth presses are greatly to be desired, but I need not say to you there must be something more than buildings and presses back of a great newspaper. There must first be character; character that means truthfulness, honesty, soundness of opinion, fidelity to right causes, judiciousness in utterance, fairness in the treatment of news, and honorableness in all the wide meaning of the word. I am proud of this building and I believe I have a right to be, but I want above everything else to achieve success along lines of the highest standards of journalism.

"I want no big building; I want no gerat printing presses, unless I can send forth from that building a newspaper that the best people of this state and this city can be proud of; a newspaper that shall render to the people of Kansas true and honest service, unwavering in determination to tell and teach the truth, and to expose wrong regardless of the sacrifice, uninfluenced by any consideration, save what conscience and right may dictate; and I pledge you an honest endeavor and the best that is in me to publish that type of newspaper.

"A good friend who is a member of this association said to me this morning after looking over our establishment very carefully: 'Capper, you have the foundation here for a wonderful business and you are going to make a great fortune in this building.' It is a laudable ambition to make money honestly and I, of course, hope for financial success, but I trust you will believe me when I say to you that I want to make something better and greater and more valuable than a fortune in this business. I want to make great newspapers; newspapers that shall stand out prominently as examples of the best of Kansas journalism; newspapers that are faithful to their trust; that shall command your cordial approval and merit your unqualified admiration and respect; newspapers that shall win their way by courage, plain speaking and fair dealing; newspapers that during this generation and for generations to come shall be the mightiest of all influences for the advancement and upbuilding of this, my native state—the state upon which all the world looks with admiration and wonder; the paradise of the west, the garden of the earth; marvelous in progress; wondrous in deeds; the most superb example of this magnificent age; with a record that ever grows brighter, and a future in which every Kansan Editor has boundless faith. It is a mighty and most inspiring work which we newspaper men of Kansas have to do, to be champions, the defenders, the protectors of this matchless commonwealth. And it is reward enough for me, it is reward enough for anyone, to have had a share in that splendid work; to have been an influence in that glorious achievement. This delightful occasion will always be one of the pleasantest memories of my life and an inspiration for progress toward the best attainable ideals in the splendid profession we have espoused. To me, the suggestion of this inspiring hour is a higher sense of responsibility and I shall try to meet that responsibility in the utmost good faith.

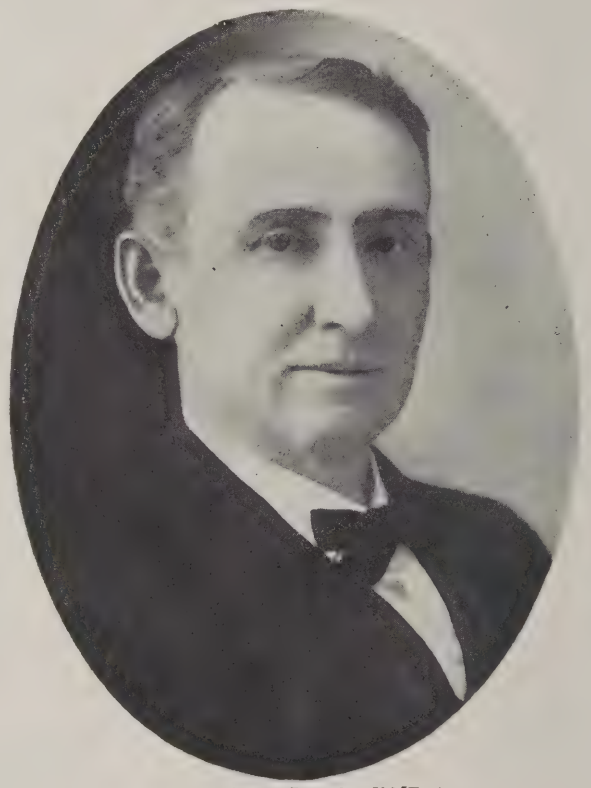
"I know you will join with me in the hope that this new home of ours shall never cease to be the temple in which progress, justice and fairness shall ever abide, inside as well as out, an institution that Topeka and Kansas will be proud of: always encouraging the making of this state and city a better place to live, and always standing for higher and richer and nobler things and for that which is right and clean and best in life."

An invitation from the students at the State Agricultural College at Manhattan requesting the editors and their wives to join the legislators in their excursions to the college was received with applause.

There were between twenty and thirty members of the national executive committee present at the banquet.

John E. Junkin, of Sterling, who has the distinction of being a Past-President of both the Kansas State and of the National Editorial Association, introduced the following resolution, which was adopted unanimously by a rising vote:

"Resolved, That the Kansas Editorial Association notes with approval the growth of schools of journalism and printing in Kansas and other States, as evidence of the rapidly increasing sentiment for better equipment for public service through professional and technical education. Kansas, as one of the pioneers of the movement, congratulates its sister



Will H. Mayes, President N. E. A.

State of Missouri upon its State University School of Journalism, under the leadership of our friend and brother, Dr. Walter Williams, who is present here tonight."

Mr. Capper was showered with flowers, at the suggestion of Mr. Thomas Rees of Springfield, Illinois, as having been the victor above all others in building up a great newspaper and publishing business and erecting a magnificent newspaper building, unsurpassed in any city of the United States of the size of Topeka, and given a unanimous vote of thanks, every guest making the vote emphatic, by rising and standing and joining in hearty cheers.

"The Lands of Taos" is the title of a beautifully illustrated pamphlet being distributed by the Denver & Rio Grande Railroad. The Taos Valley in New Mexico is the father of agriculture and the mother of irrigation, as it has the oldest farms and the first ditches in the United States, some of the lands having been cultivated in a crude way by Indians and Spaniards for over 400 years. However, the land is by no means worked out, and the country is fast settling up with progressive American farmers and fruit-growers.

KANSAS EDITORS

KANSAS, in its great prosperity, might well be designated as the very Paradise of newspaper-makers. With an educated, progressive people, noted for intellectual activity and earnestness as to convictions, and an aggressiveness as to all principles underlying society, government and institutions and agencies for the uplift of mankind, it could not be otherwise than that newspaper readers, as well as editors and writers, of the highest character should abound.

It is a gratifying fact that the newspaper men are fully alive to the opportunities and responsibilities of their calling. A little thing like paying cash for railroad fare, notwithstanding the existence of the custom for more than a third of a century, of paying in advertising space, does not stand in the way, not a little bit, of attendance on the annual conventions of the State Association. The meetings this year on Feb. 1st, 2nd and 3rd, were largely attended, there being two hundred and fifty present, and thirty new members were enrolled. The meetings were held in the roof garden of the National Hotel, and the place proved to be most capacious, comfortable, and convenient for the purpose, and was reached by excellent elevators. It was enclosed on two sides by glass and with ends of corrugated iron construction that can be rolled up in warm weather. What would New England think of an elegant hotel roof garden away out in Kansas?

One of the pleasant incidents of the first day's session was a visit to and a dinner at Washburn College, that boasts the largest college building in the United States. The *Daily State Capital* gives the following resume:

After dinner President Frank K. Sanders invited the guests to assemble in the chapel, where a pleasing musical program was given by several of the music students.

WELCOME BY W. R. STUBBS.

Governor W. R. Stubbs delivered the address of welcome between numbers. The Governor paid high tribute to the work done by the press, and said in part:

"America is the most progressive, patriotic and powerful nation the world has ever known. The three most potent influences in our national life are the church, the public schools and the public press.

"The newspaper is the bulwark of liberty and one of the strongest safeguards of the constitutional rights of American citizenship.

"When Roosevelt was elected President, the United States Senate contained many senators who owed their election to powerful corporate interests. The United States Senate practically dominated the appointment of federal judges. The legislative and judicial departments of the federal government were to a large extent under the control of the large corporations, trusts and combines. Roosevelt, brave and aggressive as he was, could have made small progress without the loyal support of the newspapers throughout the country, in the greatest struggle for the protection of the rights of the masses of the people that has occurred since the Civil war.

"A wholesome public press is a most powerful factor in quickening the public conscience. The people intend to be right and to do right, but they can not know their whole duty without the instruction of the newspapers. Yours is a high and responsible calling. I thank God for newspapers that gold can not corrupt nor great wealth monopolize. The newspaper man enjoys unusual privileges and he should conscientiously consider the public welfare.

"With all the good things that newspapers do, I think there is still room for improvement. I hope to live long enough to see the bad things that happen, like murder, divorce, scandal and evil deeds, printed only in ordinary sized type, stating only the necessary facts in the case, and the double leaded headlines that attract attention be devoted to the really important transactions of life."

President Sanders made a short talk in which he told of some of the work Washburn is doing and of what the future might bring.

"I believe a man could well covet the privilege of living during the next 25 years," he said. "We seem to be dreaming, but our dreams are going to come true. It is almost beyond dreaming what wonderful things have already been accomplished in the world, and there is every reason to believe that even greater things will be done in the near future.

"We are very glad indeed, for having the opportunity to entertain you, and hope that you will come again. In my estimation, no geater service can be rendered to a community than the work you are doing."

An address by Walter Williams of Columbia, Mo., on "The Challenge of the Sky Line" ended the program for the first day of the convention. Mr. Williams, noted as a traveler, writer and instructor, said in part:

"We may not rearrange the skyline to suit the opinions we had yesterday, nor shape it in accordance with the hope we have for tomorrow. We must deal with it as it is today. This is the challenge of the world's skyline. The answer is that each must be made to serve all. No more must it be each for himself and the devil take the hindmost. The call of the hour is for each to care for every other one and for all to take the hindmost.

"No code of rules, no regulations may be suggested that meet the changing order. Three great principles, however, will solve the problems of the bewildering skyline—old, old principles, simple yet profound—self-sacrifice, service, love."

SCHOOLS OF JOURNALISM.

Schools of journalism were exploited and praised in a manner which left little doubt as to the sentiment in favor of them. The subject has not been considered so much in detail and with such interest by the association before.

President Sheridan Ploughe appointed the following committees:

Credentials—C. E. Ingalls, C. A. Connelly, W. D. Greeson, W. E. Payton, Charles Browne, S. D. George, Clark Conklin, Mack P. Cretcher.

Resolutions—Ewing Herbert, John Redmond, J. W. Sowers.

Legislative—John Mack, John Cockran, R. H. Trueblood, C. A. Kimball, M. C. Hemenway.

Memorial—Charles Barne, John S. Gilmore, H. W. Young, E. B. Cowgill, T. B. Murdock.

Auditing—G. H. Yust, Gerald Volk, F. C. Flory.

The Rev. S. S. Estey, pastor of the First Presbyterian church opened the convention with prayer. The first address was by Frank P. MacLennan, editor of the Topeka *Journal*, who gave a talk on "The Print Paper Problem." One of the most important points emphasized by Mr. MacLennan was that publishers were wasting money by using such wide margins on their newspapers. He gave concrete illustrations to prove his statement by calling attention to several papers published in the state with margins from one to two inches wide. He stated that it was not only a waste of money to let so

AMONG THE ASSOCIATIONS

"IN UNITY IS STRENGTH"

MICHIGAN PRESS TO MEET

The mid-winter meeting of the Michigan Press Association will be held in the city of Flint, February 25-26. The details of the program are being worked out by Secretary Hopkins who promises a more than usually attractive array of talented speakers.

The *Michigan Bulletin*, in an article regarding the convention, makes the following racy plea for a large attendance:—

Forward Mate Harry H. Fitzgerald, of the Flint *Daily Journal*, who always sets the pace as a high roller, will be in full charge of the fireworks and for the past three years has laid awake nights to plan something especially novel for Flint's entertainment of the vanguard of Michigan's live ones. The first evening, that'h Thursday evening—get permission from your pastor to miss prayer meeting—will be devoted to a theater (accent on the middle syllable, please) party. Flint has one of the best little theaters in the state and one of the most enterprising theater managers. He has bells on already and is having a company transported direct from New York for the special edification of the Michigan editors, their wives and sweethearts. There is one comedienne and several very pretty chorus girls in the bunch and they will have a "mash" on Len Feighner. So everybody watch "Fike."

The business sessions are to be business throughout. Topics of vital importance to the craft have been selected. The matter of libel legislation will no doubt come up with a report from the present legislative committee headed by Stuart H. Perry, of the Adrian *Telegram*, which is planning a campaign during the present legislative session. The new postal regulations will also be discussed and it is thought that the government will have a representative of the department at Flint to answer questions and get the publishers in closer touch with what is being attempted by the department. Other men to be on the program are C. E. Churchill of Petoskey, W. H. Berkey of Cassopolis, H. Kirke White of Owasso, John T. Winship of Saginaw, and other bully business successes. Don't miss a session at Flint.

Friday evening, February 26, all sorts of surprises will be uncorked. The city of Flint will supply three of the banquet talent attractions, selected from well known men and "Hop" has his drag out for such men as H. B. Stitt, managing editor of the Grand Rapids *Press;* Chase S. Osborn of the Soo, and other eloquent and witty after dinner speakers. The Flint meeting is to outdo all former meetings, take our word for it, and there should be 200 at least in attendance.

Mark up the dates this instant and let nothing prevent your coming. Half fare on all roads (for children).

The New York State Legislative Correspondents' Association, at their annual meeting, held recently, elected the following officers: President, Louis Seibold, New York *World;* first vice-president, Frank G. Whiston, Buffalo *Express;* second vice-president, George L. Terrell, Brooklyn *Eagle;* secretary, John P. Gant, New York *Evening Post;* treasurer, William H. Owen, Albany *Evening Journal.*

The regular mid-winter meeting of the South Dakota Press Association will be held at Pierre, S. D., on February 10 and 11, instead of February 4 and 5, as previously announced. The change was made necessary in order to give those on the program a longer time in which to prepare papers.

At the annual meeting of the Southern Publishing Association, held in Nashville, the following board of directors were elected: C. F. McVagh, L. H. Ford, C. P. Bollman, H. F. Harrison, L. H. Smith, W. A. Westworth, P. T. Magan, R. L. Pierce and R. Hook, Jr. The board organized with the following officers: C. F. McVagh, president; L. H. Ford, vice-president and business manager.

The Erie, Pa., Press Club held a special meeting recently and elected the following officers: President, Paul Burkhart; vice-president, Frank E. Crane; secretary, G. Reid Yaple; treasurer, Harrison Baldwin; directors: J. H. Dearduff and William P. Tiebont (two years), P. B. Hurlburd (one year).

Amherst College has recently organized a Press Club. It will seek to have Amherst College kept properly before the public through the newspapers and to suppress any undesirable news.

The Old Time Printers' Association held its twenty-fourth annual banquet and ball January 18th at the Sherman House, Chicago, 400 people being present. The principal address was delivered by Rev. Joseph A. Milburn, who spoke on "Printing as a Force in Civilization." M. H. Madden was toastmaster.

The Utah Press Association at its annual meeting, held at Salt Lake City recently, elected the following officers: Parley P. Jensen, president; A. H. Schulthess, first vice-president; Fred Turner, Logan second vice-president; Andrew Jensen, Spanish Fork, third vice-president; J. David Larsen, Provo, secretary; May Anderson, Salt Lake, treasurer; Briant S. Young, historian; Le Roy Armstrong and H. C. Hicks, delegates to National Editorial Association, which meets at Seattle.

The Southeast Missouri Press Association met January 30 at Cape Girardeau.

The winter meeting of the Western Iowa Editorial Association will be held at Council Bluffs, February 19. E. A. Stevens of the Silvery City *Times* is secretary.

It was announced that the Indiana Republican Editorial Association is to meet in Indianapolis, February 25 and 26, 1909. The sessions will be held at the Claypool hotel. The banquet will be given on the evening of the 25th and the business sessions will be held the day following.

The completed program of the Indiana Democratic Editorial mid-winter meeting has been announced by President A. D. Moffett of Elwood. At the dinner, 7:30 o'clock, February 4, Denison hotel, the speakers will be Thomas R. Marshall, Prof. R. J. Aley and United States Senator-elect, Benjamin F. Shively. Mrs. Juliet V. Strouse of Rockville, "The Country Contributor," will be on the second day's program.

ANNUAL WINTER BUSINESS MEETING OF INLAND DAILY PRESS

The annual meeting of the Inland Daily Press Association will be held in the Empire Club Room, at the Stratford Hotel, Chicago, Tuesday, Feb. 16, 1909, commencing at 10 a. m.

This is the winter business meeting for the election of officers, chosing delegates to the National Editorial Association, etc., and for the discussion of important business topics. The following tentative program has been prepared:

"Advertising—How to get it; Local rates—How much per thousand of circulation." John Sundine, *Dispatch*, Moline, Ill.

Discussion—by F. T. McCann, *Journal*, Crawfordsville, Ind.

"The make up of the paper:—(a) Headings; (b) Classification of news; (c) Ads, etc."—F. W. Sherman, *Times*, Port Huron, Mich.

Discussion—by F. D. Troop, *Journal*, Muscatine, Iowa.

BUSINESS SESSION.

Reading minutes of last meeting.
Communications.
Presenting of bills.
Secretary and Treasurer's Report.
Election of officers for ensuing year.
Election of delegates to N. E. A.
Reception of new members.
Any other business.

"Running the job department for profit:—Keeping cost of jobs, system, etc." E. A. Tostevin, *Journal*, Racine, Wis.

Discussion—by D. B. Worthington, *News*, Beloit, Wis.

"The Editorial Page:—How to make it of the greatest value to the paper." W. R. Jewell, *Commercial-News*, Danville, Ill.

Discussion—by Col. Smith D. Atkins, *Journal*, Freeport, Ill.

"How to handle the Foreign Advertising copy between business office and news rooms:—Checking system for foreign ads, etc." E. P. Adler, *Times*, Davenport, Iowa.

Discussion—by H. H. Bliss, *Gazette*, Jacksonville, Wis.

Symposium on Want Ads:—Experiences of those present; how to get them; rates to charge, etc. Led by J. K. Groom, *Beacon*, Aurora, Ill.

General Discussion:—Experience Meeting:—Any member will be at liberty to ask any questions he wishes; give his experience on any of the following topics or any other topic.

(a) "Inventory—Its value; how much to charge off for depreciation each year."

(b) "Insurance, settlements after a fire."

(c) "Some leaks, how to stop them."

(d) "Some popular features for the paper."

(e) "Good stuff to leave out."

(f) "The Wisconsin law permitting the State to audit the circulation statement of publishers.

"The Bungle," a play dealing with municipal reform, will be presented by the Salt Lake City Press Club some time in March. The plot of the play is laid in Salt Lake City, and the story has to do with local conditions.

O. E. Remey was re-elected president of the Milwaukee Press Club recently. Other officers elected are: Vice-president, Henry F. Tyrell; secretary, Leonard E. Meyer; treasurer, Frank Markle; directors, Charles Dean and Judge John C. Karel.

At the annual meeting of the North Star Daily Press Association which was held in St. Paul recently, Mr. C. L. Dotson of the Sioux Falls, S. D., *Press*, was elected president of the Association. This Association of newspaper publishers comprises the leading dailies and weeklies of South Dakota, North Dakota and Minnesota, outside of the Twin City papers.

The Central Division of the Associated Advertising Clubs of America will be held in Indianapolis, February 16 and 17. President Smith B. Queal desires to bring about a thorough organization of advertising men in the leading cities of Wisconsin, Michigan, Illinois, Indiana and Ohio. The advertising organization movement is growing even in the smaller cities of these states and an aggressive campaign will be launched, it is expected, at the Indianapolis convention.

The officers of the A. A. C. of A. have extended a general invitation to advertising men interested in the organization movement to attend the convention. A program covering the two days has been prepared, and many of the advertising lights of the country will be present. The Adscript Club of Indianapolis will give the ad men a hearty reception.

Thirty newspaper men of Kankakee county, Illinois, have organized a Franklin Club, with the following officers: President, James Breen of the Manteno *Independent;* first vice-president, C. R. Richter of the Kankakee *Democrat;* second vice-president, T. W. Mayo of the St. Anne *Record;* secretary, Herman F. Schmidt of the Kankakee *Gazette;* treasurer, G. W. Schultz of the Emmington *Joker;* chairman of the executive committee, George Cannon of the Herscher *Pilot.*

PENNSYLVANIA STATE PRESS

The Pennsylvania State Editorial Association, at its annual meeting, January 27th, adopted resolutions urging the publication of new State laws, instancing particularly those relative to public hygiene, sanitation, pure food, fish and game, schools and factory inspection.

The association named this Committee on Legislation: H. P. Hapgood, Harry A. Thompson, O. D. Schoch, A. N. Pomeroy and Ernest G. Smith. The committee will co-operate with a similar committee from the association of western Pennsylvania dailies, which met here yesterday.

These officers were elected: President, H. A. Thompson, Tyrone; vice-president, W. C. Dershuck, Hazleton; O. D. Schoch, Hamburg and Crombie Allen, Greensburg; secretary and treasurer, R. P. Hapgood, Bradford; assistant, Miss Anna [illegible]aw, Bradford.

Executive Committee: E. H. Serby, Pottsville; E. G. Smith, Wilkes-Barre; I. O. Nissley, Middletown; R. H. Thomas, Mechanicsburg; W. P. Hastings, Milton.

The following resolution was unanimously adopted:

Resolved, That we congratulate Hon. A. Nevin Pomeroy upon his advancement to the office of First Vice-President of the National Editorial Association and urge that Association to further advance Mr. Pomeroy and place him at the head of the organization by electing him President, knowing that the National Association will honor itself in honoring him. We hereby instruct our delegation to the National Convention to take every honorable means to secure his election.

Remarks on the resolution eulogistic of Mr. Pomeroy were made by the retiring President, Ex-Senator McQuown, R. H. Thomas, National Executive Committeeman and others.

The Press club recently organized by twenty-five students in the college of agriculture at the University of Wisconsin, has adopted the name of the Hoard Press Club, in honor of Ex-Gov. Hoard and his work for agricultural journalism.

KANSAS EDITORS.

Continued from Page 127

much valuable paper go to waste, but that it would improve the appearance of the papers to have less margin.

"There is a lack of standardization in width of newspapers which should be remedied," said Mr. MacLennan. "I am also in favor of cutting off return privileges. It is money in the pocket to do so."

Albert T. Reid, of the Kansas *Farmer and Advocate*, Topeka, presented some interesting facts concerning "Newspaper Illustrations."

DEMAND FOR PICTURES.

"The demand for pictorial news has grown rapidly the past few years," declared Mr. Reid. "With few exceptions metropolitan dailies make large appropriations for pictures, and a marked change has been wrought in the appearance of newspapers in consequence. A picture conveys information easier and better than news articles. Hearst's publications place great importance on pictures, and are noted for excellence along that line.

"I once worked in a newspaper office where my instructions were to 'make portraits of men look like the men, but make a portrait of a woman beautiful.' I do not favor using old, out-of-date pictures, but those that are used should be simple, and in good taste."

"The Kansas School of Journalism, was discussed in detail by Charles M. Hager, editor of the Abilene, *Reflector*, and dean of the School of Journalism.

"The object of the school is to give students training in regard to the writing end of a newspaper," he said. "It is taken up in connection with their English work, as we are not yet able to make the school a complete four-year course and give a degree. College men are becoming more important factors in the newspaper world than ever before, as editors are rapidly getting away from the notion that a college man is not a success in a newspaper office. We give students practical work in regard to the local side of a newspaper which fits them to enter a newspaper office with a definite idea of what is expected of them. Of course a great deal depends on their own ability."

Additional information concerning schools of journalism was given by Walter Williams, head of the Missouri University School.

"We are not planning to make journalists. That can not be done anywhere," said Mr. Williams. "We can train young men and women, however, just like doctors or lawyers are trained. Our course in journalism covers four years and leads to a B. S. degree in journalism. We issue a daily newspaper under our own control. There are 75 students in the school, which I think is a good beginning, as this is the first year the school has been conducted.

"The difference, in the training given a person in the school, from a newspaper office, is that in the school he is constructively criticized. We teach him how to do his work in the best possible manner, rather than to see how much work we can get out of him."

The reception at Washburn college at night was very successful. The delegates were shown over the grounds in the afternoon before a luncheon was served in the college library. Mr. Williams delivered his excellent address on "The Challenge of the Sky Line," in the college chapel. Addresses of welcome were delivered by Governor W. R. Stubbs, Mayor William Green, and a response by Ex-Governor E. W. Hoch.

On the second day a number of important and interesting papers were presented:

W. Y. Morgan, of Hutchinson, discussed "Laws the Printers Need," during the afternoon. Mr. Morgan spoke strongly in favor of legislation tending to promote publicity of things the public should know about, and, incidentially, the circulation of newspapers.

"Many people doubt the circulation figures the way they are published now," said Mr. Morgan. "I am in favor of a law to make publishers print the correct figures, and believe that the general effect of such a law will be all right."

The expert on questions pertaining to the state publication of school books, T. A. McNeal, presented several phases of the subject to the association.

"While the printing of the school books by the state would not be likely to put any money in your pockets, still, the subject is of considerable importance to the people of the state," he said. "Some say that the California law is a failure, but it has been in force there for 25 years and no effort has been made to get rid of it." He spoke against the appointment of a commission to investigate the matter.

PROGRESSIVE JOURNALISM.

William H. Mayes, of Brownwood, Texas, president of the National Editorial Association, spoke on "Progressive Journalism." He said in part:

"Newspapers are not always as progressive as they might be. I would like to see all of them leaders in every good movement. A newspaper man should take to leadership as naturally as Kansas editors do to politics. Editors should be close students of politics, but they make a mistake if they allow such things to permeate their entire business. A little experience in politics is good for them.

"One of the greatest obstacles in the way of a newspaper man is self-abasement. He should carry on his business in a good building, and take his stand as a citizen just as well as anybody else.

"Another great trouble with most of us is that in our desire to do great things we overlook opportunities close at home. Our perspective is too often at fault. I think great good is accomplished by these press meetings. You are enabled to do more and better work on account of them. You should utilize every such opportunity to improve yourselves."

"Newspaper Paragraphs," was the subject of a talk by Mack P. Cretcher, of Sedgwick. He said in part:

"Editorial paragraphs are of modern invention, but they have come to stay, as people will not take time to read long editorials. The paragrapher does not need to elaborate, as he holds the center of attention anyway. The people want them.

"The best of marksmen do not always hit the bell, and the same thing is true of paragraphers. If the writer succeeds in making his thought clear, he has done well."

NEWSPAPERS AND RAILROADS.

One of the most important addresses of the convention was delivered by N. H. Loomis, of Omaha, general solicitor of the Union Pacific railroad. He spoke on "Newspapers and Railroads," and gave many interesting and enlightening facts during his address. He said in part:

"If, as I believe, the newspapers are the controlling factors in determining the policies of government, it is equally true that the railroads constitute by far the most effective force in the industrial world of today. They represent the greatest investment of capital—they are the largest employers of labor and the greatest purchasers of material and supplies. Their prosperity, as well as their adversity, is immediately reflected in the material conditions of the whole people and all other business enterprises.

"Allow me to urge the importance of encouraging instead of discouraging the investment of moneys in the railroads of Kansas. You have merely entered upon the development of your great natural resources. You will need more railroads, and you now need the expenditure of large amounts in the betterment of the railroads you already have. You need live railroads, not dead ones. You should want the managers of your railroad properties interested in their continual growth

and development and using their best endeavors to boom the best state in the Union. You ought not to send them to jail and leave the operation of your railroads to statesmen whose theoretical knowledge is all that could be desired but whose practical experience is very limited. It is all very well to regulate the railroads, but I submit that the power to regulate should not be used as a device by the state to become their general managers. And while the people are regulating, let it be understood by the railroads that their interests also are to be consulted, and that investments in railroad properties will not only be protected but encouraged."

Wichita was selected as the convention city for the State Editorial Association next year, after a lively contest. Representatives of Olathe and Pittsburg extended cordial invitations for the Association to come to their respective cities, but Wichita received a majority vote.

Arthur Capper was unanimously elected president of the Association for the ensuing year. H. C. Sticher, of Alma, had no opposition for the office of vice-president. In placing his name before the convention, J. E. Junkin, of Sterling, referred to Mr. Sticher as "one of the young and coming newspaper men of the state," and suggested that he would be a good man to make president of the Association next year. Mr. Junkin, who has held the position of corresponding secretary for 17 years, was re-elected by acclamation yesterday. He protested against such action, and gave notice that it was positively the last year that he would hold the position. W. E. Blackburn, of Anthony, was elected recording secretary, and J. Byron Cain, of Belle Plaine, treasurer.

Following is the list of members chosen for the state executive committee, and delegates to the National Convention:

First District—Executive Committee, E. B. Cowgill, Topeka; delegates, T. A. McNeal, Topeka; Ralph Tennell, Sabetha.

Second District—Executive Committee, W. H. Peters, Olathe; delegates, J. W. Sowers, Springfield; C. C. Thomas, Moran.

Third District—Executive Committee, J. S. Gilmore, Fredonia; delegates, W. T. Yoe, Independence; J. F. Callen, Pittsburg.

Fourth District—Executive Committee, Charles Barnes, Osage; delegates, A. S. Bernheiser, Hartford; K. C. Smick, Wamego.

Fifth District—Executive Committee, J. D. Rickman, Manhattan; delegates, E. H. Hemenway, Hope; A. Q. Miller, Belleville.

Sixth District—Executive Committee, E. D. George, Mankato; delegates, V. Hutchings, Smith Center; B. P. Walker, Osborne.

Seventh District—Executive Committee, Clark Conklin, Lyons; delegates, W. Y. Morgan, Hutchinson; S. P. Gebhardt, Pratt.

Eight District—Executive Committee, Mack P. Cretcher, Sedgwick; delegates, J. C. Dick, Burton; S. S. Smith, Eldorado.

BRAND QUACK EDITORS.

In order to secure an even stronger position in the reform movement, a motion carried to have a committee on ethics appointed, to report at the next convention. W. E. Miller, of St. Marys, made a strong plea for such a committee. In his speech he said:

"There are some editors who are guilty of unprofessional acts, and why not brand them as quacks if they use questionable methods in running a newspaper, just the same as men in other professions are branded?"

President Sheridan Ploughe appointed the following committee: Ewing Herbert, Hiawatha; W. E. Miller, St. Marys; John Gilmore, Fredonia.

The committee on resolutions at the convention of the State Editorial Association, composed of Ewing Herbert, John Redmond, and J. W. Sowers, submitted the following report, which was unanimously adopted:

"Resolved, That the Kansas Editorial Association in convention assembled expresses its appreciation and gratitude for the many courtesies and splendid hospitality extended by the good people of Topeka.

"We appreciate the entertainment at Washburn College and the opportunity to acquaint ourselves with the good work done there, which we heartily commend.

"We thank the Topeka publishers and members of the craft for their successful efforts in making this the most enjoyable meeting held at the state capital, and to Mr. Arthur Capper particularly, we are grateful for the very substantial evidence of his hospitality and consideration.

"We thank the Bell Telephone and Western Union Companies and the Topeka Street Railway Company for courtesies shown the members of this association during this meeting.

"We thank the Topeka Ad Club for a delightful luncheon and entertainment.

"We thank those who have contributed to the program which has enlightened and uplifted the members of this association.

"Resolved, That we look with favor upon the course in newspaper making established at the Kansas University and also favor the course in printing established at the State Agricultural College. There is need and demand for intelligent and trained men in printing offices and we urge the Legislature and regents to treat the newspaper and printing courses with the same liberality shown other technical courses.

"Once more we protest against the government entering into competition with the home printer in printing envelopes and recommend that each member of this association write to his Congressman urging him to call on the Postoffice department to abolish the custom."

Another resolution is:

"Whereas, The auditor of the War department at Washington has allowed claims in favor of Kansas, amounting to $525,000, for interest and discount on money borrowed by the state during the years of 1861 to 1865, for organizing and equipping troops to suppress rebellion and Indian raids, and

"Whereas, Over $97,000 has been appropriated by Congress and is now in the treasury of the state of Kansas and we are assured by our congressional delegation that the balance will will be appropriated at an early day, and

"Whereas The basis of these claims against the United States was furnished by the Kansas State Historical society as well as the evidence upon which they were allowed, and

"Whereas, The property, including historical documents, mementos and other valuable relics now in the possession of that society would be increased four-fold in value and interest to the people of Kansas if the same could be properly arranged and clasified, and believing that the State house is already crowded beyond its capacity and that the necessity for additional space is constantly growing as the business of the state increases, therefore, be it

"Resolved, That the Kansas State Editorial Association here endorses the movement towards procuring a memorial building to be used as a permanent home for the Grand Army of the Republic and the Kansas State Historical society, and we hereby call upon our senators and representatives now in attendance in the Legislature in this city to use every endeavor within their powers to carry out the tenor of this resolution, knowing, as we do, that it voices the wishes of a vast majority of the citizent of this commonwealth.

"Resolved, That a copy of this resolution be sent to the President of the Senate and the Speaker of the House of Representatives."

U. S. POSTAL LEGISLATION

CONGRESSMAN William A. Ashbrook, of Ohio, has favored the National Printer-Journalist with copies of one hundred and twenty-nine separate new bills, acts and joint resolutions relating to the U. S. Postal Service. The showing is certainly large enough to indicate that Congress is determined that this department of Government shall not lack in regulation and efficiency if these can be secured by legislative enactments. These bills and resolutions cover all subjects from ocean mail service and safer, fireproof mail cars, to the extension of the franking privilege, increasing the salaries of mail route mail-carriers, paying $100 a year for use of a horse and prohibiting the discontinuing of any rural route in any Congressional district without the consent of the member of Congress therefrom.

We first notice a "House Joint Resolution" (216) that has a patriotic interest, authorizing the designing and issuing of a special two-cent stamp commemorative of the one hundredth anniversary of the birth of Abraham Lincoln, which is certainly worthy and appropriate.

H. R., 18,347, fixes a rate of postage on books and merchandise, to apply only to packages deposited at the local postoffice, or collected by rural carriers for delivery to the office from which the route emanates and not to mail transmitted from one office to another and not to apply to packages exceeding eleven pounds in weight, and not to be accepted from any agent acting for any person or company not a resident of such rural delivery route. The rate of charges is made five cents for the first pound and two cents for each additional pound or fraction thereof, 2 ounces, 1 cent; from 2 to 4 ounces, 2 cents; 4 to 8 ounces, 3 cents; 8 to 12 ounces, 4 cents; 12 to 16 ounces, 5 cents. This act is intended to make the rural delivery more serviceable among the residents of the territory covered by each rural route, from each local distributing postoffice. It is a law that we have advocated and believe that it will not increase the expense of the rural mail service, and should prove a great accommodation and saving to the people served, have no tendency toward the feared centralization of business, and would increase the earnings on the rural routes so that they would return a profit instead of showing a loss.

The most comprehensive bill is H. R., 24,473, offered by Mr. Overstreet of Indiana, on Dec. 17, 1908, "To codify, revise, and amend the postal laws of the United States." The bill covers 288 pages, and will at least possess the advantage, if passed, of putting into law some things that were mere rulings, subject to change. This bill provides for a Postmaster-General with a yearly salary of $12,000; a Director of Posts at $10,000 a year; seven Assistant Directors of Posts, at $6,000 each; an Assistant Attorney-General at $5,000; a Chief Inspector at $4,000, and a Board of three Commissioners of Appeals, at $5,000 each. These are the men who are to so frugally administer the mail service as to prevent the deficit. The Commissioners of Appeals constitute a new feature in the service. The power and authority and duties of these new Commissioners are of interest to all publishers and are defined as follows:

First. To decide, on appeal from the assistant director of mail matter, or otherwise, upon the application of publications for admission to the second-class of mail matter.

Second. To determine, upon proceeding instituted before it by the Assistant Attorney-General, or his deputy, whether the admission of any publication to the second class of mail matter shall be suspended, annulled, or revoked.

Third. To determine, upon proceedings instituted before it by the Assistant Attorney-General, or his deputy, whether any fraud order shall issue whereby any mail matter shall be returned to the sender thereof or refused delivery, or the payment of any postal money order or postal note shall be forbidden upon the ground that the person to whom, or the company to which, or to whose agent or representative such matter is directed, or said order or note is drawn, is engaged (a) in conducting any lottery, gift enterprise, or scheme for the distribution of money, or of property by lot, chance, or drawing of any kind, or (b) in conducting any scheme or device for obtaining money or property of any kind through the mails by means of false or fraudulent pretenses, representations or promises in contravention of the statutes in that regard.

Fourth. To establish such rules of practice and forms of procedure as may be necessary for the conduct of the business coming before it.

The following sections will also be found of interest to publishers:

Sec. 79. There shall be kept in the bureau of the assistant director of mail matter, under such regulations as the Postmaster-General may prescribe, a register of publications admitted to the second class.

The proprietor or publisher of any newspaper or periodical may apply to have the same placed upon said register as a publication entitled to transmission at the second-class rates of postage. Such application shall be in writing in such form as the Postmaster-General may by regulation prescribe, and shall be verified by the oath of the applicant, and shall be accompanied by a copy of the newspaper or periodical to be registered.

Sec. 80. The application thus submitted shall be examined under such regulations as the Postmaster-General may prescribe, and if the evidence that the publication complies with the requirements of law be deemed satisfactory by the assistant director of mail matter, he shall cause said publication to be entered upon said register. Publications so entered shall, until such registration be suspended, annulled, or revoked by judgment and order of the Commission of Postal Appeals, be deemed to be mail matter of the second-class, and transmissible at the rates provided therefor by law.

Sec. 81. Pending final action upon said application, the assistant director of mail matter may, in his discretion, issue a temporary authorization for the transmission of such publication at second-class rates of postage.

Sec. 82. The proprietor or publisher of any newspaper or periodical publication the application for the admission of which to the second class of mail matter has been denied by the assistant director of mail matter shall have the right within such time as may be fixed by rule of the Commission to appeal from such denial or refusal to the Commission of Postal Appeals, which shall thereupon hear, consider, and determine such application with respect as well to matters of fact as matters of law.

Sec. 83. The order and opinion of said Commission upon such application shall be in writing and shall be filed as a part of its permanent records, and a certified copy thereof shall, within such time as the rules of said Commission may prescribe, be transmitted to the assistant director of mail matter, who shall thereupon, in conformity with such order, grant or refuse such application or take such other action as the order may direct.

Sec. 168. As rapidly as practicable after this Act shall take effect, the Postmaster-General shall cause to be installed and thereafter regularly kept in the bureau of the assistant director of accounts, under such regulations and in such form and manner as may be prescribed, books of account exhibiting analytically the cost of the operations of the Post-Office Department by it, whether to the public or to the Government of the United States, in such manner as to show:

First. The distribution of the expenditures of said department and service under the following main heads of service and such other heads and subdivisions thereof as the Director of Posts may prescribe:—(1) Collection; (2) Assorting outward mail; (3) Assorting in railway post-offices; (4) Transportation; (5) Equipment; (6) Delivery, including assortment in post-offices of destination; (7) Revenue charges, manufacture and sale of stamps, stamped paper, etc.; (8) Foreign mail; (9) Money order; (10) Registry; (11) Special delivery.

SECOND. The cost of the aggregate as well as separately in respect of the main heads of service mentioned above, of the collection, assortment, transportation and delivery of each of the following classes of mail and such subdivisions thereof as the Director of Posts shall prescribe:

(1) First class; (2) Second Class, (a) pound rate, (b) free in county; (c) local delivery, (d) transient; (3) Third class; (4) Fourth class; (5) Government penalty; (6) Franked.

THIRD. The cost per unit and the unit rate of revenue and postage for each class of mail matter.

FOURTH. The computed or estimated weight of mail, number of pieces carried, average haul and ton-mile of transportation of each of the classes of mail matter and the subdivisions thereof mentioned in subsection second.

SEC. 342. Mailable matter shall be divided into four classes:

First, Written matter. Second, Periodical publications; Third, Miscellaneous printed matter; Fourth, Merchandise.

SEC. 343. Mailable matter of the first class shall embrace letters, postal cards, and all matter wholly or partly in writing, or typewriting, except as hereinafter provided.

SEC. 344. Mailable matter of the second class shall embrace every newspaper and other periodical publication which complies with the following conditions:

FIRST. It must regularly be issued at stated intervals as frequently as four times a year, and bear a date of issue and be numbered consecutively.

SECOND. It must be issued from a known place of publication.

THIRD. It must be formed of printed paper sheets without board, cloth, leather, or other substantial binding.

FOURTH. It must be originated and published for the dissemination of information of a public character, or devoted to literature, the arts, sciences, or some special industry.

FIFTH. It must have a legitimate list of subscribers.

SIXTH. It must be designed or published primarily for advertising purposes, or for free circulation, or for circulation at nominal rates.

SEC. 349. Publishers of matter of the second class may, without subjecting it to extra postage, fold within their regular issues a supplement; but in all cases the added matter must be germane to the publication which it supplements; this is to say, matter supplied in order to complete that to which it is added or supplemented, but omitted from the regular issue for want of space, time, or greater convenience, which supplement must in every case be issued with the publication.

SEC. 350. Mailable matter of the second class shall contain no writing, print, or sign therein, in addition to the original print, except the following: (a) The name and address of the person to whom the matter shall be sent; (b) index figures of subscription book, either printed or written; (c) the printed title of the publication and the place of its publication; (d) the printed or written addition of advertisements of the publisher or sender, or both; (e) written or printed words or figures, or both, indicating the date on which the subscription to such matter will end; (f) the correction of any typographical error; (g) marks other than written or printed words designating any word or passage to which it is desired to draw attention; (h) the words "sample copy" when the matter is sent as such; (i) the words "marked copy" when the copy contains a marked item or article.

SEC. 354. The term "circular," within the intendment of this chapter, is defined to be a communication in print or produced by any mechanical multiplying process easy to recognize, but not direct from a typewriting machine, which, according to internal evidence, is being sent in identical terms to several persons. A circular shall not lose its character as such when the date and address of the addressee and of the sender shall be written therein, nor by the correction of the typographical errors in writing.

SEC. 355. A circular may, without becoming liable to higher rate of postage, have the date, signature of the sender, and name of the addressee written therein, and any typographical errors corrected in writing.

SEC. 372. Postage shall be paid at the following rates:

First-class matter, two cents for each ounce or fraction thereof, except postal cards and private mailing cards, on which the postage shall be one cent each, and matter known as drop letters, deposited for local delivery, on which at any postoffice not having free city delivery, on which the postage shall be one cent for each ounce or fraction thereof.

Second-class matter, (a) one copy to each actual subscriber residing in the county where the publication is printed in whole or part, when said copy is not distributed by city carrirs, shall be free of postage.

(b) Copies sent by the publisher from the office of publication or by news agents (first) to actual subscribers, (second) as bona fide exchanges with other publications admitted to the second class, (third) to advertisers in proof of publication of advertisements, (fourth) as samples under the provisions of section three hundred and eighty-three, (fifth) to authorized agents or solicitors, one cent per pound or fraction thereof.

(c) Copies sent by news agents to actual subscribers thereto, or forward to another news agent, one cent per pound or fraction thereof.

(d) Copies deposited by the publisher or by news agents at any city free delivery office for delivery by the letter carriers thereof, one cent per copy for newspapers, excepting weeklies, and periodicals not exceding two ounces in weight.

(e) Copies sent by others than the publisher or news agent, one cent per copy for each four ounces or fraction thereof.

SEC. 383. During each calendar year, or any portion thereof, the publisher of any newspaper or periodical admitted as second-class matter may mail, at the respective rates provided in clauses (b) and (d) of section three hundred and seventy-two for second-class matter, sample copies not to exceed ten per centum of the total number of copies mailed by him during the same period to actual subscribers and news dealers. Samples within the limit prescribed may be mailed, at the election of the publisher, with one or more or all of the issues of the publication: *Provided,* That the aggregate number thereof mailed in any year up to and including any date shall not exceed ten per centum of the total number of subscribers' and news agents' copies mailed in that year up to and including that date.

SEC. 387. The postmaster shall, by card, to be charged by postage-due stamp, or otherwise, with one-cent postage to be collected on delivery, notify the publisher of any publication admitted to the second class whenever any person to whom such publication shall have been mailed, as to a subscriber, shall refuse to take the same from the postoffice or neglect to call for it for a period of one month.

SEC. 388. All notices of change of address or removal of the addressee of any second-class matter or of directions to discontinue the same which it may become necessary for any postmaster to send to the publisher or mailer of any second-class matter shall be charged by postage-due stamp or otherwise with postage at the regular rates, to be collected on delivery.

We have given this much as to proposed postal legislation, with the view of calling the attention of those most interested and to help prepare the way for a more general and careful consideration of the regulations and acts affecting so closely the third largest business in the United States. It seems to us that the department is overloaded—too heavy with officials at Washington. We believe that the mere business of carrying the mails for the people could be regulated in a law of about two thousand words, and this idea of treating it as a great, involved public, governmental function, to be exercised and enforced through all kinds of rules, enactments, provisions and regulations, with a system of espionage, making every office a detective bureau and providing for high-salaried men and a high salaried attorney, is all nonsense and a parody on a government that is merely the agency for doing certain simple acts for the people. The Postoffice business requires no initiative, no promotion, no business management, no investment or risk of capital by those employed to do the work; needs neither high talent nor great study or learning. We do not intend to review the law at present, and the one hundred and twenty-six other bills and joint resolutions will have to be put aside for later consideration.

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

The cuts for this department were unavoidably delayed at the engravers. They will appear in the next issue.

AS to the contents of a weekly newspaper, one could not consistently recommend the same thing for all, since that which would be ideal for a paper of one field might prove wholly unsuitable for that of another. To be a success an editor must aim to please his constituents, and to please them, he must study them—come in contact with them—until he understands them and appreciates their wants, their preferences and their needs. With such an understanding the editor can follow out such editorial themes as will prove mentally compatible with his readers and give them such news-features only as he knows his subscribers demand and like.

There are one or two things in the way of contents, however, which may safely be commended to the weekly newspaper-maker, because they invariably meet with the attention and approbation of approximately all rural and urban readers. The first of these is community items, or news written by special correspondents in the various districts of the field which the paper purports to cover; the second is that commonly known as "short locals" being timely topics of a newsy character gathered by the editor and pertaining to folks and events of the home town and elsewhere. And in nearly every newspaper field in America, I dare say, a spicy department of editorials will receive a welcome reception from a large percent of the regular readers. But the editor of a country weekly should not devote his space to long editorials, or editorials of any kind, unless he is fully assured his readers are of a mental calibre large enough to follow him in his editorial thoughts; nor should he, as many do, deem his editorial effusions the most important of all, giving them the most conspicuous space, while personal mention and local correspondence is secretly deplored as a veritable abomination and relegated to the most obscure pages.

PAWNEE CITY, NEB., Dec. 21, 1908.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—As it has been a long time since I last sent you a "batch" of ads, I thought it best to renw old acquaintances lest you think I had forgotten the many kind things you have said about my work and the value the N. P.-J. has been to me.

I am today sending you under separate cover some ads clipped at random from the files of our sheet. These are the work of our foreman, Mr. L. O. Green and myself. Many of them were gotten up in the rush of press day and with very little attention paid to the smaller details that add so much to the appearance of a piece of work. Any criticisms yau may make will be appreciated.

L. E. OVENDEN.

It is with sincere pleasure that the receipt of Brother Ovenden's fine "batch" of ad specimens is acknowledged, and I am pleased, too, that chance has placed them on top of the pile of matter submitted for review this month, so that I may feel more at liberty to share many of them with my readers than I could if they had come in at the bottom when this installment were well crowded with illustrations. This batch from Brothers Ovenden and Green are all superlative examples of the skillful combination of excellent material and high-class workmanship, as so precisely and prominently exemplified in the first exhibit made (No. 1). Briefly, the reader is cautioned not to overlook the fine balance and exquisite whiting out, as well as the intelligent display of all lines. But one little suggestion could I offer: The address line closed up and centered in a short line beneath the signature would give a more natural relief. The second exhibit (No. 2) shows a higher degree of originality in the layout, and equally as good quality of display and general treatment save as pertains to the lower central portion thereof, where there is conspicuously too fluent a use of brass rule. The third exhibit is probably as good an illustration of how some of the best of us will "fall down" at times, as I am likely to run across this month. It shows the "art-touch" all right in design; but the extremely great and black display in connection with the comparatively rather insignificant facts are at once discordant. The senseless underscoring of every line of the body gives a hazy effect not to be sought for, while the sharp, strong dash of black represented in the rule at the bottom of the panel works a complete optical annihilation of the obvious intention. The use of two sizes of the Roycroft in the display lines was possibly unavoidable, but nevertheless deplorable; and two great a space was allowed between the word "dollars" and the exclamation point. The rest of the budget (Exhibits 4 to 10 inclusive) I must offer in mute admiration, as a source of unlimited inspiration and instruction for other compositors.

BROOKINGS, S. D., Jan. 1, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Enclosed find proof of ad, the same appearing in the Brookings *Press* of last week. I submit the same for criticism. Very truly yours,

A. G. KENNARD.

Mr Kennard's advertisement is being shown herewith as Exhibit No. 11. In the main this ad shows fairly clever laying out and likewise fairly creditable composition. The underscoring of the first line is superfluous and objectionable, especially in view of the occurrence of similar rules immediately following, without any type intervening. A better way for the arrangement of the squibs pertaining to the beginning and ending of the sale is seen in Exhibit 1. The ornaments at either end of a short line, as in evidence in both of these masses flanking the central cut, is happily obsolete. The rule under the mass beginning, "We Propose to Make This," etc., is also uncalled for, as a much more desirable effect could have been gotten by its omission and by then leading the introductory mass. A more perfect result could have been secured, too, by setting the two outer panels a pica wider each, and each of the two inner ones a couple of picas wider, or, vice versa if desired. The white margins between regular panels like these should never be greater than

that between the border and the outer panels, the reason for which is obvious.

Mr. O. Byron Copper, De Soto, Wis.

My Dear Sir:—Am sending under separate cover copies of the last four issues of the *Transcript*. Since you reivewed the paper last—about two years ago, I believe—we have been able to carry out at least one of your recommendations, and have the first page cleared of display ads. Some day we hope to relegate the 30-year-old Country Campbell to the background and put in a machine upon which presswork can be done. None of the job type is permitted in ads, so in that regard we do not show up as brightly as some.

We get many good suggestions from the N. P.-J., and trust it will continue the good work.

With kindest regards for the paper and yourself, I am,

Very truly, Geo. M. Kimball.

There'd be no use of me trying to hide it, if I would—no use trying to pretend that the receipt of such letters as the foregoing is not a source of considerable satisfaction to me and the management of this magazine, for there is no honest laborer in or out of the Lord's vineyard who will not weary of the work if no word of appreciation or commendation comes. One must at least know that his efforts are effectual in some little way, else pleasant tasks grow irksome; and therefore I rejoice to know that Brother Kimball has found this journal helpful to him in his daily craft-work, and even this department, to the extent of prompting him to rid his front page of displayed advertisements. The *Transcript's* first page is now a thing of delight, because it is not only cleared of ads, but pains are evidently expended in every other direction to make the page attractive and modern. (Exhibit 12). The fine first page is not the *Transcript's* only commendable feature, either: The contents are of a most pleasing character, as can easily be judged from a close inspection of the reproduction. The back page is given over to a cultured account of the local news, and a pithy, up-to-date department of editorials is maintained. The next time I am privileged to see this paper—and I don't want that that shall be as long as two years—I sincerely hope that the new press shall have been installed and some new faces added to the ad-alley, or at least that the ad-compositor shall have added a few new and more cultured ideas to his stock and store. I couldn't wish too heartilly for the new press, just yet, since the present machines seem to be doing fairly good work; but the other things, especially the last named, I pray for with sincerety.. And I further trust that Brother Kimball and his force may continue to receive pleasure and profit from the pages of this journal.

The following is a welcome letter from one of my numerous North Dakota friends:

Walhalla, N. D., Dec. 13, 1908.

Mr. O. Byron Copper, De Soto, Wis.

Dear Friend:—I have been a close observer of your department in the N. P.-J., three years or more, and am sure I have benefited by it. I have been working at the trade something like four years and am at present foreman of the *Mountaineer*.

Am enclosing a blotter gotten out by myself for your inspection, although I know this work does not belong to your department, and do not expect criticism.

You will note that the editor's and my name are the same, although no other relationship exists.

Wishing you the compliments of the season, I am,

Yours respectfully, Walter R. Lee.

Out of courtesy to the fact that Brother Lee has not asked criticism of the blotter which he has so kindly sent me, therefore I am offering none. I beg to add, however, that blotters are always appreciable gifts to me, and this one shall not come amiss on my desk, where it shall repose indefinitely both as a token of remembrance and a thing of use. Along with this paragraph I might present an advertisement from a late issue of the Walhalla *Mountaineer*, (Exhibit B), which I judge is the handiwork of the donor and maker of this blotter. This specimen's commendable feature is in the neat arrangement of the mass in the central panel, while its most objectionable point is the treatment given the opening lines. If impossible to have set the display thus:

CLEARING SALE
OF HOLIDAY GOODS

in two lines of equal length and of the same face of type, then the next best thing is to have arranged it thus:

CLEARING SALE
OF
HOLIDAY GOODS

omitting the underscore from the first line. To further dictate for the improvement of this specimen, it would be necessary to draft an entirely new lay-out, which I scarcely have time to do, but I wished especially to bring out the one point, inasmuch as I notice the same defect in other ads in the same paper. I invite Friend Lee to come often.

Gering, Neb., Dec. 16, 1908.

O. Byron Copper, De Soto, Wis.

Dear Brother:—I am forwarding you again a copy of the *Courier*, our last issue. Don't expect you to devote any space to it, as you have reviewed it several times, but if you think it is worth while, you might drop me the enclosed envelope with a word or two of your opinion, good, bad or indifferent. I am more than interested in the newspaper department. Too much so for an old duck who has never done business for himself anywhere except in one town, and that one not on a railroad—though I fancy you will admit that for such conditions the *Courier* is a rather decent and prosperous-looking sheet.

Hastily yours, A. B. Wood.

That's the latest I have from Brother A. B. Wood—and the mentioned copy of the *Courier* shows that several little efforts toward improvement have been put forth by the office force since the time I last inspected it. These are especially in evidence in the initial page. The double column heading in use over the short locals now has a narrower and more pleasing border around it, and the line over the title (which is changed from time to time; that at present reading, "The *Courier* has the circulation, therefore it has the advertising—and advertising is news, too.") is now a full one, as it should be. These were points, which, if I remember rightly, I objected to in my former review. There is also a very commendable effort toward the attainment of the ideal in the composition of the *Courier* ads, for evidence of which I reproduce a specimen (Exhibit 14). In my opinion there are but a few reasons why the compositor in this case fell short of the ideal: The "gim-cracks and gew-gaws" under the two words "Hardware" and "Furniture" should have been omitted, all of the matter in the four central panels should have been centered, and the two outer panels should have received the same treatment at the sides adjacent to the border as on all other sides. This would have been easily possible if but a single rule, instead of a double one, had been employed between them. Otherwise this ad is alright. I am very sorry that I cannot find the same degree of system and neatness in the mechanical makeup of the *Courier's* other pages as that manifested in the first one. Here, on the contrary, nothing seems to be in harmony with the recommenda-

(Continued on page 138)

THE COST OF WORK

"UNIFORMITY OF SYSTEM OF COST FINDINGS."

THERE is no subject of greater importance to any business than that of the cost of production, including all the expense of conducting the business. There have been many books and thousands of articles written in effort to inform printers how to arrive at proper figures in fixing prices, but no method can be devised more reliable than that of a comparison of figures, reached through daily experience, by practical, well-informed men in the business, who are meeting and solving, in their own way, every day, these ever-present questions as to real cost of, and proper charges to be made for, the varying classes of work. The Ben Franklin Club of Chicago has a Cost Committee, of five successful conductors of job printing offices, and at the first regular monthly meeting of 1909, on January 14th, this committee submitted a report that contained very instructive facts and figures that will be found useful in the conducting of printing and newspaper offices everywhere. All business is united by a common bond as to underlying principles. The plan pursued by this committee in Chicago, could well be adopted by newspaper and printer organizations in the different cities and states. Members of newspaper organizations could wisely exchange advertising rates, charged and secured, cost of paper, etc., as well as figures as to cost of production. Publishers should know the actual cost to them of every inch of space in their paper, including what is known as overhead expense, just as certainly as the job printer should know the cost of the jobs turned out.

In order to arrive at "Uniformity of System of Cost Finding," this Committee, consisting of J. A. Morgan, chairman; F. I. Ellick, O. A. Koss, W. J. Wells and C. J. Thiebault, reported in part as follows:

Nothing that benefits our trade as a whole can fail to benefit each one of us individually. It has been said by an authority on cost: "It is characteristic of human nature to prefer to work very hard at a thing we understand rather than to study an unfamiliar subject. Many an industrious printer who spends nine or more hours daily at desk or case in an effort to make ends meet, could by spending an hour a day for one month in studying costs make enough more money to cut one hour off his day's labor for the rest of his life." A strong statement but true, we think.

Taking as our guide, "Uniformity of system of cost finding," we found it necessary to work out a plan that could be used by all, small, medium size or large plants, and special efforts were made to devise a system applicable to the small plants, which by some elaboration would be practicable and available to the larger or the largest plants. This end we are glad to say we believe was accomplished. Throughout our year's work and while testing and proving out this system in a number of plants, we are more and more convinced that the foundation plan or principle is correct, and further, that this is the most simple, economical and thoroughly practical system yet devised. We are led to this belief by several facts, possibly the principal one is that several other trade organizations in our line have adopted this plan. We speak now of only the plan or principle of the system. As to the blanks or forms used, those we first devised were offered as a beginning, believing that the test of use in different plants would suggest changes in a general way as well as changes required to fit individual plants.

Perhaps it would be well to state in a few words what the plan of cost-finding is.

The main or first proposition was to establish a unit of product. This we have determined to be the hour sold and this hour to be considered a separate unit in each department. Having determined the unit of product, the next step is to find for a stated period the aggregate of the units produced and the moneys expended in producing them. The total expenditure for a stated period divided by the aggregate of the units or hours produced will give the cost per hour in each department. This it would seem is simplicity itself, and not the complicated task so long dreaded by all of us.

Perhaps it would be well to state some of the steps taken to arrive at and perfect the system adopted and to obtain useful data:

1st. A request of all Chicago printers for copies of all shop blanks used by them.

This met with a very generous response and was an invaluable aid to us in our work.

2nd. The following inquiry to all club members:

"Have you a method of determining the cost per hour of production in the several departments of your plant?"

To this inquiry we did not receive such generous response. Such replies as we received, indicated, we regret to say, that very few could answer this question in the affirmative.

3rd. A request of members for data on cost per hour of hand composition. We received a number of replies which we tabulated, and ascertained the average cost on the figures submitted to be $1.02 per hour.

4th. A request of members for data on cost per hour of platen press work. The response to this inquiry, tabulated, showed an average cost of 78c per hour.

5th. A request of members for costs of hand composition, cylinder and platen press-work. We received a number of replies with the following results:

Hand composition, per hour	$1.02½
Cylinder press-work, per hour	1.46
Platen press-work, per hour	.68¼

6th. Statement of cost blanks sent to members with request to fill out in detail. The responses to this request were numerous, showing increased interest and marked improvement in method of handling this proposition. A complete tabulated statement of these figures appear in the December issue of the *Ben Franklin Monthly*. Following were the results:

Hand composition	$1.18
Machine composition	1.58
Cylinder press-work	1.40
Platen press-work	.76
Bindery	

Total overhead to wages paid, not including lost time, 106%.

We want to state our belief that these figures are the most accurate because all were figured by the same method on the same basis.

The result of the year's work in the study of costs by this organization is most gratifying to your committee. A net result of this work has been the installation of cost systems in the offices of 57 members of this club. This being in addition to offices already operating cost systems. On request we furnished a large number of printers in various parts of the country complete sets of blanks used by us and learn that they have been adopted in most instances and are working out satisfactorily. Your secretary, Mr. Ellick, is better able to report progress made in this direction, and he will do so.

It is not too much at this time to say that we believe that the efforts of the Ben Franklin Club and that part performed by the Cost Committee has done more to stir up the printer to the knowledge of his own business than anything that has ever been done in printing circles. Printers that in the past never had any idea of what the goods they sold cost them, have become interested in some sort of a cost system, and if they have not installed the Ben Franklin Club Cost System they have begun the use of some sort of blanks and records whereby they do know nearer the cost of production than formerly. By this investigation and by the knowledge acquired through it, the printer has learned that it is absolutely impossible to sell composition for any price below $1.00 per hour and even get cost. This investigation has not only told the printer what his goods cost, but has been the means of him getting sufficient backbone from the knowledge of facts to raise his prices and make money in a department where in the past he considered it a necessary evil and lost money. By the work of the cost committee and by the continuous assertions that composition costs at least $1.00 it has become the belief of the majority of the printers of Chicago that composition does cost $1.00 per hour, and if we can get all of the printers of Chicago to believe and know that our goods cost something and know what that cost is, it is only a matter of a short period before our trade will be on a level with any of the money-making trades and institutions.

Through the medium of our monthly publication we have been publishing figures that have been sent to us on uniform statements of costs and by them we have learned that the

average cost of composition in the city of Chicago is in the neighborhood of $1.10 per hour. If this is a fact, and we are here to prove it is a fact, how in the world is it possible for a printer to exist; to pay his paper bills; to meet his pay-roll; to enjoy some of the comforts of this life; while selling composition at 50, 60 or 70 cents? We knew when we started in this work that the figures we would ascertain would be startling to the majority of printers here, and when we began to present some of the figures that we had collected, it was not uncommon for our friends to not only infer that we were crazy but to make the absolute statement.

One thing you will believe and that is that the committee lived through it and this committee at the present time feels stronger in the fact that behind us we have seventy-five of the best houses in Chicago who back us up in the statements that we present. When your committee took hold of this proposition there were not ten houses in the city of Chicago that could fill out our statment of costs form, and we are pleased and gratified to be able to tell you of the number that are equal to the occasion at the present time.

We hope that the investigation of costs will continue and we further hope that the investigation will not only in the minds and in the efforts of the Cost Committee, but will be taken up by every printer in Chicago.

A resume of the situation from the data received from various plants and from the experience gained in our own plants, from carefully kept and complete records, would indicate the following:

1st. A fair profit on outside purchases and paper stock if sold at 20% advance over cost, allowing 10% for handling and 10% for profit.

2nd. A considerable loss on composition when sold at $1.00 per hour.

3rd. A considerable loss on cylinder press-work when sold at $1.25 per hour for presses of size 25x38 or smaller, and $1.50 per hour for presses 36 x 48 and larger, exclusive of ink.

4th. A reasonable profit on platen press-work when sold at $1.00 per hour, including ink.

5th. A loss in the bindery when sold at 100% over labor cost per hour.

Leaving us in the position of charging a profit on the lesser department, and operating at a loss in the larger and most expensive departments.

It would seem that we are entitled to better returns on the capital invested. And we believe that every other line, especially those organized, demand and receive much better returns.

Now let us make ourselves clear on this proposition and be honest with ourselves. As to composition and we say $1.00 per hour, we expect this to cover all overhead expenses and by all overhead expenses we mean everything: proprietor's salary, rent, heat, foreman's, proofreader's, distributor's and slug boy's wages and every item of expense incurred to produce this hour.

Of course, if you charge 60c for setting the type, and sell 30 minute hours, and then add 25c for distribution, 10c for proofreading, 5c for slug boy, 5c for delivery and so on down the line, you will possibly get enough.

But this is a dangerous, complicated and inaccurate method, and we believe will end in trouble. And further it does not promote uniformity of method, which is necessary to obtain uniform prices and uniform estimates and their ensuing benefit to our trade.

The same applies to press-work and binding. Use for your costs the figure which covers labor cost, also department and office overhead expense, which means every item of expense. And if all do this, we have the simplest and a uniform method.

While the Ben Franklin Club does not attempt to dictate prices or even urge its members to do more than to ascertain costs, believing that if they know the cost of their product they will sell at a profit.

We cannot refrain from stating what in our opinion would be a fair minimum scale of prices for our product.

Stock and outside purchases of less than $100.00—25%.

Composition, including distribution, proofreading and all overhead expense—$1.30 per hour.

Platen press-work, ¼ medium or smaller—$1.00 per hour; ½ medium and Colt's Armory—$1.25, including ink.

Cylinder press-work, taking sheets 25 x 38 or smaller—$1.50 per hour, and larger sizes $2.00 per hour. Not including ink.

Bindery work—150% over labor cost.

We make these recommendations as your cost committee and not as individual printers. And to those of you who hold different opinions we ask a careful study and a full and free discussion of the matter, to the end that if these figures are not correct, we may determine in the near future the ones that are.

In conclusion we wish to say that we believe that there is only one thing wrong with the printing business, and that is some of us are selling our product at cost or less for the sole reason that we do not know the cost.

GIVE THE LADY MEMBERS RECOGNITION.

Minneapolis, Minn., Jan. 26, 1909.

My Dear Mr. Herbert:—Thank you very much for the bound volume of proceedings of the N. E. A. at St. Paul, last summer. It certainly was a memorable meeting and worthy of being preserved in a durable manner. I don't know when I have so much enjoyed a convention, and now have a repetition of much of the pleasure in reading the papers and the accounts of our entertainments. The day at Red Wing I think was the most impressive of all, with the beautiful ceremonies at the dedication of the newspaper building. I shall long remember your very eloquent address on that occasion.

But I noticed one omission in the book—not *your* fault, because you did not have the matter to incorporate in the volume. I *do* think that in some way the women who are members of the N. E. A., and who act as delegates should be recognized.

One not acquainted with the personnel of the Association, and knowing of it only through the printed reports, would imagine it to be composed entirely of *men*. To be sure, the names of women delegates are recorded, but they seem to be mere figureheads, whom I suppose are intended to look pretty and say nothing.

Now there are several of these women who are actively engaged in newspaper work as editors; others in addition own and publish their own papers or magazines. There is that bright little girl from Oklahoma, Miss Thomas, who does all three of these things. Why not give her or some other of our ladies a chance to come in on the program? Can't you give a hint to Ex.-Com. to the effect that in this year of our Lord, women have some influence in the world?

Wishing you a very prosperous and happy New Year, and a pleasant meeting at Kansas City.

I remain sincerely yours,

Sallie M. Moses.

The Chicago Woman's Press league will give a "Lincoln Breakfast" in celebration of the Abraham Lincoln Centennial memorial on Friday morning, Feb. 12, at 11 o'clock in the gold Banquet hall of the Congress hotel. Mrs. Frederick Dent Grant will be the guest of honor and the honorary hostesses will be chosen from those whose families have made Chicago great, as it is the desire of the league to make the event memorable from a historic standpoint. Mrs. Frederick K. Bowes, who originated the famous "Beauty Luncheon," given last year by the league, is the social chairman. Mrs. F. C. Farnum will sing and the toasts will be responded to by distinguished speakers.

The Woman's Press League of Chicago arranged three large social affairs, opening with a reception for Sig. Guglielmo Ferraro, the noted Italian historian, who is the guest of Professor Johnstone of the Chicago University, Saturday afternoon in the parlors of the Auditorium hotel. The third of the series of events arranged by the league will be a benefit performance to be given at the Auditorium theater. A number of celebrities will appear on the program and the proceeds will form the nucleus of a fund for indigent writers.

The Elgin Ill., Press club is making plans for a big entertainment to be given on the evening of February 26.

(Newspaper Criticism, continued from page 135)

tions of this department of the NATIONAL PRINTER-JOURNALIST, but the ads are scattered helter-skelter over the page, with that appearance of having been shoveled into the forms at random and with little thought as to esthetics. I've told so frequently how this ought to be done, that I shall not repeat it here. But the contents of this sheet are just as good as of yore, and the advertising patronage is certainly gratifyingly great. I disagree with Brother Wood that one can become too much interested in anything pertaining to his craft—even Newspaper Criticisms—e'en though he be "an old duck who has never done business for himself anywhere except in one town, and that one not on a railroad." For that class of folk, particularly, should this sort of thing prove most profitable. At any rate, I hope that Brother Wood's interest may never grow less.

And now comes the Harvard, Illinois, *Herald*, by its president, Brother M. F. Walsh, praying that I be lenient in my criticism of its press-work, because and in view of the fact as follows:

HARVARD, ILL., Dec. 18, 1908.

Mr. O. Byron Copper, De Soto, Wis.

MY DEAR SIR:—In writing to you a week ago, when I also send several copies of our paper for inspection, I neglected to say that the *Herald* was and is now being printed on an old Chicago Taylor newspaper press, which we bought as a second-hand rebuit machine seventeen years ago.

I feel that this explanation is necessary when you examine the paper and pass on its appearance and presswork. I also send you by today's mail a sample copy of this week's edition, which contains twelve pages.

Very truly, HARVARD HERALD CO.,
M. F. Walsh, Pres.

Well, well, Brother Walsh, you needen't to have presented any such petition at all. I'm not much of a pressman, practically, but a mighty fastidious judge of presswork, just the same; and I'll assure you that your antiquated Taylor is doing some excellent work for you yet. In fact, very few newspapers come to this department with a better print on them than that of the *Herald*. I made my review of this paper in last month's installment, which is not yet in print as I write this, hence I am at a loss in trying to recall what I may possibly have said in reference to it; but I know what I must have said, judging from later copies of this excellent paper now before me. A cleaner, neater sheet would be hard to find.

ALTUS, OKLA., Dec. 8, 1908.

O. Byron Copper, care National Printer-Journalist, Chicago, U. S. A.

DEAR SIR:—I enclose herewith a copy of a circular set up and printed in the office of the Altus *Times*—a small, ordinary country print-shop, yet well selected as to material, presses and workmen. Please criticise it in coming numbers of the N. P.-J., if you think it worthy. Very truly yours,

SHEPARD & SHEPARD, Publishers,
By Horace W. Shepard, Editor.

Contributors should remember in sending in specimens for review in this department, to send only black and white work, as there are some colors which are bothersome in the photographic process of reproduction. This circular from Brother Shepard is on colored stock, and therefore may not be reproducible; but I hope it is, since it is a very creditable piece of work, in which every minute detail hase been carefully attended to. (Exhibit 15.)

"The day returns again. Greetings of good cheer I present you. As the year waneth may we plan well our future endeavors—may we gain much profit from struggles and uncertainties of the past." Such is the unique burden of season's greetings from Winfred Arthur Woodis, typotect, Worcester, Massachusetts. Beautiful, yes; but I wish you could see the work! Never mind; perhaps—yea, surely Brothers Woodworth and Hanson have also gotten samples—and it is more in their respective lines to describe it. Brother J. Albert Wood of Asbury Park, N. J., also remembered me—and to both of these dear old fellow-craftsmen I return greetings and gratitude.

FARINA, ILL., Dec. 18, 1908.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR AND BROTHER:—I am sending you under separate cover a copy of our "Christmas Special," which we issued this week. I expect you can find a good many criticisms to make on this issue, but please bear in mind that two of us got out the whole thing in one week, and charge some of the errors to hurry. I thank you very kindly for your friendly criticism and good words for a recent specimen of our paper in the N. P.-J. Wishing you the compliments of the season, I am, Yours very truly,

S. S. COON.

The Farina *News* is regularly a five column quarto, methinks, but this special holiday edition consisted of twenty full pages. A Kellogg cover topped the whole thing out nicely and the local merchants did their share nobly well in the way of contributing advertising matter for the special effort. Brother Coon and his one fellow helper had their hands full, alright, I can see that, and therefore I must forgive, or forget, the several little flaws in evidence. Special editions are always a fine evidence of enterprise and thrift, not only on the publisher's part alone, but on the part of the town's business people as well, and I congratulate the Farina *News* on this unmistakable mark of progressiveness. Exhibit 16 is one of the best ads in this issue.

The Centralia, Wash., *Daily Chronicle* issued a twenty-page special edition December 24th. The contents were appropriate and well selected. The ads were abundant, but in the main not of a very commendable grade of composition. The compositor evidently endeavors to panel too many lines, with a very amateurish and unsightly result. But since when did the *Chronicle* become a daily? As I remember it, it was a weekly, or a tri-weekly. I wish the publisher would write to me, and put me right, if I am wrong in this; and if right, then tell me all about how it happened.

The Pierce County *Tribune*, of Rugby, North Dakota, is another of the progressive publications which took advantage of holiday time as an opportunity to do something a little out of the ordinary, and came out with a pretty cover, the inner pages of which were filled up with seasonable advertising matter. There's nothing succeeds like being able to embrace opportunities as they come your way.

The Gibson, Illinois, *Courier* issued a twenty-page Christmas special edition, which is really worthy of more attention than I can bestow at this writing. The *Courier* is a big paper, and this special effort on its part is most commendable. The Gibson business people came forward to the support of the undertaking in a manner reflecting most creditably upon them, and while in the main the advertisement composition in this sheet is only mediocre, nevertheless the *Courier* has done its part well.

PRINTERS' BUILDING IN ST. LOUIS.

A large building devoted entirely to the printing business and allied trades has been erected in St. Louis. The building occupies a lot 125 x 76 feet, seven stories in height, and is built expressly for printing purposes.

The building was promoted by A. E. Reton, manager of the St. Louis Branch of the American Type Founders Company, and it involves an investment of about $200,000.

The building will be occupied by printing concerns, electrotypers, photo-engravers and bookbinders. All space in the building has already been rented to some of the leading concerns of St. Louis, and it will be ready for occupancy about April 1st.

"WITH COMPLIMENTS."

Office of Pacific Outlook.

Grants Pass, Oregon, Jan. 2, 1909.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—I desire to start the year right, so enclose herewith draft on Chicago in payment of my subscription for four years to National Printer-Journalist.

With compliments of the season, I am,

Yours truly,

Arthur Conklin.

The *Sentinel* at Morrison, Ill., for over a half century one of the best weekly papers in that part of the state, has taken a step along the road of progress and will appear three times a week instead of once.

STUDIES AND TURNS OVER TO FOREMAN FOR HIS INSTRUCTION.

B. B. Herbert, Chicago, Ill.

Dear Sir:—Enclosed find $2 to keep the wolf from the door of the Journalist in 1909.

When I have examined the numbers as they come each month, I then turn them over to the foreman for his instruction. I notice that each year you get more and more into the Journalist and make it better and better. Long may it ride the waves, and you continue at the helm to direct its course to the best advantage.

Truly yours, W. O. L. Jewett.

COMPLIMENTS AND GOOD WISHES.

The Louisiana Planter.

New Orleans, La., U. S. A., Jan. 3, 1909.

B. B. Herbert, Esq., National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

Dear Mr. Herbert:—Herein please find check for $2 to cover your bill, which is also enclosed herein and which you will please return receipted in due course.

Appreciating your kind compliments and desiring to express my best wishes for your good self and the various members of your family, and always at your service, I am,

Yours truly, John Dymond.

Professor Cooley of the Bozeman Agricultural College, remarks in *Farmers' Bulletin*, that "failure of crops, owing to a lack of knowledge of Montana conditions, means disaster and sometimes ruin to the settler. It, therefore, becomes the duty of the state to instruct the newcomers in the methods which have brought success to others similarly situated. We should bend every effort not towards inducing more settlers to make their homes with us, but rather towards the success and prosperity of those we already have. A prosperous community attracts like a steel magnet."

The "Low Quad Mold" described and illustrated in the advertisement of the Lanston Monotype Company in this issue, is declared to be one of the greatest improvements that has ever been made in the Monotype. It justifies any size of type (5 to 14 point inclusive) in justified lines with quads and spaces (both justifying and fixed size) either high or low as desired.

To those who first see the Mold in operation, it seems almost uncanny to run matter from a keyboard ribbon for low quads and spaces for letter press work, and then, without any change whatever in the Matrix Case or Casting Machine, to put the same ribbon through the Caster again and cast it with high quads and spaces.

When the fact is taken into consideration that every man who has operated a Monotype has worked out at least two different schemes of casting low quads and spaces, every man who has ever worked in an office where Monotypes are used has realized that if he only had the time, he could invent a low quad and space Mold, and that every man who owns a Monotype has dared the Lanston Monotype Co. to perfect a Mold of this character, it will be appreciated that this announcement will create some excitement and a very general interest.

The splendidly printed and illustrated insert in the front part of this issue of the National Printer-Journalist so fully and clearly explains this new device and its operation that it is not necessary to enlarge thereon. Let every one carefully study the insert.

* * *

A NEW COMPOSING STICK

H. B. Rouse & Co., Chicago, manufacturers of a number of well known tools for printers, including the popular Rouse Job Stick, are introducing a new Composing Stick that sets to picas only. As nearly all type matter above thirteen ems is now set to some multiple of picas, the nonpareil measures on

Composing Sticks more than eight inches in length are seldom used. It is to be expected therefore, that an accurate, well constructed composing stick made on the lines indicated and selling at a moderate, price, will meet with a ready sale.

THE PICA-STICK made by H. B. Rouse & Co., Chicago, is simply the Rouse Job Stick, minus the nonpareil adjustment, retaining all the other good features, and is guaranteed by the manufcaturers (who are jealous of their reputation for producing only the best) to be unsurpassed for accuracy, construction or finish.

As the new stick has the merit of cheapness in addition to all the good qualities (save one) of the Rouse Job Stick—for years the best selling stick made— the manufacturers seem to be justified in anticipating a big demand for the new tool, an advertisement of which appears elsewhere in this journal.

A NOTABLE HOUSE ORGAN

In January, 1873, there was published in Chicago Vol. 1, No. 1, of *The Electrotyper*. In the Introductory the Editor says: "It is our desire that *The Electrotyper* should take its place among the trade circulars and professional journals of the day, not only as a mouthpiece of our own trade, but also as a periodical of general interest and information." The general appearance as well as the subject matter of that first issue shows the high mark at which its publisher aimed.

In the course of time the title of *The Electrotyper* became too narrow in scope to fit the needs of an expanding business, and a new and more comprehensive title was needed. Out of this need grew the Printer's Album, the artistic and valuable house organ of the Challenge Machinery Co., Grand Haven, Michigan, now in the 27th year. It is one of the few house organs in the United States which have risen to the dignity of a recognized place among trade papers.

The *Printer's Album* of today is an attractive 16-page publication, printed in two colors. It presents a fine typographical appearance. The matter is interesting from cover to cover. The greater part of it bears directly upon the machines and devices produced by The Challenge Machinery Co., but variety is added by matter of general interest to the craft, many original articles of merit appearing in its columns.

Altogether *The Printer's Album* is a credit to the craft and no progressive printer can afford to be without it when the cost is so low—("a request written on your letter head" is the subscription price.) It is the desire of The Challenge Machinery Co. to have this publication reach every printer who is interested in improved machinery and methods.

* * *

The Hamilton Linotype Magazine Cabinet, advertised in this issue of the National Printer-Journalist will prove a great convenience and economy in every office owning a Linotype. The Hamilton Mfg. Co. have become deservedly famous for anticipating and providing for every need or want of the printers in cabinets, or wood goods and everything in the lines of their manufactures. It is a pretty valuable reputation, too, as a business asset. The Linotype Magazine Cabinet provides a place for the convenient storing and care of all parts and accessories that go with a Linotype outfit, protecting the same from injury and dirt or dust. It is built of hard wood throughout with heavy hardwood working top and all nicely finished. The arrangement is thoroughly systematic. There is a proper place for everything, easily accessible, and always at hand. We need not enumerate here, but it would prove profitable and pleasing for any one to turn to the advertisement and read the careful and enlightening enumeration. The new book entitled, "Composing Room Economy," issued by the Hamilton Hanufacturing Co., is fully reviewed, this month, in our Job Review Department, as being more appropriate there than elsewhere. Unfortunately a miscalculation was made in the reproduction of the two pages attempted to be shown. The print is on a yellow tinted background, and this interfered with the securing desired results, and the reproduction was too great, but enough is shown to suggest the value of the arrangement of these several leading offices, fully and accurately shown in the pamphlet itself, which will be forwarded to any printer on application. It should be in every printing office in the country. There is great economy of time and space in the proper and systematic arrangement of a composing room as well as in having the same fitted out with these labor, time and space-saving and type-protecting cabinets, etc.

* * *

The Star Engravers Supply Co., are sending out price lists giving the sizes that they can supply in cardplate copper, steel dies, commercial steel, photo-engravers zinc, and copper, and photo-engravers' supplies, which they are sending to the engravers throughout the country. They carry large stocks in Boston, Philadelphia, Cincinnati, Buffalo, Chicago, St. Louis and San Francisco, so that they can give prompt attention to any orders.

* * *

KEYSTONE SELLS MORE TYPE THAN EVER

The announcement made by the Keystone Type Foundry in a display page advertisement in this issue of the National Printer-Journalist is surprising, because of the conditions prevailing in the type-founding business and the depression in all lines throughout the year just closed. The fact that "the Keystone sold more type in 1908 than in any previous year" speaks well for that Foundry's products and unmistakably indicates that it is a growing concern and not to be headed off by panicky business nor strenuous competition. The Keystone is not dependent upon favorable conditions, but seems to progress notwithstanding dull times.

The Harris Roman is the above Foundry's latest production and is very near an ideal Body Letter. An advance showing is being made this month in some of the trade papers and the Foundry's Specimen Department is at work upon an effective booklet which gives a more complete showing and will be distributed to the trade at an early date.

* * *

We have received from Geo. H. Benedict, of the Globe Engraving and Electrotype Co., Chicago, an 18 x 28 blue-print of a diagram, showing the cost of halftones—a graphic illustration of the varying cost of the various sizes.

It is, as we have had occasion heretofore to remark, for the good of any trade, that producers know the cost of their products, and hence for the good of the craft, that one of these diagrams should hang in every photo-engraving office in the United States—for use in explaining to clerks, salesmen and customers that any halftone sold for less than $1.75 carries with it a loss that is equivalent to a cash contribution.

The square-inch rate has proved to be the curse of photo-engraving, because it puts the manufacture of cuts on a speculative basis—on large cuts engravers win—on small cuts they lose, and the profit on the large cuts is the "gold brick" that has started more photo-engraving plants, in every city, than can be profitably operated.

There is a cost to getting up the diagram, the blue-prints, the explanation and the postage that will be barely covered by a charge of 25c. Any one who considers the object in view worthy of attention, will receive the diagram for the amount mentioned, on application to Geo. H. Benedict, 407-425 Dearborn St., Chicago Ill.

* * *

TRADE NOTES

H. E. Pratt, recently of Los Angeles and formerly in the printing business in Marshall, Michigan, has joined the sales force of Barnhart Bros. & Spindler, Chicago, and will cover for that type foundry San Francisco and the territory adjacent. He started for the California field January 20th.

Duane H. Jaques, Alhambra, California, is now selling the type products of Barnhart Bros. & Spindler, Chicago, in Los Angeles and the territory adjacent.

Butler Bros., the big wholesale mail order house, Chicago, have installed a Miller Saw-Trimmer, purchased through Barnhart Bros. & Spindler, Chicago. Other recent purchases of this popular machine from the Chicago house include the Nicholson Co., Richmond, Indiana, and the News Pub. Co., Toledo, Ohio.

Chas, Ashraft, Sisterville, W. Va., has added to his equipment a new Gally Universal press purchaser through Barnhart Bros. & Spindler.

Copies of the new Hamilton Book of "Printing Office Economies" can be had by sending request to Barnhart Bros. & Spindler, Chicago.

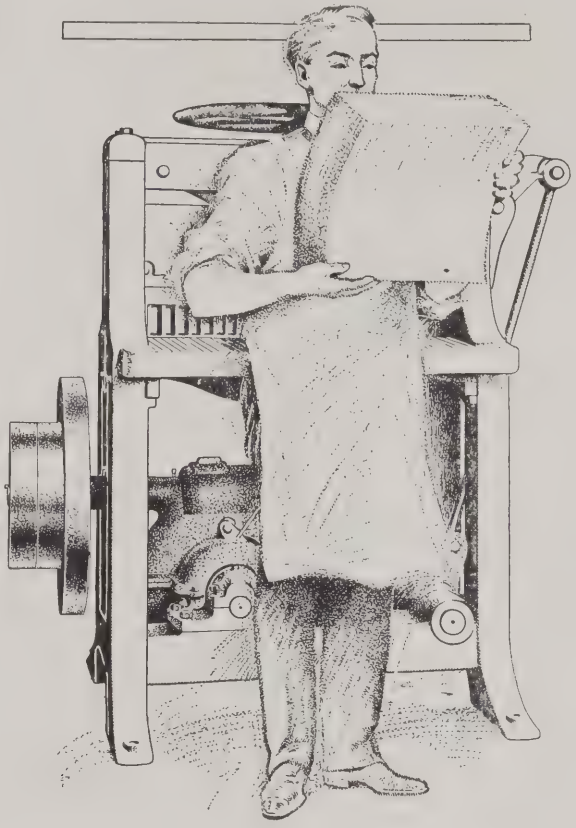
POWER CUTTERS



"STRAIGHT AS A DIE!"

NOTE that this new power cutter is simple in construction. All parts are strong and properly placed. It makes a compact, though very powerful machine. The power mechanism is attached where it is out of the operator's way, and is enclosed in a dirt-proof metal case. The purchaser obtains the latest improvement in power cutters; patent issued July 14, 1908.

The metal is so distributed as to withstand strain of heaviest cut without springing. In fact, this is designed as a general utility cutter for the job printer. The speed is twenty cuts per minute and the cut is "straight as a die"—no frayed edges to spoil the appearance of the job.

We have profited by the marked success of our lever paper cutter and designed our new POWER CUTTER along the same lines. It is very simple in construction, having no extra parts, and all parts as nearly interchangeable as can be made. Every cutter is built as perfectly as experience and special machinery can accomplish, and thoroughly tested before it leaves the factory.

A deep throat and ample table permit the printer to cut thick "jogs" of large-sized sheets. We claim there is less danger in operating than with any other power cutter, as the controller knob must be pulled forward and then given a quarter turn before clutch engages with gear and knife descends. It never repeats, as the mechanism is so arranged that knife cannot fall, thereby preventing possibility of accident.

The Babcock Optimus
The Babcock Optimus

We take you into partnership on the proposition that the Optimus will better satisfy you than will any other two-revolution, no matter what your work. You will find it no less than claimed. No matter what we promised the performance will equal it. In fact, you will find the press more, and will delight in the pleasures of discovery.

If our claims are unknown to you they will be furnished promptly. We assume all responsibility for them. The heaviest forms, the work that others cannot do as well, are easily within Optimus capacity. The highest speed is backed by every quality essential to make it fully effective. It remains a good press after many years of hard work, during which not a dollar has been expended for repairs, and no time lost through fault of the press itself.

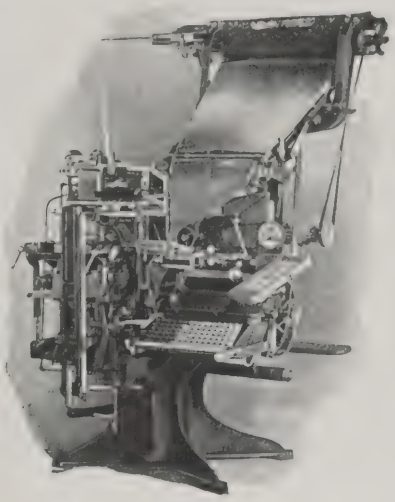
"A FEW FACTS

Truthful Statements"



Quick Change Model 5
Single Magazine

Mr. Edgar Johnson, Orange County Tribune, Fullerton, Cal., writes:

$5000 Would Not Buy It

Sets Nearly All His Ads

Does Job Work

Delayed Purchasing

One Year's Repair Bill Less Than $3.

A Real Money Maker

GENTLEMEN:

I installed a Linotype about a year ago. Now I wish to give you a few facts—truthful statements. I would not take my machine out for $5,000 spot cash, and do without it. When I purchased the machine last year I only expected to use it then about three days a week; but it was only in the office a few days until we began using it EVERY DAY in the week, not having any idea what the machine would do until it was installed.

Many persons who think of purchasing a machine do not stop to consider what can be done on the Linotype. We use 7, 10 and 12 point mats, setting nearly all our ads, both large and small, and set a large part of of our job work, in addition to our eight pages of reading matter and work for outside papers.

All of these years we have been getting along without a machine—at the same time having the ready money to purchase one. Why? Because we were told we would have to keep an expert operator-machinist, and all that sort of rot. We have a good operator, although he is not an expert machinist. He can set up 12 or 14 galleys a day with ease.

The machine, the past year, has not cost $3 for new parts or repairs; we notice only a slight increase in the gas bill. We would keep a Linotype if we only used it three full days a week—believe it would be a paying investment. During the past year the machine has not delayed us at any time for FIVE MINUTES.

It is a real MONEY-MAKER, standing at the head of the list of all printing machinery—and we claim to have a pretty good office.

You have not solicited any statement from us, but we take pleasure in giving you these facts, because we are a friend of the Linotype.

Yours truly,
ORANGE COUNTY TRIBUNE.
EDGAR JOHNSON.

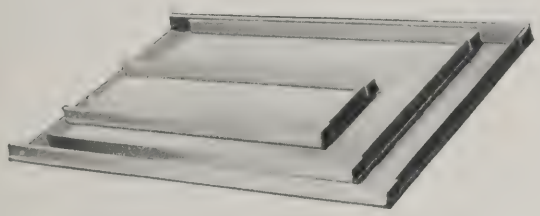
Our "Bull" Card—Showing the suitability of the various screens to the different finishes of papers.

PLATE ZINC GALLEYS



For storage and for proof taking the Challenge Plate Zinc Galley is a good, low priced device. The popular sizes have a depression or groove running along the side, which s characteristic of our beaded edge galleys. This gives a rue, square corner, with added strength and rigidity. The material used is double compressed plate zinc, hard, smooth and free from scale. These galleys never fail to make good with their purchasers.

GALVANO STEEL GALLEYS

A specially prepared heavily galvanized rust-resisting sheet steel, worked on machines constructed for this sole purpose, forms the Challenge Galvano Steel Galley. It is the lowest priced dependable galley on earth. For storage of standing forms, linotype matter, etc., they are particularly desirable. Like the Challenge Plate Zinc Galley, they have our new beaded edge on the popular sizes. Special prices on quantity shipments.

FURNEAUX STORAGE CABINET

The HAMILTON Line of Modern Printing Office Furniture

The rapid development of the appliances used and the methods applied to modern printing has taxed the ingenuity of every concern catering to the printing trades in the effort to maintain the required standard of perfection. But few concerns in any one line have successfully survived the fierce competition in quality.

In the furniture line the name of Hamilton stands alone, without the semblance of a rival. There must be a reason—that reason is QUALITY.

The Hamilton line of modernized Printing Office Furniture leads but is never complete—it's always developing.

SOMETHING NEW NEXT MONTH. WATCH FOR IT

Furneaux Lead and Slug Storage Cabinet

Lor Leads and Slugs and Metal Furniture

There has always existed a lack of storage room for leads and slugs, metal furniture, etc. Likewise the line of modernized Printing Office Furniture has lacked a convenient Lead and Slug Bank of large capacity. Both of these wants are supplied in the Furneaux Lead and Slug Bank and Storage Cabinet.

This equipment has given such great satisfaction and has proven its economical value so thoroly in the plant of The H. O. Shepard Co., of Chicago, that we have decided to offer this Cabinet as a standard article to our customers. This Cabinet has an enormous storage capacity and is most substantially constructed to support the great load of metal it will accommodate. Send for descriptive circular.

Chicago, Ill., February 3, 1909.

The Hamilton Mfg. Co., Two Rivers, Wis.

Gentlemen:—The fact that from time to time you have accepted and manufactured from the proved ideas of practical printers, assures the trade that in purchasing goods of your house they are purchasing the best result of ripened experience. The double decked Metal Furniture Cabinet, with Lead and Slug Bank, designed by our Mr. Geo. A. Fourneaux, is especially useful. It occupies about one-tenth of the space that would be required to handle the same amount of material on old-fashioned furniture racks and lead and slug banks. The compactness and thoro workmanship of this furniture makes it a valuable time saver, while the handsome design and finish adds greatly to the appearance and gives a business-like air to the room. Printers are perhaps prone to overlook the aid which modern composing room furniture has been in developing the craft by the saving of time and space—costly elements of production.

Yours very truly, The H. O. Shepard Co.

WOOD TYPE Perfection in the height of wood type has at last been attained. We absolutely guarantee our type in this respect WITHOUT RESERVE.

These two letters tell the story:

Orange, N. J., Jan. 4, 1909.
The Hamilton Mfg. Co., Two Rivers, Wis.

Gentlemen:—The new Wood Type bought about six months ago thru a New York salesman, is just type high and works with metal to our entire satisfaction. Yours truly,
Wm. Force, care of Orange Pub. Co.

Sanford, Me., Jan. 9, 1909.
The Hamilton Mfg. Co., Two Rivers, Wis.

Gentlemen:—We have a few fonts of Wood Type which we purchased from a competing house, but which have caused us a great deal of trouble as they were not type high. We do not feel like throwing them away. If you could refinish them and make them type high, we would like to have you do so, provided the cost would not be too great. Will you please advise us. Yours very truly, Averill Press.

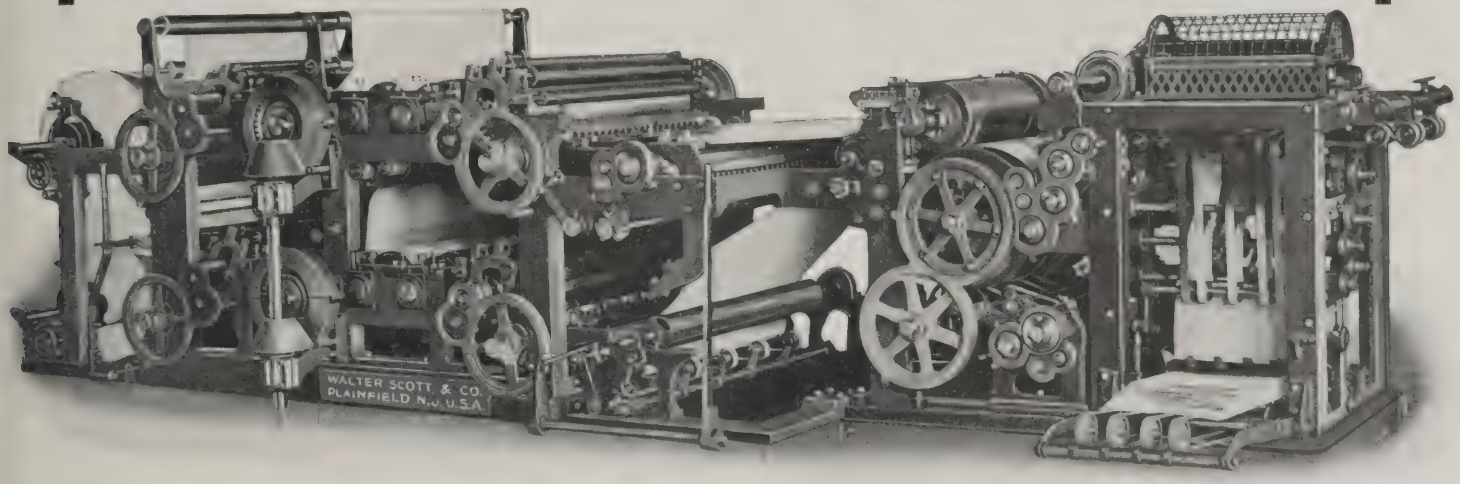
Single-Plate **SCOTT** Double-Speed

ROTARY NEWSPAPER PRINTING, INSETTING AND FOLDING MACHINE



Produces 16 page papers from 16 plates at 24,000 per hour, all other combinations at relative speed. Can be enlarged to give more pages. One-third of stops for roll changes eliminated, further increasing actual production. This enormous speed produced without increasing running speed of webs or ink rollers. All motions rotary.

We are prepared to furnish these machines in any size and to produce any desired combinations of pages. Let us know your requirements and we will forward details. Ask about our 24 page machine with the capacity of a regular sextuple machine and its speed.

In addition to speed, these machines have a great many excellent features, such as no collecting mechanism, all products are delivered inset in one section, arrangement the most convenient possible, and our many patented features, such as Direct-Independent Drive, Continuous-Adjustable Ink Distribution, Rotary Folding Blades, Staggered-positioned Printing Cylinders, Independent and Collective Tension Control, Sheet Cutting Grooves, Adjustable Cylinder Fold, etc., etc.

SIGMUND ULLMAN CO

NEW YORK
CHICAGO
PHILADELPHIA

EVERY printer admires a beautifully printed illustrated booklet or catalogue, and if he has not yet learned how to equal the grade of work he admires, he naturally strives to do so.

Among other essentials, it is necessary that the cuts and electrotypes he uses enable him to secure high grade results without exceeding difficulty. In other words, he must have plates that will print well easily.

Printers throughout the country are more or less familiar with the high grade work produced by the Hollister Press. We furnish practically all the plates and engravings they use, and working in close touch with their press room, we know the natural troubles and give them plates that print right and without difficulty.

All printers who read this advertisement can demonstrate for themselves by sending us a trial order.

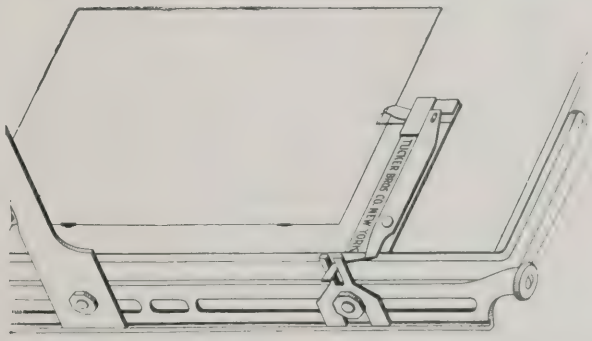
The Tucker Automatic Register Gauge

A Time and Paper Saver—You Cannot Afford to Do Without It



This is positively the only gauge used on platen presses that PULLS the sheets to a register. Every pressman knows that you cannot PUSH a thin sheet of paper to a register mechanically. This gauge does not push the sheet, as all others do; it does not matter how fast your press is run it does not "kick" a stiff sheet away from it, but, on the other hand, it pulls it to it and gets a register. If a sheet is placed within ⅜ of an inch of the gauge it will pull it to it.

It works independent of the grippers, and can be put on or taken off instantly.

Volume Twenty-seven | Chicago, March, 1909 | Number Three

THE MAKE-UP OF THE PAPER

BY F. D. TROOP, JOURNAL, MUSCATINE, IOWA.

IT was true many years ago, but not as true now that many publishers in business throughout this western country did not pay as strict attention to the general make-up of their papers as they should. This came from so much time being taken in hustling for business and news matter and the lack of facilities in the office so that a good make-up could be accomplished. With the wider use of the linotype, the growth in the business and the system of the offices, the general appearance and make-up of papers improved. The work of plate houses and feature concerns who studied and made up attractive features for newspapers has also added much to the appearance of the daily newspaper of today.

Subscribers notice the make-up of your paper. The publisher who is careless about this detail is censured by his readers and it is often an argument made use of by a competitor in securing business. Any little change in the manner in which your news matter or advertiseing is placed is always noted by your readers and given its full share of commendation or condemnation as the change suits or does not suit the reader.

In the matter of headings, I am a firm believer in large and attractive heads. I do not believe in over-doing the matter the way certain so-called "yellow' newspapers do, but I believe that every day there are certain news stories in every paper that are worthy of playing up under attractive headlines. Let the size and importance of the item gauge the size and display of the head, and when you have a good big item, swing on it for it will pay and your readers will appreciate it. The fact that you have a good scoop on your competitor and the item comprising the "beat" is not very important does not always call for as big head lines as some editors are inclined to give it. I know of an editor who, when he gets the least kind of an item that his competitor does not have will play it up as one of the real big stories of the day, no matter how insignificant the item really is.

In the make-up of the paper always make your first impression the very best—hence an attractive first page is a necessity. We use our telegraph report on our first page and a local item must be of great importance to crowd any of the telegraph report into the inside of the paper. A good live press report, even if it is a breif one, supplemented by several good "state specials" can always be made to fill a page and gives the entire paper an appearance of thrift and enterprise. It is your reader's first impression of that issue, always try to make that impression a good one.

The local news, country correspondence, etc., can be used on the inside pages. We try to make every page contain some local matter except the editorial page, and good local heads with live and up-to-date country correspondence for fillers make an attractive make-up. I believe in the classification of news. Sporting news should have its department, for many of your readers care nothing for it, while other readers care for nothing else. We have two districts in Muscatine, South Muscatine and East Hill and run these two departments, making a great success of both. Reporters in the office handle each one, visiting their territory each morning and using the 'phone if anything happens later in the day in those parts of the city. Our readers appreciate this very much for it gives them a certain independence and they feel as though a certain part of the Journal was run for their special benefit. Items of insignificance always appear to an advantage when under their classification. The editorial page should contain the editorial, press comment from the leading papers of the state, a chapter or so of the continued story you are running and any other features good for such a page. We run reminiscenses of 50, 40, 30, 20 and 10 years ago taken from the Journal files and find that it makes a good impression and is one of the best features we use.

The want ad page, containing the want ads, real estate ads, in fact, the classified advertising should all be on one page and one can use this page to dispose of his time-cards, society cards, market reports, etc. This will make this page valuable for it has the markets which are always read and the page will be attractive even though it carries little real news of the day outside of the market report.

By the make-up described above one can see that every page is a good page for either local or foreign advertising. Whenever possible advertising should be given good position. We handle the foreign advertising on certain pages, and reserve other pages for the local men. Of course there are certain regular local ads that are sandwiched in with the foreign matter. Some of our contracts require full position and others request it, but we try to be fair and give good position to all. Ads are run on both sides of the page and the general make-up of the page remains nearly the same each day.

I believe in the liberal use of up-to-date features. Any make-up of a paper can be materially brightened by the liberal use of good features, such as pictures of recent scenes and events both at home and abroad. We have used an attractive feature service for the past year and found that it greatly brightened up the appearance of the paper. A good up-to-date cartoon on the front page is always a good feature.

The general line of make-up should always be for a good appearance of your paper, convenience for your readers and put your best front to the public by an attractive and newsy front page.

LITTLE TALKS ON ADVERTISING

NO. 2—ABOUT SPACE BUYING.

In the "good old days," before the professors of psychology began to meddle with the "rule-o'-thumb' in advertising, advertising like kissing "went by favor." The newspaper man asked for an advertisement as a favor and received it with due thankfulness; the merchant gave the ad as a favor —largely because the town had "to support a newspaper, anyway."

In those olden days the newspaper publisher fixed his rates in the same way that railways fixed their tariffs, charging all that the traffic would stand. The merchant paid as litle as he could without any very definite idea as to whether he was getting value received or not.

Fortunately, the modern merchant and the modern publisher have a very different idea from that prevailing a genera tion ago, and sustain very different relations toward each other.

Advertising has become the greatest factor in modern salesmanship, as well as the greatest factor in modern publishing, solely because of the new attitude toward advertising taken by the business world.

What is it?

Listen—

Merchant and publisher alike have realized this:

The publisher's space is a commodity, with a value as fixed and staple as is the value of the goods in the merchant's warehouse.

The publisher can afford to sell his space for a certain price. If he takes less, bankruptcy lies ahead.

The merchant can afford to pay for space a certain price. If he pays more he may not land exactly in the bankruptcy court, but he is inviting the sheriff to keep an eye on him.

What is that price?

There's the whole problem of space-buying—the money-end of advertising in a simple phrase.

Advertisers and publishers alike have many different theories about what constitutes an equitable rate and about how it can be determined, but all their theories have one common starting point, and that is:

Circulation.

No man is so simple-minded as to imagine that every thousand of circulation has a value equal to that of every other thousand, or an equal value to every advertiser. Circulations differ in quality, the difference depending upon the people reached, the territory covered, the standing of the publications, and a dozen other factors, but no matter how high-grade a circulation is, what the advertiser can afford to pay for it, depends upon how much there is of it.

That's the first question, after all.

Circulation is the measure of advertising value, and like all weights and measures, should be within the laws' keeping. Newspaper publishers are the salt of the earth, of course, but as long as the law inspects the merchant's yard stick and the grocer's scales, the publisher has small ground for complaint if the same law require him to give the advertiser full measure —ten hundred papers to every thousand.

Why not?

ARTHUR CAPPER.

P. S.—Incidentally, it may be worthy of note that the Topeka *Capital's* circulation records of all kind are open to every interested advertiser.

"THE GRAPHIC ART, YEAR BOOK"

"LETTERING AND DESIGNS FOR PRINTERS"—"TECHNICAL EDUCATION."

In "The American Annual Review of the Engraving, Printing and Allied Industries, under the above title, the publishers, The Republic Publishing Company of Hamilton. Ohio, are doing a valuable service, each year, for the members of the arts of typography, lithography and engraving. Volume three, edited by Joseph Meadon, is not only a work of art, worthy of consideration by reason of the many art reproductions and artistic color printing, but for the highly educative contributions and suggestions by leaders in the different branches of the graphic arts. The successful conduct of such a publication is no small undertaking in this country, where commercial publicity has occupied so large a place and art has been given such small consideration. Yet, as this volume and its predecessors prove, art is coming into its own in this country, besides it is being thoroughly demonstrated that art has a very large commercial value in promotive publicity. The latter fact is forcibly illustrated in the many examples of commercial illustrating and photoengraving from a dozen among the leading engravers of this country.

To give a satisfactory review of a work like this, made up of so many specimens and contributed articles, would be indeed difficult, so, in lieu of this, it seems best only to dip into some of the matter that we deem of most interest to our readers, by way of giving a taste of the contents.

Under the title "Lettering and Designs for the Printers," F. J. Frezise of Chicago says: "The printer of the present, in order to fortify himself to meet the demands of the immediate future, must do more than learn his trade by serving a certain number of years as an apprentice. He must make a study of it. Obviously this involves a study of lettering and designs. The study of lettering, aside from the practical feature of learning to form commercial letters, is of absorbing interest to the printer."

The subject as interestingly and instructively discussed at length in this and other articles, convinces one that printing is at last coming to be considered and studied scientifiically as a fine art.

Lewis A Schwarz of Philadelphia, Pa., in an article on "Technical Education," writes: "Like a tower of strength, the fact looms big and undeniably before us, that technical education is going to revolutionize the entire industrial world, and it behooves the workers in all the crafts to take note of the trend of modern progressiveness and make every possible effort to keep abreast of the times. * * * *

"The man who wants to keep himself in the foremost ranks of the world's best workers must devote some of his spare time in an effort to prepare himself for that purpose. No man's store of knowledge is so complete that he can view any additional education superfluous. Especially is this true when such additional knowledge multiplies his efficiency as a competent workman. * * * *

"Technical graduates are in high demand simply because they possess a knowledge which, when applied in practice, gives to the product of their hands the additional qualities of training of the mind. It is the additional application of principles, well learned, that gives the technical graduate pre-eminence over the workman at his side who is not possessed of the same training."

These quotations are only high lights as to almost indispensible preparation under existing conditions. There is an abundance of technical information and discussions in the volume besides the art pieces that make the work a constant joy to the lover of fine engraving, color work and typography.

'THE LARIAT"

ROPING BUSINESS AND AIDING IN A NEWSPAPER'S NOBLE CHARITY.

THE *Lariat* is the significant name of a booklet issued by the Williamson & Haffner Engraving Company of Denver, Colorado. It ought to prove effective in "roping" business. It is "published every time the moon gets full," and is a work of art, especially artistic in the showing of color plates and good printing. Denver's pure, rarified air is said to be especially favorable to excellence in photography, photo-engraving and printing. One of the novelties of the post card department, told about and illustrated by a neatly

"O Winter! ruler of the inverted year"
—*Cowper*

Photo by William Eugene Irons, Brooklyn
Two-color plates by Baltimore-Maryland Engraving Co.

reproduced post card of the State of N. Y., is certainly attractive. It is the manufacturing of new and exclusive cards carrying a combination design and picture symbolical of a particular State, and a verse descriptive of the same and setting forth its virtues. In all states which have adopted a state flower, the name is given with a reproduction of the flower in the proper colors. The designs are certainly most interesting and pleasing. The little publication is filled with wit, wisdom and practical thoughts and suggestions. Here are some facts given in the *Lariat* with regard to the business of the Williamson & Haffner Engraving Co. that will be a surprise to many of our readers:

"We have have handled many of the largest contracts for color plate making and printing ever given out by the Western railways.

"Our line of Western scenic post cards is the largest and finest in the United States today.

"During 1908 we made plates for and printed in round numbers 20,000,000 post cards.

"We have made the plates for and printed view books of different localities from Niagara Falls and Washington, D. C., east, to Los Angeles, Cal., west; from Portland, Ore., north, to San Antonio, south.

"This extensive experience in the printing, as well as in the making of color plates, has taught us how to make the best plates from the pressman's viewpoint, and also how to furnish him a guide that, if followed, is bound to give first-class results."

To our way of thinking, this only shows the good results of liberal advertising. This much for business. Our attention was attracted by the *Lariat's* plan in helping a noble charity, inaugurated by the Denver *Post,* for building a children's hospital. It occurred to us that this method might be found helpful to other newspaper publishers who are seeking to forward some such good work. Under the heading "Read All of This" the *Lariat* says:

Many of you, my readers, have little children of your own—little tikes whose welfare and happiness is more to you than the best of the tawdry of worldly power or untold wealth of money.

Some of you who, while not knowing the joy of hearing childish lips learn to lisp that first wonderful "Papa" or "Mamma," still have little brothers or sisters who with unfaltering faith look to you for help in all their little troubles.

Then there may be some, who, unfortunate enough to come under neither of these two headings, still have that most indelible mark of one of God's noblemen—an inborn love for children.

Well, I want you all to read this little story, and having read it, get busy.

A few weeks ago, during one of our worst cold snaps, a representative of the Denver *Post* discovered a case of poverty and suffering that, owing to peculiar reasons, was the most pathetic among the many which the warm-hearted craft of pencil-pushers unearth in every big city every cold winter.

It was not alone the lack of creature comforts, such as fuel, food and suitable clothing—though that is bad enough—but in this case, that of a little girl, they found her a sorry cripple. And now for the peculiar condition which marked this case among the many: Little Viney, as her parents and friends call her, in addition to being compelled to do without many of the ordinarily considered necessities of life, had to stare in the face,with tearless eyes, that greatest of all tragedies of childhood—a Christmas without a Santa Claus and his pack—was also compelled to bear the almost constant physical agony caused by her poor crippled little back with what patience she

Design on Menu of the Pioneer Limited, Chicago, Milwaukee & St. Paul Railway

could, without any hope of the relief and possible cure that the right kind of medical and surgical services and nursing might bring—all because her father was not a mining, ranch, timber or some other kind of a king with plenty of money.

A sad state of affairs, but true.

In all this great and wealthy city, all over this glorious and prosperous state, there is no place for poor little suffering lambkins like little Viney.

With money and men provided in abundance to feed the snowbound and hungry antelope, to safeguard the mountain

sheep, to protect under certain conditions even the fish that swim the mountain brooks and the birds of the air; with all this, there is no place provided for these poor little suffering mites where they can go and at least have their sufferings greatly alleviated, their short lives made happier, even though, in some cases, they cannot be made whole again.

The regular hospitals, even the public institutions, don't want them—say they are not fitted to properly care for such cases. Well, perhaps they are not, but more's the pity, more's the need of making a place for them.

Well, you know what kind of people the newspaper folks are.

The *Post* took up the fight and, thanks to the lashings and pleadings of some of its most trenchant pens, lead by Winifred Black, the movement to build a child's hospital is now well under way.

They call it The Santa Claus Hospital because of its inception at the time of that good old saint's annual merry-making and gift-giving.

The *Post* called for contributions and they began to pour in.

They organized a Legion of Honor for the little folks, and to all such who gave 10 cents or more a badge was given.

Amateur entertainments were given, and even the professional theatrical companies playing in the city contributed in some cases the entire receipts for a day. At the suggestion of a county official it was determined to grant to every donor of $100 the privilege of having his child or children's names cut in one of the stones to go into the front of the building.

Architects, contractors and mechanics volunteered their services free, and the grand total value of such monies and services now reaches approximately $12,000. But much more is needed, and both the publishers and the editor of the *Lariat,* thinking that they knew the kind of people their readers were, felt that they should give them the opportunity to help in this glorious work.

Most of our readers are either printers or newspaper men (or both) than whom no more generous or warm-hearted men ever lived.

Others who are a part of that great army of publicity-pushers, who, by buying engraving and printing to help boost their own or their employer's business and who associate very much with the craft, we feel are not a bit behind their brethren of the art preservative.

Now, then, the *Lariat* proposes to raise a fund for The Santa Claus Hospital, to be known as "The *Lariat's* Santa Claus Hospital Fund." Subscriptions of from 10 cents up are solicited, and while we are frank to say that we would rather have them "up" we still wish to say that the dimes will be just as welcome and will do the giver who cannot afford more just as much good as the hundred dollars of the better fixed man.

While we do not want to dictate methods, we would suggest that inasmuch as this movement was started and still remains largely one of the newspaper craft, that you fellows who are busy molding public opinion take this work up in your paper and give a boost to the kiddies' Santa Claus Hospital. While this may be regarded as a Colorado affair by some, please don't look at it that way.

The whole world is helping Italy, and helped our own 'Frisco in her time of trouble. Charity should know no state or national boundaries.

So let us hear from all our readers; no difference where you live.

If you can afford it, and want not alone an enduring but a beautiful monument for your little ones, send your check for a hundrerd dollars and have their names carved on this building. But remember: any sum, no matter how small, will help and will be gladly and gratefully received.

Unless requested not to do so, the names of all donors and amount given will be published in the *Lariat* and later in the Denver *Post.*

Mr. H. M. Williamson, the president and general manager of the Williamson-Haffner Engraving Co., has consented to act as treasurer of this fund.

Now, boys, for a final word.

Many of you have written us expressing your appreciation of the *Lariat.*

Some of you have even offered to pay for it. Well, we don't want you to do this.

But the editor has staked his reputation as a judge of human nature in this undertaking and if you have ever appreciated either his humble efforts or the progressiveness of the publishers of this little book, we ask you to show it now in the form of a liberel response to this appeal.

Address all communications to

THE LARIAT,
Care Williamson-Haffner Engraving Co.,
Denver, Colo.

Get busy, boys, and back my judgment.

ZIM.

J. E. JUNKIN HONORED BY HIS COMPETITORS.

Past President J. E. Junkin of the N. E. A., has recently completed his twenty-first year as editor of the Sterling, Kansas *Bulletin,* and his feellow editors in Kansas honored the occasion by saying many kind words with regard to him and his work, that have an educational value, in showing the ways by which success in newspaper making is attained. From among these, we select the following boquet of compliments that appeared in the Wichita, Kansas, *Star:*

"J. E. Junkin went to Sterling 21 years ago the first of this month, and assumed control of the Sterling *Bulletin.* Since that time he has been its guiding hand, and he has prospered with it. Mr. Junkin admits that he thought Sterling was to be a great city, and he had visions of publishing the leading daily of the state. His daily died and was buried, but his weekly flourished and stands today as one of the best papers in a state that is full of them. Sterling ought to be proud of the *Bulletin.* That Sterling does appreciate it, is shown by the patronage which has been extended unstintingly. As one of the leading men of his city, as one of the best newspaper men of the state, John E. Junkin has achieved what would satisfy most men. If he never does anything else, if he never becomes famous throughout the nation, he has cut his niche in walls that are adorned with the memories of solid successful business men, who, after all, count for more than heroes or mock statesmen. Hats off to a man who has won success honestly and fairly, and may he live long to see it increase as rapidly as the years go by."

N. P. J. LEADS TO SEEKING BETTER PREPARATION FOR WORK.

I enclose check in payment of my subscription as per your bill.

Please change address of my copy from Healdsburg, Cal., to 303 Waugh St., Columbia, Mo. Reading in the National Printer-Journalist of the Department of Journalism established in the University here, I was led to come here to take advantage of the opportunity to fit myself for a wider field.

If you have already mailed the February number of the National Printer-Journalist to me at Healdsburg, will you please send an extra copy to me here, as I do not like to miss a number. Yours very truly,

T. W. Cook.

303 Waugh St.,
Columbia, Mo.

THE CONNECTICUT PRESS

ALL newspapers are united by a common bond of interest and have very much in common as to methods, work and character of service. The daily paper, by reason of its character and frequent issues, gives news more in detail and is generally confined to a narrower territory than is the weekly and has in the past served the residents of cities rather than of the country, though the introduction of the daily, free rural route delivery has caused a change in this regard; the farmers now take the dailies, and country correspondents, farm news and farm interests are becoming as essential to the daily as to the weekly. The same kinds of work in nearly all departments are required for the success of both or either. The publishers of the weeklies can learn from the publishers of the dailies and many a daily publishr can get most valuable business hints from the successful publishers of weekly papers. There is, if anything, more of an all-around business education in the offices of the latter than in the former. As we have had occasion to remark, citing examples, many of our most permanently successful publishers, of even metropolitan dailies, have been first trained in the offices of home weekly papers, where they have had experience in every branch of the newspaper making

Woods near Dorking
From reproduction of Carl Hentschel, Ltd., London, E. C.

business and have come in direct contact with individuals, with members all the different callings and each and every interest of the community, industrial, commercial, educational, religious and social.

In view of these facts, we believe that the steps taken for the close affiliation of the daily and weekly editorial organizations of Connecticut, at the recent annual convention held in New Haven, Feb. 16th, showed practical wisdom. A correspondent of the Hartford *Daily Times,* in giving an account of the convention says:

The Connecticut Editorial Association held its mid-winter meeting and its annual banquet at the Tontine hotel, Monday afternoon and evening. Both were notable—the meeting because of action taken which will nominally affiliate the association with the Associated Dailies, and the banquet because of the presence of so distinguished a newspaper editor as Dr. St. Clair McKelway of the Brooklyn *Eagle.* The business meeting was attended by about twenty members, and the banquet by about fifty members and guests. It was one of the pleasantest in the history of the association.

THE BUSINESS MEETING.

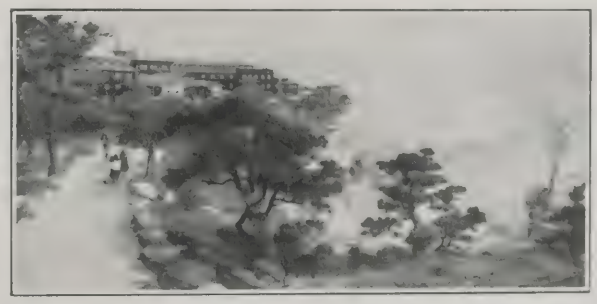
For the fifth consecutive term Arthur S. Barnes of the Bristol Press was chosen president of the association and Elwood S. Ela of the Manchester *Herald* was elected secretary and treasurer for the thirteenth time. Mr. Ela and the

From Supplement to the British Printer

association have no fear of the unlucky number. Here is the full list of officers:

President, Arthur S. Barnes, Bristol *Press;* Secretary and Treasurer, Elwood S. Ela, Manchester *Herald;* Vice-Presidents—Hartford County, Joseph W. Flood, South Manchester *News;* New Haven County, Charles H. Scholey, *Shore Line Times,* Guilford; Fairfield County, F. W. Lyon, Greenwich *News;* Litchfield County, George C. Woodruff, Litchfield *Enquirer;* Middlesex County, G. Philip Le Crenier, *Connecticut Valley Advertiser,* Moodus; New London County, Theodore Bodenwein, New London *Day;* Windham County, D. A. Lyman, Willimantic *Journal;* Tolland County, Harry C. Smith, Rockville *Leader;* Auditor, F. W. Lyon, Greenwich *News.*

Six new members were admitted, bringing the membership up to seventy, the largest in the history of the association. The new members are: Arthur R. Kimball of the Waterbury *American,* Professor Henry W. Farnam, editor of the *Yale*



Hotel El Tovar, Grand Canyon of Arizona, on the Santa Fe Ry.

Review; R. Rowden King of the *Journal-Courier,* New Haven; Ralph A. Graves of the New Britain *Record;* Alexander Troup of the New Haven *Union,* and F. W. Bolander of the Bridgeport *Post.*

The proposed social and fraternal alliance with the Associated Dailies of Connecticut was discussed at considerable length. The proposition was that while the two should retain their identity as separate organizations so far as board of officers and business is concerned, they should hold meetings on the same date and in the same place, but should

join hands at luncheon and dinners, and in the presentation and discussion of papers and other literary features following their business meetings, and that the annual banquets should be under their joint auspices. A committee made up of President Barnes, George C. Woodruff and Everett G. Hill of the New Haven *Register* was appointed to confer concerning the proposition with a similar committee from the dailies.

At the same time that the Editorial Association was in session the Associated Dailies held a special meeting in another room of the hotel, solely for the purpose of considering the proposed alliance. A committee was appointed, composed of William J. Pape of the Waterbury *Republican,* F. W. Bolander of the Bridgepost *Post,* and Alexander Troup of the New Haven *Union,* and the two committees met, and afterward reported favorably on the matter. The Editorial Association passed a resolution accepting the report and appointing the president and secretary a committee to act with the same officials of the dailies to arrange future programs. The dailies' committee decided to report at the March meeting a recommendation that the by-laws of that organization be changed so that stated meetings shall be held on the same date as those provided for by the laws of the Editorial Association, which are in January, April, July and October.

THE BANQUET.

The banquet was held in the large dining-room of the hotel.

EDUCATORS, MINISTERS, MANUFACTURERS AND EDITORS FRATERNIZE AND BREAK BREAD TOGETHER.

There were three speakers on the toast list and as many more who responded to invitations to speak. At the speakers' table were President Barnes, Arthur Reed Kimball of the Waterbury *American,* the toastmaster; Dr. St. Clair McKelway of the Brooklyn *Eagle,* the Rev. Francis T. Brown, pastor of the First Methodist Church of New Haven; Professor John S. Schwab, librarian of Yale University; Charles Hopkins Clark, editor of the Hartford *Courant;* the Hon. Charles F. Brooker of Ansonia, president of the American Brass Co.; Professor Henry W. Farnam, professor of political economy at Yale; James M. Emerson of the Ansonia *Sentinel,* and Elwood S. Ela, secretary and treasurer of the Connecticut Editorial Association. At the other tables were men representing all grades of newspaper work, the editors and great moguls of numerous Connecticut weeklies and their helpers, and the editors and managers and reporters of leading dailies, not forgetting Mr. Myers, the manager of the Associated Press.

President Barnes made a pleasing address, and also read a letter from President-elect William Howard Taft to the effect that he had found it impossible to come to New Haven to attend the meeting of the trustees of Yale University, but had he done so he would have considered it a privilege to be present with the editors, if only for a few moments.

The Rev. Francis T. Brown was the first speaker. He spoke on the press, "As a Clergyman Sees It," and was given hearty applause at the finish.

Dr. McKelway responded to the toast, "Voices from the Past." It had to do principally with recollections of Horace Greeley, Henry W. Raymond, Charles A. Dana, James Gordon Bennett, and other great New York editors, now passed away, of about the period of Lincoln's first term as president, and was interesting and edifying. It is printed in full elsewhere in this issue of the NATIONAL PRINTER-JOURNALIST.

Professor Schwab spoke on, "The Newspaper Reader versus the Newspaper Writer." His address was witty and humorous at times and at others in a serious vein.

Frank Parsons, business manager of the Rutland, Vt., *Herald,* who some time ago was engaged on New Haven and Waterbury papers, related some amusing incidents in his career. Mr. Main of the Springfield *Republican,* spoke for Massachusetts. Colonel Norris G. Osborn of the *Journal-Courier,* entertained the company in his usual happy style, and ended with a brief disucssion of legislative problems, forceful and convincing.

COURSE OF READING AND STUDY FOR NEWSPAPER MAKERS

ADOPTED AT THE CONVENTION OF THE NATIONAL EDITORIAL ASSOCIATION, GALVESTON, TEXAS, 1906.

(Reprinted from Proceedings by Request.)

FOURTH DAY'S SESSION.

The Convention was called to order at 9:30 o'clock by President Thomas, with a good attendance.

Past President B. B. Herbert presented a proposed course of reading for newspaper editors and writers as follows:

FIRST YEAR

(1) First quarter: Read Parton's Life of Benjamin Franklin and prepare a disquisition on Franklin's methods and work as a newspaper maker and publisher. (2) White's Every-day English and Words and Their Uses, with brief reviews of the same. (3) Taylor's Origin and Growth of the English Constitution.

Second quarter: (1) Life of Horace Greeley, with Essay on his Ideals of an Editor. (2) English and American Literature, with special study of character and style of narrative of Shakspeare; reading King Lear, Richard III., Julius Caesar and Hamlet, with brief reviews of same. (3) Study Washington's Farewell Address to American People, Emerson's Future of the Republic and Shea's Nature and Form of the American Government.

Third quarter: (1) Life of George D. Prentice, with paper on his Times and Writings. (2) Study of Journalistic Methods—the selection of general and State news, the character and preparation of locals. (3) Landon's Constitutional History of the Government of the United States.

Fourth quarter: (1) Life of Ralph Waldo Emerson, with paper on his writings and teachings. (2) Editorial writing, with comments on current events. (3) Municipal Government, Sanitation, Drainage, Street Improvements, Methods of Village and City Adornment.

SECOND YEAR

First quarter: (1) Biography of John Greenleay Whittier, with essay on his writings, including notes as to style. (2) Reporting, interviewing and condensation or abbreviation of articles. (3) McCleary's Studies in Civics—read from American Commonwealth Series, History and Constitution of Editor's Own State.

Second quarter: (1) Life of William Cullen Bryant, with disquisition on his editorial work, writings and addresses. (2) Newspaper departments; their conduct, arrangement and limitations. (3) The American Public School System—Life of Horace Mann.

Third quarter: (1) Life of Washington Irving, with review of Irving's life of Washington. (2) Starting a newspaper, with requirements for its success. (3) Industrial education—Schools for Destitute and Neglected Children and other saving, reformatory and eleemosynary and punitive institutions.

Fourth quarter: (1) Life and newspaper theories and methods of Charles A. Dana, editor of the New York Sun, with review of his lectures on Newspaper Making. (2) Business management of newspapers. (3) Study of existing social conditions—wealth and poverty—pauperism and crime, with relation of the newspaper thereto.

THIRD YEAR.

First quarter (1) History and Philosophy of American Journalism. (2) Life, Character and Work of Henry W. Grady. (3) The advertising department, practically and ethically considered. (4) Study of monetary institutions, needs of publicity as to financial standing and the relation of the press thereto.

Second quarter: (1) The Mechanical Department. (2) Newspaper circulation. (3) History of the United States financial legislation, with theories of taxation, money and finance. (4) History of industrial development, with disquisition on the influence exerted by the same on civic and social conditions.

Third quarter: (1) Newspaper legislation and the law of libel and contempt of court. (2) The proper treatment of economic questions, with a study of the theories and the relations and mutual obligations of employes and employers —the system of wages, profit-sharing, co-operation and hours of work. (3) Public office, public credit and civil service, with history of theories regarding the same.

Fourth quarter: (1) Relation of the newspaper to political parties, to candidates for public office and to the public. (2) Economic history of the United States and Europe, with the possible influence of the press on future economic conditions. (3) Newspaper ethics. Shea's American Government, founded on the Christian Religion.

Exposition of the Sermon on the Mount, with relation of the principles taught therein to present social and civic conditions and the duty of newspapers toward each other and the public.

Mr. R. M. White, of Missouri, offered the following resolutions, which, on motion, were adopted by a unanimous vote:

Resolved, by the National Editorial Association, in session at Galveston, That the course of study presented by Past President B. B. Herbert be accepted and adopted as a general outline of work.

Resolved, That the Past Presidents of the association be constituted a standing commitee to revise and perfect the course and have full power to put it into practical execution, provided it be done without cost to the association.

Resolved, That three Past Presidents constitute a quorum for transacting of business connected with this work.

"BETTER AND BETTER."

PLATTEVILLE, WIS., Feb. 10, 1909.

MY DEAR HERBERT:—Enclosed please find draft for $2.00 to pay my subscription to the JOURNALIST from January, 1909, to 1910.

I have been with you a long time—ever since you started to publish the JOURNALIST—and I like it better and better as the years go by.

I wish you all kinds of success. Mrs. Rindlaub joins me in very kind regards to yourself and Mrs. Herbert.

Sincerely yours, M. P. RINDLAUB.

DERIVED A GREAT DEAL OF BENEFIT.

THE KEYSTONE-PRESS,
STREATOR, ILL., Feb. 11, 1909.

Pub. National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed find express money order for renewal of my subscription to your valued publication.

I have been a subscriber to the N. P.-J. for a number of years, and I desire to here state that I have derived a great deal of benefit from its pages. "It's a good thing,"—and I take pleasure in adding my mite in pushing a good thing along.

Wishing you every success possible, I beg to remain,

Yours respectfully, L. WIETLISPACH.

THE LINCOLN CENTENNIAL ENDOWMENT FUND

WHY EVERY PATRIORIC AMERICAN SHOULD BE INTERESTED IN THIS FITTING MEMORIAL.

(From the *Mountain Herald.*)

SOME REASONS WHY

I BELIEVE in Lincoln Memorial University. I believe in its object. I believe in its methods. I believe in the men who have made it what it is and whose purpose it is to promote in a special way its interests at this time. I am glad to give a reason for the faith that is in me in regard to these things.

WHY A LINCOLN MEMORIAL UNIVERSITY.

Because every American owes a debt to the great President, and an opportunity is offered through the Lincoln Memorial University to honor the name of Lincoln in a peculiraly appropriate way. A sufficient endowment is needed to secure for the coming years the usefulness of the institution that now bears his name and has already proven its work, and because the boys and girls reached by the institution are of that same mountain people that gave us the priceless blessing of our martyr President, Abraham Lincoln.

SECOND—Because the location is as near ideal as a location could be. On the slopes of the mountain at Cumberland Gap, looking down toward the fertile Powell's Valley, with the magnificent estate, including fertile lowland fields and sloping pastures, thus offering a field for work to the students and producing food and supplies for their use. Because the buildings already there and the money already invested give the best possible guarantee for the continuance of the work.

THIRD—Because General O. O. Howard, last of our great Army Commanders, has concentrated the best days of his life to the promotion of this great enterprise, and because he and the men who are associated with him are deserving of every confidence and the hearty co-operation of all who have the interests of the Southern Mountaineers at heart.

AND FINALLY—For the reason that I have visited the University and seen with my own eyes and "seeing is believing." For these and many other reasons I believe that Lincoln Memorial University ought to have the generous support that it asks, and be prominently given a permanent endowment, thus making this one hundredth anniversary of the birth of Abraham Lincoln serve the present and pressing needs of the institution which bears his name.

(Signed) JOHN S. ALLEN,
Pastor for Strangers, Marble Collegiate Church.
NEW YORK CITY, January 9, 1909.

The sum of $500,000 is desired to establish this National Memorial to Lincoln. Several thousand dollars have already been subscribed, and paid in. Send all checks to

ALEX. S. WEBB, JR.,
Lincoln Trust Co., New York City.

—o—

Lincoln Fund is Increasing.

Contributions From New England States Are Expected to Reach Total of $100,000.

The progress of the Lincoln Centennial Endowment Committee, in its efforts to raise $500,000 for Lincoln Memorial University, located at Cumberland Gap, Tenn., was made public at a meeting held at the International Banking Corporation's offices, at 60 Wall Street. A record of progress already made and plans for the future were embodied in a report read by Gen. O. O. Howard and approved by the committee.

The report stated that arrangements for the work of gathering subscriptions have been completed in Philadelphia, Pitts-

burg, Cincinnati, Cleveland, Detroit and Chicago, while some members of a committee appointed at Boston to prosecute the work in New England have estimated that New England's contribution to the fund will reach the $100,000 mark. Other cities, the report said, have promised to give a benefit and to make an organized campaign for contributions, while the agent of the committee will visit several more large cities for the purpose of organizing the work in them.

The directors of the Metropolitan Opera House have placed the house at the disposal of the committee for a Lincoln Memorial benefit, to be held on the afternoon of Feb. 9. Miss Ida M. Tarbell, who has written a life of Lincoln, will read a paper on Lincoln. Mark Twain has been asked to preside, while Mme. Nordica and other opera stars have been asked to sing.

Following is an extract from a letter received from Elihu Root:

DEPARTMENT OF STATE, WASHINGTON, Jan. 18, 1909.

"MY DEAR GEN. HOWARD:—As to the Lincoln Centennial Endowment Commitee, I assume that under the circumstances of my engagements in Washington, you would not expect me to really attend the meetings of the committee. With this understanding, if you think it would be of service, I will gladly become a member of the committee, and you may put me down for a subscription of $1,000. I beg you to believe, my dear general, that I most heartily sympathize with the noble work in which you are engaged and feel deep gratitude to you for your self-devotion. I am glad to be associated with you in so good a cause.

"I have shown your letters and the circular regarding the university to Mr. Robert Bacon, the assistant secretary of state, and he authorizes me to say to you that he would be very glad to help in the same cause and you may, if you choose, put his name down for $1,000. I think it would be useful also for you to add him to the committee. Faithfully yours, ELIHU ROOT."

THE BEST LINCOLN MEMORIAL.

All know the story of Abraham Lincoln's youth, and what a struggle it was with the hardships of the pioneer and with a poverty far worse than any condition known by the same name to-day.

To do for what was peculiarly Lincoln's people, as respects social condition and educational opportunities, what he would have been most thankful for then—that is the opportunity.

These present representatives of Lincoln's people are the dwellers in the mountains of Kentucky and Tennessee—the descendants of what were the pioneers in the winning of the West along the first road that was opened for the march that has reached to the Pacific and beyond.

Some twelve years ago there was founded near Cumberland Gap, the first gateway to the West, a school for those of Lincoln's people who had paused in the mountains instead of pressing on to the plains, and whom a change in trade routes that began in Lincoln's youth has left in an eddy of the stream of progress.

This school was planned as a memorial to Lincoln and bears his name. It has done good work for the mountain youth. It has had some support, as is shown by its 600 acres of land, buildings valued at $150,000, and a funded endowment of $100,000. But it cannot meet half the demands on it.

Gen. O. O. Howard, almost the last of the officers of high rank in the armies that Lincoln called to save the Union, is appealing to the country an endowment adequate to provide for this peculiarly appropriate memorial to Lincoln.

Productive funds of at least $500,000 are needed to enable the Lincoln Memorial University to occupy its field and teach the youth who knock at its doors. It is hoped to have this sum in hand on or before February 12, 1910.

A number of prominent citizens of New York City have organized to help Gen. Howard to raise this fund. The honor of raising it should not be left to the East. The gifts should come from all the nation, for, though those to be aided were peculiarly Lincoln's people in his youth, the heights to which he climbed made him dear to all Americans.

—Chicago Inter Ocean.

ITEMS OF INTEREST

J. M. Galusha, for twenty years manager of the Western Newspaper Union of Des Moines, and probably as well known to Iowa newspaper men as any man in Iowa, has been forced to resign because of ill health. Mr. Galusha spent a large part of the fall and summer in the west and returned to Des Moines hoping that he would be able to continue his duties but finds it impossible. It is probable he will remove from Iowa permanently. L. N. Russell has succeeded Mr. Galusha as manager of the Western Newspaper Union. Mr. Russell has been assistant manager for the past three years and is well known to newspaper men in Iowa.

The Chicago Advertising Association held a Lincoln centennial dinner at which Major General Frederick D. Grant gave "Personal Reminiscences of Abraham Lincoln."

One of the most original and unique literary and musical entertainments ever presented in Elgin, Ill., was given by members of the Elgin Press Club. The program, consisting of between 12 and 15 numbers, was presented at the Elgin Opera House, Friday evening, Feb. 26. Among the speakers were some of the best known newspaper and professional men in Chicago, while well known musicians contributed vocal and instrumental selections.

The DuPage County, Ill., *News,* published at Wheaton, has changed hands, Henry W. Curtis of Vermontville, Mich., purchasing the plant. Mr. Curtis is proprietor of the Vermontville *Echo,* his wife being in charge of that publication.

Willard E. Holt, for seventeen years of the Bellevue, Mich., *Gazette,* and recently president of the Michigan and National Associations of Postmasters, has sold his paper to George A. Barnes, formerly editor of the Howell *Republican.*

Leigh Harris, formerly Advertising Manager the *Journal,* Peoria, Ill., has bought the *Evening Journal,* Henderson, Ky., C. M. Palmer negotiated the sale.

The secession style of decoration, to which the American Type Founders Company's Art-tile Tint Formers are admirably adapted, is shown in the advertisement of the Boston Wire Stitcher, printed on another page.

The Pittston (Pa.) Daily Gazette will shortly move into a fine new building which is being erected by the publisher, William J. Peck, solely for the Gazette newspaper and printery. Being located on a corner with an alley at the side and also at the rear and with large skylights over the composing room, abundance of light is assured and every convenience of building and equipment will be provided.

The Gazette is the only newspaper published in Pittston; was founded in 1850 and conducted for many years by the late Hon. Theo. Hart, who died in 1901.

The increased facilities will result in a great improvement in the Daily Gazette.

THE STRENUOUS LIFE OF THE REPORTER

NOTIONS entertained by many as to the easy life of the newspaper man are frequently amusing to members of the craft and the communication by a young man wanting a position as a reporter, just to fill out unemployed time, brought home to the Jamestown, N. Y., *Evening Journal* some thoughts as to what really constitutes the daily routine work of a reporter on a live evening daily, that sets out to miss no item of local news in its field. The description of the duties required are of no small educative value, and as the application and reply have an entertaining and humorous side, not very frequently found in a technical journal, but justifiable in the present case, we reprint the same in full as follows:

The Newspaper Reporter.

I saw in The Journal a day or two ago that one of your reporters has gone to another city. I would like to apply for his position. I have work now that only partly keeps me busy and I'm sure that in addition to what I now do I can say without exaggeration that I could fill the duties of reporter to perfection.

Very truly yours,

JAMESTOWN, N. Y., February 6, 1909.

MY DEAR YOUNG FRIEND:—If you have not sufficient work to keep you busy now you do well to apply for the position of a newspaper reporter. You would find sufficient work to satisfy the most ravenous appetite for labor. But you could hardly continue your present occupation and "withot exaggeration fill the duties of reporter to perfection."

You would be required to report at the office not later than half past seven in the morning, and a half hour earlier than that would be better. Immediately on duty you would be sent to one part of the city to get the report of a death, to another section for a social gathering, and sill another for a wedding, always getting back in time to run down to the station for the arrival and departure of trains to get personals of those who are going away or coming home. Then there may be an important committee meeting in some church, an accident at the boat-landing, a fire on Willard street, a noon wedding on Buffalo street or someone injured while coasting on Barrett avenue, you must hurry around to these places and return to the office between times to write out your story and get it into the hands of the printers to put into type for the paper.

At 4 o'clock the paper goes to press, but your duties have already begun for the next day's issue. A park expert, an electrical engineer, some man distinguished in one calling or another is in the city. You must interview him, getting his views on matters that will be of special interest to the people of this city; plans have been received for a new factory; you must see the management and get the story; a rumor comes to the office that land has been sold for a new industry, you must find out whether it is true or false; here comes a report that the Chautauqua lake company, the Chautauqua steamboat company, the traction lines or the street railway has been sold, you must find out about it, fully realizing that it is doubtless a false rumor, but the possibility of truth compels an investigation, however often such rumors are started.

Then you think of an evening's rest, an hour or two with friends at some social gathering, or still better from your point of view an evening with one friend, but the city editor informs you that there is a lecture or a concert to report, a skating race at the rink, a wrestling match, or a poverty party; you must cover at least one of these, probably two, and possibly three before you go home that night. After you have fallen into a sleep of complete exhaustion the fire bell rings and you must hustle to the scene of the fire wherever it may be, and after the fire is out find the owners of the property and learn of the losses and insurance. If the fire is very disastrous it means a big story, and instead of going back to bed you must come to the office and write it up so as to get that out of the way for the routine of the next day.

How do you like your first day's work? That sort of thing is continued day after day, with little variation. But there are three holidays in the year when the paper is not published, and you can look forward to them—the Fourth of July, Thanksgiving and Christmas. On the Fourth you want to go with the young people to Panama Rocks, but the city editor tells you that would never do; there's a big celebration at Coloron that must be reported, or it may be an old-fashioned Fourth at Frewsburg, a baseball game at Falconer or a cricket match at Levant. All of these things must be looked after before you think of Panama Rocks, or Chautauqua or the Stillwater.

And in all of this work you'll meet an uncertain number of persons whose genuine boorishness sticks right through what they consider a well polished veneer, who would snub you and insult you if they could—but after a time you will not care anything about that, for you will meet so many genuine men and women whose friendship you value and hold as long as life lasts, and you have so many opportunities to do the things that will advance the interests of the city in which you live and labor, and you will have learned so many things about so many men and women which you never think of printing, that the intended rebuff misses its mark entirely and you simply add another name to your mental list of lisagreeable people whose cultivation may be a duty but could never become a pleasure.

My dear young friend these are only the outlines of the reporter's duty, if you want to take up the work come in and we'll talk freely over the details.

THE EDITOR.

INVALUABLE IN HIS WORK.

BUHL, IDAHO, January 7, 1909.

National Printer-Journalist, Chicago, Illinois.

GENTLEMEN:—Inclosed herewith find two dollars ($2.00) to pay my subscription to the PRINTER-JOURNALIST from January 1st, 1909 to January 1st 1910.

I find the PRINTER-JOURNALIST invaluable in my work. With kindest wishes, I am, Very truly yours,

J. WARREN WHITE.

Robert W. Patterson was re-elected president of the Chicago *Tribune*, Company at a meeting of the stockholders and Joseph Medill Patterson, author of "The Little Brother of the Rich," was elected secretary, to succeed Medill McCormick, who relinquishes that post and also the office of treasurer, which was given to Robert R. McCormick. Medill McCormick remains as first vice president, and the office of second vice president was created for James Keeley, who has been acting as vice-president in the absence of Mr. McCormick. E. H. Huntington was re-elected as assistant to the secretary and treasurer, and William G. Beale continues as chairman of the executive committee. The board of directors consists of Azariah T. Gault, chairman; Robert W. Patterson, William G. Beale, Alfred Cowles and Medill McCormick.

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

THE giving of premiums as an impetus to the extension of circulation is, I am aware, a practice ardently advocated and supported by some so-called successful newspaper men. But it never struck me as a desirable thing for the permanently located. For the speculator—the journalistic grafter—it might be appropriately and safely recommended; for he is in a field for the time being only. Today he is here and wants a copius circulation—a long legitimate list as a mark of growth and special inducement to the unsuspecting prospective purchaser. Tomorrow he hopes to be in fresh pastures booming another speculation.

But such journalists (?) do not add much to the respectability of the calling. Nor do their long lists of subscribers thus obtained endure for long; because, as a rule, subscribers thus secured do not care for the paper, but were persuaded to take it through the human weakness common to many of us, to want to get something for nothing. In nine of such cases out of ten the people buy the premium and accept the paper with it; or, a better way of putting it would be to say that they submit to the regular visits of the publication merely in order to possess the article that goes with it free.

In summing up, then, it follows naturally enough that newspapers that are sufficiently good to sell on their own merits do not require the additional inducement of a premium offer, and papers that are not good enough to sell readily on their own merits are of a class that ought not to be inflicted on a long suffering public under any circumstances.

The first thing I pick up this month is a copy of the Covington, Tennessee, *Leader*, whose mechanical department is looked after by that veritable ad-genius, Tom McGregor, the author of that remarkable "star" advertisement shown in this department of last August. It is an extremely neat paper mechanically, and a good one as regards contents and editorial work. It is an all-home-printed six-column quarto, with such an abundance of advertising patronage that it is thought

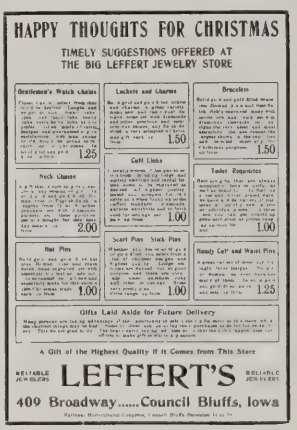
No. 1

necessary to run three columns of the front page filled with displayed matter. There is system in the mechanical arrangement of the pages, though that system is not fully in accord with the recommendations of this department, differing only in the respect of giving the larger spaces top of column instead of vice versa. The ads in the main are tastefully wrought, as may be seen by the specimen shown herewith, which is one of the few almost faultless pieces of composition that has come to my notice. (Exhibit No. 1.) The *Leader* makers are to be congratulated in their fine selection of reading matter, their dignified and copious department of editorial comment, and the general high quality of their paper throughout.

An exceptionally newsy and wide-awake paper is the Mills County *Tribune* of Glenwood, Iowa, a twice-a-week publication, I take it, of four six-columned home-



No. 2

printed pages. I have admired the editorial and reportorial labors as evidenced in its columns, likewise its clean print and uniform typographical styles. The DeVinne series is employed almost exclusively throughout, and the three quarter-page advertisements,

No. 3

No. 4

which accompany this paragraph, demonstrate beyond cavil the perfection of this grand old tried and true letter for advertisement work, as well as the fine skill of the compositor.

The next reproduction is a page advertisement taken from a late copy of the Shawano County *Advocate*, of Shawano, Wisconsin. With the exception of the first line, one would have to be that which is known in the

vernacular of modern slang as a "sore-head" to find serious fault with this big specimen. It shows care-

ful and intelligent workmanship throughout. (Exhibit 5.)

I have taken just occasion before—and not long before, either — to praise some product of the Sparta, Wisconsin, *Democrat* office, and here (Exhibit 6) again is an advertisement—a great big double-pager—

that fully bears me out in anything nice I may have been moved to say then or now. From all that I have seen emanating from this shop of the *Democrat,* I am fully persuaded that it is a strictly modern office, with a mechanical force, some of whom at least (the ad-man, for instance) are perfectly worthy to work in such an office. The very imprint of this high grade shop itself, as seen at the bottom of this big specimen, is a unique idea. It reads, "The *Democrat,* of course." It is a rare pleasure to get such reminders that all men have not taken up the printing business in vain. The original of this reproduction was printed in tow colors—red and black.

I have seen some horrible things in the way of newspapers during my experience as a newspaper critic, but that which exceeds everything else ever witnessed possibly, is the *Monthly Visitor,* which hails from Winchester, Ohio. Because its name is the *Monthly Visitor* you must not conclude that it is a magazine, for it in nowise resembles anything in style, shape or contents other than an ordinary—very ordinary—country newspaper. The typography is so frightful, that I shall spare my readers' nerves by keeping all reproductions of it out of these columns, and the print throughout is so unreadable, through the use of worn-out type and bad presswork, that I doubt if any specimen from its pages would be reproducible if I were disposed to attempt it. A man of ordinary experience would be hard to convince that such newspapers as this one actually exist in this great country of great newspapers.

I would not have to read the date line in order to know that the Santa Anna *Daily Register* is a western product. There's something about the typical western newspaper that is distinctive. I ask you to study the front page reproduction (Exhibit 7) of the

Register, and see if you don't understand. Note those deep, breezy pyramids, followed by the many decks,

in a seeming attempt to fill space and tell all the story—for the western reader, like the western printer, is leading an extremely strenuous existence—one that goes with a rush-slap-bang from the beginning to the end of the union-limit day—and if he, the reader, can get all of the story in the head, so much the better—likewise, so much the better for the printer. Laying all jokes aside, however, the Santa Anna *Register* is a bright young daily, with an exceptionally complete local news-service, considering the state as the generally accepted local field of a western daily newspaper of the *Register's* class. All local stories are well written and the editorial columns are both caustic and conservative as the varied subjects necessitate. Santa Anna is according this representative of its best interests with a fitting and liberal support, with the result that its inner pages are dotted with many ads—and I use the hackneyed expression, "dotted," judiciously, since the *Register*, like almost any other of the lesser dailies in the world, has not yet attained that degree of affluence and authority where they think they can afford to dictate a little in respect to the making up of their pages.

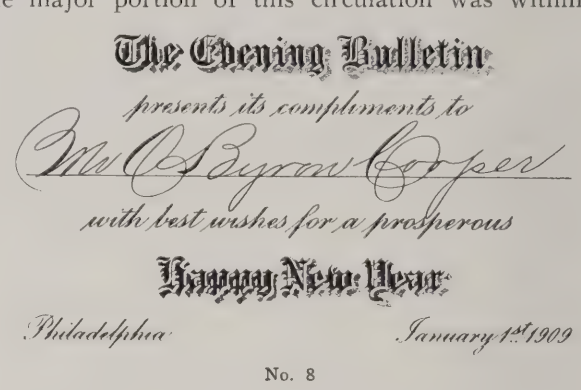
In exhibit 8, I show the beautifully engraved New Year greetings received in proper time, (even though this acknowledgement comes belated) from the *Evening Bulletin* of Philadelphia. Along about the same time came a copy of the *Bulletin*—that copy for 1909 in which the circulation manager made his annual report of the conditions in his department for the year closed. This report to its readers has become a regular annual feature of the *Bulletin*, and is a commendable one. The report for 1908, shows that the aggregate number of copies sold for 312 days was 75,128,741, and the net average daily sales, 240,797 copies. This remarkable record, with the exception of the sales of the same paper the year before, is the greatest in Philadelphia journalism, and forsooth is surpassed only by that of Chicago and New York publications, and only when the depressing condition of the past year are taken into account can this achievement of the Philadelphia *Bulletin* be fully appreciated. The major portion of this circulation was within a radius of twenty miles of the *Bulletin* office. I have said briefly above that this practice of annually reporting the circulation of a paper is a commendable one for daily papers (as it is indeed good for weeklies, too) and this is so because, as the *Bulletin* so clearly explains it editorially, "not as a thing of boast, but as a matter of legitimate concern to the advertising public in particular and also of interest or information to its readers."



The Evening Bulletin

presents its compliments to

Mr. O. Byron Copper

with best wishes for a prosperous

Happy New Year

Philadelphia January 1st 1909

No. 8

ST. MARYS, KANSAS, January 10, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending two of the latest ads I have set, for criticism. I am at present foreman on the St. Mary's *Eagle-Journal*. I will likewise send you several copies of the paper, since I have been connected with it.

Fraternally yours, JOHN F. MCKELNEY.

Both of the ad specimens submitted by this contributor and referred to in the foregoing letter, are quite neat, but neither of them are in the least striking or remarkable for strength, novelty or beauty. The real estate and insurance specimen is entirely too weak. It would have been a little better with the firm name set in eighteen-point Jensen (upper and lower) the same as the line following it; and with the line giving the location in say ten-point Jensen, to make it a shade blacker, and thus giving it greater strength. The whiting out of this ad is its redeeming feature, that being nigh perfect, with the exception that too much space intervenes between the first two lines. In the Erbacher ad, while the face employed in the display is of an extremely black family, nevertheless, for a specimen of this size, the main display is in too small a face, which gives a headless, forceless aspect. Possibly by having set the word, "The," in upper and lower, the signature could have been gotten into a single line, which would have been preferable anyway, and then by running the matter under the head, "Furs at ¼ Off," all in one paragraph, enough space might have been gained to admit of setting the principal display something like this:

CLEARANCE SALE
OF CLOAKS AND FURS

IN TYPE LARGE ENOUGH to make full lines without too much inter-spacing of letters. The *Eagle Journal*, representing a consolidation of two papers, is a cunning little four-column all-home-printed quarto. I don't admire its heading at all, much less the rather haphazzard manner in which its pages are mechanically arranged, but it is a newsy little sheet and possesses an editorial department that sparkles with much

wit and witticism and good hard common sense. Presswork is creditable.

The American Type Founders Company have decided to continue the publication of the *American Advertiser* as a regular feature in their efforts to promote sales and promulgate ideas and information concerning American Line Type. I unfortunately did not receive a copy of the initial issue of this interesting publication, or possibly I overlooked it—but I am glad this No. 2 did not escape me. In exhibit 9 I reproduce the upper portion of the first page. The lower portion wasn't so good, so I cut it off. I had occasion to criticise Barnhart Bros. & Spindler's paper a month or two ago, and I believe that I marvelled then that a better result were not achieved, and while the American Company has come a notch or two nearer the mark of perfection with their *Advertiser,* I still am marvel-

VOL. I. NO. 2. CHICAGO, JANUARY, 1909 SET IN THE CENTURY FAMILY FACES THE POPULAR NEWSPAPER TYPE

THE AMERICAN ADVERTISER

AMERICAN TYPE FOUNDERS COMPANY PUBLISHER

JANUARY, 1909.

The reception given the first issue of *The American Advertiser* has been so gratifying that we cannot refrain from expressing our appreciation thereof.

It is the aim of the American Type Founders Company to give the printer the best of everything he needs. Our policy shall be the most liberal, our service the most prompt, and our dealings the most satisfactory of any concern in the world.

The name "American" stands for the best. We realize that we will have hard work to improve upon the reputation the Company has so justly earned, but shall not give up trying. It is our desire to teach the printing fraternity that the "American" is not only at the head, but will always remain at the head, as the largest and best Printers' Supply House in the World. To prove this statement just drop into our Chicago house the next time you are in Chicago, see what we have, how we do business, and when you leave you will know the "American" to be the concern you want to do business with.

New additions are being made to our store, our show-room is being enlarged, our machines for exhibition purposes are being put under power, so that a prospective purchaser can see just what kind of a machine he wants and how it is operated, without running all over Chicago to see them in operation.

Our Want Column has proven so useful and successful that we believe it will become a perma-

American Typographical Library and Museum

An Establishment of Note at Jersey City

The American Type Founders Company, in its general offices and foundry, 300 Communipaw Avenue, Jersey City, N. J., has established a Historical Library and Museum to preserve the memory of printers and their achievements and to illustrate the development and progress of printing in all periods, particularly in America.

This library is in a room 73x14 feet, under the care of a librarian, and additions are made almost daily. It is open to the public during all business hours. Its principal departments are:

Specimens of types used in all countries from the invention of printing to the present time.
Histories of printing and publishing.
Biographies of famous printers.
Books printed by famous printers of all periods in all countries.
Books of historic interest.
First issues of newspapers, magazines and books in all states of the Union.
Books relating to engraving, with examples of famous engravers.
Portraits and autographs of famous printers and type founders.
Medals relating to typography.
Curiosities of typography.
Books relating to paper making.
Specimens of commercial printing of all periods.
Collection of trade papers relating to printing in all languages from the earliest known to the present time.
Publications of printers' societies.
Text books of printing in all languages.

This Typographic Library and Museum is now open and available for visitors at all times. Any printers, publishers, or others interested in history and current typography will be welcome, and there is no doubt that the Library will prove intensely interesting to any one connected with the business.

The American Type Founders Company will be very glad to receive contributions of real interest to this Library, particularly objects of interest to printers, such as commemorate the anniversaries of old established businesses and memorials of printing houses and newspapers. In considering the advisability of an item for this collection, the question may be asked, whether it will not have an increased value of interest a century from this time if preserved in this collection.

The Chicago branch of the American

American Notes

Phone Franklin 1188.

Ask the American man.

American borders bring the orders.

Golding's machinery and material is carried in stock by us ready for immediate delivery.

The Peerless presses and Peerless Gem paper cutter are carried in stock by us. You ought to know about them and we'll be glad to tell you.

Our stock of rebuilt stitchers (all replaced by Bostons) must be reduced. Prices will be made with this in view. Look over the list elsewhere in this issue and write us.

The Cranston newspaper presses are finding favor with users who appreciate the effect of a well-printed paper. An attractive catalogue will be sent upon request to us.

Somebody is going to get a bargain in a used 33-inch Advance power cutter. This machine has been overhauled and is in good running order. Two knives are furnished with the machine. If interested let us hear from you.

Among the new tools for printers are:
Star composing sticks.
Page-Miehle fountain dividers
Rule locking quoins.
Non-explosive benzine cans.
These are all good ones—ask us about them.

Hart Springless Counter, made for Chandler & Price and Gailey Universal presses, will count only when the impression is made, and the non-explosive gasoline gas, which is "fool proof," are two new articles offered to the trade. Send for circulars.

One of our printer friends requested us the other day not to sell the Cheltenham type to his competitor. The series we had previously sold him brought in new business and elected much favorable comment and he did not wish his competitor to have the same ammunition. Here is another instance of the effectiveness of the greatest type family ever brought out.

If you have not seen the new American Brass Label Holder, we should very much like to send you sample. The labels are inserted through the opening in the top and are prevented from being soiled by a celluloid card. Incidentally, mention might be made of the fact that we furnish gratis, printed labels to fit above holders with every order for American Line type.

There have been numbers of attempts to put a vibrator roller on the Chandler & Price Gordon press. The Chandler & Price has a success in this line. The

Time Is Money

The "American Man" Makes a Few Remarks.

The average employing printer makes more ado about buying type than any other item connected with his business, when the fact of the matter is, type is the smallest expense, even though he purchase liberally, and keep his type up-to-date and plenty of it. Especially is this so in the smaller and medium sized towns. Not all of them, by any means, but it is true of a large proportion. Some are alive to the fact that plenty of good type saves time, and time is money. Not only is time saved, but much better and up-to-date work is turned out, which attracts attention and brings more business.

If a rush of work comes in, the proprietor thinks nothing of putting on another hand at an extra expense of $12.00 to $15.00 per week, whereas if he had plenty of good type the regular force could handle the work in good time and dispense with the extra man. Time is money.

Take for example one of the many old shops through the country owned and run by an old time printer, who in the days when he worked at the case, used all the different faces of type he could find in the office. Not so now. The compositor takes his copy and uses in many cases only one series of letter, and has the job ready for the press in about half the time it took in the old way, providing the cases are well supplied with good sized fonts in each. Now, here comes a customer to this old time printer with a big job to figure on. Of course he wants to secure the work, but has to figure against an up-to-date, progressive competitor, and has to figure close. Well, he makes a pretty low figure and gets the work. He takes the copy out to his foreman, and tells him the work must be gotten out by a certain time. The foreman is disgusted, for he knows that they cannot get out a decent piece of work with the type and facilities they have, and certainly not in the time allowed, and he says to the old man, "we can't do it. We haven't the type." "Type," the boss says, "why man alive, we have all kinds of type." And so they have, such as it is, all kinds of it, sure, but mostly back number faces, largely worn, battered down and low, and some fairly good. The fonts are all small, however, only single job fonts, and in most of the cases only a few letters left, all other type being tied up in standing jobs. They tackle the job, however, work hard and overtime, and finally, after much raking and scraping, and losing all kinds of time in hunting for and pulling sorts, the forms are sent to the pressroom. Here are more exasperating delays before it is made ready, in replacing broken and

I wish to mention a newspaper publisher in a Wisconsin town of about 3500 inhabitants, a good customer, who enjoys an unusually large advertising patronage from the local merchants and other business men. Calling upon him one day a few years ago, he said his advertising columns were being crowded to such an extent as to necessitate more display type, and selecting two of the popular American advertising faces, he placed his order for a complete series of each, putting in the medium sizes 25 and 50 pounds each. At another time, when calling upon him some eight or ten months later, he said: "I want to tell you I think that lot of advertising type I bought of you was the best investment in the way of buying that I have made since being in business, and I have saved the full cost already in time gained by my workmen. Now my men will set up a page "ad" or a big special sale bill in half the time they could before, and we get them up in city style, too, and more satisfactory to my patrons. We are not running out of letter and hunting around after sorts; there is always plenty of type in the cases." Surely time is money.

Another matter in connection with type buying which I consider important, is spaces and quads. Many offices keep a space and quad case, requiring the workmen distributing job letter to put all spaces and quads in this case, instead of the type cases, necessitating going to this case at all times to space out a line. In my opinion this is all wrong, and a great loss of time, both in distribution and composition. I would have in every job case in my shop a liberal supply of spaces and quads, in proportion to the size of the font, the same as body type. Why not? The cost is not much, and the saving in time of the workmen will very soon make up for it, and be a big gain in the end. Time is money.

Within the last few years there has been a complete revolution in the printing business, both in style and volume of demand. The American Type Founders Company is constantly placing before the printers most beautiful and artistic designs in both original type faces and ornaments, and the progressive job printers the country over are taking advantage of these and producing effects in printed matter that are We haven't the type." "Type," the boss says, "why man alive, we have all kinds of type." And so they have, such as it is, all kinds of it, sure, but mostly back number faces, largely worn, battered down and low, and some fairly good. The fonts are all small, however, only single job fonts, and in most of the cases only a few letters left, all other type being tied up in standing jobs. They tackle the job, however, work hard and overtime, and finally, after much raking and scraping, and losing all kinds of time in hunting for and pulling sorts, the forms are sent to the pressroom. Here are more exasperating delays before it is made ready, in replacing broken and

As Others See Us

What Joe Mitchell Chapple Knows About Type Founding.

The National Magazine is a widely-read publication and deserves all the good things that have been said about it. Its genial editor, Joe Mitchell Chapple, of more than national reputation and experience, invariably speaks with authority. In the December issue Mr. Chapple says:

Benjamin Franklin, when he gathered the material for his new printing office in Philadelphia, could not have felt more pleasure than I did when I unpacked my first "case," bought of Marder, Luse & Company, now the American Type Founders Company. That clean, neat case, with the "e" boxes in handy prominence, those bright, silvery letters, were a joy that can be understood by every printer.

Type founders have played the important part in developing the art preservative, and when one speaks of them the very first that comes to mind is the American Type Founders Company, the corporation founded on Marder, Luse & Company's business.

When the National Magazine proposed to print a daily paper, in connection with its exhibit at the New England Exposition, it needed only a short telephone message to the American Type Founders Company to secure, in a few hours, a complete printing equipment, installed in the place allotted for it. There were rules, quoins, and other mysteries of the compositor's equipment; there were slugs and galleys of which no printer thinks he can have enough—his impulse is to grab more at every opportunity.

The smooth imposing stone, new cabinets, ink sink, waste can and planer, everything installed was good of its kind and amply able to handle the work for the paper.

Since my initiation into a printing office, I don't think a week—certainly not a month—has elapsed without my getting something from the type foundry, that unfailing reservoir of the printer's materials. When the printer runs out of "sorts"—that is, certain letters—the American Type Founders Company are very popular people.

It might be supposed that the immense number and great variety of articles required to complete an equipment and keep the presses of the country busy, would exhaust the resources of any foundry, but the American Type Founders Company always aims at keeping in touch with printers and publishers, and thus accurately gauging consumption and supply.

The Chicago branch office of the American Type Founders Company, has the largest stock of type, presses, printers' wood goods and supplies in the world, and it is especially appropriate that their telephone number is "Franklin" 1188. No one can speak

No. 9

ling why these great founders with everything at their finger tips with which to make a perfect paper cannot come nearer doing it. But I must say there is little fault to consistently mention with reference to this *Advertiser* from the American Type Founders Company. There is just one I have noticed, and possibly I have been so shocked by that one flaw that I have missed others. The one that has held me so "entranced" is the antiquated, amateurish head-styles. How much more preferable—how much more esthetic and sightly would a full line of twelve-point caps followed by the upper-and-lower pyramid have looked! There is a very pretty print on this paper, however, and the title line is exquisite, including the dainty effect lent by the squibs at both ends and the date line—although I'm not sure that I would prefer this shade of head-rules—certainly not for advertising rules, as used in the sub-

head. There are some good things in this paper—things which the bright country printers receiving it can put to practical application in their own work. For instance that expression, "American borders bring the orders." And then, "You ought to know* * * and we'll be glad to tell you." This latter ought to mix well in almost any ad, of which the country publisher of a newspaper has not a few to write each week.

And now comes Friend Van V. Boyce, of the Dallas County *News,* Adel, Iowa, with this acknowledgement of my ability at surmising:

O. BYRON COPPER:—You were right about the ad. I sent it principally to settle a dispute here. It was the work of a printer who held foremanship here while I was out west. I had to reset the very same ad this week. See if I improved it any. I have followed several of your suggestions. Could not improve it much, because the *Leader* people absolutely refused to allow it. Said it was just the way they wanted it, and I had to let it go that way. I set the full page on Monday and half of Saturday. Then have made an extra run at home to keep from putting any ads on the first page. Give me a credit mark for that.

Yours, VAN V. BOYCE.

Truly the newspaper maker who will go to the extra trouble that Brother Boyce confesses above, to obviate the necessity of using a part of their front page space for displayed advertisements, is a man after my own heart, and deserves a long credit mark. While I have not now the original setting of this Leader ad for comparison with this setting of Friend Boyce's, it is not therefore possible to note every difference, but it is quite clear that a marked improvement has been wrought—so much forsooth, that I am not ashamed to devote this good space for its reproduction. (Exhibit 10.) The crowded effect and absence of leaders in the price lists, are about the chief defects noticed and re-

membered in the first setting and retained in this one. It is not by any means a first class piece of work yet, but a remarkable improvement over that of last year. But this statement from Mr. Boyce expresses what is

more times the cause of inferior work, than one unacquainted with the interior affairs of a print shop would think—"the man wanted it that way."

And here are two interesting letters from a new friend—one whom I hope may grow to be an "old one" of this department: The first of these letters was sent to Mr. Herbert at Chicago, who forwarded it to me together with the papers mentioned therein, and the last came direct to me sometime later. I am glad at this time to be able to offer them careful attention:

Wynnewood, Okla., November 20, 1908.

Dear Sir:—Enclosed please find check for $3 to cover subscription to your periodical.

Under another cover you are being sent two copies of the *New Era*—one when the undersigned bought the paper last March and the other when we enlarged to six columns. Our first page is not yet what we would like it, but those ads are under contracts and as this is a rum cotton year we don't care to monkey with advertisers. The editor has had no particular experience in the mechanical part of a newspaper. He used to be a reporter and before buying a country weekly worked in one shop for two or three months as devil to learn something of the business, aside from editorial work.

What do you think of the sheet and can you give us any suggestions? Thanks,

The Wynnewood New Era.

National Printer-Journalist, Chicago.

We worked as a reporter making a paper as other men wanted it. Now our aim, besides making a living, is to run a paper according to our ideas, not simply to make all the money possible.

January 26, 1909.

Dear Sir:—Just received the National Printer-Journalist for the current month. Your editor intimated last month that you might tell something about what you thought of the *New Era* since the writer purchased it last spring. We sent him copies of our first paper and our last (at the time) in November.

Now, I'm not looking for a write-up but would only like a little criticism. I expected it to be personal so enclosed a stamped envelope,—which I do again in the hope of a reply this time. The undersigned, as he wrote your editor, had always been a reporter on city dailies and had but a few week's experience as apprentice in a country shop before he purchased a weekly for himself.

My ideas on make-up are probably not a printer's, as I'm not one of the craft, though I do occasionally set up a quick job when my foreman is away. So I'd like you to tell me what you think of the looks of the *New Era* nowadays. If you have not seen those copies I sent to your publication office we will forward you some more. Anyway, I'll be much obliged for anything you may say. Very truly yours,

Mr. O. Byron Copper, De Soto, Wis.

The Wynnewood New Era, L. E. Stoddard.

I like that expression of Brother Stoddard's: "Now, our aim, besides making a living, is to run a paper according to our ideas, not simply to make all the money possible." It expresses the ideal spirit—the spirit which is so scarce in modern newspaper makers—the spirit this department has ever endeavored to inculcate in the minds of its readers. The principal change which Mr. Stoddard has made in the Wynnewood *New Era* since he became its possessor, is to enlarge the size of the pages from five-column to regulation six-column size, and to reduce their number from twelve to eight pages, thus eliminating entirely the ready-print feature. If anything, as pertains to typography, the *New Era* was a little better under the former management than at present—but that is no compliment to either, for in both cases the typography is bad, very bad. It is plainly to be seen that Mr. Stoddard is a good writer and a good news gatherer, and it is to be regretted that he is not equally as well versed in the mechanical departments, else that he is not able to secure the services of some one who is. It is a tedious task, indeed, to set out with a paper so entirely gone wrong as this one, and definitely and thoroughly point out the defects and recommend the proper remedy in each, but since that is one of the first objects of this department I have determined in this case at least to tackle it:

Beginning with the first page: The "squibs" at both ends of the title line are unsightly and unsymmetrical. Reset them within neat rule boxes, for instance, in an eight or ten-point face. Banish all displayed advertisements, if possible; but if considered so impossible that the effort at their elimination will not be made, then, at least, make them up according to accepted typographical propriety, which, being plain, is to relegate them to the right hand side of the page, the larger ads to the bottom, and smaller ones to the top. Make up the reading matter with a careful eye to balance. Choose a series of headings, if desired, (although a great variety of headings is not to be recommended for too free use in ordinary country weeklies) but by all means choose caps for the first line. After the head-letters have been chosen, the editor should acquaint himself with the number of words and letters required for lines of the desired length, whereupon head-writing becomes—not always easy, as I was about to say—but accurate. And the man who writes the heads should always have in mind the makeup of the paper (which is easily possible on small weekly papers) in order to achieve best results. If cuts are used, as in the example before me, they should be grouped attractively and with a view to symetry—cuts in a rigid row across a page-top cannot help looking stiff and inartistic. All other pages of a paper should be made up according to the simple rule laid down in this case for the first page. Shove all advertisements to the right hand side, starting at the bottom with the largest specimen and topping out with the smallest, as thus in ordinary cases each advertiser is given a position

next to pure reading matter, as I have a hundred times explained in past installments of this department. It is not possible in a few words to teach a man the art of advertisement composition. I wish it were, for the ad compositor on this *New Era* needs instruction. Nor is it possible to say in all cases from an inspection of the paper alone why the impression and the print is not good. I wish it were, so that I might put the *New Era* force next to their troubles. In truth, it is hardly possible in a single review to inform a contributor along all the lines in which he needs information, but every criticism in this department of the NATIONAL PRINTER-JOURNALIST is written quite as much for every reader of the magazine as for the one man who writes for advice, and therefore he who is wise and awake can surely get instruction from a careful watch of each review. ,

A booklet well calculated to delight the eye of him who appreciates pretty things in typography is Barnhart Bros. & Spindler's late pamphlet displaying their popular Adstyle series. The series makes a strong letter for the printer, especially the ad-compositor, for whom particularly it must have been designed.

A fine, bright, snappy, enterprising publication is the evening *Herald* of Missoula, Montana, which on the first of the year issued a mammoth "booster edition" I would call it, of thirty-two full-sized pages, profusely and nicely illustrated, and containing an extraordinary abundance of matter intended to boost Missoula and Montana skywards. The *Herald* main-

tains about as neat and about as modest typographical styles as any of the lesser dailies hailing from that section of the earth, and her typography throughout is about as admirable as anything I have reviewed this month. DeVinne is the predominating face in all the displayed work, and in a majority of the instances the compositor has handled this grand old letter lovingly and skillfully. Exhibit 11 is one of the quarter-page specimens from this big edition. I fully realize that in these few hastily chosen words I have given a very vague idea of the excellence and elaborateness of this fine special effort on the part of the Missoula *Herald*, but I assure you that my lack of expression has not been due to any lack of appreciation. Suffice to conclude with this deposition: This special edition was as nearly complete and perfect in every respect as anything of the kind that I have been favored with this year. It demonstrates the proper spirit and represents an exemplary practice for all newspapers.

RICE LAKE, WIS., January 30, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Please find enclosed a copy of my paper, the *Commander*, which please criticise in the next number of the NATIONAL PRINTER-JOURNALIST.

I am fourteen years of age. My composing room—if that is what it may be called—is located in the attic of our home. Here I set up all of my type and make up my forms. I print my paper on a large job press in one of the newspaper offices here. Your truly,

A. NORMAN BREKKE.

A unique little paper is the *Commander*—with pages 9x12 inches, three columns to the page. I reproduce the first page as exhibit 12. Under the circumstances this little sheet is a creditable production—much better in every way, in fact, than some "sure enough" papers that I have had to do with. But then, I must not count this *Commander* out of the category of the "sure

enough" publications, since it is enjoying second class mailing privileges, and to be so favored, makes it, of course, a fullfledged newspaper, with a legitimate list of bonafide subscribers and the promulgation of information of a public character as its aim and purpose, and so on. The young editor does pretty well at gathering the local news, and his method of mechanical makeup is neat and tasteful. He has a fair conception of display, too, and his little paper is accorded a liberal advertising patronage from local dealers. There is nothing better for a boy than the possession of a printing outfit, if he is of the temperament that can be interested in such things, and nothing more profitable to his mind at which he may spend his time out of school. Master Brekke gets up his local news items in good readable shape, the sort of grammar he uses showing the beneficial result of the past six years' experience—that being the length of time the *Commander* has been in existence. I congratulate this young brother on his successful work.

MANISTIQUE, MICH., January 11, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Enclosed find samples of advertisements run in the *Courier-Record* and set in this office by Frank Guinan, foreman.

You are free to use these in your criticisms in the NATIONAL PRINTER-JOURNALIST.

The *Courier-Record* is a weekly newspaper and Manistique is a city of about 5,000 population.

Yours truly, WILBER E. CAMPBELL,
Editor and Manager.

Mr. Guinan's ads are being shown herewith as exhibits 13, 14 and 15. They have all been very nicely and neatly set, and eked out with painstaking care and sacred attention to the most minute details. The first of the trio is the best typographically, nothing having been left undone, evidently, that might add to its strength and attractiveness. The second specimen is a trifle coarser in style of display, but equally as fine

in finish and detail. There is some superfluity of rule however. While exhibit 15 is a most remarkable creation, nevertheless it impresses me as an extremely

No. 13

undersirable advertisement. It is rather obscure, conglomerate and cramped in places, and withal a very expensive time-killer. Part of it might very consistently be considered as good job-work, but none of it

No. 14

could ever pass for nice advertisement composition. Just the same, it is a remarkably clever piece of rule work.

Ochelata, Okla., November 18, 1909.

Dear Sir:—I recently bought the N. P.-J. from a local news-dealer, and notice your department. I am sending you a copy of last week's paper, under separate cover, and would like your opinion of it. I have but one font of type over eighteen-point, and that is 24-point Livermore. I have no border. I have just gotten my Roman (all but 50 pounds) and am in debt for it, and can't get the type paid for. I am fifteen years old. I have no help to run the paper, so you can see I am fairly busy. I print my paper on a Washington hand press. My main trouble seems to be in locking up the last page, as the plate matter bulges up. And I have some difficulty in getting an even distribution of ink. I would like your opinion of the paper very much. J. T. May.

From the tenor of the above letter and an interested inspection of the Ochelata *Progress,* I am compelled to own it is as my opinion that here is a young brother editor who is "bucking a pretty stiff proposition," as they say out west. And I must add that his exemplary pluck, determination, initiative, and his achievements (such, even as the latter are) are worthy of much

ONE HALF OFF REGULAR PRICE
Sam Winkelman's
DEPARTMENT STORE

No. 15

admiration. I cannot tell him what causes his plate matter to bulge in locking, but I should think if the bases were of correct length and the form carefully locked, by beginning gradually with the quoins at what I call the "solid corners" of the chase first, and so on until one has gone all around the chase, and then repeating the operation until the form is tight, there had not ought to be any bulging of the columns. Too often printers who do not understand locking-up, tighten a quoin completely before passing to another, whereas each point of pressure should be forced by degrees until the form is locked sufficiently all around to lift. As to the uneven distribution of ink, if Brother May hasn't a regular inking apparatus, such as may be procured for use with hand presses, then he should provide himself, if possible, with a marble slab, which may be mounted on a bench or box of proper height—or a dry goods box alone, one end of which may be covered over with tin, makes a good substitute. If the ink then is spread upon this and carefully distributed here with the roller before being applied to the forms, a good even color ought to result. One should be careful in operating a hand press not to get too much ink on their distributor, as this is more than half the battle. Of course, the Ochelata *Progress* at the present writing won't stand criticism, but under the circumstances it might be considered a pretty creditable effort for a lad of fifteen, hampered by the lack of proper material, etc., and I sincerely hope that its name may prove prophetic and that I may have the pleasure of viewing it in the future with everything in perfect shape.

Dalton, Georgia, January 12, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—Am sending you under separate cover sample copies of the Weekly and Daily *Argus* for your criticism. Have been working on the *Argus* for the past two years as ad man, and would like to have your opinion of the ads, make-up and general appearance of the paper. Appreciating in advance any criticism you may make, I am,

Yours truly, Edgar L. Nonce.

I was told the other day by a friend in whose veracity I have considerable confidence, that even to this

day there is a man now and then here in the North who can't believe that any good thing can come out of the

Currey. They display real ability and taste as an ad-builder. Both are simple, neat and strong examples.

WILLOW SPRINGS, MO., January 30, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am a new subscriber to the NATIONAL PRINTER-JOURNALIST, having just received my first copy, and notice your cirticism on ads, etc. I am sending you under separate cover a few copies of the *Republican*, and if you think they are worthy of your notice, why, say what you think about them. I wish to say that this office is short on display type and good brass rule; we have no one-point at all and the 2 point is very old. The work was done in a rush as our advertisers wait until the last minute to hand in their copy. Yours respectfully, H. F. SLUSSER.

Brother Slusser need make no excuses for the ads, nor for anything else in his excellent little paper, for there's little about the Willow Springs *Republican* that requires excuse. It's a fine little sheet, with four-column pages, the strange co-incidence being that it is the second publication of that rather unusual size that I have found on my desk this month. The brass rule in the *Republican* office may be old, but there is a lot of brand new modern type to offset its age, and

whoever sets the ads knows just how to use everything he's got to the very best advantage, for proof

and artistic effect in the makeup of its first page. What more could its readers—or even its critics—ask?

THE MAKING OF A NEWSPAPER

NO other teaching is equal to that which teaches by example, gives methods and truths by actual, practical demonstration. For over twenty-one years the NATIONAL PRINTER-JOURNALIST has been conscientiously giving all possible instruction as to newspaper-making from facts, experiences, theories, and demonstration from all over the world. Each issue has afforded enough, if carefully studied, heeded and worked out, to make every reader a successful newspaper publisher, and to help him to win as a job printer. This instruction has been in somewhat disconnected facts so far as the creating a newspaper is concerned. This month, we have decided to add a complete description of how one model and exceptionally successful newspaper is made, taking our story from the paper itself. The Topeka, Kansas, State *Capital* on Feb. 28th issued what it termed House Warming Edition. It consisted of one hundred and thirty-six well-filled, well-illustrated and well-printed pages of seven columns each. Besides the news, and the section giving a description of the making of the paper, its history and a description of its building, there were Financial, Educational, Historical, Builders, Insurance, Comic and Illustrated Sections, but it is with the description of the way that the paper is made and of the building, machinery and appliances that newspaper-makers are chiefly concerned.

First, then, for the graphic description by the paper itself as to

"HOW THE CAPITAL IS MADE—EACH STEP OF DAILY WORK."

WHAT IS DONE IN EACH OF THE DEPARTMENTS EVERY DAY IN THE YEAR IN ISSUING THE LARGEST KANSAS DAILY — EVERY DEPARTMENT MUST BE WELL ORGANIZED AS THERE CAN BE NO DELAYS AND NO MISHAPS.

They were standing on the sidewalk intently watching the *Capital's* big press. The young people were evidently strangers being shown Topeka sights by an elder relative. The monster press was running, and the huge rolls of clean, white paper were unwinding and being delivered folded, cut and pasted at the other end of this pile of whirring machinery, as *Capitals*. "Now," said the elder gentleman, "when you go home you can say that you have seen how the Topeka *Capital* is made." This very common error, that the printing of the paper is all there is to it, would be quickly dispelled had the party taken advantage of the *Capital's* invitation to inspect the various departments of the Capper building. The actual printing of the paper is almost the last of the numberless details that go towards fulfilling the *Capital's* side of a contract with thousands of subscribers and advertisers to furnish them every day the latest and best news of the world in readable shape and promptly. From twelve to fourteen hours of unceasing energy upon the part of scores of men and women is necessary to bring the paper to the press room stage of completeness. To violate in any particular any part of these contracts lessens the importance, prestige and popularity of the newspaper that neglects them. A breakdown may occur, but every effort is put forth to have all the machinery, human and mechanical, in good running order, that the possibility of a delay may be averted.

In order to better understand how the *Capital* is made, it would be well to start from the top of the new Capper building and work towards the press room. Not all the brains of a great daily are in its editorial rooms, but the majority of the brain-workers are employed in getting together the "stuff" that goes to fill the columns of the paper. The term, "stuff," is applied to everything in the way of copy, whether it be good or bad, news or joke, advertising or editorial. Upon the character of the "stuff" that goes into the paper depends the success of the paper. A newspaper is judged by its editorial opinions, the character of its news and the manner in which it is compiled for the reader. If these be satisfactory, the advertising department will have easy sledding.

The opinions of a newspaper are sacredly reserved for the editor and proprietor. They alone are privileged to use the editorial "we," the big I, or express personal opinions. The editorial page is revered by all concerned as the only part of the paper that has precedence over every other part. On this page may be found the editorial and news comment on national and state affairs, and the page is under the control of the managing editor. The exchange editor is his helper, but of much less importance and power. Every paper publisher in Kansas and the leading dailies of the United States find their way to the *Capital* office in exchange for the great Kansas daily. The mail messenger dumps the sacks of newspaper mail on the distrubiting table of the

The Topeka State Capital Building

exchange editor and it is sorted by the classification of daily, weekly, magazine, or to whatever department each particular publication goes for perusal. The exchange editor culls from the state papers the current news of state-wide interest. The editor-in-chief scans the great daily papers of the nations that he may keep in touch with the trend of public opinion; the best ideas of the great writers are thus noted and compared on subjects of current interest.

It has been said that the editor controls the editorial page. It is not quite correct for "Dodd Gaston" is permitted to encroach upon the sacred precincts of this page. His column is not controlled by anybody. He is given wide latitude and "poetic license" to lambast, praise, ridicule or cajole all manner of people and things, and in his own way, just as the "black sheep" of a family is tolerated and allowed to do and say outlandish things without being sent from home, for fear he may contract even worse habits. It is in the same spirit that his writings are tolerated by the thousands of

parties to the *Capital's* subscription contracts; they make excuse for him and pass it by for the *Capital's* sake.

The workers on the editorial page are the daylight force of the literary end of the paper. When their copy is in they are privileged to go home, and their stuff is usually in type and the proofs read before the local copy is even written.

The pulsating life blood of the big daily newspaper centers in the news department. Routine and time are factors here as elsewhere, but the attractive something-new-every-hour spirit that pervades the work of the news-gatherer makes his work less tiresome or monotonous. The energetic reporter with a "nose for news" never finds his work monotonous. He rubs against the world, all classes of people and all manner of places are daily visited by him, and he learns to know human nature as few other men can know it.

The reporters are under the direct supervision of the city editor. By telephone from his desk, he keeps in close touch with them from the time they receive their assignments and set out on their afternoon rounds, until they return. Though all may have regular beats, or as they are called in newspaper parlance, "runs," they are subject for assignment upon other work—a special feature story, a murder case, a railroad wreck, or perhaps to meet No. 6 and interview some notable passing through the city. The reporters have no assurance of a cut and dried program any day of the week. The city editor, with telephones at his elbow, with the Associated Press operator in the adjoining room, and with hundreds of sources of information at his hand, is in touch with the city and the world. If a "flash" by wire should indicate a good story of local interest abroad, he has but to wire a request for 500 words, or whatever length of story he thinks the occasion warrants, to the utmost ends of the civilized globe, and learn from eye witnesses what has happened to the Topekan away from home. While his reporters are in the field he is not idle. He plans the next morning's paper ahead of any definite knowledge of what the day may bring forth. His plans may be cast entirely aside and new ones formed owing to the day's happenings. By the time the reporters return from their quests for news, usually at 6:30 in the evening, the city editor has prepared the feature stuff that he always keeps in store, has ordered and received the halftone engravings that accompany the stories, and much of this is in type before a line of local news has been turned in. In the event of something of great importance happening it may be necessary to print an "extra," and then is when there is something doing about the news rooms. This important event may come at a time when all are ready to retire for their early morning sleep; but when the city editor is notified by the reporter left on "dog watch," he decides quickly whether the story will warrant an extra and sounds the "all hands on deck" signal by telephone, and his staff and the mechanical force are soon on hand to perform their part of the work.

It may be necessary to "kill" column after column of otherwise important news matter to get the more valuable news in the paper, but at such times little thought is given to the lesser news, and it is sidetracked according to the city editor's blue penciling. This was made necessary by the recent Copeland hotel fire, which occurred at a time when all but the "dog watch" had gone home.

When the reporters congregate in the early evening they report to the city editor in brief what stories they have of importance, and settle down to their typewriters to "grind out" the news that they have encountered in their rounds. As fast as a story is written it is passed to the desk of the city editor. He, with blue pencil in hand, judges the value of the stories, cutting out, or adding to them, words, lines or paragraphs as he deems best, and writes the headlines. The most important news receives "top heads," that is, display headings of several "decks" in large type; and as the importance wanes the headings and style of type decrease in relative ratio. His idea of the greater or lesser importance of a story may widely differ from that of the reporter, and it may be necessary for the writer to add further detail to a briefly written article in order to warrant the "top head." If the copy turned in is of no public importance, but stretched beyond its worth, the city editor's blue pencil will do the trimming. The life of the city editor and his staff of reporters is not always rosy. No matter what the weather, what the circumstances, what the place or time, the city editor's and the reporter's first thought is "my paper." The readers must have the news, fresh and in readable form, and on time, every morning, and if a cog slips somewhere along the line, there is delay, as well as trouble ahead for the one who is responsible. The reporter's province is to get the news, and he goes to great lengths and often dangerous lengths to get the first and best story for his paper. His task could be made lighter and his stuff more accurately recorded were all people aware that withholding facts from the reporter result only in garbled first reports. A reporter will not violate a confidence. He knows the good from the bad and his trained eyes and ears can detect the fakir and the untruthful news sources. It is far better to get any kind of news correct than to have it garbled, and it is bound to come out if of news importance.

The society reporter is a member of the city editor's staff and she, too, must seek out the day's news in her line, and prepare her copy for his inspection. Her page is prepared principally during daylight, except when some social event of great importance will not bear an advance write-up, when she is obliged to return after the party and write it up.

The telegraph editor bears the same general importance to the paper as does the city editor, though he has no force of men to direct. In the adjoining room is the telegraph operator who, while an employe of the Associated Press, is the principal source of supply of the telegraph editor's copy. As the instruments click out the news of the outside world the operator hammers away at his typewriter at the rate of 100 words per minute, taking the news off the wire by a code that condenses many words in one. Instead of transcribing by code as received he typewrites the translation, and the telegraph editor has few words, and then only small ones to supply. This operator is an expert telegrapher and typist, and can take the President's message entire without a break. His copy is deliverd at the telegraph editor's desk as fast as written and there the stuff is edited and heads supplied. It devolves upon the telegraph editor to arrange the first or telegraph news of the *Capital.* The "specials" by wire from the *Capital's* 250 correspondents in Kansas and the Associated Press service are at his command for whatever news of interest to the *Capital's* readers he desires to use. In addition to these he is supplied with an advance news service which comes by mail or express daily, containing illustrations of current events of world-wide importance, and from this he may choose appropriate illustrations, the matrices for which are sent to the composing-room with his copy. He must have a keen sense of discrimination as to the value of news and "play up" the most important.

The autocrats of the *Capital's* army of employes are the advertising manager and his assistants. They rule with a Czar's hand whenever business is brisk, and can kill more good news stuff to make room for advertising than the city or news editor would dare leave out of the paper under almost any circumstances. "Paid stuff," as it is called, has precedence over all else, and even the editor-in-chief is sometimes called upon to whittle his page rather than resort to the making up of an extra section at a late hour. The first page of the *Capital* is the only one of the paper that the

advertising department cannot sell, and the temptation to make contracts for that page is hard to overcome. As ministers plenipotentiary and envoys extraordinary representing the best advertising medium in Kansas, they go out among the business men during the day and, with an inch rule and a copy of their paper, present arguments and facts that convinces the advertiser that an increase of space on that particular day is the proper thing. With his pockets bulging with copy and hands full of illustrations in the form of electrotypes, stereotypes or matrices for cuts he makes frequent trips to the office, reporting to the advertising manager. By the time the news forces assemble after supper the ad man can report the amount to be consumed in advertising, and the pages upon which it will have to appear. The assistant foreman in the ad room is advised as to the probable outlook for the evening so that sufficient force may be employed, this part of the composing-room being dependent upon the success or failure of the ad men in securing copy. A large proportion of the small ads are brought to the counting room, but the advertising department has men searching out the small advertiser the same as the big contracts.

The foreign advertising is an important division of this department. Hundreds of annual contracts made with agencies all over the country must be continually watched to prevent the least violation of their provisions. No advertiser is more exacting than the agency that controls the advertising of a great proprietary article or commodity of national renown. Failure to insert, wrong position, or the least error that can be construed to mean a violation of contract is taken advantage of, and causes grief for the advertising department. The advertising manager is constantly seeking new advertising features for the benefit of his customers. It is his business to assist in every way possible the advertiser, and furnish ideas for display, illustration, shape and size. He must have the rates at his tongue's end, and be equipped at all times to give prices of space or readers, from pages to lines, at a moment's notice.

There are two departments of the *Capital* that are closely allied to both the news and advertising branches—the photo-engraving and the illustrating departments. The city editor, for example, may need at any hour, the portrait of some distinguished citizen who has suddenly met death in a railroad wreck, or has gained greater honors in public or private service. He has obtained a photograph from the family and wants to use a picture with the story next morning. He sends a rush order to the photo-engraving room, and here, by the aid of powerful electric lights and monster cameras the photograph is reproduced on metal by the halftone procses. Between the camera and the picture is a glass screen on which is ruled vertical and horizontal lines. By the fineness or coarseness of these screens the cut it is etched suitable for newspaper or magazine work. For newspaper work the coarser screen is necessary on account of the quality of the paper and the fact that it must be stereotyped and printed on a press running at a high rate of speed. If on fine screen the halftone would appear as a blur instead of being clear and distinct.

All copy, from every source, the editorial, reportorial, advertising and telegraph rooms, goes through the composing-room. Here the work of putting into type, arranging into columns and pages, and the proofreader's corrections is carried on. The foreman's desk is the catch-all for all copy that goes into the paper. He divides it up among the various divisions of his room, according to the class of matter to be set. The headings for the various articles go to the Linotype operator in charge of the machine of interchangeable type faces, the straight reading matter on the copy hook for the several straight letter Linotypes, and the advertising matter to the ad room, the latter to be set by hand. Since the advent of the Mergenthaler Linotype only the display type is hand-set, and but one-fourth of the number of printers is required to get out the mechanical work on a daily paper as under the old system. The Linotype takes its name from the fact that it casts a line of type into a slug, the cast being made from single character matrices of brass that are assembled by the operator from the keyboard of the machine. These slugs, accurately trimmed and sized, are automatically assembled on a slide, and by the operator transferred to proof galleys of column length, the heads are inserted over the various stories, and a proof taken by the galley boy. This proof, with all the copy, is taken to the proof room, where the proofreader reads every word, letter and figure, carefully comparing it with the copy which is read by the reader's assistant, or copy holder. He must find and mark every error made by the compositor and send it back for correction. If in Linotype work, the entire line has to be re-set to correct an error in one letter or figure, and another revision is made by the "make-up" to ascertain if another error has been made in re-setting.

The galleys of corrected type and slugs are passed after correction to the make-up dump, from which the various pages are made up by the assistant foreman in charge of that work. Each page or form is imposed on a separate iron table, or turtle, on castors, on which is a steel frame, type high, called a chase. After the make-up has completed lifting the material necessary to fill the page into the chase, it is locked by screw keys at the bottom of the page and and by wedge locks on one side, and the turtle is rolled into the stereotyping room. The same form then goes to the steam table; folded blankets are placed on the form and the whole pushed under a screw press made hot by steam. Pressure is applied and the form left until the layers of paper are thoroughly dried. When the paper and powder covering is peeled off it is a complete reverse imprint of the page form. This is called a matrix. The paper matrix is then placed in the casting box, of half sylindrical form, the edges of the matrix being held in place by clamps, and molten type or stereotype metal, an alloy of zinc and lead, is pumped from the melting pot into the casting box sufficient to fill the space between the paper mould or matrix and the back of the box. This is quickly cooled, or sufficiently so to handle with felt gloves, or hand size pieces of felt, and when the casting box is opened on its hinges, a plate, with rough edges, curved to fit the cylinders of the press, is taken therefrom. The paper matrix is laid aside for further castings or for the files, and the metal plate is put on the trimming machine, where the rough edges are sawed and smoothed off, and after the operator has planed and chiseled the proper bevels on the sides and ends the plate is ready for the press room. This operation is repeated for each page as it comes from the composing-room until all the plates necessary to make the complete *Capital* are out of the way.

At last that stage of the making of the *Capital* has been reached that was viewed by the spectators introduced at the press room windows. The foreman of the press room and his assistants have been busy for some hours preparing for the work that must count for so much in the last hours of the daily routine. The big printing machine has been oiled, tested and made ready, and the rollers that apply the ink to the metal plates (cylindrical in form and made from a composition of molasses and glue) are put in place, the ink fountains filled, and the requisite number of rolls of paper brought from the storage compartment, unwrapped and placed conveniently for quick use. All is in readiness when the first plates begin to arrive from the stereotyping room above. As soon as they are taken from the elevator they are taken to the press, where they are put on the proper cylinder of the press and locked on by set screws. All in place, the monster machine is ready to turn out papers. The least hitch or miscalculation in any part of the pressman's work may delay

the issue at the most critical time in all the day and night labors. There are several editions to print, and there are trains to catch with the early editions. Time now counts for more than anything else in the whole establishment. Too often the press room must make up the time lost by other departments that have been delayed in their part of the work. But when all is running smoothly this can be done. The capacity of the press is rarely taxed to the limit, but can be increased in speed to a rate of 25,000 complete *Capitals* per hour of any number of pages up to sixteen. It prints from continuous rolls of white paper, automatically feeding itself, and at the other end has a folding attachment that gathers the pages, pastes the inserts and folds to mailing size, delivering in a trough as fast as a man can take them away by hundred bunches, the complete papers. An automatic counter tells the pressman when he has reached the limit of his run for the issue.

The *Capital* buys paper by the carload, and has capacity for the storing of several carloads under the broad sidewalk at the west of the press room. Each roll averages 600 pounds in weight and contains about 5,000 feet of paper in one continuous sheet.

The end is not yet. Another important part of the *Capital's* contract is unfulfilled at this stage. The paper must be delivered by carrier and mailed to the subscribers. The first editions are all sent out in the early morning hours by the various trains leaving the city. The mailing room is a busy place at this time. Minutes count, and everyone concerned must be on the jump. The mailing force has corrected beforehand the mailing list, inserting the new subscribers' names and addresses and taken out those whose subscriptions have expired, the strips of names have been printed from these lists and pasted together in long strips for the mailing machines, and all the necessary wrappers have been supplied with the little stickers to tell to what postoffice each bundle of papers is to go. The mail sacks are arranged on frames and tags applied which designate the route and railroad over which each is to be sent. As soon as the papers begin to come from the press room the operators of the mailing machines get busy. These machines are the invention of a man named Dick, who conceived the idea of expediting work of addressing papers by other means than pen or pencil. The printed strips, the width of the name and address are coiled on a small roller, and as the strip is fed by thumb pressure onto a rubber belt on which paste is carried so that each name passes the automatic cutter, a downward movement of the arm on which the machine is hung, cuts off the name and sticks it to the paper or wrapper. Experts on these machines can address papers as fast as two men can wrap the bundles. The bundles are thrown into the mail sacks by routes and hurried to the waiting mail wagons in the alley and started on their journey to the breakfast tables of the paper's patrons.

The last edition is divided between the mailing room and the city circulator's room, and while the mailing forces are at work getting out the bundles of papers to go out outside the city the carriers are receiving their quota of *Capitals* for delivery in the city.

In a general way the foregoing tells of the methods employed in the making of the *Capital,* leaving out the detail and technical terms that all may thoroughly grasp the multitudinous small things that go to make up the routine of all departments of the great state paper.

THE CAPITAL BUILDING IS A MODEL NEWSPAPER HOME.

EVERY DETAIL OF THE STRUCTURE AND OF THE EQUIPMENT WAS PLANNED WITH THE IDEA OF PROVIDING EVERY FACILITY FOR GOOD WORK AND FOR THE COMFORT OF THE WORKERS.

At the southeast corner of Eighth Avenue and Jackson street, with a facade of 75 feet on the north and 130 feet on an unobstructed frontage towards Capitol Square on the west, is the new and premanent home of the *Capital*, a massive structure of four stories and high basement of pure white stone, terra cotta and reinforced concrete, that challanges the admiration of all who look upon it. Built to withstand the ravages of the elements and the deteriorating influences of time, this monument to the leading Kansas newspaper will always be pointed out as one of Topeka's principal points of interest. It covers ground never befort built upon. Though in the very center of the busiest section of the business district, the ground was part of the homestead of Fry. W. Giles, one of Topeka's founders. Mr. Giles was also Topeka's historian, banker, benefactor and friend from the day of the birth of the city until he passed away.

The *Capital* building is undoubtedly the finest newspaper office, used exclusively as a "print shop," in the great West. It was built and planned for a modern printing establishment, and the details were admirably worked out at a cost of $180,000. An additional $175,000 was expended in equipping the plant. There is an air of stability and solidity in its every line, and the interior construction is in strict keeping with its exterior.

That most important of all requisites of the printing office, light, is abundantly supplied in this building. Immense plate glass windows, in twin series from ground to roof line, make the interior a strictly daylight office. There is little blank wall space, the columns between the double sets of windows and the comparatively small spaces between floors being the only outer wall shown The balance is plate glass clear to the handsome cornice The highest class of modern steel and concrete construction is typified in this building throughout, and provision was made in the plans for additional stories by erecting walls that would need no strengthening

The first glimpse of the interior as one passes the massive portals of the main entrance, impresses the visitor with the grand scale of substantial elegance of the builder. There are no superfluous nooks or rotundas that waste valuable space, yet there is richness combined with stability that strikes the eye at a glance. Every foot of the floor space counts and every department is taken care of according to its needs. The whole of the main floor is given up to the business, accounting and advertising departments, with the exception of the public lobby and the visitors' reception room at the left of the entrance. Comfortable chairs, large tables, the current files of the *Capital,* and the visitors' register make this one of the most inviting nooks of the big establishment. From here the stranger views a busy scene, and one that is but the first indication of what the Capper enterprises mean as employers. Behind the long counter that spans almost the width of the room, are the accountants, bookkeepers, subscription clerks, stenographers, mail clerks, and a force of assistants that occupy desks clear through to the rear of the great room. At the right of the main entrance is a room corresponding to the reception room, without door or partition, occupied by the general superintendent of the business force. Opening out of the general superintendent's office is that of Mr. Arthur Capper, the door of which stands ajar, without railing to bar the casual visitor or the easy approach of any employee.

The *Capital's* "central" occupies a place in the lobby. By intercommunicating telephone systems the outside world is connected promptly with any department in the building through four trunk lines that enter the building. There are twenty-two telephone stations in the building.

The first or main floor, is the one of all others that excels in importance in the eyes of the loyal Capper newspaper family. There the ways and means committee works out the safest and best methods to insure the payment of $5,000 weekly to about 400 employes in this building to say nothing

of the army of special agents and men in the field, for it is the advertising and subscriptions, the commercial printing and the judicious contracting for supplies for the big establishment's various departments that makes the wheels go 'round.

None need to wander aimlessly about the Capper building, for guides are there to escort the visitor through all departments, and the commodious and handsome passenger elevator connecting with the main lobby, makes the trip easy. The reader is therefore, metephorically speaking, asked to ascend with the writer to the top floor and by gradual descents will be shown the remaining departments from cafe to press room.

The comfort and convenience of the small army of employees in the *Capital* building was not lost sight of anywhere in the construction of this modern printery. Evidence of the warm spot in the proprietor's heart for the workmen and workwomen is particularly prominent on the fourth floor, where a large assembly room is set aside for the business and social meetings of the employees. Here rehearsals of the newly organized *Capital* orchestra, and *Capital* glee club are held. The whole souled idea of the proprietor to furnish comfortable quarters and amusement within the building for the employes is also evident in the rest and lounging rooms for the women and men on the same floor. Tables are supplied where they may spread their luncheons and order hot coffee from the cafe, or if they prefer not to bring their luncheons, they can be served with a hot meal at a nominal price. A nucleus for a library has been started by Mr. Capper with books from his private library. Just imagine, old time "print," what a boon this is to the regular and the "tourist," as compared to the past. The rooms are open at all times every day and from them a magnificent view may be had from the large windows of the busy city below.

The cafe is controlled by the employees, a committee of whom contract with a caterer for the serving of meals and lunches at reasonable rates. The kitchen and serving room has been set aside, rent free, by Mr. Capper, for the benefit of the employees, and they lay down the rules governing its management.

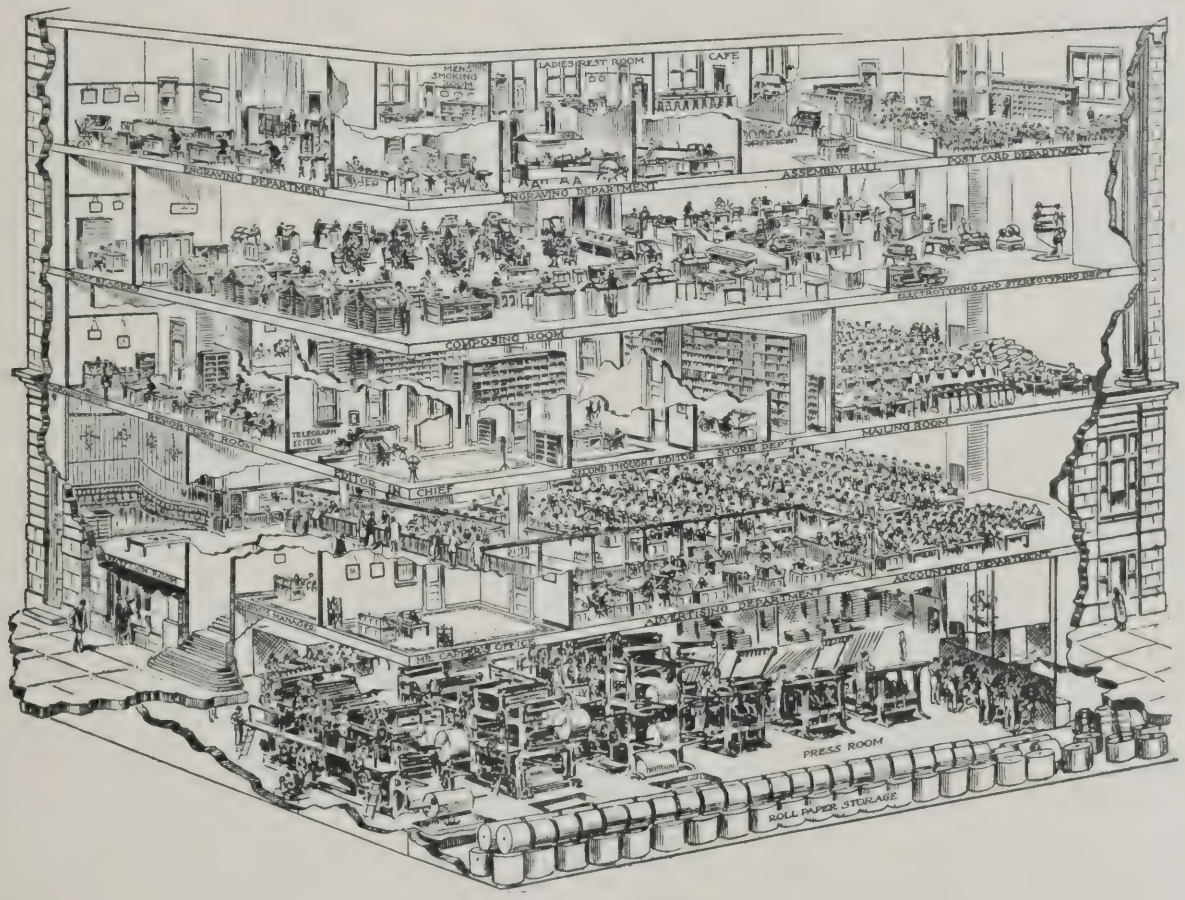
At the rear of the assembly hall on the fourth floor is the post-card department which employs a large force. A million post cards per week are sent out from here. The stock rooms for blanks and supplies are also in this department where they are arranged on shelves and labeled in perfect order.

The photo-engraving and art department is on the fourth floor, at the front of the building, and is the acme of convenience and arrangement. The skylight furnishes admirable light for the photographing room, and in the absence of daylight, the work is done by artificial light. Photo-engraving, until recent years, has been hedged about with secrecy, and the outer world was kept in ignorance of the process by which a photograph could be coppied on metal for printing. In the Capper engraving plant everything is open and the visitor is welcome. This department, without men on the road, covers a wide scope commercially, Kansas, Oklahomo and Nebraska drawing upon it for high grade art work.

The third floor is occupied entirely by the composing room. The composing room, in the words of one of the old time "prints," is "simply a dream." Light from three directions, high ceiling, good ventilation, and the most modern equipment that money can buy, makes it all that could be desired by the workmen. The linotype battery of seven machines occupies the center of the room, each with individual motor, and not a gas pipe in sight, all these being imbedded in the cement floors. New type, new rules, cases, cabinets, and all

THE TOPEKA DAILY CAPITAL

Where the Various Departments Are Located in the Capital Building



that goes to make up the complete print shop has been installed here. Nothing has been omitted to facilitate the getting out of a first-class metropolitan daily in the quickest possible time. This department is also supplied with one of the finest lavatories and baths in the building, a shower bath being one of the extras.

At the rear of the composing room is the stereotyping and electrotyping rooms. There is absolutely nothing in the way of up-to-date equipment that has been omitted in these departments. One of the most complete electrotyping plants in the west is found here. Plates are made from which the Capper papers are printed, and the commercial work is also a considerable item.

On the second floor are the editorial, mailing and filing rooms. Substantial elegance, that characterizes all the departments of the building is found on this floor. The editorial writer has a room on the northwest corner that is finished and furnished in excellent taste.

Across the front of the building on this floor is the news department, the workshop of the news end of the paper. The city editor has a cozy little private office adjoining the reporters' room, that permits of privacy without room for entertaining large crowds. The reporters' room is large and airy and flooded with light, with a commanding view to the north. Adjoining this is the telegraph room, just large enough for the operator who has little time to entertain company when at work. His instruments are connected with the outside world by wires concealed within the walls and enclosed in a case that may be locked when not in use. Here the news by wire, Associated Press and special service, is received and transcribed by typewriter by the operator. The editorial rooms of the other Capper publications are also on this floor.

The file room contains cases reaching to the ceiling, with boxes or pigeon holes for every day of the year, each numbered with a metal date tag. In these a number of copies of every issue of the *Capital* and other Capper papers are filed to supply future orders and for the bound files. In this room are also the bound files of the paper from the date of publication.

At the rear of the filing room is the mailing room. Here a large force is employed in revising and correcting the subscription lists of the *Capital* and the other publications. The little yellow name slip on a subscriber's paper is also the record of his account, and shows the date of expiration of his subscription. To provide against loss in this particular a duplicate copy of the mailing lists is kept in a vault outside the Capital building entirely. These extra lists are changed every week, in order to have them as near correct as possible at all times.

Papers are sent to the mailing room on the big elevator from the press room, are labeled, wrapped, put into small sacks and weighed on the large floor scale in this room. A government weigher is furnished by the postoffice department who superintends the weighing out of all mail from the *Capital* building.

The press room of the *Capital* is one of the most interesting departments of the building. Here are presses large and small that represent an enormous outlay of money. "Major," the big four-deck Goss straight line press, on which the Capital is printed, cost $25,000 with its equipment. This is one of the finest pieces of machinery that has ever been installed in the West. It will print a 32-page paper, the size of the Capital's pages, at the rate of 25,000 an hour, cut, folded and counted. The color attachment on this big press is in addition to the four decks named. Two sizes of webs, or rolls of paper, are used on this press, the narrow rolls being used for the inserts that are pasted in when a ten or fourteen page paper is printed.

The largest press of its kind ever built is the Cottrell rotary magazine press upon which the *Mail and Breeze* and other Capper publications are printed. This press cost complete $30,000, and will print a 64-page paper, cut and folded complete, the size of the *Mail and Breeze,* or two separate papers at the same time of 32 pages each at the rate of 14,800 an hour. The finest book paper can be used on this press. Five different sizes of paper may be used on the press, according to the number of pages desired, the rolls being 15⅜ inches up to 61¼ inches. A hydraulic lift at the rear of the press is used to elevate the rolls of paper to the several decks of the press. Another large press is that upon which the *Mail and Breeze* was printed before the Cottrell was installed. The big presses are all equipped with the controller system, by which the pressman, or his assistants, may start or stop the ponderous machines from six different stations on the Goss and seven stations on the Cottrell by pressing an electric button. No matter what part of the press the pressmen are watching, or where they may be located about the press, they can throw the electric switch on the switch board and stop the machinery instantly. All presses are equipped with individual electric motors.

Plenty of light, so essential to the press room, is one of the admirable features of the big press room. Here also is a fireproof vault for the oil and gasoline tanks, which are filled from the outside through pipes connecting with the tanks. In this vault also are kept the bales of rags used for wiping the machinery, to guard against combustion. A thoughtful provision in the construction of the building was the installation of steel stirrups, hung from the ceiling, through which heavy timbers may be placed for the lifting of heavy parts of the machinery, and for taking out, or installing new presses.

One of the biggest expense accounts of the institution is the item of paper For all regular publications web rolls are purchased by the carload, and several cars are unloaded into the *Capital* building at one shipment. Space under the sidewalk on the west is utilized for the storage of these rolls up to three cars, but outside storage is necessary for the reserve supply.

In the southwest corner of the press room, where the back stairs to the street are located, is the carriers' and newsboys' cage, a heavy wire grating that keeps the noisy throng out of the press room proper, when they gather to get their papers in the morning. Steel shelves behind the screen furnish ample room for the city circulator to count out the papers and transact his business.

A boiler and engine room are provided in the basement, though the Edison system furnishes the power and light for the building at the present time. The electric power installation is a marvel of beauty, mechanically speaking, and the big switchboard is the largest in the city outside the Edison's central power plant. Every floor is independent of any other floor and any department may be cut in or out from this board. The current is transmitted in conduits built into the walls and ceilings. This applies alike to the lighting system, as well as the telephone and telegraph wires. Brilliant high candle power lights are conveniently located in the walls, and the ceilings are studded with electric globes.

Notwithstanding the fact that the *Capital* building is considered one of the most thoroughly fire-proof structures of modern times, every extra precaution is taken to guard against any possible exigency. Hand fire extinguishers are provided in the corridors and rooms on every floor. The insurance rate on the building is lower than any other in Topeka, and Mr. Capper may carry $100,000 for $350 a year, and it is safe to say that there are few structures in Topeka that will warrant a 35 cent rate.

QUALITY CIRCULATION

WESLEY A. STANGER, editor of *The Office Outfitter*, Chicago, recently gave a talk before the Chicago Trade Press Association on the subject of "Quality Circulation." The following is an extract from what he said:

Circulation is a subject that is of first interest to the man who wants to advertise, and within the past few years the cry has been for more and more circulation. The idea has degenerated into a call for quantity and the publication boasting a million has been able to get the largest volume of business and the highest rate. Advertisers have been fooled into this idea by misled advertising agents, so-called advertising experts and a host of people whose knowledge of publishing and advertising has been restricted to getting the advertiser to permit them to spend his money. Results have been based on the number of copies sent out and not upon the value of them or the quality of those receiving them.

The medium in which advertising is placed should be governed by two things; first the article to be advertised and second, the people reached by the publication. In trade publications conditions are different than elsewhere, although general rules seem to apply to all publications. Quality in circulation is what gets the business for the advertiser, although it does not always get the advertising for the publishers, and until advertisers realize that quality counts for more than quantity this condition will remain.

The man who reads a newspaper or magazine and who answers the advertisements, because he wants to buy the goods advertised, is the man who pays his subscription at the regular rate, repeats it year after year and who has money to spend with the advertisers. Such a man reads not only the editorial matter but the advertisements as well, and he is the ideal for the advertiser and the publisher alike. He judges the magazine unconsciously perhaps, first by the editorial matter, and secondly by the impression the advertising pages make upon him. He is strictly a quality subscriber, for he is not likely to spend money for magazines that do not contain both reading matter and advertisements of personal or business interest to him.

When a publisher affirms that he covers his field and then proves it, he has a proposition that will produce results. If there are 10,000 in his field and he gets only a fair percentage of them, all paid in advance and paid two years or more, he has something worth the careful consideration of an advertiser. If there are 10,000 in the field and he mails 10,000 copies, sure enough he may reach them all, but the possibilities of his publication producing are not within half of the other fellow's, whose subscribers pay for what they get. Another point in this connection is that quality circulation does not always produce the quickest results. In fact, free circulation sometimes produces quicker results, but they are seldom satisfactory. Quality circulation produces bigger results in the long run and the results are uniformly satisfactory. Therefore it is to the advantage of the advertiser to give a quality publication a good long try-out before he reaches any conclusion. It is a well known fact that there are more rugs sold in the United States every year at $25 than at $500, and that the man buying a $500 rug pays cash for it, makes up his mind quickly after he has decided to buy it, and the profit is good and the sale clean. With the man seeking a $25 rug conditions are changed. He decides quickly to buy, pays slowly, takes a long time to make up his mind, and produces small profit and the percentage of expense in selling him is greater than to the man who pays the higher price.

The publisher who goes out after *numbers* in circulation to the disregard of everything else, usually gets the numbers, but he does not get the quality. He catches the crowd. He gets the people who are lured by every firely proposition, who dissipate their substance and dabble in a hundred and one things. He gets the numbers, but they haven't the money to spend with the advertisers after they get the publication. The man who goes after *quality*, works hard and long. He gets less in numbers, takes a longer time to get them, but when they come he has them and they are an asset, for they will patronize his advertisers and pay for what they get. Mr. Gillam, who is advertising manager of the New York *Herald*, said recently that "the number advertised to means much, but the character of readers means much more," and right he was. The character of the readers decides their productibility to the advertiser. Talking along the same line, E. St. Elmo Lewis, one of the greatest advertising men in the country, said: "I always judge a publication by its editorial matter. A publication can be pretty accurately judged by this test and if the man passing judgment is qualified, he can tell pretty closely who the readers will be." It will be observed that he has said nothing at all about the number of readers, but speaks entirely of the *quality*. He esteems it a necessary thing that the people taking the magazine read it to make it a good medium, and he is right.

In seeking a place to advertise anything, the first thought of the advertiser should be to find out the quality of the circulation. A publication with the largest number on its lists is not necessarily the best medium. It is the magazine with the class that will produce results. Tests have proved that the man who pays out his dollar or whatever the subscription price of the publication may be, is the man who reads it, and the man who does the reading is the man who answers the advertisements.

The reason why there is more quantity circulation than quality is due to two things. First, the demands in the past by advertisers for quantity to the utter disregard of anything else. Second, the mad rush for business success publishers have permitted the condition to exist and have gone out after the numbers regardless of who they are or what they are, but the pendulum can not swing further one one side than it does on the other, and at some point in its sweep it touches the center. The pendulum of quantity has swung as far as it may and is now getting back to normal. Quality in circulation means more to the advertiser than anything else, and the fact that a publication may have a small circulation does not necessarily mean that it is not a good advertising medium, or that it is less productive than one with a list many time its length. Quantity is easier to get than quality, that is one reason why there is so much more of the former than of the latter, but quality in circulation is just the same as quality in anything else. It stands out, no matter where you put it, and in the true test quality wins every time.

ADVERTISING PAYS.

GUTENBERG MACHINE CO., 545-549 WABASH AVE.
CHICAGO, ILL., Feb. 17, 1909.

National Printer-Journalist,
1319 W. Ravenswood Park, Chicago, Ill.

DEAR SIRS:—In reply to your letter of the 15th inst., will say that you may repeat our February ad. in the March issue of the PRINTER-JOURNALIST.

We are pleased to state that our business since last October has been the best we have ever had.

Yours very truly,
GUTENBERG MACHINE COMPANY,
Will S. Menamin, Pres.

CHICAGO, MARCH, 1909

AS a disseminator of intelligence, the newspaper press is ever heralded, and so it is, but that intelligence should be worth while, in its subject, its associations with human lives, in the manner of its heralding or in its stimulating of intellectual well-being, material betterment, social pleasure and uplift, domestic improvement or better citizenship. In all these, it is often the little things that count by way of encouragement, precept, example or inspiration, as well as those things nearest the hearts, the lives and the homes of the people. All depends very much on the method, the sympathetic spirit, the understanding mind, with which the intelligence is disseminated.

* * *

The feeling of responsibility, giving birth, in an upright soul and a pure mind, to an enduring resolve, mercifully and fully to meet the same, is the one great endowment needed by the newspaper man.

* * *

Truth, not criticism, censoriousness, sarcasm, fault-finding or sensationalism, should be the aim of every man who has charge of a newspaper. Truth may be and often is stranger and, hence, more truly sensational than fiction, but it should always be the truth and not the sensation that is kept in view. Fairness, in handling the truth, is next to truth itself. Facts that are perverted become worse, more damaging, and more damnable than falsehoods. The editor, who cannot be fair, free from self-interest, personal spites or prejudice, has no more right to be an editor than Satan has to be a judge.

* * *

The newspaper directs, through correct information and honest enlightening application of the lessons to be derived therefrom. It serves and ministers to the desire of knowledge and helps and gives pleasure to all, young, middle-aged and the old. How especially great is its opportunity with and its responsibility toward the youth. W. H. Davidson, managing editor of the Burlington *Hawkeye,* recently said in an address before the Illinois Military Tract Press Association:—

"One of the serious responsibilities of the press is its influence on the minds of young people. In the young boy and the young girl of today we have the future leaders of our national thought and acition. * * * * *

"The youth of the land needs a common sense, helpful, uplifting, newspaper education. The press should take care that it exerts only that influence, and that everything of an opposite tendency be ruthlessly shut from out its columns."

The newspaper man who forgets or ignores the young people is unwise as the one who neglects his women readers. The home newspaper must remember and wisely and acceptably serve every member of the household. This is no new idea, but it is something that seems to be too frequently forgotten or overlooked.

* * *

With all the necessary limitations and the shortcomings of the newspaper press, it is gratifying to feel that Editor Davidson, in the same able address, from which quotation is made in the foregoing paragraph, spoke but words of soberness and well-recognized and established truth, when he further said:

The story of legitimate journalism in America is the story of sturdy manhood, unfaltering will, Christian fortitude, wisdom, charity and unselfishness. Characters containing such ingredients have been able to make that wondeerful thing—American journalism—the fame of which is world-wide, the like of which does not exist in any other country. * * * * *

Evidence of the journalist's influence for good is written across every page of our history since the founding of the first newspaper. As the country grew, journalism advanced, always keeping in the van of the country's development, always on the side of truth and justice, and ever the enemy of vice and corruption.

Thus the newspaper man worked out his own salvation and helped build up this magnificent country. The pioneer editors on our early frontiers, sturdy, fearless and outspoken

With all the attendant worries and cares, the frets and disappointments and the anxieties, there is over newspaper work, all the glamor of power, of accomplishment, which makes the newspaper men feel himself a king in the world of human endeavor, that steels him for the fray, and that satisfies him in the accomplishment of his task.

If he be a true newspaper man all this uplift belongs to him by a natural right. Once having felt the glory and power, once having scented the pungent odor of ink on paper and felt the thrill of a vivid human intelligence swayed by his printed words, he can never escape the fascinating thralldom which journalism throws about him.

* * *

W. L. Jones of the Lebanon, Illinois, *Journal,* who is always present at the conventions of the National Editorial Association and presented an able paper on the future of that organization, at St. Paul, last year, completed his twenty-eighth consecutive year on his paper on February 5th, and took occasion to say, editorially, some instructive things, as follows, with regard thereto, that will be equally pleasing and beneficial to newspaper-makers as they were to his own readers:

Twenty-eight years ago this week the present editor of this paper was introduced to the Lebanon *Journal* office and

given an active interest in the business. We are satisfied with the confidence of the patronizing public and it is gratifying to know that the paper is more firmly established in the community than ever before. We have made mistakes, but we are glad to know that many of them have been forgiven and forgotten. We have used our earnest efforts for the general good of the community and are sufficiently assured by our best people that our endeavors are appreciated and worth while. During those twenty-eight years we have been in every state in the Union and in every large city in North America, and it is our conclusion that Illinois is the best state and St. Clair the best county. And, speaking about cities, Lebanon is good enough for us, yet a while. Yet there is hope that our Lebanon may be a greater Lebanon, a better Lebanon, and a more prosperous Lebanon. And to that end we will continue to publish fifty-two editions a year. Now is the time to subscribe.

"Efforts for the general good of the community," aided, in efficiency, by broad knowledge, secured through extensive travel and intelligent observation, and an optomistic hope, backed by works, for better and more prosperous conditions, are valuable endowments for editors of home papers.

* * *

The De Kalb, Ill., *Review* of which H. W. Fay, who is noted for his collection of views, gives, in a recent issue, an illustration of a handsome nook on a noted farm, that of Col. Ellwood. It is worth while for editors to give illustrations, in their pages, from week to week, of farm and other views and the illustrations of beauty spots of nature, in the region covered by their publications. It is a wonder how much that is really worthy of illustration will be found in every city and vicinity by a live publisher who really sets out to show the beauties of his section of country. The illustrations give pleasure and instruction and are worth while. They increase the attractiveness of, and the interest in, a newspaper and they add to the pride of the people in and their love for the region they inhabit. Beauties that are hidden to dull eyes assume an entrancing loveliness when they are once sought out and pictured.

* * *

The Belleville, Kansas, *Telescope* has been chosen for the thirty-seventh time, as the official paper by the county board and counts it no small honor. It gives prestige as to the leading position held by a paper and of course is to be desired for the revenue it brings, but should never be sought at the sacrifice of independence, or of honest loyalty to the people served. High standing is entirely compatible with genuine independence. Favors won through servility to officials or party are very dear at the price. To win recognition, as has the *Telescope*, on merits is always desirable.

* * *

The Schenectady, N. Y., *Union*, issued a model Lincoln Centennial Number. The first cover page presented a most solid architectuarl design, of entablature and cornice, frieze, architrave and capitals, across the top of the page, supported by Corinthian columns, on either side, that rested on podia, with pedestal, dado and base at the bottom. The columns were circled four times with broad streamers and on the left were the figures (one figure on each fold) "1809," and on the right "1909." The frieze at the top contained the words, "Lincoln Centennial Memorial Number;" beneath, between the capitals of the two columns were the words, (in box panels of two rules) of the name of the paper; beneath this, with proper whiting between, was Lincoln's Gettysburg battlefield address, set in ten point and surrounded by a heavy border. Beneath this was a halftone portrait of Abraham Lincoln, surrounded by a heavy wreath, with an ornamental flambeau, wound with ribbon, on each side. On the dado to the left, were the words, "The nation cannot permanently endure half slave and half free," and on the dado to the right, "With malice toward none, with charity for all." The print was in black, on pure white, glazed book paper. The effect was all that could be desired.

The advertising showed that the publisher had the full sympathy and co-operation of the business men in his worthy effort. The issue was largely given up to addresses and articles with regard to Lincoln and with an account of the honors paid to the memory of Lincoln by Schenectady. Two sections, one of twelve and the other of sixteen pages, of this great forty-eight page issue, seven columns to the page, were almost entirely, outside of advertising, given up to Lincoln, with views of his character and life, addresses, etc. One page of the second section contained an account of ten minutes passed in Schenectady by Lincoln, February 18, 1861, and showed his portrait, the cabin where he was born and his monument at Springfield. The first page of the third section gave another portrait of Lincoln with portraits of his contemporaries. Among the addresses given were Lincoln's first inaugural and Bishop Simpson's Funeral Oration. Among the topics covered were: "Hon. Frank Black's Tribute to Lincoln;" "Lincoln and Emancipation;" "Schenectadians Who Rendered Distinguished Service to the Nation in the Civil War;" "News in Schenectady During War Times;" "Mr. Lincoln's Petitioners;" "Lincoln Memories in Washington;" "The Life of Abraham Lincoln;" "Some Lincoln Letters;" "The Solitude of Abraham Lincoln." We give this much to show how well and how grandly the great subject of the day was covered and treated, and by way of suggestion to others. The issue is worthy of study and worthy of preservation as a remarkable collection of the things of historic interest, both local and general, and for the wonderfully educative value and inspiring power of its contents as a casket worthily filled with incidents of the life and times of one of the Nation's greatest, purest and most exemplary noble men.

ANNUAL BUSINESS SHOW AT CHICAGO

The night of March 1st marked the opening of the Annual Business Show at the Chicago Coliseum, and when the big doors swung wide at seven o'clock to admit the crowds, it was upon a scene of splendor and system that rarely has been surpassed in the history of the country. Machines and devices for saving time and increasing efficiency were gathered together from all over the continent, and the scene presented an opportunity for a liberal education in systematic business conduct. Typewriters that add, multiply, subtract and divide while writing were placed along side machines for recording human thoughts for direct transmission to type.

One man showed a system of making matrices for stereotypes direct from the first writing on the typewriter. With his system a matrix paper was inserted in any ordinary typewriter, the stenographer proceeded in the usual way and when finished the result was turned over to a steoreotyper, who made a plate from it without having had any type set, any make-ready on forms or any of the usual details followed in a printing office for making stereos. The inventor and exhibitor claimed that they were about to cause a revolution in the printing of newspapers, for they are at work on an interchangeable type, writing machine which will make it possible to do all composing for newspapers and publication direct on the typewriter and print from plates. This device, in connection with Edison's dictating machine, will eliminate all of the work and hands between the reporter and stereotyper, except the stenographer, for Edison proposes to perfect his device so that in the future a reporter on a big daily will tell his story to the dictating machine and it will be turned over to the linotype for immediate set up.

Never before has there been held such a brilliant exhibition of business devices as this year. Manager A. L. Fierlein has worked unceasingly and has produced a show of which the exhibitors may well be proud, and it is bound to attract the crowds. In years past the business show has always attracted more people than any other show that is put on in the Coliseum, and this year promises to be no exception to the general rule.

Rose L. Fritz, the fastest and most accurate operator of the typewriter in the world, who has won all the contests both at home and abroad in the use of the modern writing machine, is expected to be present. Edison's first model of the phonograph will also be on exhibition, while an old wooden model of a typewriter, said to be the oldest typewriter relic in the world, will be put where the public may view it.

In appearance the huge Coliseum presents the appearance of a great big office filled with all of the latest devices and ideas for the conduct of business and the elimination of troublesome office detail, and a visit to it will serve to put the average business man fully abreast of the times in every branch of his office routine.

REMARKABLE SELF-CONTROL

The Alma, Kansas, *Enterprise* contained the following paragraphs in double-column width, at the top left-hand corner of its first page, in its issue February 26th:

"The *Enterprise* had just printed a dozen papers when by an accident our first page containing correspondence from 13 places in the county, was pied. The old man says this is the first time this ever happened in his forty eyars work in a newspaper office. There was not a single cuss word said either.

"We cannot say more for fear our feelings will overcome us. This short spiel will account for the appearance of this page, which has always been our especial pride. Looks tough, doesn't it?"

Newspaper men will all appreciate the high Christian character of the editor and office force indicated by the fact that, "There was not a single cuss word said, either," when suddenly confronted by such a disaster.

It is a very handsome first page, however, made up of selected miscellaney, of excellent character, through the usual correspondence is entirely missing. It shows the wisdom of being fortified with good plate or other matter, against a possible accident.

This reminds us. In 1892, the editor of this paper, was in a great hurry, on a day when the streets were very muddy, and started on a run across Monroe St., Chicago, when a bicycle and rider swung with great speed around the corner and caused a sudden fall at full length in the mud, while a great delivery team was being driven on the jump. The editor was on his feet in a second and rushed to the sidewalk, and was brushing off some of the mud when a little boy, who had witnessed the catastrophy, looked up in the editor's face and said, "Be you a preacher?" Not a word had been spoken and the little Chicago street urchin seemed to think there must have been some reason for the failure to do justice to the occasion. But then, in this case, the editor had reason to be thankful for escaping the great sharp-shod feet of the horses. This was a mitigating circumstance, so the palm for Christian fortitude, resignation and self-control is willingly yielded to Editor Sage of the Alma *Enterprise,* his associate and force.

The Saturday Night Forum, a Des Moines weekly established by B. W. Blanchard in 1908 has suspended publication.

The new Kalamazoo, Mich., *Press* has made its appearance. It is owned by E. N. Dingley, and is an independent organ.

W. B. McCloy, former editor and proprietor of the Ortonville, Mich., *Hustler,* and at one time in the employ of Horace Greeley, died last week in the county poorhouse, where he recently had a stroke of paralysis.

Harmon H. Woodworth, an advertisement and newspaper writer, died last week in his home in Maywood of inflammatory rheumatism. Mr. Woodworth was born in Moline, Ill., and was 33 years old. During the *Spanish-American* war he served in the paymaster's department. For several years he was connected with the advertising and editorial departments of the *Record-Herald.*

O. J. Smith, who has been for years editor of the Semi-*Herald,* has disposed of his interest in the property and will give possession March 15th. Mr. Smith's health has been failing for several years and his advancing age made disposition of the property practically imperative. Howard E. Moffett, the purchaser, was for a number of years publisher of the Grundy County *Republican,* but for the past year has been doing editorial work on a daily paper at Niles.

The office and plans of the *Herald-Progress* of Sumner, Miss., was entirely destroyed on the night of February 11th, in a fire that destroyed a whole block, including a bank, hotel, business buildings and residences. The paper was printed for the publisher, as usual, the next day by the A. N. Kellogg Newspaper Co., at Memphis, and contained a very complete and well-written account of the fire. A new outfit was ordered at once, to be in place within ten days, in the meantime the paper is to be printed out of town. J. R. Oakes is publisher and A. L. Whitten editor and manager.

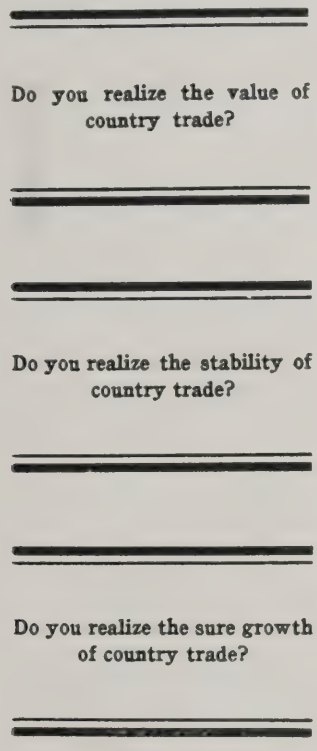
MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH,

Address all communications for this department to 314 Linden Street, Scranton, Penn.

A "LONG-DRAWN-OUT" FOLDER.

THIS (1) is only a section of a mailing folder 23x2½ inches wide, with eight folds. Each side is in the same style, but one is printed in blue, and the other in red. It represents an attempt of the Boyce Weeklies, of Chicago, to get next to advertisers who would get good returns from putting their wares before the enormous country trade now available.



Do you realize the value of country trade?
Do you realize the stability of country trade?
Do you realize the sure growth of country trade?

No. 1

MERRY CHRISTMAS—HOPE THIS YEAR WILL BE SO.

The following "communication" on the address-side of a postal from Anderson, Ind.:

DEAR MR. WOODWORTH:—Though I have not visited you for some time, I still look for and read your department in the N. P.-J., with much interest. May you long continue it.

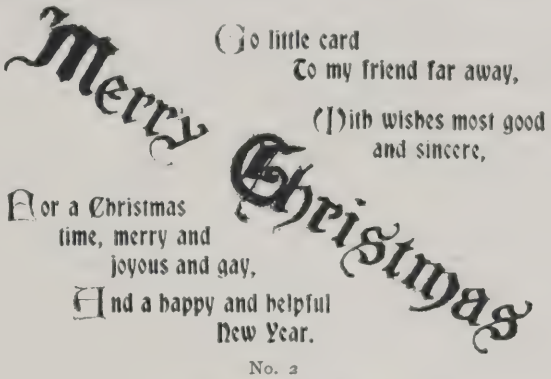
Your friend, B. F. HARB.

Don't destroy your Christmas cards this year.

On the other side—this very Christmas-y wish (2), which is, of course, of Mr. Anderson's composition. The "Merry Christmas" is on a bronze background with red initials, and the remainder of the words blue. The same color-scheme, except the gold, is that of the remainedr of the card. I never destroy my Christmas cards; but various chambermaids don't seem to appreciate printed matter—or else they do.

FROM WISCONSIN.

This (3) is part of the letterhead of the Adamson Printing Company of Belleville, Wis., is not all of it. Its beauty is greatly increased by a red seal 'way down in the lower left-hand corner.

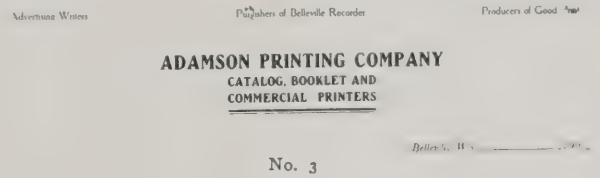


Merry Christmas
Go little card
To my friend far away,
With wishes most good and sincere,
For a Christmas time, merry and joyous and gay,
And a happy and helpful New Year.

No. 2

A NEWSPAPER TRADEMARK.

A distinctive design as a sort of trade mark for a newspaper is as good in its way as a print-shop work-

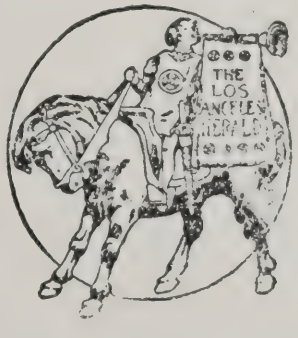


No. 3

mark is in its way. Here (4) is one sufficiently appropriate for a newspaper with the name of *Herald*.

UP-TO-DATE, AND YET NINETEENTH-CENTURY.

Just as an example of how the modern idea in job printing continues to be the modern idea, despite its variations, here is a blotter sent to this department in 1900 by the Harrison & Swift Co., Minneapolis, Minn. The heavy-faced lines are red, remainder of the text is green and the stock a lighter green. Now, who be they who would not say that such a job was an up-to-date 1909 one? And so it is, though various new styles have been originated since 1900, some of which are not so up-to-the-times as they were. But the simplicity and charm of such a job as this the advertised-to world does not tire of soon.

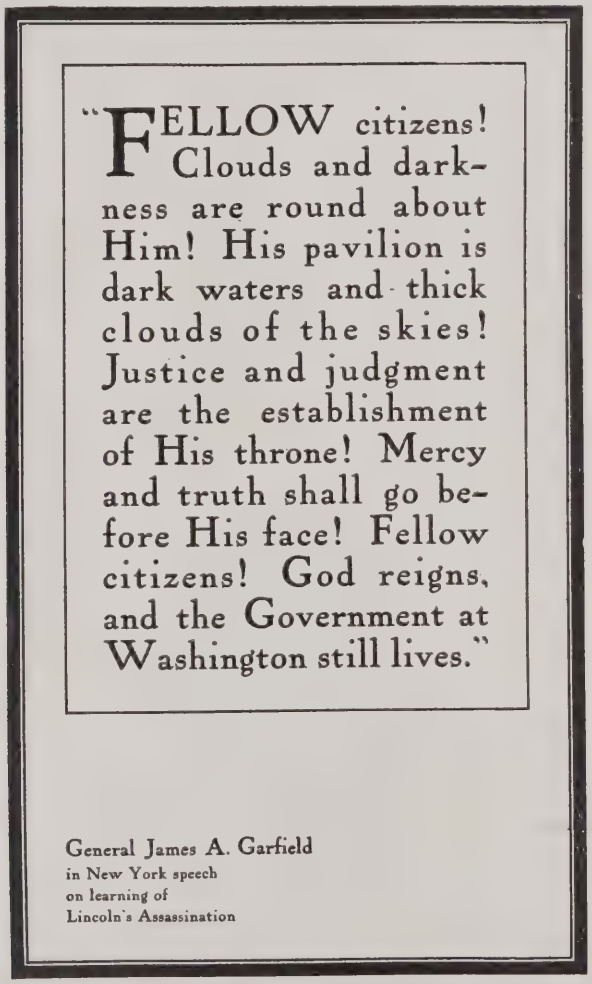


No. 4

A CHARACTERISTIC, CHARACTERFUL JOB.

I have received many superb circulars from the Griffith-Stillings Press, of Boston, recently. That is, they were superb as to design, illustration, type, reading matter, and character of stock. As to the latter qualification, I do not mean to praise the *condition* of the stock, and consequently the appearance of the circulars, by the time they reached me via Toronto, via Brooklyn, although I had filled in post-cards stating that it is some time since I dwelt in either of these places. The stock is not of the kind that stands transmission through the mails without any means of keeping in shape otherwise than that afforded by a clip. Strange, indeed, that such excellent, no-regard-to-the-expense printers should neglect the mailing end of their advertising so neglectfully. But so it has been.

And thus it is not only with gratification as to the appearance of the job, but with appreciation of the appearance it has when it reaches me, that I welcome *Character,* a monthly periodical of twenty-four pages



"FELLOW citizens! Clouds and darkness are round about Him! His pavilion is dark waters and thick clouds of the skies! Justice and judgment are the establishment of His throne! Mercy and truth shall go before His face! Fellow citizens! God reigns, and the Government at Washington still lives."
General James A. Garfield
in New York speech
on learning of
Lincoln's Assassination

No. 6a

and cover, with all the word implies in a good sense, from a firm whose character is beyond reproach. On the cover page of the February issue there is most appropriately a portrait of Lincoln. (By the way, haven't the monthly publications of the United States been a little inclined to forget that there was another great American born this month? But perhaps it is fully excusable, only when *Farm News* appeared for February with a portrait of Washington on its front cover page, it gave rise to the thought given above. But then, we cannot have too much of Honest Abe; he is one character of which we never seem to tire. This digression will be forgiven upon my reproduction of (6a), the last page of the catalogue).

No 6b is a nice page, and contains a grand sentiment in the 14-point. There is a good deal about Abraham Lincoln in this number of *Character*—the first I have seen, and there is also an article which,

C H A R A C T E R

I am not bound to win, but I am bound to be true; I am not bound to succeed, but I am bound to live up to what light I have.

— *Abraham Lincoln.*

Sometimes you get hold of a piece of printed matter that fairly charms you. It is just right. You turn it over and over in your hands. You hold it at arm's length and admire it. You resolve to hide it, so that no one shall get it away from you.

But when you come to analyze it, you are puzzled. The stock is n't expensive. The typography is simple. Maybe it's in only one or two colors. Yet the beauty and the impressiveness are there, and you can't get away from them.

Printed things of this kind are simply the result of knowing how. That's all. It's the artistic instinct plus hard study and years of experience. And this is precisely what we offer you, in a degree, we believe, which cannot be surpassed. It is by no means a question of expense. Dollars can't take the place of the know-how. We can make a dollar go as far as any printshop in America — and give you the know-how, besides.

The dreamer of today is the genius of tomorrow.

[8]

No 6b

for its fairness and reanonableness, would, I am sure, so appeal to Lincoln, as it undoubtedly will to the printing fraternity, that I republish it entire:

MORE ABOUT THE DUMMY.

The following are extracts from some rather interesting correspondence on the dummy question, concerning which comment has been made in previous issues of *Character.* Only such changes have been made in these extracts as were necessary to avoid revealing the identity of the concern with which the correspondence was held.

In September last the Griffith-Stillings Press received a request for an estimate on a book issued annually by a well-known company. Acknowledgment of the request was made, and the estimate followed duly. Shortly afterward a letter was received from which the following is taken:

"Pardon delay in acknowledging receipt of Mr. Griffith's "letter containing quotations on the book. I am not altogether "certain after reading his letter that it was your intention to "submit a specimen dummy as required by the specifications, "but it is necessary to say that we must have this dummy, for "in no other way can the character of the work be determined. "Furthermore, *the printed dummy* should show the specifica-"tions on the tinted background. The character of the work

"will influence placing the contract equally as much as the "estimated price."

To the above letter the response quoted below was made:

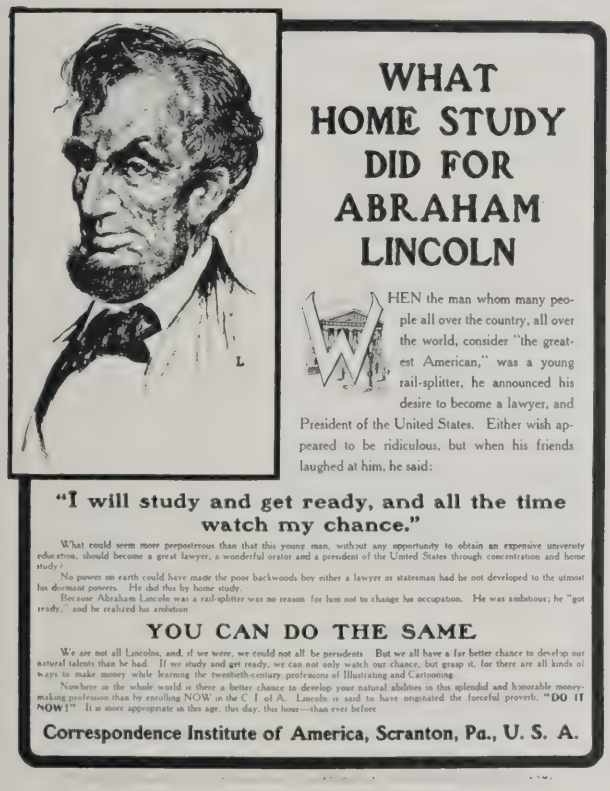
"We did not interpret your specifications to require a speci-"men printed dummy with quotation. We are willing to meet "your requirements in this matter of dummies, proofs, de-"sign, etc., if the order is placed with us and we will furnish "same subject to your satisfaction and approval, but we are "not willing to incur this expense on speculation, and we "would be surprised to learn that any first-class printing house "meets your requirements in this particular."

This brought a reply which stated, among other things, that:

"It may interest you to know that estimates were sought "from nine of the leading publishers in the United States—"only those that rank in the very first class. The Griffith-"Stillings Press is the only one of the nine that has not "supplied dummies, and I do not mean by that, blank paper "bound in a cover, but two or more of each lot submitted, "have had the cover design furnished and the inside pages "printed according to the specifications."

In answering this, Mr. Griffith simply said:

"I cannot see the justice in asking eight or ten concerns "to make an investment of from $50.00 to $100.00 each on "dummies when the contract could possibly go to no more "than one concern and the order not to be given on results "of dummies shown, but rather on price. It is this sort of "imposition that is forcing printers together to regulate such "abuses. The principle is wrong, and I think the time will "come when you will agree with me."



WHAT HOME STUDY DID FOR ABRAHAM LINCOLN
WHEN the man whom many people all over the country, all over the world, consider "the greatest American," was a young rail-splitter, he announced his desire to become a lawyer, and President of the United States. Either wish appeared to be ridiculous, but when his friends laughed at him, he said:
"I will study and get ready, and all the time watch my chance."
What could seem more preposterous than that this young man, without any opportunity to obtain an expensive university education, should become a great lawyer, a wonderful orator and a president of the United States through concentration and home study?
No power on earth could have made the poor backwoods boy either a lawyer or statesman had he not developed to the utmost his dormant powers. He did this by home study.
Because Abraham Lincoln was a rail-splitter was no reason for him not to change his occupation. He was ambitious; he "got ready," and he realized his ambition
YOU CAN DO THE SAME
We are not all Lincolns, and, if we were, we could not all be presidents. But we all have a far better chance to develop our natural talents than he had. If we study and get ready, we can not only watch our chance, but grasp it, for there are all kinds of ways to make money while learning the twentieth-century professions of Illustrating and Cartooning.
Nowhere in the whole world is there a better chance to develop your natural abilities in this splendid and honorable money-making profession than by enrolling NOW in the C. I. of A. Lincoln is said to have originated the forceful proverb, "DO IT NOW!" It is more appropriate in this age, this day, this hour—than ever before
Correspondence Institute of America, Scranton, Pa., U. S. A.

No. 7

Subsequently, having had his attention drawn to the article in December *Character* on, "The Abuse of the Dummy," the party of the first part in this correspondence recapitulated the circumstances in a letter to a member of the Griffith-Stillings staff, and concluded:

"The fact that eight of the principal companies in the "United States offered no objection or showed the slightest "hesitation to submit dummies, some of them pretty elab-"orately gotten up, would seem proof positive that Mr. Grif-"fith, and not the others, shows a lack of foresight and has "taken the wrong attitude."

Perhaps. Wisdom should certainly dwell with the majority. But, it should be remembered, eight printing houses, according to the evidence in the case, spent a considerable sum of money and a large amount of thought and skill on this proposition, and seven received absolutely nothing in return. Where do they come in? Is their situation, now that the matter is all settled and one house (at the low price, however) has the order, particularly to be envied?

There is only one way to figure this vexed question out. Take the case embodied in the above correspondence. Eight printers submitted elaborate and expensive sets of dummies. One received the job. Seven received nothing.

In nine similar instances, involving the same nine printers, the law of averages would give each printer one job. In order to get that one piece of work each individual would have to make and submit nine different sets of dummies, with sketches, type proofs in colors, and all sorts of things. Each set of dummies would call for thought, study, correspondence, postage and perhaps traveling expenses and the price of a salesman's time.

Now, gentlemen of the jury, who pays for all this? The man who conducted one side of this correspondence seems to think such things are free.

They are not.

MORE ABOUT LINCOLN.

Speaking of Lincoln, I am sending a page ad I designed and wrote myself (7). I never reproduced any of my work in this publication before, and simply do so now in order to show the excellent portrait of Lincoln done by A. Hoyt Levy of New York, who designed the department headings that are now used in the NATIONAL PRINTER-JOURNALIST, and who has made one or two striking headings.

A LETTER HEAD ANNOUNCING A BOOK.

The letter head (8) used in advertising the Graphic Arts and Crafts Year Book for 1909, has one feature, at least, that is unusual, and that is the single connected phrase across the top combined with the smaller

The Graphic Arts And
The American Annual Review of the Engraving, Printing and Allied Industries

"VOICES FROM THE PAST"

ADDRESS BY ST. CLAIR McKELWAY BEFORE THE CONNECTICUT EDITORIAL ASSOCIATION IN NEW HAVEN, FEB. 15, 1908.

MY FRIENDS—Your committee wrote to me for a title to my address. I gave to them a title for it which would look well on a program or a poster, and would not run over too far on the second line. I did not mean that the title should necessarily bind me, for I had not blocked out my address, when their letter came. An editor can always tell what headliners want, for he knows what they ought to want. So, when I sent on to you my caption or title, I had discharged my duty to you and could then discharge my duty to myself. My duty to myself is that of one newspaper man talking to more newspaper men about some other newspaper men—the newspaper men of Connecticut. The other newspaper men, about whom I should talk to you, ought to be such as are dead enough not to be in our midst or company, lest we hurt their feelings, yet who were, and still are, alive enough to make them inhabit our memory or challenge our ambition or stir our emulation or serve as a warning to us in our own work.

Kansas and N. E. A. Editors at the New Building of the Capitol at Topeka.

"Of course, such names as Horace Greeley, Thurlow Weed, Henry J. Raymond, James Gordon Bennett, George D. Prentice, Samuel Bowles, James Watson Webb, Charles A. Dana and others, occur to you at once. But do you recall that not one of these names was mentioned in any of the late symposiums about Abraham Lincoln, except the name of Horace Greeley? And do you realize that his name was recalled more for his relation to politics than to journalism? Not Raymond was recalled, though he wrote the "Campaign Life of Lincoln," when Lincoln was renominated. Not Thurlow Weed was recalled, though Mr. Lincoln sent him a special messenger to Europe, to chloroform newspaper writers there who were pushing for intervention for the South. Not James Gordon Bennett was recalled, though Lincoln offered to him a foreign ambassadorship or its equivalent on those lines, and received his declination of it at once. Not Prentice, not Bowles, not Webb, not Dana were recalled, though doubtless Lincoln met and knew them all, and though he appointed Mr. Dana to be assistant secretary of war, with confidential powers and duties far beyond those the law prescribed to that secondary office.

"The significance of the exclusive attention to Greeley in these celebrations of Lincoln's centennial is in the fact that Greeley probably accomplished the defeat of Seward for nomination, by convincing the Chicago convention of 1860 that Seward could not be elected. Mr. Greeley appeared in that convention as a delegate from Oregon, by substitution for an Oregon man, whose proxy he had received. The main worker for Seward was Thurlow Weed. The desire of Greeley to go to the Senate from New York was frustrated by Thurlow Weed, who defeated Greeley with a man named Ira Harris. When Lincoln, however, put Seward in as secretary of state, and when Seward got Lincoln to send Thurlow Weed on great business to Europe, there was that in Horace Greeley's mind that was disturbed. He criticised Mr. Lincoln's policy so severely and incessantly at the start, and antagonized Lincoln's renomination so intensely that he drew from Mr. Lincoln the most explicit rejoinder that any editor or any other Republican ever extorted from that consumate controversialist, while he was President of the United States.

"Had Weed let Greeley go to the Senate, Ira Harris would not have been sentenced to forgetfulnss in that office. In that office Mr. Greeley's journalistic readiness and restlessness would probably have broken all the bounds of convention and tradition, and have impaired the great influence of his *Tribune* with many of the *Tribune's* constituency of readers in the Union. Greeley's criticisms of Lincoln in his first term would have been less formidable to Lincoln, had Greeley been in the Senate, than they were with Greeley and the *Tribune* in circulation outside the Senate. The reply to Senator Greeley Mr. Lincoln could have left to other senators. To Editor Greeley Mr. Lincoln knew of no other editor who could reply. So he replied himself, frankly, effectively, kindly, conclusively. Mr. Greeley, as a diffusion, was more formidable than Mr. Greeley would have been as a senator. Mr. Weed's influence would have been impaired. Mr. Raymond's primacy as a peacemaker or platform maker would have been less. Mr. Seward would have escaped the imputation of being only Mr. Weed's oracular masque, but Mr. Greeley instead of being saturated dew would have been concentrated into a stream that would have been discharged as a comparative trickle through a small pipe into an unconsidered trough, which need never have worried Mr. Lincoln at all. As it

was, Mr. Greeley was the only editor Mr. Lincoln had to single out, and had Mr. Weed not defeated Mr. Greeley for the Senate, Mr. Seward would possibly have attained to the presidential nomination—I do not say to election. It had been easier to fuse the opposition to Republicanism against such an academic radical as Seward was, than it would have been to do so against such a wise, politic and tactful man as Lincoln was. That question would have been settled on the knees of the gods. The gods, however, did not extend their knees or their lap for Seward to sit on. They seem to have sided with Mr. Greeley in his intense but possibly unconscious execution of reprisals. The gods are apt to be ironic as well as reserved.

"I think you will now realize why Abraham Lincoln singled out Greeley alone among editors for direct reply. You should remember that Greeley entitled his letter which drew Lincoln's letter: "The Prayer of Twenty Millions." The number was exaggerated, but Mr. Greeley was accepted as an authority on figures, especially on election statistics or returns, and Mr. Lincoln was perhaps impressed on being made either the subject or object of prayer, which he supposed was a form of petition ordinarily addressed to Deity. His reply was suitably humble, but otherwise summarily conclusive.

"It is not my purpose to discuss that correspondence. To have achieved it would have satisfied Horace Greeley, had he been cast in the mold of several editors of this later time. But he was not cast in that mold. He delighted to be an editor, but he desired to be something else, too, and he thought that something else would be something better as well as something more. The something else, which he thought was something more, was first to be a United States Senator and next the President of the United States. He did not seek the Presidency for himself in Abraham Lincoln's time. He at first supported some other Republican for it, less in the hope of electing him than of preventing the re-election of Lincoln. When he found what would be the Democratic consequence and the national consequence, he rejoiced that the opposition movement from within Republicanism was abandoned, but his relation with Republicanism was weakened, and by the close of General Grant's first term, Mr. Greeley became the Democratic and so-called Liberal Republican candidate against Grant, only to go down to overwhelming defeat, which was soon followed by his untimely death.

"He would have died, had he been elected, the day he died, after being defeated. The election, with his defeat, had nothing to do with the cause of the illness which resulted in his death. He lost the power to sleep, by vigils at the bedside of his dying wife. Loss of power to sleep brought on exhaustion that made restoration of that power impossible, and that brought on mania and death. As President-elect he would have died to the minute he did die, as defeated candidate for President. The contrary was asserted by malice, reiterated by mendacity, believed by uninvestigating credulity, and has passed into accepted lies of history. It is incurable and untrue. There were too many who wished to believe it ever to disestablish it.

"Most of the other editors I have named were content to be editors or did not at least want to become Presidents. Thurlow Weed was content to be an editor and a party leader. The one office, a little one, he took in early life he regretted having taken. Raymond served as a member of the Legislature, as Lieutenant Governor and as a Congressman from New York, but he lived on and for the New York *Times* till he died. Bennett summed all his ambition in being the founder of the New York *Herald*. George D. Prentice was not tempted beyond the Louisville *Courier*. Bowles revolved solely around the Springfield *Republican*. Webb certainly did not attain any other distinction than newspaper distinction. Mr. Dana did break with Grant on a political disapointment and misunderstanding, but the essentially journalistic ambition of his mind was as signally attested as his genius in that ambition.

"None of these men came to more than the merest incidental allusion in the late and large multiplication of writing and speaking about Lincoln. They were ignored or lost in the concurrence of attention on Lincoln himself, though the number of newspapers suppressed and the number of editors arrested and imprisoned, under the war power, in the war between the states was comparatively large. As much journalism resented it as approved it, for the credit of loyalty then was an asset interconvertible with revenue as well as with happiness and the discredit of disloyalty not only wrought unpopularity but justified suppression in the general mind, heated to the boiling point in the civil strife. Those who escaped the distinction of being personally made a Lincoln text or pretext as Greeley was, if they attaineed less conspicuity were, I think, happier, on the whole. As, however, Mr. Greeley was unalterable, speculation as to what he would have been, had he been someone else, would be idle.

"Connecticut has a respectable rank in the journalism that death has closed to criticism and opened to review. Joseph R. Hawley belonged to the class that made journalism and politics co-operate with one another, as the right hand cooperates with the left, while both help the state and national interest. Charles Dudley Warner, his associate, hyphenated journalism between literature and philanthropy, and adorned and strengthened all three. Gideon Welles, whose war time diary, posthumously published, is the political novelty and revelation of the Lincoln centennial, was the strongest contribution of patriotic Democracy to patriotic Republicanism and proves to have been the clear sighted monitor and bulwark of the President who freed the slaves, but not until it was wise to do so, and not until the Constitution and the Union could be preserved only by doing it, as it was done.

"There are other Connecticut journalists, of whom doubtless you know better than I do. But your journalism of sane partistnship in the past, like your journalism of sane independence in the present, can be credited with worthily remembered honor, in the land of steady habits.

"I assume I may be addressing editors who divide on party lines. It may be their necessity. It may be their choice. It is their option or their right. Their papers may have to depend on party support for existence. The politicans of the state may have so arranged conditions of public printing that sheets of both parties must be partisan to get it, and think they must get it, to live. If the politicans can keep you dependent, none has a right to censure you, if you cannot be independent. I only know that independence is better than dependence, because I have trid both, and both have tried me. I can sympathize with and allow for both kinds, and am prescribing my preference to none to whom it could not be adapted.

"There is, however, a notable gain in some organic journalism and an observable and regrettable independent journalism, so called. Organship is tending more toward prescribing for managers than managers are now disposed to dictate to organs. The partisan editor is aware of the ability and disposition of the independent voter to differentiate his ballot in the booth.

"The independent journal is sometimes prone to be as dictatorial as the political boss of tradition, and is angry when it finds that its truculency is resented as much as that of the traditional boss himself. When even machines 'pander to reform,' independent editors should not put on airs of bossism. Boss dictation and reform dictation are both discounted.

"That is why nearly every election is a crazy quilt and why nearly every state poll shows such marked discrepancies in comparative totals. Quite often the barely elected bring out results in administration, to reassure those who barely supported or openly opposed them. Sometimes, the triumphantly successful abuse support by getting heady or heedless. Real

character or real sagacity comes out in results. The pandering to reform inherent in the fears of machinism and the tendency to machinism inherent in some reform are constant. The discriminating and disinterested voter casts up between elections the accounts entered at elections. The trial balance is invariably instructive and sometimes disilusionizing.

"I advisedly counsel you not to judge your pudding before you have tasted it. Digestion is another name for justice. Experience is often the factor or synonym of disillusion. Don't be sure you are right till you or others have gone ahead. The vindictation or condemnation of foresight is hindsight. There is an interest in machines to improve, if well shaken when being taken. There is a tendency in reformers to become dictatorial, when success brings the fact of power to tempt one way from the obligation to impartiality and disinterestedness.

"Every first term in American history has been better or more successful than any completed second term in American history, in executive government. That has been invariable. The executive that makes the opposite to this, his record will probably become an angel, before his second term expires. It is hardly in human nature to make a second term better or more successful than a first. I would not have editors be pessimistic, but I would caution them to expect the habit of history to repeat itself."

"A BOLD-FACED LIAR"

IS THE PUBLISHER OF NATIONAL PRINTER-JOURNALIST. NOW AND ALWAYS NON-UNION.

Last week a large number of circulars were handed out to Werner employes, said circular containing two letters—one from a union proof reader to the editor of the NATIONAL PRINTER-JOURNALIST, of Chicago, criticising the horrible proof reading of the P.-J., the other letter being a reply to that of the union proof reader, in which B. B. Herbert, editor of the P.-J., occupies about three columns in ripping union men up the back and wound up by stating that his shop was manned by union men from top to bottom and that the very work criticised by the union proof reader was the work of union men.

In reply to a letter from W. B. Tanneyhill to President Jas. M. Lynch the following was received:

INDIANAPOLIS, IND., Feb. 3, 1909.

Mr. W. B. Tanneyhill, Chairman Label Com. No. 182, 206 Wills Avenue, Akron ,Ohio.

DEAR MR. TANNEYHILL:—I have your favor of the 1st inst., with enclosure. You ask me to give you such information as I can in regard to the NATIONAL PRINTER-JOURNALIST. The only information that I can give you is that this publication is non-union, and always has been, and Mr. B. B. Herbert the publisher of the PRINTER-JOURNALIST is noted for his antagonistic attitude toward trade unionism in general and the typographical union in particular.

With regards, I am, Yours fraternally,

JAMES M. LYNCH.

Above is from a paper, published in Akron, Ohio, called *The People,* and is a sample of the kind of truths that are dealt out by the self-constituted servers of the dear people. The fairness of telling a falsehood, charging the falehood to another, and then calling the other "A Bold-Faced Liar," for one's own lies, will be appreciated for what it is worth, as will the low code of ethics it indicates and represents, by those who know the facts. There is no necessity of telling the readers of the NATIONAL PRINTER-JOURNALIST as to the utter falsehood of the assertion, that, "the editor of the P.-J. occupied three columns (or any other space) in ripping union men up the back and wound up by stating that his shop was manned by union men from top to bottom." In trying to convict another and to transform the truth into a lie, the editor of *The People* has only shown himself to be a wreckless falsifier. We did in substance assert "that the very work criticised by the union proofreader was the work of union men," and the assertion was literally true. The article did show that the Linotype operator who set the type was a union man who struck for an eight-hour day, that the ad compositor who also made up the pages was a union man and that the press work was done in a press room manned by union men and that three of the department writers on the NATIONAL PRINTER-JOURNALIST are union men, one of whom struck for an eight-hour day, and we do not believe John M. Lynch is going to excommunicate these men, or say that they must be put out upon the cold world and be deprived of employment or the right to earn a living, on that account. The article fully indicated that we were running an open office, and asked no questions when giving employment to men, as to what society, organization or church they belonged. We take it that in this free country a man has a right to give employment to whom he pleases and every man has a right to work for whomsoever he chooses, and anything short of this is going back to the civilization of the Dark Ages. Any one seeking to abridge these rights *is* a violator of the laws of this free country and acts in controvention of the plain provisions of both the State and National Constitutions and the "Bill of Rights" secured to the American people.

President Eliot of Harvard, who is certainly reliable authority and wholly fair, unbiased and unprejudiced, as he is not an employer of labor, recently said in a public address in Chicago, as reported in the Chicago *Tribune* of February 11th:—

"The ethical influences of a well conducted industry, spring from steady work, a permanent home, loyalty and good will at work, and a reasonable freedom to profit by intelligence, alertness, and fidelity so there may be constant hope of an improving lot."

Taking up the question of "employes ethics," the limitation of apprentices was condemned as "unmitigatedly selfish" and "an interference with a freedom that is precious to every American—namely: the freedom of education"

"They abridge the choice of occupation and they have no other motive except the selfish one of procuring or maintaining a monopoly," he continued. "The objection af all civilized people to monopoly is really a moral one. Monopoly is always an advantage for the monopolist selfishly enforced against the rest of the community."

Minimum wage scales were condemned as exhibiting the "extreme cruelty of unions toward their members," in that they ignore local conditions, personal capacity, crush ambition, and prevent the less competent obtaining any employment at all. Limitation of output was said to be based on uneconomic theories, and, in addition, "intensely unethical" in that—

"It is impossible that a workman who habitually works at a rate below his normal individual standard should not be personally degraded by that practice."

"No distinction can be made between strikes and lockouts," he said, "as both are equally unethical in that they temporarily put out of practice the demonstrated principle that the great source of civilization on a large scale is steady, productive labor."

The unethicalness of the boycott and the union label was declared to lie in the fact that they abridge industrial freedom.

URGES MUTUAL UNDERSTANDING.

Now as to the ultimate result and remedy:

"The public liberty which permits the formation of strong combinations of men to promote their own interests will prolong and intensify industrial strife until both parties to the strife realize that the only way to public happiness in modern industrial communities is through the cultivation of mutual accquaintance and sympathy.

"The way to mutual understanding lies only through the habitual use of the most complete publicity with regard to all causes of strife between the parties. From that publicity both parties have shrunk and still shrink. Nevertheless it is only through the utmost publicity that better methods and better times can come."

President Eliot then discussed at some length the workings of the Canadian law which compels the parties to an industrial dispute to submit to an investigation, making public their differences before resorting to strike or lockout.

The examination of the pages of the NATIONAL PRINTER-JOURNALIST for the past fifteen years, will show that the only antagonistic attitude toward trade unions in general and the typographical union in particular, for which James M. Lynch says, "Mr. B. B. Herbert, the publisher of the PRINTER-JOURNALIST is noted," has been in constant maintainance of these well-established principles of human rights, law and ethics, both on the side of employers and employes; if he should declare anything different, and if we were accustomed to use the language of men whose minds have been poisoned with hate, envy and distrust, or the epithets of the haunts of the dissolute, who were at one time numerous in the ranks of unionism, but have grown gloriously less—though some bad specimens still remain—who neglected the support of their own families while they guzzled poor whiskey and poured out their venom upon the men who give them employment, and paid out their earnings to stir up strife and to support law-breaking strikes, we would then say that he had proven himself, that which his union admirer prints so readily, "A Bold-Faced Liar."

But epithets avail nothing and prove nothing. Why not be sane and discuss these matters with candor and refrain from passing judgment upon others through prejudice and on only partial information.

The method of our Akron newspaper editor of *The People,* reminds us of the illustration once used by Lincoln, when he said in substance that "An old philosopher claimed to have proved that the sum of the squares described on the two sides of a right angle triangle is equal to the square described on the hypothenuse. It is no disproof of his claim to say that he is a liar." Why should not unionism and everything else be judged with candor? If there are injustices, why not reform them?

President John M. Lynch is reputed to be a man honest in his convictions, and desirous of serving the members of the union. We have no disposition to prove anything to the contrary and though we think that we have proof that great deceits have been used at times, this would be deemed only the wise diplomacy of war, as the members of militant unionism, in the strife with employers of labor, have not hesitated to declare that war measures were justifiable. So we are willing to denominate whatever deceit has been used as misdirected diplomacy and let it go at that, though we deny the right of one group of men, in the name of either labor or capital, to declare or wage war on another group of men, in this free country where every one stands equal before the law and every voter is a sovereign in his own right as a citizen.

However, Mr. John M. Lynch is a little wide in his assertions.

We had a controlling interest in the Indianapolis Printing Co., while the NATIONAL PRINTER-JOURNALIST was published at Indianapolis, and it was run as a strictly union office, and did a liberal share of the printing for the International Typographical Union, but that was, possibly before Mr. Lynch was old enough to sit up and take notice. The NATIONAL PRINTER-JOURNALIST Printing Co. was a union office until 1893 and we are neither boasting of or apologizing for the fact. We have not run nor claimed to run a union office since 1893, and have had no occasion to make any apologies for that fact, either. During the summer of 1893, a busy-body undertook to stir up trouble in our office, through the union. A complaint was made, and a committee sent to investigate. We explained and the committee reported that we were in the right but the disturber of the tranquil relations between employer and employes, was not satisfied and defeated the adoption of the report and had another committee appointed. The second committee visited the office and after making investigation reported that we were in the right. The disturber was still stronger than this committee and they were sent back, against their protests, and the union boss followed them to the foot of the elevator to see that they visited the office again. We had been a good deal worried and were in a nervous condition and were thrown into hot anger, during which we used anathemas that had not passed our lips before for thirty years, and drove the committee from our office with a cane that happened to be one that had been given us by the clerks of our old Minnesota home town, in recognition of personal and newspaper servecises rendered them in securing fewer hours for a day's work and giving them their evenings for enjoyment and improvement. No committee of the union ever appeared again, the threatened strike was not ordered. Two weeks later a member of the committee met us (to retain the editorial plural) and personally apologized for what he said he had been compelled to do, and expressed his feeling of shame and degradation and related the fact of the union boss following the committee to the foot of the elevator to see that they did the unpleasant and disgraceful work assigned to them. We accepted the apology, but stated that if that was unionism in Chicago, we had no use for slavery and little patience with the self-enslaved, deluded victims of that kind of tyranny. Yet we have all along only opposed what we have designated as spurious unionsm, that has grown up from blind, self-seeking, selfishness and narrow short-sightedness, which seeks not the real good of the men, but the antagonizing of employers and their interests and the forced controll of property that others have built up and through which employment is given to workers. If unionism is the usurping of power over the interfering with and the teaching of distrust and emnity towards employers, the seeking of the limitation of work, and the securing of employment, not through encouraging efficiency in and loyalty to the business by which employes live and on the success of which their own well-being is as much at stake as that of the employer, if this is unionism, then we are antagonistic thereto.

Possibly James M. Lynch is a discerner of the hearts and thoughts of others and knows by a sort of sixth-sense the lives of those whom he criticises, but he makes a great mistake when he says "this publication is non-union and always has been." This publication has always been independent and for fair play and the editor has ever been antagonistic to slavish servility, and to any badge of servitude or slavery and to all efforts to keep employes at enmity with their employers and to all claims, that, because men had been sufficiently industrious and thrifty to lay up means to give employment to others—something that, in the line of opportunity, is open to all men in this free country—they were to be combined against, to be considered as unfair. Our course has been that of entire fairness, openness, and in the interest of fair play. We are not the only man that has once run a union office and afterwards changed to an open office. The largest printing offices in the United States are open offices, though strenuous efforts, with more or less success, have been carried on by un-

worthy means to make the uniformed to believe otherwise. The Werner Company of Akron was at one time a union office, and they changed as have others, and theirs is not the only office that reprinted and circulated the article that appeared in the NATIONAL PRINTER-JOURNALIST.

The office in which this proofreader, who has gained a little temporary notoriety, worked and in which he made trouble and from which he struck, also republished the article and it is one of the best offices in Iowa and was at one time union, but is union no more. If unionism is fair, just and of benefit, why do offices, after having tried its blessings and endeavored to get along with the men acting thereunder, change?

As we have before said, one Government is enough for any free American, and no man can serve two masters. "If you want anything done, do it yourself," was Franklin's motto and it applies to all men in a larger sense. No one can wisely turn himself or his affairs over to be run by some outside organization, however good the organization may be in itself, at least not until human nature changes and everyone seeks another's good rather than the promotion of his own selfish ends.

The Werner employes, although they are non-union, seem to be doing pretty well. We notice by an Akron daily paper, that they have voluntarily raised and contributed $1,000 to the building of the Y. M. C. A., and are active in good works. We submit that it is better for workers in any calling to mingle with other men and get in touch with the benevolences and all the worthy enterprises of life, than to go off by themselves Sunday afternoons or any other afternoons and curse their employers, bemoan their lot and, through selfishness, endeavor to get more money for less work and keep others out of work, curtail, as far as possible, the number of producers and the output by those who are able to produce, and arbitrarily strive to limit the number of those seeking preparation to enter a useful calling.

Better wages will be secured by broadening out, being useful in the community, knowing and influencing others, and better laws will be more easily and more certainly secured in this way. Vinegar catches no flies and it is much easier to entice men into liberality and good deeds than to drive them, even if they are the men who furnish you honorable and remunerative employment.

In this connection the following letters will be found of interest:—

THE WERNER CO., GENERAL SUPERINTENDENT'S OFFICE.
Akron, Ohio, January 29, 1909

Mr. B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill.

MY DEAR SIR:—A copy of the January issue of the NATIONAL PRINTER-JOURNALIST came to my hands and I have carefully read over the articles criticising a letter of a Union man with answer. In fact, the feelings, which you express in your answer, are identical with mine, and it is with pleasure that I wish to congratulate you on the firm stand, which you have taken.

You may not be aware of the fact that we are operating a strictly Non-union Printing Shop. These conditions were brought about entirely by the same actions of the various unions, which you so plainly state in your answer and which we find are only too true.

I was so taken up with this article that I took the liberty of having the same re-set and printed some copies and distributed the same among our employees. Trusting my action in this matter may meet with your approval, I remain,

Yours very truly,
THE WERNER COMPANY,
E. P. Werner, Gen'l. Supt.

P. S.—I take the pleasure of enclosing a few of these reprinted copies herewith.

THE WERNER CO., GENERAL SUPERINTENDENT'S OFFICE.
Akron, Ohio, February 15, 1909.

DEAR SIR:—Yours of February 12th at hand, and I am glad to note that you were pleased with the way we handled your article.

It may be of interest to you to know that we had run a union shop for thirteen or fourteen years and about three years ago, our compositors went on a strike for the eight-hour day, a year later our lithographers went on a strike for the eight-hour day; the year following the bookbinders, about 300 in number, went on a strike for the eight-hour day and the following November our pressmen and feeders to the number of one hundred went on strike for the eight-hour day. Our factory is now working nine hours per day and is run by Non-union men throughout. We have had no difficulty in procuring exceptionally good help in every department. Our business is steadily increasing in volume and, in fact, we have been exceedingly busy through all our troubles and would not go back to union condition for any consideration. Furthermore, ever since we have changed to Non-union help we have found that our out-put has increased 25 to 33 per cent, which leads us to believe that the union has always limited the output in our factory, in fact, we know they have done so, as results prove this.

Again thanking you for the interest you have shown, I am,
Very respectfully,
E. P. WERNER, Gen'l. Supt.

ITEMS OF INTEREST.

On Monday, March 1, the Milwaukee *Sentinel* will become an All-Day newspaper. Beginning on that date the *Sentinel* company will keep its entire plant in operation the full twenty-four hours of every week day, supplementing the morning editions now published with afternoon editions. It is the company's purpose to publish this paper at all hours of the day and night that conditions and the development of news may warrant. Every edition will be a complete paper of all the news for the past twenty-four hours.

At the University of Wisconsin, Dr. W. G. Bleyer, chairman of the courses preparatory to journalism, who has had charge of the courses in newspaper writing, was made assistant professor of journalism. A course of four years of practical journalistic work has been provided for next year to include practice work in connection with the *Daily Cardinal.*

After having been in existence fifty-three years, the Muskegon, Mich., *Morning News,* suspended publication. The paper gives way to the plan to issue but one paper in the city, and that a strong one, the Muskegon *News Chronicle,* which will be published afternoons with a Sunday morning edition.

President Roosevelt has reappointed J. C. Adams editor of the Peotone, Ill., *Vidette,* as postmaster of Peotone. The appointment is favorably received at Peotone. Editor Adams during the last four years has rendered faithful service which is appreciated by the people of the village and the postal authorities.

MINNESOTA EDITORS HOLD FORTY-THIRD ANNUAL CONVENTION

AT the Forty-third Annual Convention of the Minnesota Editorial Association, held in St. Paul, February 17th and 18th, there was the largest attendance for several years, and it proved to be one of the most successful conventions.

Mayor Lawler, who is one of the most able and eminent lawyers of the Northwest, made the address of welcome on behalf of the city, in which he said:

The association represents, as well as any other state association, and perhaps better, all the factors, material and moral, that go to make up the strength of a great commonwealth. Editors, not only in cities but in small communities, know more than even the clergymen about the morals of their neighbors; and editors do more, in fact, to repress gossip and to promote morality than any other class of men. As a rule, editors are patriotic, enlightened, broad-minded, eager to strive for the true and best interests of their communities.

The mayor didn't hope, he said, that the editors' session would be merely harmonious—harmony too often meant stagnation. He did hope the sessions would be spirited and that they would serve to advance the welfare of the association and the state. This mayoral welcome was seconded by that of Eli S. Warner, president of the St. Paul Commercial Club.

The *Pioneer Press* says:

"For the first time since the foundation of the association in 1867, the only five survivors of the members who founded the organization were present. The venerable deans, four of whom ar still in harness just as they were thirty-four years ago, are Irving Tood, aged seventy, of the Hasting *Gazette;* Granville S. Pease, aged seventy-five, of the Anoka *Union;* A. W. McKinstry of the Faribault *Republican,* aged sixty-eight; David Ramaley of the *A. O. U. W. Guide,* aged eighty-three; Capt. Henry A. Castle, formerly of Anoka *Union,* and W. B. Mitchell, formerly of the St. Cloud *Union.* These men formed a notable contingent throughout the deliberations of the association.

PASS IMPORTANT RESOLUTIONS.

Before adjourning, the association put itself on record as being unequivocally opposed to the present duty on wood pulp and passed a resolution calling upon the senators from Minnesota and the state delegation in Congress to strive for the absolute removal of the duty on that product as well as any other imported articles needed in the publication of newspapers or magazines.

A resolution was also presented and passed urging the state authorities to co-operate with Canada in the establishment of a big game preserve, as was one favoring the project to change the name of the National Schools of Science to the Lincoln Schools of Science in honor of the martyr president.

PATENT MEDICINE LEGISLATION.

The report of the committee on legislation on H. F. No. 169 and 189, the first establishing a criminal penalty for the publication of advertisements of sexual medicines and the second requiring the printing of the exact quantity of each ingredient in a patent medicine under penalty of a fine and imprisonment, were also adopted.

The committee favored the former measure, but on the latter reported that the bill was entirely too sweeping.

A committee of seven was appointed to go before the legislature and urge the association's views upon that body.

"Give artificial aid to the natural propogation of the game of Minnesota as has been given the fish," was the advice given by Carlos Avery, executive agent of the state game and fish commission, in his paper read before the association.

"It has been demonstrated that this plan has given good results with the fish in our lakes and streams," said Mr. Avery, "and it is beginning to be believed that the same principles should be applied to game. It has been demonstrated that certain restrictions are necessary to preserve the fish and game of the state, but that alone will not preserve them entirely. An enlargement of the appropriation to care for this department is absolutely necessary."

In the discussion which followed, it was stated that the propogation and breeding of white fish in the lakes, especially, was absolutely without results, because the white fish lived on the mosses and growth at the bottom of the lakes and that this growth is destroyed by the dumping of ashes and refuse in the large lakes.

Following the reading of a paper, "Work to Profit Members," by W. H. Goetzinger, Elbow Lake *Herald,* it was advocated that a committee be appointed to make arrangements with some advertising concern to furnish a set copy of advertising to be printed by the newspapers calling the attention of the country merchants to the value they would gain from attractive advertising. Frank A. Day, chairman, Charles Mitchell and Joel Heatwole were appointed on this committee.

Mention was made that the American Press Association is already provided with plates suitable for the committee's needs, and that certain large advertisers could also supply the requisite matter

This idea of educating merchants through the local papers as to the value of advertising is certainly worthy of consideration in an association of newspaper publishers. It is a little curious that newspaper-makers seem to forget that they carry on a mercantile business as well as manufacturing industries. The paper, as such, has two lines of merchandise for sale, advertising space and newspapers, and that they should fail to advertise their own goods, seems somewhat singular, while they are constantly urging such use upon others. We have given hundreds of examples of good advertising used by most successful publications to advertise their own goods and for ten years have maintained a department conducted by one of the ablest men in that particular line in the United States, to gather samples of and give instructions and suggestions for effective advertising for more work both in the newspaper and printing departments, and have witnessed much improvement, still the great majority of newspapers have failed to use the means afforded, either through indifference, indolence, the lack of any real purpose or ambition for success, or on the principle of the old saying that the shoemaker's wife goes without shoes. We are glad that our Minnesota newspaper brothers are waking up to the subject. A newspaper man ought to be able to write ads for his wares, but possibly modesty has prevented this in the past. The preparation of such ads in electrotype by the American Press, always alert to meet all the wants of publishers, shows that there is a demand.

The following officers were elected for the ensuing year:

President, C. S. Edwards of Albert Lea; First Vice-President, C. H. Bronson of Osakis; Second Vice-President, F. W. Hunt of Mankato; Third Vice-President, H. J. Essler of St. Peter; Secretary, C. P. Stine of St. Paul; Treasurer, David Ramaley of St. Paul; Historian, H. W. Wheelock of Fergus Falls; Executive Committee—C. C. Whitney, chairman; C. S. Easton and Frank J. Meyst.

NEBRASKA EDITORS.

The following was the program of the Nebraska State Press Association, concerning which more will be given, treating of the instructive addresses in the April issue:

Monday Evening, Febuary 22—Informal reception tendered to

the visiting newspaper men and ladies by the Grand Island Commercial Club and citizens of Grand Island, at the Elks' Hall.

Tuesday Morning, February 23, 10 o'clock—Music; Invocation—Rev. Luther Lipe, Pastor English Lutheran Church, Grand Island; Address of Welcome—Mayor Schuff; Response—L. A. Varner, Sterling *Sun,* President Nebraska Press Association; Music; Annual Poem; Appointment of Committees; Secretary's Report; Announcements.

Tuesday Afternoon, 1:30 oclock—Music. Paper—"The Conservation of Nebraska's Resources"—H. M. Bushnell, *Trade Review,* Lincoln; "The Relation of the Newspaper to Politics"—Will Owen Jones, *Nebraska State Journal,* Lincoln; Discussion—Led by T. M. McCullough Omaha *Bee;* Music; Address—B. B. Herbert, Editor NATIONAL PRINTER-JOURNALIST, Chicago; Music; Announcements; Automobile Ride and Visit at the Soldiers' and Sailors' Home.

Tuesday Evening, 7:45 o'clock—Newspaper folks will be entertained at a concert in the Bartenbach Theatre by Bohumir Kryl, Cornet Virtuoso, and Company, followed by a reception at the Elks' Parlors at 9:30.

Wednesday Morning, February 24, 10 o'clock—Music. "Sidelines for the Country Printer"—A. B. Wood, Gering *Courier;* Discussion. "Handling the Advertising"—John M. Cotton, Ainsworth *Star-Journal.* Discussion: Music. "Benefits of County Organization"—E. E. Correll, Hebron. Discussion.

Wednesday Afternoon, 1:30 o'clock—Music. Annual Election of officers. "Stopping the Leaks"—H. G. Taylor, *Nonpareil,* Central City. Discussion. "The Cash-in-Advance Subscription System"—F. D. Reed, Shelton *Clipper.* Discussion. "Country Correspondence"—E. R. Purcell, *Chief,* Broken Bow. Discussion. "No. 709"—F. O. Edgecombe, Geneva *Signal.* Discussion. Reports of Committees. Appointments. Benediction—Rev. S. D. Bartle, First Methodist Church, Grand Island. Adjournment.

Wednesday Evening, 7 o'clock—Banquet tendered by Commercial Club at Liederkranz Hall.

STUDENT JOURNALISTS TO EDIT DAILY PAPER

STATE UNIVERSITY TO PROVIDE MODEL NEWSPAPER OFFICE AND GIVE FOUR YEARS OF PRACTICAL NEWSPAPER TRAINING—ALUMNI OFFER $400 FELLOWSHIP.

Madison, Wis., March 1—The University of Wisconsin has just provided for four years' Training in practical journalism for next year, which will include daily experience in all the details of newspaper making in connection with the *Daily Cardinal,* the university newspaper. A model Newspaper office equipped with typewriters, files of the leading newspapers of Wisconsin and the country generally, and some 2,000 well-written newspaper stories of various types taken from the best edited papers, is to be established in connection with the new division of journalism.

TWO YEARS TRAINING AS REPORTERS.

A course in the elements of newspaper writing is to be required of the freshmen in the courses preparatory to journalism, and they are to act as sub-reporters on the *Daily Cardinal,* their work on which is to be taken up and criticized by the instructor in this work. In the sophomore year the students preparing for journalism will take the course in newspaper reporting and correspondence, and will act as the regular reporters on the *Cardinal.*

The juniors in the course in newspaper editing will fill the positions of university editor, assistant university editor managing editor, and assistant managing editor, and by a system of rotation will gain practical experience in all the desk positions on the paper. The staff of editorial writers will be made up from the seniors in the course in editorial writing. Students in this course will meet several times a week in conference to decide upon the editorial policy of the paper and to divide up the work of editorials and paragraphing.

ALUMNI FELLOWSHIP IN JOURNALISM.

The Alumni Association of the University of Wisconsin has decided to offer a graduate fellowship in journalism valued at $400 to a graduate of the course preparatory to journalism, the fellow to devote a part of his time to work on the Alumni Magazine. The Cardinal Association will offer next year a number of undergraduate scholarships in journalism, ranging from $10 to $100, to be awarded to the students in the courses in journalism on the basis of work done on the *Daily Cardinal.*

The new courses in newspaper writing to be given by Prof. W. G. Bleyer, in charge of the division of journalism and chairman of the courses preparatory to journalism, are the Elements of Newspaper Writing, one hour a week throughout the freshman year; Newspaper Reporting and Correspondence, three hours a week throughout the sophomore year; Newspaper Editing and Editorial Management, two hours a week throughout the junior year; Editorial Writing, two hours a week in the first semester of the senior year; and Special Feature and Magazine Work, second semester, for two hours a week, in the senior year.

TRAIN MEN FOR AGRICULTURAL PRESS.

A course in agricultural journalism designed to meet the needs of those students who wish to study the agricultural press in order to become contributors or editors, is to be given next year by J. Clyde Marquis, editor of the agricultural publications of the university and formerly assistant editor of the Orange Judd farm publications.

The agricultural press work will consist of lectures and practice in writing to meet the special requirements of the farm and dairy journals, and will include a survey of the present agricultural press, a study of classes of agricultural writing, methods of reporting fairs and agricultural exhibits.

Peter J. Grandon, formerly an An Arbor newspaper man, has purchased the Hillsdale, Mich., *Herald-Democrat,* and the *Standard,* both weekly publications.

Colonel Thomas Burton, a well known retired publisher and editor, died suddenly at Cheboygan, Mich. He published papers at Youngstown and other places in Ohio and Pennsylvania.

Paul S. Junkin of the Creston, Iowa, *Advertiser-Gazette,* has sold his interest in the Corning *Union-Republican* to Charles and Frank Gray and hereafter the brothers will give their whole time to the publishing of the sheet. Mr. Charles Gray, who owned an interest with Mr. Junkin, has been the postmaster at Corning for some time, but has resigned. Mr. Grey will have charge of the editorial department of the paper.

At the annual meeting of the Inland Daily Press Association held in Chicago, officers for 1909 were elected, delegates to the coming annual convention of the National Editorial Association to be held at Seattle in July and August were selected and questions concerning the interests of the Association and its members were discussed. The following officers were elected for 1909-1910:—President—Frank D. Throop, Muscatine, Iowa, *Journal.* Secretary and Treasurer—W. V. Tufford, Clinton, Iowa. Vice presidents were chosen by states.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

BEFORE me on my desk is a copy of the 1909 edition of "The Graphic Arts Year Book," which I am obliged to keep under lock and key in order to make sure of having it when I want it. For most of the people who come around my desk, the book's artistic excellence alone is sufficient to make it charmingly attractive. To myself, the wealth of information it contains gives it an added value, so that I feel restless when it is out of my sight. I have only one wish in regard to the volume, and that is that the section devoted to lettering and typography might have been more full and complete. While engraving is covered in all its phases, on lettering and typography there are but three papers. These, to be sure, are by masters of the craft, and they are so helpful as to make one long for more. Mr. S. M. Weatherley of Philadelphia treats of "Type Designing," placing the present status of this craft clearly before one in a few well written pages. I will quote two or three paragraphs:

Coming to the designing of type, there are many things to be considered besides an artistic production. Fancy characters must be carefully avoided, for while ornamental types may be good to look upon and may stamp the designer as a real artist, they will never bring financial success. Thefounder knows the pitfalls encountered with ornate letters and will not risk the large sum of money which must be expended before their merit can be tested in the market, as the master printer, upon whom he is so dependent, is likely to cast them aside as "freaky." Nowadays types that are successful are those which have no queer characteristics. The letters must be correct in formation and more or less plain in appearance, with graceful strokes of proper widths, well placed ceriphs, good coloring and sets, and with such variations of these things as will make them useful and attractive.

Years ago, before printing could properly be called an art, the foundries indulged their wildest fancies in designing types. Reference to the old specimen books of the MacKellar, Bruce, Conner and Farmer foundries will amaze students of typography. Rims, rays, shades, curlicues and flubdubs were rampant, and designers seemed to vie with each other in the production of "freaky" characters. To be sure, some of these faces were meritorious and liberally sold, but in many instances only two or three sizes were cut, no extensive advertising was done and poor success meant nothing like the financial loss which follows a failure today. The designing of type in those days was a proposition different from what it is now. Ornateness was the result sought and master printers were not students in typography, guided by standards of excellence, as they are now, and therefore did not condemn fancy designs. Out of the development in typefounding and printing certain well-founded precedents, traditions and standards have been established. Typography is not only taught in many technical schools, but students in the art are to be found all over the country; not only in type foundries and printing houses, but in the publicity departments of nearly all the great advertisers. Type, composition and presswork are now subjects of much study, and the progress being made in their development is marked by the establishment of clearly-defined conventionalities commonly recognized.

Ultimately it is believed the large and useless variety of type-faces heretofore deemed necessary in printing will diminish, and fewer designs—basic designs with their variations—be produced. This does not apply to typewriter, scripts, texts and other series, the use of which requires no variations. Both founder and printer will welcome such a new order of things because of the economy possible and also the greater usefulness of type in groups or families. Fewer faces and larger quantities will be the rule, thereby facilitating composition and at the same time producing that harmony in typography which is so desirable.

In "Lettering and Design for the Printer," Mr. F. J. Trezise of Chicago goes into some of the advanced principles which every printer should know, though I fear many do not. I shall give an idea of the lesson he teaches by quoting again:

The study of lettering is especially valuable in aiding the printer to a determination of the appropriateness of the type-face for the work in hand. He learns that the Roman capital is necessarily a formal letter and that its most appropriate use is found in the composition of a formal piece of printing; he learns that the text letter is an informal, decorative letter, gothic in design and peculiarly harmonizing with the gothic architecture and decoration found in connection with the church—and therefore he does not use it to any great extent in the stationery of, for instance, a hardware house. The resultant influence upon his product cannot be other than beneficial, as obviously much depends upon the type as the medium through which the message is presented to the reader.

Our printed matter is growing more pleasing in appearance, and while some of the change may be attributed to

L. Wietlispach, Streator, Ill.

what might be called a passing style, still the far greater proportion of the improvement is due to the fact that the basic principles underlying good printing are being applied in typographical design.

And what are the principles of design which the printer must bring to bear upon his work? Generally speaking, they may be narrowed down to four, viz.: simplicity, proportion, tone harmony and shape harmony. The printer or designer who does his work without violation of any of these principles cannot but secure pleasing results. A consideration of simplicity, the keynote of good printing, will prevent an excess of panels or ornaments, too many type-faces, and the general lack of typographical restraint which has characterized much of our printing; a consideration of proportion results in pleasing divisions of pages, sizes of panels, etc.; shape harmony applied to the work in hand will result in the pleasing association of type-faces, a proper relation of type-face to page, proper relation of both to decoration, etc.;

while the application of tone harmony will prevent the jarring note of an exceptionally black rule or initial letter standing out from a light type page—a feature all too common.

In spite of the great decrease in the number of type-faces of today, as compared with a few years ago, the printer is in many cases really handicapped by too great a variety. Lacking the discrimintion gained by a study of letters in their relations, both historically and as regards harmony, one toward the other, he frequently mixes up the various letter forms in a manner altogether displeasing. Personally we think that three-fourths of the type-faces now in use could be dispensed with to the betterment of printing. However, as long as the composing rooms contain an indiscriminate assortment of letters, the only course open to the printer is to study the various forms with a view to avoiding the bringing together of those which, by reason of their characteristics of design or historical relations toward each other, are antagonistic.

Then, too, the design must be kept simple—not necessarily plain, devoid of all ornamentation, but an arrangement of the groups of type and decorative material in a manner that may be easily comprehended. Each group constitutes a force of attraction and, generally speaking, the fewer these forces of attraction we have on a page the more pleasing the result.

The proper placing of these groups or forces of attraction calls for a consideration of proportion—the necessary "pleasing inequality in the parts of an object." In no art or craft is proportion of more vital importance than it is to the printer, yet he seems to be the one who understands it the least. True, he has vague ideas regarding what he calls "whiting out" a page—distributing the white space around the groups—but usually no definite working knowledge regarding the principles underlying this distribution.

The last article of this section is by Mr. Lewis C. Gandy of Philadelphia, entitled, "Lettering and Typography." He goes to some extent into the history of different letter faces and their relative values as typographic mediums.

One of our friends sends in a couple of envelopes to show how a lot of 5,000 which was run through with an error was afterwards used to advantage by running a block of silver over the old printing and then another printing over this. This was all very well, so long as the error was made; but it was a very obvious one and should never have been made at all. It seems incredible that any ordinarily intelligent feeder could run through 5,000 impressions without noticing the error. Feeders are apt to have fits of dreaming, however. I have known them to throw off the impression and then run through a dozen or more sheets before they noticed that the press was not printing.

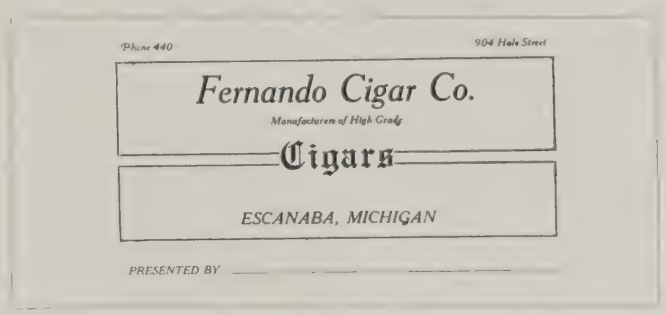
"Character" is the name of a bright and readable little magazinelet issued by the Griffith-Stillings people in Boston. It is devoted, as it assures us, to "Art-in-ink, fact, fancy and fun," and in it Peter, the Printer, continues to tell us some of his quaint and pointed stories. It also contains many another good bit of philosophy, and all gotten up in such a typographic style as to make the reading of it irresistible. It is not all as pointed and "shoppy" as this little extract, but this is worth reading:

Sometimes you get hold of a piece of printed matter that fairly charms you. It is just right. You turn it over and over in your hands. You hold it at arm's length and admire it. You resolve to hide it, so that no one shall get it away from you.

But when you come to analyze it, you are puzzled. The stock isn't expensive. The typography is simple. Maybe it's in only one or two colors. Yet the beauty and the impressiveness are there, and you can't get away from them.

Printed things of this kind are simply the result of knowing how. That's all. It's the artistic instinct plus hard study and years of experience. And this is precisely what we offer you, in a degree, we believe, which cannot be surpassed. It is by no means a question of expense. Dollars can't take the place of the know-how. We can make a dollar go as far as any printshop in America—and give you the know-how, besides.

Chas. C. Metcalf, Escanaba, Mich.—Glad to hear from you again. The boiler works card is about the best of the lot. It is well balanced and nicely displayed. Your own letter head, too, is very satisfactory. The press work is so good as to bring out the full value of the job. Your envelope is much less satisfactory, chiefly on account of the absence of good presswork. The head for the County of Delta is as neat a thing as I have seen for some time. I scarcely know what to say about the card for the Fernando Cigar Company. The word "Cigars" does not stand out strong enough, and the upper part of the card is more crowded than the lower part. I would suggest that the upper panel be made somewhat large



and the lower one smaller; also that they be brought closer together, so that there might not be so much width of rule at each side of the central word; then set this word in the next size larger.

D. L. Beckham, Goliad, Texas.—Your Jordan & Anderson card would not be to the discredit of any printer. I consider it a highly satisfactory piece of work. I should say that your letter head set in Gothic, in square effect, might be improved by having the top line, "The Goliad Guard," set in a larger size and extending beyond the other lines on each side, of course with a rule under it of the same length.

W. N. Crawford, New Hampton, Iowa, wants suggestions as to how to reset the card which is shown

herewith. I shall be glad to give space to criticisms or resettings of the card. For myself I shall only say at this time that I should by all means have the

rule in the center run vertically across the card rather than appearing in danger of toppling over. I might add, however, that the letter head on which Mr. Crawford writes appeals to me as being a much more tasty job, and I cannot refrain from reproducing it, too.

Circulation 1700 Copies
Official County Paper

W. N. Crawford, Publisher

NEW HAMPTON, IA.

W. W. Whetstone, Cherryvale, Kansas.—The first of your jobs to attract my eye is a letter head which appears to have been intended as a color card from

which prospective customers might make selections. It reminds me of the advertisements which used to speak of things as being done in gold and colors. Seriously, though, what did you work in those stripes for? All your other work is very satisfactory, especially the Elk's program. The legend on your card has afforded me much amusement, and I shall print it here for the benefit of others:

IFNOB USIN ESSFO RMEH AVEY OU
I'LLB EATITF AD EAWAYSKI DOO

E. K. Waters, Sidney, N. Y.—Your script type is somewhat out of date, but it would be improved by being spaced closer. Then, again, you should have "June the twenty-third," not "June, the twenty-third"—with the accent on the comma! Some of your text is also spaced wider than it should be. I have forgotten the name of the old style upper and lower which you use on so much of your work, but it is scarcely suitable to go with your Old English.

R. H. Fadden, Morris, Manitoba.—I should prefer not to see an envelope printed in gold, and I imagine the postal clerks would much rather have some other color. At any rate, the one in red and green is much more satisfactory. The title page for the auditor's report should have much plainer and more simple treatment.

William C. Eastwood, Piper City, Ill.—Your sale bill is a much better piece of work than many such. In fact, I think I shall have to acknowledge getting up many a worse one myself, when I was a "two-thirder" in a country office. You are working along right lines, I am sure, and ought to succeed.

A booklet issued by the Inland Type Foundry on the McClure series contains some very clever suggestions of display. It is worth getting.

T. E. West, Runnells, Iowa.—Your envelope card for the Brown Mercantile Company should have the main line slightly larger. With this change it would be a decidedly satisfactory job. Your letter head for the Runnells Hardware Company is also a good piece of work. The head for the R. W. Taylor Company shows almost too many different faces of type, some of them older than you should use on such work. Your notes are l ith fairly good pieces of composition, though the one tor the Brown Mercantile Company might have the date line a little smaller.

Printers who do their own presswork will find double value in a little booklet called "Ink Secrets," issued by Philip Ruxton, the ink man. It not only gives some valuable inside information about ink, but it is suggestive as a high class piece of printing as well.

AT EIGHT O'CLOCK

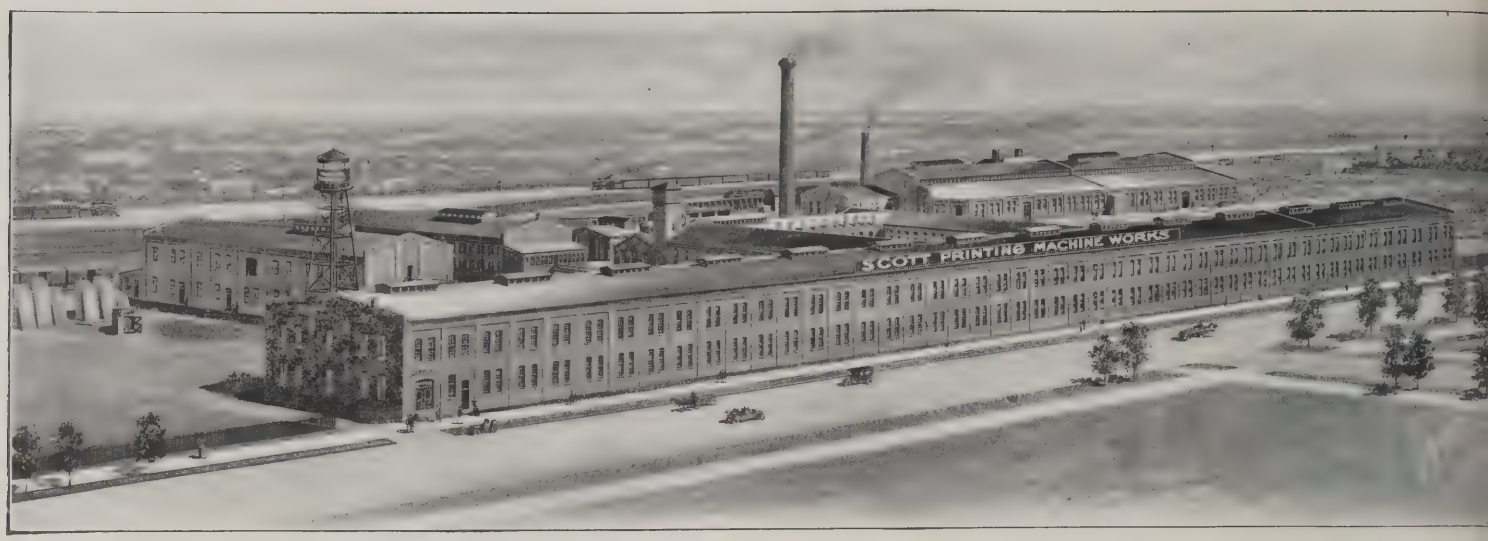
and consistent throughout, but I should try to lighten up just a bit. Your blotter is very clever and ought to bring you good returns. I have looked for some little time at your card set in a squared out style, in which you abbreviate Presbyterian to "Presbyt'n." This looked odd at first, but is certainly better than having a hyphen at the end of both the second and third lines, as would otherwise be made necessary.

Sam H. White Rock Hill, S. C.

Your own letter head and statement are unusually attractive. I hope to be able to show a few of your jobs next month.

Printology is issued, as time and opportunity allow, by the Regan Printing House, Chicago. It is not governed by second-class rules, and so can take its own time to appear. It might thus reasonably be expected

to have the superior quality which leisure allows; and in this it is not disappointing. It is gotten out on the best stock, and in the highest style of the art, making it a positive delight to the lover of good printing.



Works of Walter Scott & Co., Plainfield, N. J.

THE SCOTT PRINTING MACHINE WORLS

WE ARE sure our readers will be interested in the above picture of the works of the Walter Scott & Company, the well-known press manufacturers, which are ideally located in Plainfield, N. J., and said to be the largest works in this country, if not in the world, devoted exclusively to the manufacture of printing presses, from the small pony drum cylinder to the very largest newspaper rotaries which feed from any number of rolls at one time and deliver enormous quantities of complete papers, pasted, folded and counted.

An inspection of these famous works shows that they are unique in that they are built with a definite plan always in view; that in the process of manufacture of the various parts no useless moves shall be made and that there shall be no wasteful moving around of parts that is so conspicuous in many factories where no definite plan of building has been followed. To illustrate this, the course of an order for a new machine can be followed. The order is first received at the office, which is located at the West End of the Main building where it is entered and the shop specifications are made out. It then goes to the Draughting Department which is located at the West End of the Second floor of the Main building where the machine is designed, all the various parts drawn out, tracings made of the parts, blue prints made from the tracings, and these blue prints are furnished to the various departments. These go to the Pattern Shop which is located on the second floor of the first separate building near the water tower. Here the various parts that are to be made in cast iron, cast steel, malleable iron, bronze and brass, are first made to exact shape in wood to serve as patterns from which the castings are made. This building is extremely well-lighted, well-ventilated and makes very pleasant workrooms. It is equipped with all the latest and best woodworking machinery, a special department being devoted to molding machine work.

The building east of the Pattern Shop is a three-story pattern storage in which the various patterns are all arranged so that any one can be instantly selected and without disturbing any other patterns. This building is completely filled with the "live" patterns which are in frequent use. The contents of this building represent many thousands of dollars. It is equipped with many special fire-protective appliances. The sprinklers, with which the entire factory is equipped, are much closer together and provided with very sensitive heads. The entire building is equipped wth iron fire doors and window shields which can be instantly closed in case of fire.

From this building the patterns are taken by means of cars on narrow-gauge railroad to the foundry, which is the large building at the east end running parallel with the main building, where the moulds and castings are made. The Foundry is well equipped with cupolas for melting the iron and steel, etc., core ovens as large as ordinary rooms for drying the cores, molding machines, overhead power-driven travelling cranes, etc., etc. A particular feature of this foundry is the care taken in the mixture of the irons. Every car of iron that comes into the place is analyzed and the mixture is made to exactly suit the castings according to the work they are intended for. No more care can possibly be exercised than is given to this one subject alone. For gearings and other parts where extreme strength and durability to resist wear is required, the castings are made of semi-steel, and the analysis of the irons in the large, medium and small-sized parts differs according to the work the parts are required to do. Converted steel, Open-Hearth steel and Crucible steel castings are used where they are best suited for the work. All bronze castings are made to the government Phosphor Bronze formula which has been proven to give the finest bearings for durability ever made.

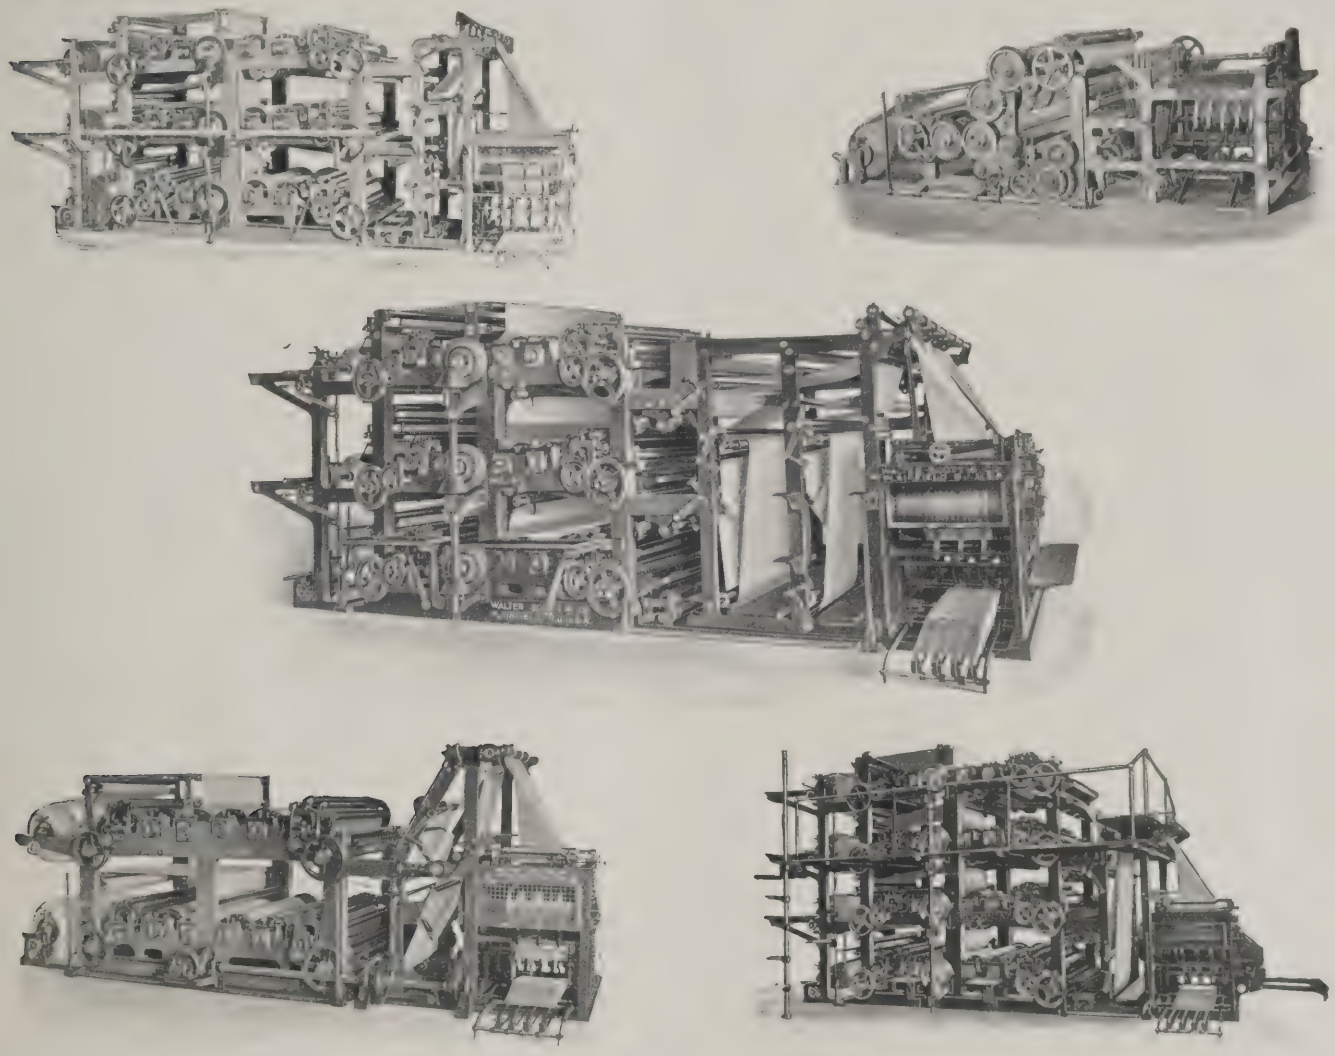
From the foundry the castings pass to the Machine departments, the large pieces going to the heavy tools located on the lower floor of the main building at the eastern end, and the lighter parts going upstairs where the lighter tools are in operation. The tools are located so that the various operations are made progressively. First the heavy planers and heavy lathes, then the latest turret lathes capable of turning out parts with many operations, then the special cylinder mills, the grinding machines, the radial drills, the regular drill presses, the boring mills, the automatic gear cutting machines, the milling machines, the rack cutters, slotters, keyseaters, and thousand-and-one odd machine tools required to economically perform the various operations. Upstairs the smaller parts are machined by the various automatic machines, small lathes, planers, drill presses, etc., etc.

The west end of the main building between the office and the machine departments, which commence at the east end, are the erecting floors, the larger presses being set up on the lower floor and the upper floor being used

for the smaller machines. Here the machines are completely assembled, tested in every particular, and finally taken down. The final painting, polishing, etc., is then done in the shipping department, which occupies the lower floor of the building by the water tower, immediately under the pattern shop. From here the finished press is taken by cranes which run directly to the car door and swing their loads into the car without further handling or exposure to the weather.

The smaller parts and others that are made from bar steel, iron, etc., originate from the iron storehouse, which is located along side of the siding in the yards, from there pass through the Forge where the blacksmith work is done. This shop is equipped with many individual forges, blasts, power and steam hammers, hardening furnaces, etc., etc., to greatly facilitate the work and turn out large quantities of work in quick time. The steel and iron parts then pass to the machine departments and finally to the erecting floors. The location of the power plant is central with the demand. The boiler rooms are located near the trestle over which the coal cars are run to be dumped, and the engine rooms have the several engines, dynamos, motors, etc., that are necessary to furnish the power, lights, etc. The boiler capacity is 800 H. P., and the engines, motors dynamos, etc., represnt a total of some 800 to 1,000 H. P.

Some idea of the size of the Scott Works can be formed from figures, and it may therefore be well to state that the main building is nearly a thousand feet long and 70 feet wide, two stories high, the foundry over two hundred feet long and one hundred wide, the pattern shop 60 feet wide and 120 feet long, two stories high, while the pattern storage is the same size, except that it is three stories in height The entire floor space under cover, including tool rooms, two stories high, iron storage, forge, boiler rooms, engine rooms, sand houses, etc. ,etc., is over 250,000 square feet, the whole of which is occupied by the latest improved machinery, there being no waste or idle space whatever. The works have private railroad sidings connecting directly with the Central Railroad of New Jersey, Philadelphia & Reading Railway and Baltimore & Ohio Railroad. The length of the sidings in their yards is more than 2,500 feet. In addition to this they have a complete system of narrow gauge railroad of their own which goes throughout the various buildings, there being over 3,200 feet of this narrow gauge track. Nearly 5,000 feet of overhead railing is required for the hoists, cranes, etc. Length of main shafting is some 4,600 feet and the works are lighted by numerous arc lights and incandescent electric lights.



Some of the Printing Machinery Manufactured by Walter Scott & Co.

Although a large variety of presses are built in these works, enough of each kind are built to make them in the proper quantities so that interchangeability is provided for. All the important as well as the smaller parts are made from jigs which are designed and built in the special tool room, which is really a very complete machine shop with the most accurate and best machine tools of its own. Here all the special tools required are made and the jigs

laid out, and manufactured for all kinds of operations. These jigs make possible the economical manufacture of the various parts, without which the cost of the presses of the quality turned out by the Scott people would be prohibitive.

The line built by this firm includes Lithographic Presses, single and multi-color printing from stone, single and multi-color printing from aluminum or zinc plates, and Offset Presses. Drum cylinder machines for the small job printer, some capable of running at extremely high speed, and others of the regular construction, also a variety suitable specially for the needs of the publishers of the country-weeklies, and small town dailies. Two Revolution presses including the high-speed machines used extensively for newspaper work as well as the large and small job presses capable of printing the finest kind of color work and half-tone jobs. Flat Bed Perfecting machines in various sizes and styles, some feeding from flat sheets, others with an all-size roll feed added. Rotary presses for the larger job printing offices, including single and multi-color sheet fed rotary machines, Wrapping paper presses, the famous All-Size Rotary machines which are so favorably known throughout the trade as being the biggest money-makers for the large printers, and also the endless variety of Rotary machines and Newspaper printing and folding machines. They also manufacture the auxiliary machinery such as stereotyping outfits and electrotype bending, trimming and routing machines. Color printing presses of all kinds are also made to suit any possible requirement.

Of the merits of the various machines built by Walter Scott & Co., little need be said. Their reputation is firmly established and practically every one who has ever used a Scott press or come in contact with it in any way has a most favorable opinion of it. Walter Scott & Co., have been established some thirty-five years and their first machines are still in operation doing their work perfectly. What is more, they command a higher price second-hand than any other machine on the market because the purchasers are sure of the superior value of the machines.

To the newspaper publisher they offer a variety of machines. Their Drum Cylinder and Two Revolution presses are so well known that no extended description is necessary. It may be added that they have just designed a new type of Drum Cylinder machine for the country paper that bids fair to supercede practically all other makes of machines. It is complete in every respect, extremely simple in operation but with unequalled efficiency, and it is made better than any drum cylinder press has ever before been made. These new machines, the first of which have just been shipped, can be obtained either from Walter Scott & Co. direct, or from the Western Newspaper Union, whose main office is in Omaha, Neb., who have been appointed the western selling agents of this type of press.

To the publisher of the larger dailies they offer an unusual variety of Rotary presses. Some of these machines are illustrated in connection with this article and they are capable of running at enormous speeds, fold perfectly, and produce a larger quantity of papers of superior appearance than any other make of press. Below is a list of the many features obtainable only on SCOTT machines, as they are thoroughly protected by their patents, of which they have a large number.

Direct-Independent Drive,
Multiple-Drives (on large Presses)
Minimum Plating Positions,
Staggered-Positioned Cylinders,
Graduated Printing Cylinders,
Continuous-Adjustable Ink Distribution,
Wedge Impression Adjustment,
Adjustable Paper Roll Journals,
Web Tension Equalizers,
Web Tension Indexes,
Independent and Collective Tension Control,
Accelerated Web Associating Rolls,
Ideal Angle Bar Arrangement (on double-width presses),
Non-smutting Folding Rolls,
Perfect Cross and Vertical Association,
Steel Cutting Grooves,
Adjustable Tapeless Folders,
Constantly Rotating Folding Blades,
Collect-without-transfer—no ribbons.

Walter Scott & Co. are now building a newspaper press which is advertised elsewhere in this issue. This machine is remarkable for its great speed and its extreme versatility in producing any desired variety of combinations of pages. The most remarkable feature, however, is that it will produce from two two-page-wide rolls of paper 16-page papers at a running speed of 24,000 per hour, which is the speed usually obtained on a Quadruple press, feeding from four twopage-wide rolls or that equivalent. Also it produces this enormous quantity of papers from a single set of plates which is another saving. On account of the smaller diameter of the cylinders, there are 1-3 less stops for changes of paper rolls. The machine has also many advantages over others in perfection of the details and is built extra heavy.

HELPED BY N. P.-J. AD CRITICISM.

Boscobel, Wis., Feb. 2, 1909.

National Printer-Journalist.

Dear Sirs:—For the past few months I have been a steady reader of the many useful and interesting hints and suggestions contained in your magazine, as relating to advertising. I am only through high school last June, but through such helps as your paper, I have been writing and laying out the ads for our local dealers. As I have been much helped by your ad criticism, I wish to send you several of my poor attempts for criticism, as I wish to know if I am on the right track. If you would criticise them I would be very much pleased.

I would also like to know if you think a course like the Sheldon Course is as good for an advertiser as one like the Page Davis give?

I enclose stamped envelope for reply.

Yours reply,

Herbert W. Blashfield.

J. Edward Jennings, a resident of Chicago for twenty-five years, died suddenly of heart disease last week. He was born in Boston, Mass., in 1861, and came to Chicago in 1880. In 1885 he became one of the associate editors of the Associated Press and later became night manager of the Chicago headquarters of that organization. He was affiliated with local news service until a few months ago, when illness forced him to cease work. Mr. Jennings is survived by his wife, Katherine E. and two sons.

A. L. Patterson, one of the oldest newspaper men in Chicago, and business manager of the Chicago *Times,* when that paper was in existence, died at his home last week. Mr. Patterson was 77 years old and the cause of his death is given as general ill health. Mr. Patterson was born in Fredonia, N. Y., in 1831, and before coming to Chicago had been with Detroit papers. In 1861 with a number of other Detroit newspaper men, he came to Chicago and became a part owner of the Chicago *Times.* He acted as business manager until 1888.

WHEN IN FAVOR OF AND WHEN ANTAGONISTIC TO UNIONISM

When unionism tends to improve laborers, and their conditions, to increase their intelligence, their efficiency, and their producing power, to build them up in morals, in self-reliance, in good citizenship, in a love for justice and fair play and a regard for the rights and well being of others, and of the community; helps toward the care of all dependent upon them, the instruction of the ignorant, and the support of the sick or afflicted and to secure just and equitable laws for the protection alike of employe and employer, we are in favor of unionism. When unionism seeks to rule others for selfish ends, to monopolize the right to labor or of the free privilege to dispose of labor as the laborer himself choses; to control the property that others own, to build up and maintain class distinctions, and classes antagonistic one to the other; to limit production, or the opportunities for production or for the securing of the training necessary thereto; when unionism undertakes to interfere with the laws or the findings or decisions of the courts thereunder, and to set up its own interpretation instead; when it strives to enforce a badge of slavery on others, to prejudge their acts and declare them unfair, then we are antagonistic to unionism, for then unionism is degrading, unfair, unreasonable and destructive to personal liberty. It may be a glorious thing for those who have not the industry nor the thrift to earn and accumulate property, through which to afford employment to themselves and to others—who wish to avoid all responsibility—to gain the power by combination and demagogy of absolute control over the property of others and all the benefits therefrom, leaving to these others, who own the property, to do more than their share of the work, to endure all the worry and to take all risk, to pay all the wages, expenses and taxes and stand all the losses and slanders, cajolings, abuses, cheatings, robberies and cursings for their pains, while the employes take all the glory and honor and strut about as the only honest laborers, the noble sons of toil. There is too much injustice, hypocrisy, cant and demagogism in such unionism to permit such a system to rule forever in a free country.

WINNING INCREASED BUSINESS UNDER ADVERSE CONDITIONS

The Aurora, Ill., *Daily Beacon* showed a wonderfully satisfactory business for the year 1908 and told the pleasing story in a well-displayed page in its issue of January 23rd. The conditions that confronted the paper, and yet how the paper prospered in face of hard times, are briefly told as follows:

"The financial depression experienced during the latter part of 1907 and extending to and influencing trade throughout 1908 was probably felt in Aurora as much as anywhere in the country. The banks began to issue scrip. The big C., B. & Q. Railway shop first cut down their force and then to part time, and every one of the 132 factories followed suit; and 1908 was half over before the wheels of industry were moving in their accustomed manner; and the local business affairs did not assume an altogether normal condition till fall. During all this trying period the *Beacon* grew "in stature and in favor" with men and women in Aurora and vicinity. The circulation grew and merchants realized the growth in the result of their advertising during this period. When money was scarce and trade hard to get the *Beacon* proved to be the best result producer for the advertiser, proved it so clearly that eleven regular patrons of the advertising columns, representing nearly 30,000 inches of space, and who are careful though liberal spenders of their advertising appropriations, have during 1908 come to patronize the *Beacon* exclusively."

The true philosophy is to meet new difficulties with greater and more systematic exertions. In this way in newspaper making, and in all other callings, new difficulties frequently prove a blessing in disguise.

The Aurora *Beacon* was wise in its enterprise and evidently convinced advertisers that the way to get trade when most needed, was to go after it with strenuous and continuous effort by means of attractive publicity in a medium that reached their buyers, and then made good, by furnishing an incerasing circulation among new buyers. The circulation was enlarged during the year from 6,823 to 9,374, or 37½ per cent, probably the largest per cent of gain of any paper in the country, "which," as the paper well says, "accounts for the milk in the coocanut." There is another point well made by the paper to the effect, that, "The circulation of the *Beacon* covers most completely Aurora and the surrounding 'Trading Territory,' and it does not and never has tried to cover any more." There is nothing like concentrating one's efforts to the home field and then being loyal and useful to all the people and all the dealers as advertisers in that field. The *Beacon's* gain in 1908 was: in home display advertising, 16,335 inches; in classified items, 2,933, and in foreign display ads, 2,771 inches. Evidently an all-around effort was made and then the increased circulation and the greater effort told in the foreign field where less was to be expected under the existing conditions.

TRADE ITEMS.

Barnhart Bros. & Spindler, Type Founders, Chicago, with world-wide connections, have purchased for $42,000 the northwest corner of Monroe and Throop Sts., Chicago, 197 x 236 feet, (46,500 square feet) on which it is purposed later to erect the most perfect plant in the world for the manufacture of type, printing machinery and printers' supplies. It is announced that the down-town offices and salesrooms will be retained, but that the various manufacturing plants will be concentrated in the new building. The company has already something like three acres of floor space under one roof, but their growth has compelled them to engage a large quantity of room in Chicago outside of their main building.

Frank I. Miller, Bloomington, Ill., has installed a 38-inch Oswego Semi-Auto power cutter with foot treadle and hand clamp, buying the same through Barnhart Bros. & Spindler, Chicago.

MACHINIST-OPERATOR—13 years' experience, steady, sober, union, desires situation in western city. F. M. HERTZER, 126 Third St., San Francisco, Cal.

Newspaper Criticisms

O. Byron Copper — *De Soto Wis.*

Continued from February Issue

GALLATIN, Mo., Dec. 18, 1908.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—We recently sent you a copy of the 1908 Christmas Number of the Gallatin *Democrat*. If you failed to receive it kindly advise us and we will send another, as we want your opinion of this number from every viewpoint of a newspaper critic. Yours truly,

ROBERTSON & BALL.

Gallatin is only a "country town" of about 2,500 population, but in it and the other towns in the county represented in the advertising columns of the Christmas *Democrat* are as hustling, wide-awake, progressive set of merchants as you could find anywhere on the Globe.

It is now inconvenient for me to look up my reviews of the 1907 Christmas special editions, but I have the impression that the Gallatin *Democrat* was among the greatest of last year, and its special now before me positively eclipses anything I have yet received this season. Counting the handsome Kellogg cover, there are some 44 pages in this handsome 1908 edition, all copiously supplied with seasonable matter three-quarters of which, I would say as a rough estimate, consists of advertising. And the modern, skilled manner in which all of this has been put up is a delightful sight for one who appreciates that which is right in printing. There is page after page of advertising, and two double page ads, both of which I cannot resist reproducing (Exhibits 17 and 18). Any of the many other advertisements would make most desirable illustrations for this instalment, but I have contented myself with the showing of but one other specimen, Exhibit 19—a half-page example remarkable for its simplicity and strength. Now, with reference to this last mentioned specimen, Rex Lampman could, and doubtless would, work in an ornament between those two panels in a way that would look allright and proper; but not being so dextrous with such things myself, I should probably have had to reduce the defective space there by lengthening each panel a couple of picas or

"Christmas Comes But Once a Year"
A Bunch of Suggestions Concerning Practical Gifts and the Economy and Other Advantages of Buying Where Quality Is Assured and Your Right to Attention Is Recognized.
Think back a few years more or less, and recall the present that made the most pleasing and lasting impression on you. Wasn't it it a suit—perhaps the first pair of long trousers; maybe a pair red-topped boots? If a girl, possibly it was the first stylish little jacket that brought a flush of pride and happiness to your cheeks At any rate, it was a practical present, more than likely something you needed very much, and if you are practical NOW, you will buy practical presents for those who look to you for all or part of their pleasure. The following are all useful and wantable articles. Many are priced far below their real value. Look over the list, make your selections and buy early to avoid disappointment.

such a matter. I am ready to believe all that Messrs. Robertson & Ball have said in their letter above—I know it must be true that the men who support such a remarkably prosperous newspaper as the *Democrat* are a "hustling, wide-awake, progressive set;" and it naturally follows, of course, that a newspaper with such a constituency must take the pace set by its patrons, and to do this it must of necessity become "wide-awake and progressive," too; and if the *Democrat* is not that, it is nothing. Brothers Robertson & Ball have evi-

dently provided everything modern needed for their work and their workmen are surely pastmasters in their respective lines, for there is scarcely a thing from any critical viewpoint against which one might complain. All the writing is performed in a thoroughly well educated style, the composition of straight

according to Hoyle), and the presswork is high grade. What, therefore, is lacking to satiate the most exacting artist?

The *Independent Herald*, of Bertrand, Nebraska, got out a special holiday edition this year, too. It was a most creditable sixteen-page affair, every page of which was home printed. The *Herald* is a high-grade little paper, with a number of excellent faces in its displayed columns, and considerable mechanical ability backing them. I should much enjoy having future copies to look over.

The *Leader*, that sprightly little "booster" of George H. Speck's, printed at Pemberville, Ohio, issued with a pink home-made cover along about the holidays. It goes without saying that the edition was all right. Brother Speck has been "pushing Pemberville" so persistently during the past decade or so, that all citizens have apparently caught the spirit of "push," so that even the postmaster there advertises in this Christmast special, and makes a bid for the people's patronage in his line of stamps and postal cards, etc.

The *Press*, of Lawrenceburg, Indiana, and the *Observer*, of Ollie, Iowa, were others to issue holiday editions something similar to that mentioned last above. Both are commended for their efforts to rise above the average by doing something different, and possibly a little better, than some others.

Being a newspaper man myself, I have not been able to fully escape the rush that pervades a print-shop along the holidays, and therefore I have found my time for writing this instalment of newspaper criticisms extremely limted. As may be imagined, therefore, I have not scored always where I saw a chance, nor praised always where praise was due, as I should have done under happier circumstances. And last, but not least, I have not been able to attend to more than half of the publications which were submitted for review this month (December-January) but am holding many in abeyance for future consideration, reviewing not only such papers as were accompanied by letters of introduction and explanation, and those which if neglected might become too unseasonable in character. Hence, let none who have sent in papers for review despair; the criticism of their contributions will most probably appear in my next month's insalment.

What is a Good Watch
SOME people claim that if a watch does not gain the correct time more than five minutes each week it is good.
?
OTHERS expect that if a watch does not vary more than three minutes per week it is a good watch.
But those that really have a good timepiece should not expect them to not vary more than thirty seconds per week. The really good watch, when well regulated, will tell you the right time with a very few seconds. Let us show you some really good watches.

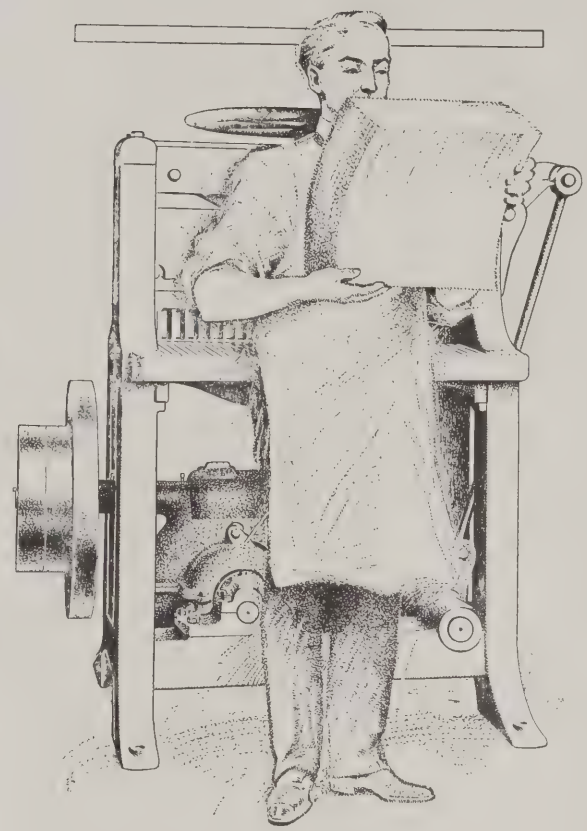
POWER CUTTERS



"STRAIGHT AS A DIE!"

NOTE that this new power cutter is simple in construction. All parts are strong and properly placed. It makes a compact, though very powerful machine. The power mechanism is attached where it is out of the operator's way, and is enclosed in a dirt-proof metal case. The purchaser obtains the latest improvement in power cutters; patent issued July 14, 1908.

The metal is so distributed as to withstand strain of heaviest cut without springing. In fact, this is designed as a general utility cutter for the job printer. The speed is twenty cuts per minute and the cut is "straight as a die"—no frayed edges to spoil the appearance of the job.

We have profited by the marked success of our lever paper cutter and designed our new POWER CUTTER along the same lines. It is very simple in construction, having no extra parts, and all parts as nearly interchangeable as can be made. Every cutter is built as perfectly as experience and special machinery can accomplish, and thoroughly tested before it leaves the factory.

A deep throat and ample table permit the printer to cut thick "jogs" of large-sized sheets. We claim there is less danger in operating than with any other power cutter, as the controller knob must be pulled forward and then given a quarter turn before clutch engages with gear and knife descends. It never repeats, as the mechanism is so arranged that knife cannot fall, thereby preventing possibility of accident.

The Babcock Optimus
The Babcock Optimus

If your work is heavy and hard, and must be done quickly, the Optimus will give you better service than any other can.

Because you are having trouble with such work, do not imagine that it is necessary, or that you must suffer it continually.

An Optimus will replace weakness with strength. There is no uncertainty about this. It is sure. There is not a man using an Optimus that will not corroborate it. Any Optimus will demonstrate it. The cylinder does not go up when overlays go on. That's one test of rigidity, and makes fast make-ready. The Optimus will not gutter. That's another, and saves forms. Judged by these two familiar tests the Optimus has no equal in the most vital quality in a printing press. The best work is impossible without this supreme strength.

The things that make the Optimus best for heavy and hard work are the things that fit it most perfectly for the light and easy. Unequaled strength, splendid distribution, high speed, superb construction, give superior efficiency, and insure endurance. On any sort of work it will be a good press when others with like service are practically useless. Old Optimus presses prove this; and every Optimus ever made not destroyed by fire is still in use.

The Babcock Optimus

No. 1 Pyramid Lead and Slug Bank

Dimensions, Weights and capacity—No. 1 Pyramid Lead and Slug Bank. Height, without base, 48 inches. Base, 18 inches. Total height, bank and base, 66 inches. Occupies floor space 25½x72 inches. Depth of Lead and Slug Bank, 1½ inches inside. Capacity, leads and slugs, on bank, 3,000 pounds. Capacity, leads and slugs, in drawers, 3,500 pounds. Capacity, Sort Drawer Base, 1,500 pounds. Weight of No. 1 Lead and Slug Bank, crated, 400 pounds. Weight of Sort Drawer Base for No. 1, crated, 300 pounds.

List Price No. 1—Lead and Slug Bank . . . $90.00
" No. 1—Sort Drawer Base 52.00
" No. 2—Lead and Slug Bank . . . 53.00
" No. 2—Sort Drawer Base 30.00

NOTE—The No. 2 is just half the size of the No. 1 illustrated and described above. Double-faced, with six sections in Lead and Slug Bank on each side, and with five drawers on the end running through and pulling from either end. Also with Sort Drawer Base containing 12 drawers in three tiers, running through and pulling from either side. Capacity in pounds one-half the amounts given for the No. 1.

HAMILTON FURNITURE

HAS a quarter century of the Company's own experience back of it, and we have inherited the experience of all the old-time concerns who have made composing-room furniture and wood type since the early days of printing in America. That is why the Hamilton Product is *unique* and stands *alone* in its field. Others may quote you on imitation Hamilton Goods, but they cannot imitate the Hamilton Quality. That quality is like the rock of Gibraltar—for twenty-five years it has been assailed, but it stands firmer to-day than ever before.

PYRAMID LEAD AND SLUG BANK

The most practical Lead and Slug Bank ever devised. It has a double-faced sloping top, divided into sections, each section adjustable, so as to accommodate any desired lengths. There is also provided a series of drawers, between the sloping banks, for the storage of surplus stock of leads and slugs. The working bank can be replenished from this stock as the occasion requires.

The Sort Drawer Base serves to raise the Lead and Slug Bank to a convenient working height.

This Bank and Base are most substantially constructed of hardwood throughout, so as to carry safely the immense load of metal, approximately 8,000 pounds, which it is designed to carry. All space inside and outside is utilized to the very best advantage.

The space-saving qualities of this piece of furniture will be appreciated when it is considered that the floor space occupied is only a little more than 12 square feet.

EQUIPMENT

Lead and Slug Bank. In the No. 1 Bank there are twelve sections on each side, providing a total of 75 square feet of lead and slug surface, when the metal is stacked double depth, each section supplied with a number of adjustable partitions, which can be so placed as to accommodate any length of leads and slugs. In the ends, between the sloping banks, is a series of ten storage drawers, five in each end, all 27 inches long, 4¼ inches deep, inside measure, and of varying widths, 3⅞, 6½, 9, 11¾ and 14½ inches respectively. 3,500 pounds of leads and slugs can be stored in these ten drawers.

Sort Drawer Base. This base contains a total of 24 sort drawers, each divided into ten compartments; size of each compartment, 4⅝x4x2½ inches inside. These drawers run through the bank and can be pulled from either side.

WOOD TYPE

EVERY LETTER in every font of wood type that bears the Hamilton stamp, which you will find on the Capital As, is guaranteed to be true to height. No underlaying of wood type lines when set in Hamilton type. This guarantee is made absolutely without reservation. What printer would not prefer such wood type to the kind that varies the thickness of a cardboard? The product of the press is increased from 10 to 25 per cent.

Single Adjustment

What does it mean?

This, when referring to a Wire Stitching Machine: When it is necessary to readjust the machine, to properly stitch a different thickness of work, the readjustment is effected by *one* operation. With the Boston Wire Stitcher that is all that is necessary. Turning a hand wheel gauges the work, and *automatically adjusts all parts of the machine at the same time.* This cannot in truth be said of any other Wire Stitcher!

NATIONAL PRINTER JOURNALIST

A Journal for printing and allied Trades

Volume Twenty-seven | Chicago, April, 1909 | Number Four

THE BUCKEYE EDITORS

THE Buckeye Press Association, held at Springfield on February 25, 26 and 27, was one of the most notable and successful conventions in the history of newspaper organization in the State fo Ohio. The consolidation of all the associations in one has proved a judicious move. Springfield made great preparations for the occasion, and the Springfield dailies, especially the *News,* gave wide publicity as to the arrangements for a royal welcome, and then the beautiful, enterprising city did its part royally. The *News* published very complete and interesting accounts of the sessions and of the entertainments. Everything went along with a zest from the beginning to the end and the editors returned to their homes with the feeling that theirs is the greatest calling in the world and of all the ages, which it is, in all the opportunities of advancing the best interests of the communities where published and the intelligence and the highest good of the people in all departments of human endeavor and social, political and industrial well-being.

These Ohio newspaper-men did not put the "shop" out of mind but sought improvement by visiting, inspecting and studying the great printing, publishing and newspaper establishments of Springfield.

Preceding the first session on Thursday, the editors were conducted through the plant of the Crowell Publishing Company. Here souvenirs were given each of the visitors as they inspected the various departments of magazine work.

The first hour of Friday morning was spent in an inspection tour of the printing and publishing plants of the Springfield Publishing Company and the *Daily News.*

The Monotype department of the Publishing Company furnished much food for study to the editors, as did also the huge press, and the Linotype batteries of the *Daily News.* The visitors were shown through all departments of the two establishments from attic to cellar, and were well pleased with what they had seen and inspected.

The Springfield *Daily News* had made the occasion worth while by the publishing a great issue, on Thursday evening, devoted largely to a description of its splendid building and plant and to a history of newspaper publishing and publishers in Springfield, and in Ohio and to newspaper-making in general. Had we not, only last month, published a full account of the model newspaper establishment at Topeka, Kansas, we would certainly reprint the description of the *News,* but, a journal devoted to a special calling must, like all other publications, seek for variety in order to educate the readers on all sides and at all points. The *News* had an editorial to "Ye who write for the Public Press" that, while conceived in a humorous vein, and couched in terms of hyperbole, contained the following in more serious mood and manner of expression:

> There is no danger of any one overdrawing the virtues of the newspaper profession. It cannot be done. It may sound immodest for one in that profession to say so, it may cause those who do not know to believe that he is an arrogant ignoramus. But the fact remains that in all of the diversification of civilization, there is not a field of labor that compares with it. And any man who does not know such to be the case, any man who does not feel every hour in the day that he is a member of one of the most exalted and useful occupations, should get out of the harness, and take up something else.
>
> It is not claimed here that those in the newspaper business are any better than those engaged in other businesses. The business seldom improves the man; the man must improve the business. But it is claimed that as an occupation the newspaper business is more broadening than any other. That pursuing it one can get more out of life than in any other channel of industry. That the newspaper man sees so much of human nature that he comes to understand himself, and his own limitations—and when a man comes to understand himself and his own limitations, he is in pretty close communion with the Ruler of the Universe. * * *
>
> There is a subtle something in the printed word that sinks into the souls of men. They know it not, nor dream

of it. They taunt you with the thought that what you write makes no impression upon them. They have their own ideas, they say. They can hire men to write anything they want written, they tell you. They advise you to get out of the newspaper business and get into some other line where there is more money to be made. Aye, their words but show that you have chosen wisely.

A student of the subject ought to be able to take the history of a city and tell without seeing them exactly what kind of newspapers it had. Certainly a student could tell after talking with the people of a city what kind of newspaper men had worked in that city. He could tell from the advances made, from the schools and churches, and what is taught and preached in the schools and churches, the character of the men who had been in the newspaper business. We are here giving away a secret, but it is all right; it will not be believed by anybody but the newspaper people and it will threfore do no harm to the profession.

Nor does this refer soley to the editorial columns of the papers. They are, after all, probably the least influential of the columns of the paper. It is the daily grind of news, the daily recording of the events, the weekly budget of little nothings which amount to the whole world in the community in which they are printed. It is the newspaper as a whole that influences the community and the lives of people in the community. And, better a thousand times to be one of those who have a hand in the shaping of the lives of those people than to sit in luxury and wonder how God ever happened to make a mouse.

The newspaper reporter or editor writes a book a month—twelve big volumes a year, read every day by thousands and thousands of people; every item a chapter; every character drawn from life; every incident throbbing with realism. Half a dozen people in a community is as many as reads the average book. Everybody in the community reads the newspaper. Ye who write—thank whatever powers there be that your writing is thrown into the very soul of things, daily or weekly, and that one chapter follows another in such rapid succession that no noe can escape your words.

But, it is said by some, the rewards of the newspaper man are not adequate; the business does not pay; there is not enough of profit in it; the newspaper people do not become millionaires—and all of that. It is unquestionably true that the emoluments of the newspaper man are not in keeping with the pay of some people in other lines of industry. But only half the truth is told by such critics. There are more lawyers starving to death in this country than there are newspaper men. There are more doctors with thin trousers. There are more manufacturers in the poorhouses than there are newspaper people. There are more failures of merchants than of newspapers. There are more beggars who have learned other useful arts. There is more destitution among college professors, and more want among preachers.

It is not fair to compare the average newspaper man with the lawyer who is above the average, nor with the isolated case of where the manufacturer has become a millionaire. The whole profession must be compared with the whole of other professions. Then will it be seen that there are newspaper men as well paid as the lawyers, or as the merchants. It is only the exceptional man in any branch of commerce who wins conspicuous success, and certainly the exceptional newspaper man is sure of that conspicuous success.

Ye who write—here's to you. You do not need our blessing, although you have it. To you have been given the keys of the universe. Unlock it at your pleasure. Gaze upon this little reeking world of self-important individuals. Watch them in their daily lives as they struggle to get advantage the one of the other. Follow them to their homes—as you do—and in your heart of hearts keep their secrets, as is your wont. But to the world give the doings of the great unselfish ones you meet; proclaim the virtues of the many, while concealing the vices of the few. To the end that when the race has been exalted, you will know that you have helped to uplift it.

It was like meeting an old friend and acquaintance of former years, to notice that old subject — which, we remember, was ably treated in a prepared address and discussed before the Minnesota editors over a quarter of a century ago—of the injustice of printing envelopes by the Government. The *News* gives the account of the handling of this perennial and ever-enduring, eternal and infernal wrong as follows:

Thousands of dollars are being taken from the pockets of country editors because of the Government printing offices throughout the country where stamped envelopes are printed, according to a paper read by Carl A. Jettinger, of Delphos, before the Buckeye Press Convention, Friday morning.

Mr. Jettinger urged the members of the association to take some formal action that might influence the Ohio representatives in Congress to have a law enacted abandoning the practice of giving out Government contracts to inland printing offices. An office of this kind is located in Dayton and the speaker declared it was practically ruining the envelope business for printers.

Following his address a movement was set on foot to take action on the matter and a committee of five was appointed by President Bryan to confer with the Ohio senators and representatives.

The following program was carried out at the first day's session:

Addresses of Welcome—Mayor W. R. Burnett on behalf of the city and John N. Garver on behalf of the Commercial Club.

Response—President Chester Bryan.

Reading of Minutes of last meeting by Recording Secretary J. F. Gaskins, of the *News-Record,* Sabina, O.

Applications for membership.

President's Address—Mr. Bryan, of London.

Address, "Why Newspaper Men should Organize," by J. W. Johnson, of the *Democrat,* Waverly, Ohio.

Addresses, "Women in Newspaperdom," by Mrs. Maude Murray Miller and Mrs. Delia Amos Holbrook, of Warren.

Address, "The Junior Linotype and the Country Office," by E. Benj. Yale, of the *Chronicle,* Waynesfield, Ohio.

Address, Public Printing Laws of Ohio," by C. U. Shryock, of Zanesville.

Symposium of experiences, "Wet and Dry Campaigns and Newspaper Policy," by J. A. Alexander.

This session was marked with much interest, and it was after 6 o'clock in the evening before the editors adjourned for the supper hour. Among the chief features of interest was the discussion by editors who had experienced a fight in their own counties of the wet and dry campaigns and its influence on newspapers.

This developed some interesting points, the most interesting of which came from J. A. Alexander of the Zanesville *Signal,* who came out squarely for the dry side and told his reasons for his action. He said he had not noticed any appreciable difference in the financial receipts, as those who left him because he conducted a dry paper were well balanced by those who came to his aid from the dry side.

Others who spoke on this subject were Ed. B. Wetzler of the Lancaster *Eagle,* C. E. Yost of the Fayette Review and C. E. Peoples of the Pomeroy *Democrat.*

The papers on the subject of "Women in Newspaperdom," read by Mrs. Maude Murray and Mrs. Delia Amos

Holbrook of Warren, were highly appreciated by the editors. They gave a comprehensive discussion of the part women can and are playing in the newspaper world.

At the second days' session, R. L. Blagg, of *Farm News* of Springfield, was the first speaker. He read an interesting paper upon "The Agricultural Press" and its relation to the regular weekly and daily newspapers.

In the absence of J. A. Hamilton, of Orville, who was scheduled to speak on "The Country Editor and the Poor House," his place was filled by State Supervisor of Public Printing, John L. Sullivan, who was introduced by President Bryan.

THE HIGHEST AMBITION.

"The highest ambition that can thrill the human breast is to mold public opinion," said Mr. Sullivan, "and as soon as I get out of office, whether by termination or decapitation, I shall get back at once into the ranks. The calling of the newspaper man stands above any other profession."

Mr. Sullivan then gave a happy little recitation of some of the things an editor does and some things he doesn't do in a country office, closing his address by reciting a poem on "Ohio." His brief talk was loudly applauded.

Carl A. Jettinger, of the *Buckeye Informer,* Delphos, next read a paper on "The Government, Our Worst Competitor." Mr. Jettinger showed in actual dollars and cents just what the printing shops of the country are loosing yearly by the government printing offices in printing stamped envelopes. The paper was highly appreciated by the editors and brought them face to face with a condition which they had not previously realized.

ANOTHER COMING EXPOSITION.

President Bryan announced that he had written Webster P. Huntington of Columbus, to take Mr. Bush's place with an address on the movement to hold an international exposition on Lake Erie in honor of Perry's victory in 1912. It will then be the hundredth anniversary of this memorable battle and it is planned to hold an exposition in commemoration of the event. Mr. Huntington is a member of the committee appointed by former Governor Harris to further and organize the movement.

ON BOOKKEEPING.

John T. Haverbeck, of the *Post,* Minster, O., read an interesting paper on "Some Branches of Printing Office Bookkeeping." The speaker declared that the real fault that many printing offices do not pay is because up-to-date methods of keeping books are not adopted by the editors. He said there was not enough attention paid to details in printing offices, as herein lay many of the disastrous leaks to the editor's pocketbook.

"The Ideal Makeup of a Country Weekly" was most ably discussed by C. B. Unger, of the *Herald,* Eaton. He talked in detail of the manner in which news articles should be displayed on the front page and other pages in the paper in order to give it a pleasing appearance to the subscriber. The advertising features and their arrangement in the paper were also discussed.

A lively discussion by various editors followed the reading of Mr. Unger's paper and this led up to the "Rapid Fire Shop Talk" symposium that had been scheduled. Various editors expressed their respective views about the makeup of a country paper and the handling of advertising and news in the columns.

Professor Oliver Farrar Emerson, of Western Reserve University and Captain Charles Reynolds delivered able addresses to the editors on Friday evening in the convention hall.

Professor Emerson gave an extended discussion of "Simplified Spelling" which consisted of an exploitation of the proposed plan to revise the spelling of many of the words in the English language. He used a blackboard to illustrate many of his ideas on the subject and the address proved a most interesting one.

Captain Reynolds spoke on the Philippine islands, describing in detail the conditions upon the islands and dwelling in particular on the part that the newspapers are playing in bringing about the civilization of the islands. He spoke in part as follows regarding the newspaper situation:

PHILIPPINE NEWSPAPERS.

There are numerous publications in Manila, as there are in New York, differing of course in number and variety. There are dailies, weeklies and monthlies. They are printed in English, Spanish and Tagalog and combinations of these languages and dialect.

Then there are newspapers published elsewhere in the islands, in other dialects, and some in English and Spanish or both, and one, or the other in conjunction with a dialect. These are at such important places as Legaspi, Iloilo, Cebu and Zanboanga.

All of them are not money makers. The percentage of failures is less than in the United States but it is large enough.

Nevertheless the press in the island is a power, and not always for the good. A Spaniard believes in a newspaper publication as firmly and blindly as he does in his Bible, which is saying a good deal. Whatever is printed in types he thinks is exactly correct. How can it be otherwise? There it is. In this respect he differs from the average American reader.

The Filipino having acquired his habits largely from the Spaniard, like him, has the same respectful regard for the newspaper. So that the bad which he reads he gives as much credence to as he does to the good. The effect suggests itself.

The American papers in Manila are known as the *Cable News-American,* morning, the *Times,* evening, and the *Free Press,* weekly. The two first named support the government, as a rule, but they freely criticize and blame the government for not enacting legislation which would give to all without distinction an opportunity to get on. And when they refer to the government they mean the government of the United States.

The *Free Press* is less pro-government. It is opposed to the form of government for the islands which is a downright and un-American bureaucracy with a fearfully high and extensive salary list. It, also, as do the two otherss named, fights hard against the action of the United States Congress in taxing all products of the islands before they may be exported and all imports from the United States before they may be taken from the custom houses. All the papers hit extravagance and frequently single out particular officials for special criticism. Controversies editorially often are violent and there is no telling what might happen if the code duello were respected there, now-a-days.

There are many Spanish and Tagalog publications as for example El Renacimiento, El Mercantil, El Commercio, El Democracio, El Independente, and so on. For the most part these publications are against the government. That is to say they are for immediate independence, and this means right away—always means it to Filipinos who favor it and most of them do. Perhaps two native papers are not for independence now nor perhaps in the near future, on the theory that the Filipinos are not competent to govern themselves and there is no telling when they will be.

But the native paper with the most influence is for. independence without waiting and at times it is very bitter in its atacks upon Americans generally and American officials and army officers in particular.

At the Saturday morning session Dr. Fess, a leading educator, made an eloquent address on the advocacy of the press in matters educational. Among other things he said:

The advocate is the man who brings about reforms and stirs people to action. The press should be free to criticise, even the highest of men, for by that criticism the people have opportunity to find the weaknesses and study them. Every inch of true greatness is then gained fairly by great men and no advantage can be taken of the people.

AN OUTSIDE MAN.

Among the various reforms advocated by Dr. Fess was the idea of having at least one of the three county school examiners an outside person who is not a teacher. Members of any one profession, he declared, are apt to get into a channel that grows narrower each year and they do not keep close touch on what the rest of the world is doing. He said no teacher or educator can hope to be a success who does not read the newspapers and keep in close touch with the current events of the world.

SHORT BUSINESS SESSION.

At the closing business session, all of the present officers were re-elected for another year. They are: Chester E. Bryan, President; Carl A. Jettinger, Vice-President; J. F. Gaskins, Recording Secretary, and A. D. Hosterman, Corresponding Secretary; H. B. Russler, Treasurer; W. J. Mortal, Historian.

A motion was offered and carried providing for the secretary to mail to each member a bill for dues one year in advance on the first of January, each year. The committee was authorized to have pins and electrotypes made, the latter to be used at the head of the editorial column in each of the papers operated by members. The design is in the form of a twig from the buckeye tree with a bursting burr and fruit suspended in the center. This is carlessly thrown over a background representing a type of the old Washington handpress.

Resolutions on the death of C. A. Day, of the Seville *Times,* a member who died the past year, were adopted.

AGAINST GOVERNMENT WORK.

The committee appointed to draft resolutions on the subject, presented a resolution declaring it the sense of the association that it favors the passage of the bill now in Congress to abandon the practice of letting out Government contracts for printing envelopes with business cards printed in the corner. The resolution was adopted. It also provides that a copy of the resolution be sent to every Congressman in the State and to Senator Dick, who is a member of the postal committee.

Several amendments to the constitution were adopted, after which Chester E. Bryan was elected excutive committeeman for the next year. The place of selecting a convention city and the selection of delegates to the National Editorial Convntion were left in the hands of the executive committee.

THE WHIRLWIND DASH.

In a whirlwind dash that took them to all of the principal places of interest in Springfield, covering a period of five hours during all of which they were constantly on the move, the newspaper men of Ohio were treated to an unusual entertainment on Friday afternoon as special guests of the newspaper men of this city.

Promptly at 12:45 o'clock the visitors boarded two large traction cars on the Ohio Electric lines and were whirled away to the Ohio Masonic home. Here they were welcomed by a song from the children and were then shown through the institution in parties, finally winding up on the large steps in front where the *Daily News* staff photographer took a "shot" at them. The welcome at this home was a most cordial one and Superintendent John Parsons tried to make everybody feel at home and glad they came. Several of the newspaper men had acquaintances in the home and they hunted them up and chatted awhile with them.

WOMEN IN HOME NEWSPAPER WORK

Mrs. Della Amos Holbrook, well known by her maiden name, at least, among all newspaper editors, presented an entertaining paper at the recent convention of the Ohio editors. She is of a newspaper family, and was for many years connected with newspaper work first on a weekly and then on a daily. The departments of newspaper work, which she found very important to a newspaper's popularity and success, adapted to the women of the press, were neighborhood correspondence, society reporting and the writing of descriptive letters from data gathered on editorial trips. She wrote of these and other newspaper women's work, in part, as follows:

The world goes fast in the twentieth century. Four years now are equal to a century of eras gone by in material advancement and rapidly changing conditions, social and economic. But the country correspondent we have with us always, although it is a branch of the business of comparatively recent development. And it is an important branch in the makeup of a successful country newspaper. I believe that the great majority of these faithful chroniclers of rural news are women. They are a part of the feminine world of newspaperdom and deserving of mention, the more so as they belong to the volunteer army, doing their share "without money and without price," merely for love of the work, and not through desire of seeing their names in print, for only in rare instances are the letters signed by the writers. What would the country newspaper be without their services? A failure at least financially.

All honor to the thousands of country correspondents, mostly women, who do this indispensable newsgathering and writing for the mere love of it.

There is a humorous side to the country correspondence, too, that often compensates for the trouble of revision which is only occasionally necessary. A collection of funny things in country correspondence that are cut out every year would make a popular volume that would certainly add to the gayety of nations. One that I can vouch for was given me by a newspaper friend. The correspondent wrote pathetically on the sudden death of a newly-made bride. "Snatched from the bridal chamber by the stern hand of Death almost before the music of the marriage bells had ceased to reverberate on the nuptial breezes of dawning pleasure!" The imaginative writer should never attempt cloud flights, especially in the country correspondence department. He is likely to be shot with a deadly blue pencil.

The society editor is another important individual in newspaperdom, also a product of gradual evolution, until now no daily, big or little, is complete without her. You will notice the gender. Why is this position filled by women rather than by men? Because she is specially fitted by nature and education to report society events in an entertaining way for women readers, a class as large, perhaps larger, than any other. A newspaper now-a-days that neglects this feature as too trivial for serious attention, is a back number and on the way to the well-filled journalistic graveyard. The newspaper that gives it systematic and careful attention is the one that succeeds best and wields the most influence, other things being equal. It is no small thing to have the women on your side. They will bring strength and ultimate triumph to any worthy cause they espouse, and their favor is most apt to be given to that cause which is advocated by the papers they read most.

The most pleasing part of the profession, as it appealed to me, was the writing of descriptive letters, data for which were gathered on delightful editorial trips with congenial newspaper friends. Loving it best, it is probable that my efforts in this direction pleased most.

A VOTING CONTEST THAT PROVED A PUBLIC BENEFIT—GOOD ROADS AND GOOD FARMING—WHY THE EDITOR PUBLISHES HIS OWN ADDRESS.

MR. COPPER was pretty severe in his reprobation of the use of premiums to boom circulation, in his "Newspaper Criticisms" department last month, and yet he gave some points, with underlying truths to sustain them, that should be heeded. Newspaper circulation should not be purchased, and the newspaper publisher who relies on that kind of a circulation, will, sooner or later, rue the day that he entered upon the giving of premiums. At the very best, premiums, once given, are apt to return to vex the publisher. Once having been given a premium as an inducement to subscribe or to renew a subscription, the subscriber is apt to expect and to ask for more. It is better to give premiums to those who secure subscribers than direct to subscribers themselves and, then, the publisher should make his paper so entertaining, useful and satisfying, that the new subscribers will want to remain. A circulation must be held by the high quality of the paper. Premiums should be looked upon only as a method of advertising, to secure attention and the opportunity of getting the people into the habit of reading a paper, which they must be made to like for itself alone. When publishers rely on premiums or voting contests instead of on the merits and usefulness of their papers, for the permanent prosperity of their business, they are on the road to failure. The voting contests have their dangers, likewise, and they must be conducted with much discretion and in a way to arouse favorable public interest and to avoid all ill-feeling as the result of the contests. Many of our most successful papers are using voting contests, that afford good news as well as keep up a constant and general interest in the papers, and many of our large dailies, like the Chicago *Daily Tribune* and the Chicago *Daily Record-Herald*, are all the time distributing premiums, through the agency of personal canvassers. They, however, charge something for each premium, and probably enough to cover the actual cost to the publishers, though the articles seem worth many times the amount charged, and the cheapness is doubtless secured by ordering the articles in ten thousand lots, or more, direct from the manufacturers. The being able to offer these articles is undoubtedly of great aid to the canvassers. We have had considerable to say concerning the successful premium offers, and voting contests carried on by H. B. Varner, publisher of the Lexington, N. C., *Dispatch*, and know that these have brought him many subscribers and very much valuable advertising abroad and favorable local publicity. If he makes good with his paper, he will realize permanent benefit. His last contest seemed to have merits above all the others, for it not only made the paper more widely and favorably known and secured a thousand new subscribers, but resulted in great public benefit. We recently gave the plan quite fully and our readers will be interested in the results.

Under date of March 6, 1909, enclosed in envelope marked private, which we are going to take the risk of disregarding, we have received the following letter, that will be found of interest as an introduction to what follows:

You have been giving me considerable publicity for several months and thinking that you might be interested in a report of my trip with the farmers to Mecklenburg County, I am sending you a copy of the paper. I ran a special train exclusively for these farmers, who numbered one hundred and sixteen in all and I gave them a big time, as you will see from the report. Every person in the party was delighted with the trip and returned home enthusiastic for good roads, better farming, better stock raising and with a broader view of life. It is the greatest proposition that I have ever had. It has done this county more good than any other one thing I ever accomplished; it has done the individual citizen good; it has made the rural population believe more strongly in the *Dispatch* than ever before, and they have always been devoted friends to the paper. It has added nearly a thousand new subscribers to the list, giving me now 10,000 subscribers, the largest circulation of any local political weekly newspaper of the United States—which means the world, and in addition to all these things, it has paid from a financial standpoint and this trip will be the means of voting several hundred thousand dollars in bonds to build macadam roads in this county, and I expect to start another contest next week of the same kind in two adjoining counties—you know I work eight surrounding counties from this county for the *Dispatch*.

If you want to publish anything about this contest, you can do so. I am not sending you this copy soliciting publicity, but purely as a matter of information that you might be interested in.

With highest personal regards, I am,

Very truly yours,

H. B. VARNER.

P. S. I am working hard every day and am happy and contented at home, out of all offices, out of politics, making more money than ever before. H. B. V.

We want to say right here that what we have published has been not to advertise Mr. Varner or for any other reasons than that his methods are novel and have proved successful, and we believed that they might prove useful by way of suggestions to our readers, and he has kindly afforded us with papers and clippings from which we could gather the facts. We wish that all other publishers, when they have any plans that have proved successful, would be alike thoughtful of their co-workers in the newspaper field. We give the following from the article referred to in the letter, because we believe the same will be useful—there can be no other two things much more important to this country than good farming and good road construction, and it is profitable to the press to work enthusiastically for the promotion of both:—

Friday, the 26th day of February, 1909, will long be remembered by one hundred and sixteen of the best farmers of Davidson county and their friends. That number of Davidson people went by special train to Charlotte, with the *Dispatch* as host, to take a day off, see the sights of North

Carolina's Queen City, and learn by experience gained from riding over good roads what such highways are worth, to country people especially. Everything was propitious and all things made for the success of the undertaking. The weather was perfect and Davidson county roads were bad—just the condition of affairs that the management had hoped for! The roads were so bad that the number of guests on the special was reduced, which was, of course, to be regretted, but when the one hundred and sixteen reached Mecklenburg, they realized the contrast so speedily and keenly that it went far to make up for the absence of others who would have aided in disseminating the facts. At home the roads were hub deep in mud; in Mecklenburg the automobiles that carried the farmers out could and did run forty miles an hour. That showed vividly the value of highways that afford mudless, profitable, pleasant traveling. The big party was in the best of humor, off on a lark, eager to see, quickly responsive to the hospitality Mecklenburgers showed and glad that such an opportunity was afforded.

The farmers were taken for an automobile ride through the country and this is what a ready newspaper writer tells of what they beheld, experienced and learned:

One thing that many realized while flying along was that while Mecklenburg is a rich county, she has no better soil than Davidson; that the improvements in farming have come through the construction of good roads. As has been said, time and time and again, the blessings of progress can only come when communication and transportation are made easy. Theses Davidson county farmers sped past lands that to the eye contained no more fertility than Davidson lands, but those same lands pay a higher profit to Mecklenburg farmers than Davidson lands do, because however far the farmers may live from Charlotte, the good roads put them in easy reach of the city, and make possible improvements in farming that mean money to the producer.

It took little time to get miles out of town. Turning, and seeing by the way a road force crushing rock bought from the farmers at a cost of $1,500 a mile, and laying new roads with steam rollers and all the other machinery modern road-makers employ, the party passed through the city again and went to the Selwyn farm, there to see the famous Berkshire boar which cost $1,100, pictured in last week's *Dispatch,* the thoroughbred cows, and the model arrangements on the farm.

At 4:30 the farmers gathered in the assembly room of the Selwyn to hear enthusiastic talks on roads.

* * * * * * *

The most striking and the most convincing utterance was: "If you want to know the value of good roads, go to those who live on such roads, and ask them about the value of land now." This was striking because some of the shrewder members of the *Dispatch* party had taken pains to enquire as to the relative values before and after roads were built, and they were answered in a way that left them dazzled.

Capt. S. B. Alexander, "the father of good roads in Mecklenbug," spoke, and showed how civilization, its enduring greatness, depended upon highways that made travel easy, swift and profitable. He cited Rome's enterprise in constructing her military highways that are still the wonder of travelers, showed the market benefit of roads, went back to old conditions and called them nightmares, told how the women of the country were in prison for three months in a year. His was a philosophical talk, that fitted in well with Mr. Long's practical remarks and Mr. Moore's irritatingly true facts as to the conditions in Davidson.

Just at this point Mr. Lee Feezor, a young man from Cotton Grove, took the floor and, outside of the body of the audience which had kept the secret well, nobody knew what he was driving at. Soon Mr. Varner's name began to crop out in his remarks, and he ended up by presenting to that gentleman a neat silver-headed cane with the editor's initials engraved thereon, as a token of the appreciation the farmers felt because of the opportunity furnished them on this occasion. The eulogy of the editor was so unexpected, ornate and so well-worded that the recipient of the cane could hardly reply, and in fact was almost "stumped" by the incident. It was a nice thing to do, all the more nice because it was so unforeseen. The gentleman who presented it and those who supplied it will never know how deeply that cane stuck into the heart of the man who received it.

Chairman A. E. Myers, of the board of county commissioners for Davidson, followed with a strong speech in favor of good roads in Davidson, saying that he did not go to Mecklenburg to learn if Davidson needed good roads, he was already informed as to that, but he wanted to learn how to get the best roads for the least money, and how to get Davidson folks in the notion of buying good roads. Chairman Long had taken the commissioners out in the country and explained to them the Mecklenburg methods and results. This incident was one of the most valuable features of the day, for the folks will look to the board for leadership in the matter .Mr. Myers talked on the wonderfully increased value of land after the improved roads had reached same, and his speech brought out facts that went far toward convincing the farmers that what Davidson needs more than all else are good roads.

These are only a few extracts from the edifying account of the occasion, that showed a company of farmers, some of whom had never been on a railway train before, what could be done by good farming and the building of good roads. The description of the visit to Charlotte, "North Carolina's Queen City," was just as entertaining, though not as novel and hence is omitted, however we cannot refrain from printing the following that has principally to do with the city's newspapers:

Charlotte is proud to call itself the city of electrical energy. Its greatest electrical energy, its biggest asset, is its hospitality on a day like this, voiced through its three daily newspapers. These papers furnish the city with that which has built it, which maintains it, which pushes it on to new and larger conquests. The Charlotte newspapers are the best in North Carolina. Their makers are in sympathetic touch with the city; the city is in co-operation with them. The citizenship and the newspapers working in harmony have made Charlotte what it is.

All this, about roads and newspapers, has impelled us to print elsewhere, what we said to the editors of Nebraska, at the convention in Grand Island, February 23rd. We do this the more readily because what we said was entirely off-hand and the product of the surroundings, the inspiration of the occasion and of what had gone before and we have been asked to reproduce the same from memory for publication in the proceedings of the Nebraska Press Association, and if we do not use this, we would be compelled to write something else that, in all probability, would not prove so practical or useful. Then we are terribly busy and the printers are asking for copy. This ought to be excuse enough for the editor's publication of his own speech.

THOUGHTS ON NEWSPAPER MAKING

BY B. B. HERBERT.

Before the Nebraska State Press Association—Feb. 23, 1909, Members of the State Press:—

I AM glad to be with you today and to have listened to the two able papers that have been presented. My memory goes back twenty years, to the first time that I had the pleasure of meeting with your association. It was in Lincoln, in January, 1888, at the time of the great blizzard of that year. We were snowbound for three days, but had a most profitable and enjoyable time. The meetings were held in the room of a hotel. The association was not as large then as now and I have been pleased to witness, and to be informed, through one of the papers read, more particularly as to, the great progress that has been made in twenty years, the great increase in wealth and in the value of your farms.

No more appropriate subject than the conservation of your resources could be considered by the editors of the home papers of Nebraska that have done so much for the promotion of the settlement, growth, and upbuilding of your rich domain.

CONSERVATION OF THE SOIL AND GOOD ROADS.

The waste of soil, by the washing of the rains and floods in this country, can scarcely be estimated. A Kansas farmer, having a piece of land, the fertility of which had been somewhat exhausted, managed, by the construction of ditches, to turn the wash of the rich alluvial soil from his other fields and from the fields of his neighbors, on to a forty acre tract of his land and he gained in a year eight inches of the very richest soil, from which he raised double the yield in the one year than from any other forty acres of his farm. He has since arranged to treat portions of his farm each year to such an overflow, retaining the water in the artificial ponds until the rich mud settled to enrich his land. It has been rightly stated that the building of good roads is closely allied to the conservation of the soil. A couple of weeks ago, I was notified that I had been elected as an honorary member of the National Good Roads Association and was invited to meet with the association in convention at the Auditorium Hotel, Chicago, on Lincoln's Centennial Anniversary, in honor of this first Great American—it being urged that nothing could be more fit than the gathering to forward the cause of the construction of good roads for the people, in honor of the man whose whole life and thought was that of service to the people. There were many speeches made and many facts brought out as to this all-important subject. One gentleman, from the City of Washington, spoke of the increased value of lands, resulting from good roads. He and his wife had been raised on farms and as age came upon them, they thought of the pleasure of getting back to the soil or, at least, of owning a farm. Finally, two farms were selected, one in Virginia and the other in Maryland, and the decision was to be made between the two. They were almost equally distant from Washington and as the Virginia farm could be had for fifty-five dollars an acre and the Maryland farm would cost $120 an acre, the inclination was in favor of purchasing the Virginia farm, but the gentleman said, "let us first drive out to the farms in a carriage." One day the drive was made to the Virginia farm, and the roads were so bad that the trip proved very tedious, disagreeable and wearying. The next day a most delightful ride, taking only half the time, was enjoyed to the Maryland farm, which was purchased, wholly on account of the good roads, and this gentleman said that he had found the purchase made, was the more profitable. Many times in the year, the most of the roads around Washington are almost impassable. During these times, vegetables jump up to double the usual prices, and he has planned to have the potatoes and other products of the farm delivered during these times, helping to save the city from vegetable famines, and more than doubling his profits. It is hard to estimate how much the saving in cartage to market, of horses, wagons, harnesses, of time and break-downs, would amount to each year, through good roads, but an estimate would show the amount to be tens of millions of dollars yearly, taking the whole country into account, and the amounts wasted in the temporary fixing of roads without any system—merely filling in ruts to be transformed into mire or to be washed out by the next rain—during the past twenty-five years, would have given macadamized highways in every county and town in the nation. You do well to discuss such subjects in your convention.

EXPERT REPORTING.

Several years ago a leading editor, in addressing the New York State Editorial Association, said, speaking of the future of newspaper making, that the time will come when a great paper will not only send a Stanley to Africa to discover a Livingston, but will also send a Macauley along to write the story. It is evident from the criticisms, in the able paper by Mr. Jones, presented this afternoon, and which all will admit are just, that the time of the Maucauley stamp of reporters has not yet arrived though there is need.

He who enters the newspaper calling enters no mean estate. Many years ago it was named by Mr. Burke, in the English House of Parliament, as the "Fourth Estate," but since then it has advanced to the position of the First Estate. Printing has been called the art preservative of all arts." Newspaper making has come to be a profession that trenches on all other professions and serves all callings and all conditions of men. To fulfill its mission it must get close to and in practical and sympathetic touch with all the people.

GETTING CLOSE TO THE PEOPLE—EXPERIENCE IN ESTABLISHING A PAPER IN MINNESOTA.

Your Secretary wrote me that you wanted something practical, and to get down to the practical along this line, I am going to relate a little of my own experience in starting a newspaper in Minnesota. There were already two local papers in the little city—the county town in a county settled very largely by Scandinavians and Germans. The two other papers were partizan, political papers—one run by the Secretary of State and his partner—with an average of about five local items to five columns of politics each week. The publishers of these papers thought there was not room for a third paper. I had no office and only small means, and set out to succeed by working about nine days in every seven—nor were they eight-hour union days either. I do not advise you to follow my example as to overwork or Sunday work, for in your case it is not necessary and could not be justified as a work of necessity. Each Sunday, I devoted to State exchanges, reading carefully and re-writing by counties all news that I thought would be useful, interesting or instructive to my readers—trying to give everything a local bearing. Monday morning I had the copy for the first page of State news ready for the printer—Monday, Tuesday and Wednesday I prepared copy for the other pages, solicited advertising, collected city news, bills, etc. Wednesday night I worked at mailing papers; Thursday morning I took a horse and buggy or cutter, as it chanced to be summer or winter, and started for the country canvassing for subscribers, and collecting items and getting in touch with the farmers. Saturday night would find me from twenty to thirty miles from home and I would get home at from 12

midnight to 2 A. M. Sunday. Then I would commence the same work over again. In this way I visited nearly every house in the county, picked up many items as to improvements, the building of new houses and barns, the introduction of improved stock, etc., securing from 8 to 16 subscribers a day. I remember taking sixteen subscribers in one day in a Norwegian neighborhood where most of the adults could read very little English. I pleaded for their children, and for their own improvement in the language and for a better understanding of the institutions of the country which they had adopted for themselves and their children. In eight months I had more than three times of the circulation of any other paper pulbished in the county. I did not stop at this. I organized a County Farmers Club, that met during the winter and early spring months and discussed better methods, diversified farming, rotation of crops, etc. I acted as Secretary for eight years, sparing neither time nor labor in bringing out everything that would be helpful. An Industrial Association, that held an annual fair, the premium list for which I largely arranged and published without charge, a flour mill in which the farmers and residents of the city joined and other industrial organizations followed. The business grew, a newspaper office and then a job office were installed—then a company was formed and a semi-weekly and then a daily and weekly were issued. The business is still flourishing.

This much of personal experience by way of introduction to the practical side of making a newspaper succeed, and for the enforcement of the wisdom of getting in close touch with and rendering valuable service to your people.

THREE CALLINGS IN ONE.

The newspaper not only serves all the people, but it is in itself, at the same time, a profession, a manufacturing industry and a commercial business. The relation and mutual dependence of each of these, in order to worthy success, must ever be kept in mind.

SERVICE NECESSARY TO SUCCESS IN A PROFESSION.

Success in a profession means the rendering of efficient, intelligent, helpful, useful, valuable, services. This is what gives, or should alone give, employment to ministers, teachers, physicians, lawyers and editors. As a profession, newspaper making is in the first instance an instructor, the gatherer and imparter of news with a field broader than that of the greatest University. The editors, reporters and correspondents, are the faculty or instructors, who must cover every department of human knowledge and must acquire a large share of this knowledge fresh every day. Time will not suffice to speak of the editors and all the various departments of human knowledge covered and treated upon under proper divisions.

REPORTERS AND CORRESPONDENTS.

To the home paper the local reporters and the neighborhood correspondents are most important. The events nearest home are most valuable, and the nearness of the events, makes it doubly essential that reports be correct, reliable and sympathetic. In the large cities, where each little neighborhood is, in a way, unknown to all the rest of the dwellers of the city, inaccuracies, may not be noticed, and experience has shown that reporting in the large cities is often very carelessly done, and the reports filled with errors. The reporter, who is only anxious for a good story, finds it much easier to invent the details, than through careful, patient inquiry, and untiring industry, to search out the facts, and he takes the chance, a small one, of never being detected in his slighting of work at the office of the paper. The inaccuracies do, however, injure even a city paper for, after one has noticed how inaccurate are the reports of the events in his own nighborhood, he becomes doubtful as to the reports of events in other sections and doubtful as to the reliability of any so-called news appearing in the paper. Good reporting is essential and reporters should be chosen with more care as to their painstaking reliability, than are even the editors, for if the news stories are wrong—the supposed statements of facts inaccurate are false—all the structure that rests on these becomes, to that extent, useless. For many years, I was connected with boards of education of public schools, and experience taught, that to good scholarship, the primary grades, the starting aright, with right incentives and ambitions, were more important to full development and good scholarship than were the higher grades. If necessary to get the right kinds of teachers in the lower grades, it was vastly more profitable to pay them higher salaries than was paid to the teachers in the high schools. It is a good deal the same as to the relations of reporters and editors. The day of thoroughly trained, educated reporters of the Macauley stamp, with broad knowledge, clear understanding, highest purposes and deepest sympathies, must come, sooner or later, if the American press is to attain to the highest estate and the worthiest possibilities.

NEIGHBORHOOD CORRESPONDENTS.

Next to the local reporters to the home paper and to the dailies as well as to the weeklies, are the country or neighborhood correspondents. These, as far as possible, should be the most intelligent, reliable and the most widely informed members of their respective communities, and they should be in closest sympathy with the people and, as far as possible, be instructed in their duties and be enthusiastic in the performance of the same. They, as well as the reporters, should feel that they represent and are part of the paper and should be loyal thereto, and have a just pride therein. School teachers, of the right kind, when they can be obtained, sometimes make the best correspondents. Good correspondents should be furnished with the paper, as well as with other papers and magazines, that can be spared from the office, and with prepared stationery, paper and stamped return envelopes, and, where necessary, should be paid for their services. In order that they may feel that they are a part of the establishment, they should be invited to the office and assembled in at least one annual gathering and given a picnic, banquet or excursion. Some of our best papers have secured regular organizations of their country correspondents, with a set of by-laws adopted and officers elected by the members, and holding stated meetings at which the work of corresponding, as well as topics of interest to the different localities and to the county or the section of country covered, are discussed and addresses are deliverd by men prominent in local or state affairs, in the industries, agriculture or business.

NEWS IN THINGS OTHER THAN THE DAILY HAPPENINGS—NEWSPAPERS TO BE PROMOTERS.

There is much that is news besides the daily happenings, and the wise publisher helps the people to make worthy events,—to secure every possible improvement in agriculture and the industries. The introduction of new and improved methods, better grains or grasses, affords the very best of news. In a city like Grand Island, dependent on the farms for prosperity, as I judge, agriculture should have a large place in the home papers. Then all industries should receive attention. I notice, on an opposite corner of the street, a flour mill. If I were running a paper here, I would describe every process, every machine used in this mill, for the transforming the wheat of the farmers into flour with the by-products of bran and shorts. And the same with other industries. The people are interested in the processes by which the articles they use are manufactured.

If you attend a fair or exposition, you will see the crowds gathered where things are being made. Men like to create, to make things, and next to this is the pleasure of seeing or reading as to how they are made.

UNENDING INFLUENCE.

Editors should remember that everything printed in the paper, is eternal in its influence and results. Last summer, I deliverd an address before the New York Press Association at Niagara Falls, and as I stood there, within the hearing of the roar of Niagara, I was impressed with the thought of the countless ages that had been taken by Nature in preparing the way for the people of high intelligence and civilization, who are now reaping the harvest in all the rich region of the Great Lakes and at their wonderful outlet, and I said that not a grain of sand, that had been disintegraded through the countless ages, not a rain drop or a leaf, that had fallen in "the foreests primeval" but that had done its part and was represented today in a new form—in the alluvial soil, in the power of the great cataract, in the coal, oil or gas of contributing regions, for the benefit of man. Everything is eternal. Every word, and every informing fact printed in your papers, influences minds and hearts, leads to conclusions and deeds that will be perpetuated in other minds and in multiplied undertakings, and accomplishments, influences and results through all the ages.

BROADNESS OF THE NEWSPAPER FIELD.

It is wonderful how wide, too, is the field covered by the newspaper. A couple of weeks ago, I delivered an address before the students in the department of preparation for newspaper making at the Illinoih State University, and I had outlines or analyses, of all the departments of the newspaper and its production, placed on a black board, covering the professional, the manlufacturing and sales departments. It would be profitable for you to make such analyses and keep the same at hand, as a reminder of all that is to be done, all that may and should be covered or accomplished in the publication of a complete up-to-date newspaper.

THE NEWSPAPER AN EDUCATOR.

The newspaper is not only a disseminator of news, but and educator and should be in touch with the schools, especially with those devoted to the training the youth for good citizenship and useful independent, self-reliant, self-supporting lives—the agricultural, industrial, trade and training schools. The newspaper should be active in the promotion of all that tends to their betterment, their attendance, support and upbuilding.

A COUNSELOR AND ADVOCATE OF THE PEOPLE—THE HOME PHYSICIAN.

The newspaper should be a loyal counselor and advocate of and for the people, and should be versed in, and alive to, all laws or enactments that affect their security, peace and prosperity and be ever able and willing to explain and defend those enactments that are most needed or useful. The newspaper should also act the part of the good true, loving, home physician to its community in the promotion of all measures for better sanitation, for the preservation of the health of the people and the prevention of the spread of disease—giving rules of right physical living and wellbeing, home building, healthful exercise, proper ventilation of houses, and wholesome happy, energy supplying and economizing and strength-producing methods of living. The gospel of purity, health, and wellbeing is the newspapers' gospel to be heralded at all times.

A PROMOTER OF IMPROVEMENTS.

The newspaper should be a promoter, also, of all needed things for the betterment of the community; the improvement of streets and public roads, the beautifying of parks, boulevards and lawns, as well as the upbuilding of the industries and agriculture. No other calling is so well situated for the promotion of charities and benevolences. Many of the dailies in our cities undertake, each year, to see to it that every poor family secures a visit from Santa Claus,—every home is furnished with the substantial material for a Christmas dinner and proper, needed presents are provided for all the children who otherwise would be without. While engaged in this kindly benevolent work, last winter, the Denver *Post* found a little cripple girl, in great suffering, whose father was unable to pay for her treatment and care. Inquiry showed that there was not a hospital in Denver in which the little children could be receeived and cared for, yet an operation and care might save this little one's life and restore her to health. The *Post* went right to work soliciting funds for a children's hospital. The money came pouring in, in sums of from ten cents to a hundred dollars, and soon $12,000 was raised for a children's hospital and the work still goes on. It is to be known as the Santa Claus Children's Hospital, because of the circumstances under which it was conceived and started.

This is the kind of benevolent work that newspapers can do and are doing all over this country, besides, all the time giving aid to established benevolences.

A PREACHER OF RIGHTEOUSNESS.

The modern home newspaper of today is in a large measure and should be in a broad sense, a preacher of righteousness and of that "Pure religion and undefiled before God," that administers to the needy, "visits the fatherless and widows in their affliction and keeps itself unspotted from the world" of greed, graft and all manner of public and private corruption. Such it should be, because the newspaper and its editors and reporters occupy a place of vantage, always before and known to the people. All these may be considered as a part of the professional side of newspaper making.

A MANUFACTURING INDUSTRY.

The newspaper is also a manufacturing industry. It manufactures newspapers, and the wise rules that govern all lines of successful manufactures should govern here. The product should be of the best possible, both in appearance and quality. The paper is manufactured for the subscribers and readers and should be such as they want. It should be bright, clear, commanding and attractive, such as will please on sight and gratify on examination and perusal.

Advertising or advertising space is a by-product of newspaper making, that has the peculiarity of being of very little value, unless the product of which it is the incident, is in every way satisfactory. The consumers, as in other articles of manufacture, must have first consideration. The by-product of advertising space is of little value or no value unless there are satisfied subscribers, buyers and readers of the paper. They do not buy the advertising, but the newspaper. For this reason the first page of a paper should be devoted entirely to pure reading matter of the highest and best quality to satisfy the buyers in the field where it circulates. It is wise, often to begin articles of importance that can not all be given on the one page—without crowding out other important articles or parts of articles—on the first page and then continue the same on some other page. The first page should never contain any advertising, for this indicates that the paper is issued for the benefit of the buyers of the by-product and not for the subscribers who alone make the by-product valuable; then, after the first page, the by-product, advertising, should be kept at the right hand of the other pages, the large ads at the bottom and the smaller ads at the top, and never be allowed to entrench on the space allotted to reading matter.

THE ARRANGEMENT OF THE PAPER.

The paper should be systematically arranged as to departments so that each reader will always know where to find that in which he or she is personally or most directly interested. The advertiser who tries to crowd in where he does not belong and is not wanted gains no benefit thereby. He only shows his bad breeding, selfishness and lack of regard for the readers whose good will and business he is seeking. When I first entered the newspaper business, I had one advertiser who would take no other place than a square in the center of the local page. He paid double price and I thought I needed the money, but both he and I made a mistake in not taking the readers into consideration. The paper lost friends among other advertisers and the readers, and the advertiser evidently gained nothing, for this business proved unsuccessful. No reasonable pains, care, expense or ability should be spared in the mechanical get-up of the paper. It pays to keep expert workmen, who have a pride and interest in the work.

ESPRIT DE CORPS.

In this, as in all other departments, what is called *esprit de corps*,—a common spirit pervading the entire body of workers, of sympathy, untiring devotion and jealous regard for the honor of the whole establishment and pride in its success—should be cultivated. Every member of the force should be taught to speak of the paper, with personal loyalty and pride, as "our paper." Recently at the close of the convention of the Kansas State Press Association, Arthur Capper, proprietor of the Topeka *State Capital*, gave a banquet to the editors and members of the Executive Committee of the N. E. A., in his new $180,000 newspaper building. After all the rest of us had completed our talks and had complimented him on his great success, Mr. Capper was called out, to tell how he had accomplished so much. He ascribed his success mostly to this one thing, the loyalty of the *Capital* force, numbering nearly four hundred in all departments, and said among other things: "I say without hesitation that the greatest factor in the success of my business has been the ability and loyalty of these people who love their work and who work as though they owned the business. It is this beautiful, conscientious service, this cordial and earnest co-operation, the value of which can not be measured by dollars and cents, which has been the most potent factor in the development of these publications. There can be no real or permanent success in any business enterprise without mutual confidence, and in this big office, more than any office in Topeka, I believe, you will find employer and employes like members of one big family. No where else in all this wide world, I assert, will you find a newspaper family more loyal, more conscientious, more faithful."

Here is the secret of success in newspaper making, with its wide field of work and usefulness and its many interests and its three separate departments, that in their sub-divisions, cover three hundred or more different subjects. This great multiplicity of departments of work and of subjects to be covered, exists, whether the work is done by one man or by four hundred. Bind your employes to the business and to yourself, to their interest in the community and all its affairs and to one another "with hoops of steel," with deepest loyalty and sincerest regard and friendship, through consideration for their well-being and comfort, as well as for their rights; through deserved commendation of their work and recognition, encouragement, personal interest, proper remuneration, and wise advancement or promotions.

THE COMMERCIAL SIDE OF THE NEWSPAPER.

As important as are the professional and manufacturing departments of the paper, the commercial department or the salesmanship is equally important. In this busy age, the most desirable article or the most worthy newspaper will not sell itself. The newspaper must be made known, its good points and valuable service must be exploited or advertised, and to every one in its field there must be given an opportunity to subscribe for, or to purchase, the paper or to secure advertising space therein. The having a paper well edited, well filled with news and helpful or pleasing information, and then well arranged, well and attractively made up and printed as an attractive, pleasing product, are all essentials to salesmanship, but the paper must be presented to the desired purchasers by intelligent solicitors, by specimen copies or by premiums or voting contests, that are only to be looked upon as methods of advertising, to be backed up by the high quality of the paper. If a publisher depends on anything without the desired qualities and merits of his goods for success, failure is almost certain.

"Keep Tab," is one of the essentials of the commercial department. "Keep tab" on subscribers and on those who should be subscribers and keep after them. "Keep Tab," on advertisers, and prospective advertisers and on all who should be advertisers. Keep a book in which the names of all such are entered and then "keep tab" on the advertising sent them and the calls made upon them. Have sufficient space at the right of the names, to make memoranda as to existing contracts and when they expire, and of the times during the year when more advertising is likely to prove useful, or to be desired, and for the entry of the reasons given for not advertising and of the times when non-advertisers can best be approached and how. "Keep tab" on all sales and expenditures, on the cost of every branch of the business so as to know what advertising space costs the office and how much should be charged therefor, and then keep everlastingly at it. I once heard a circulation manager state that it was the rule in his office, to make it impossible for any one in the field covered, not to have an opportunity presented to, or urged upon, him to buy the paper. The same rule should apply to the advertising. The commercial business and bookkeeping departments must keep the tab, not only on all expenditures, but on all leaks and failures. Do not think for an instant, that these things are less worthy or less important than are the writing of editorials or securing the news. The newspaper is a trinity of departments that are interdependent as are the members of one body. Neither can be neglected without injury or injustice to the other. There is no greater calling on earth and it is all powerful in its work and the results are unending in their influence, but a weakness in one part, like the weakness in the link of a chain, makes the whole weak. Honor your work and it will honor you, and give you power, an honored name, and genuine loving respect much to be preferred above that coming from the holding of any public office. It will bring much gratification, a satisfying competency and a worthy success. I thank you.

VALUABLE AND USEFUL BOOK FREE.

"Aid to Shippers" is the title of a 72-page book containing a quantity of information of value to all engaged in the export or import trade. The book is issued by Oelrichs & Co., of New York, for more than forty years the American representatives of the North American Lloyd Steamship Company, who by reason of long experience are qualified to advise.

The table of foreign moneys with United States equivalents together with weights, measurements, tariffs, customs requirements, etc., etc., will be found of great value.

"Aids to Shippers" will be sent, postpaid, on request to Oelrichs & Co., Forwarding Department, 5 Greenwich St., New York.

"COUNTRY CORRESPONDENCE"

[Paper read by E. R. Purcell, editor of the *Chief*, at Broken Bow, Nebraska, before the meeting of the Nebraska State Press Association held at Grand Island, Nebr.]

AFTER many years of active newspaper work in Nebraska I have become firmly convinced that the country correspondent is absolutely necessary to the success of the country weekly. If you will look over the exchanges which come to your table, you will find a comparatively small per cent which steadily maintain a heavy correspondence department. But if you will talk with the editors who have a few correspondents, you will, in most cases, find they are clamoring for more.

Any good local paper will have a good local support, but if you would permanently extend your circulation beyond the limits of your readers who make your town their weekly trading point, you must secure news that they are directly interested in. The most effective way to secure this news is by country correspondence.

If you are going to make the correspondence department an attractive feature, go at it with a system—with some definite plan outlined and work to that plan. I take a map of my county and mark the localities where I want the news. Near my home of Broken Bow my correspondents are thicker than in the outlying districts. I have them as close as three miles and as far away as thirty-five miles. It is surprising how much news the near-by correspondent will get that you haven't heard of.

Care should be taken not to get your correspondents located too near each other. But there is far more danger of their being too thinly than too thickly sprinkled over the territory you seek to cover.

It pays to get the happenings of your neighboring towns as well as from the country districts, no matter whether they are larger or smaller places than your own and no matter whether those towns have a paper or not. Don't clip the news from an exchange. Get it from a live correspondent. You need not be afraid of cutting in on the business of your brother editor located ten or fifteen miles away. You cannot take away his home subscriber any more than he can take away yours. Your home people are interested in the important events of the neighboring towns and your subscribers will all admire your enterprise.

I keep an accurate record of my correspondents, which shows the dates throughout the year that each one has sent in items. This record is posted by means of check marks and it takes probably ten or fifteen minutes each week to post it. A glance at this book will at any time tell me just what each correspondent is doing and enables me to keep in close touch with this department.

During 1908 I published 1,109 letters of correspondents, making an average of 21 each week. So far as I know this is the largest volume of correspondence published by any country weekly in the state. When I tell you that this average has been maintained, covering a period of a number of years, you can perhaps guess why it is that my circulation has reached 2,900 copies.

One of the fraternity said to me a short time ago, "Your theory of handling twenty letters of correspondence each week may be all right for the fellow with the Linotype, but it does not sound good to the follow who is up against hand composition." Let me tell you it will put a Linotype machine in your office quicker than any other method you can pursue. It has been a great factor in helping to equip my office. It will do the same for you.

I have received quite a number of inquiries from the fraternity asking how I maintain so much correspondence and how I pay the contributors. The securing of correspondents is a lottery. Quite a per cent of those you ask to act in that capacity are not a success. But those who apply for the place voluntarily, usually make good. I now have 45 correspondents on my list, and I seldom have to ask for a new one. I have many applications on file, asking for the place in case of vacancy. If a correspondent contemplates leaving the neighborhood, I usually have the place filled in advance, with applications to spare.

I cannot tell you what class of people are most desirable. In most cases the young lady, generally the schoolteacher, is the easiest to secure and many of them make good. My three best correspondents are two ladies, both past fifty years of age, and one young man, a schoolteacher. One of the ladies tells me she never went to school but three months in her life and her copy indicates that she is telling the truth. However, she possesses that peculiar faculty of gathering news and when, after a thorough renovating, her items appear in print, the people in her community declare that she is a natural-born journalist. These three correspondents mentioned are located respectively ten, twenty and thirty miles from Broken Bow, and my combined list at these three postoffices is 450. The continuous publishing of the news of these three points has probably secured and held more subscribers at these three postoffices than all my efforts in other departments of the paper have accomplished.

I have two correspondents who have been with me for over fifteen years and they rarely miss an issue. Fifteen or twenty of them have been on the staff over five years.

Now, in regard to the paying of correspondents. Money does not buy competent service in this line of work. The correspondent writes for the paper because he likes the work. The country weekly cannot pay for this service. The cost of getting the news added to the cost of publishing it makes it prohibitive. The person who writes for the paper because he likes the work is sure to make good, while the one who goes into it from a mercenary standpoint soon tires of the job and after a few weeks or months, you will find your paper not represented at that point. During my twenty years of newspaper work I have never paid a correspondent. I try to impress them with the fact that I appreciate their work and that their community is benefited by the good, wholesome news items they contribute. At Christmas time I always send each one a small remembrance and their acknowledgments show marked appreciation.

In summing up whatever success I have attained in newspaper work, I am compelled to give my country correspondents much of the credit and when a subscriber living twenty or twenty-five miles away tells me he intended to stop the paper, but that his wife wanted to continue it because it prints the news in their immediate neighborhood, it makes me feel that I am a pretty small and the correspondent a pretty large factor in my subscription building.

The hardest feature to deal with in this department is to hold down the writer who persists in dealing in personalities, or who writes an objectionable item and words it so cleverly that only those who know the cir-

cumstances, can understand the intended thrust. Then, there is the writer who tries, through the news columns, to regulate the affairs of his neighborhood and also the writer who will mention only the names of a few friends and ignore good items because of personal spite.

I do not have a long list of rules for correspondents, but I have a few emphatic ones. They are: "Get good, wholesome items;" "Avoid personalities;" "Be accurate;" "Sign your name."

I do not allow correspondents to get into a controversy with each other. I do not allow nom de plume signatures to appear at the bottom of correspondence, and I promptly cut out or revise any item that is questionable. The new correspondent soon learns what goes and what does not and he either falls into line and gathers legitimate news or quits writing.

Under no circumstance do I allow political matter to creep into correspondence. It is a frequent occurrence, during a political campaign, for a candidate to induce the correspondent to include a hot boom for himself in the regular batch of items. Politics will bring the correspondence department into disrepute quicker than anything else and the rule barring it should be ironclad.

The editor who deals with a large bunch of correspondents is sure to have some queer experiences. During the year of the drouth when aid was shipped from all over creation into my county, a couple of wealthy Dutchmen persisted in drawing rations along with the destitute people. My correspondent from that neighborhood wrote me about it and I instructed him to give them a column, just for luck. This he did and the job was a good one. The Dutchmen were greatly excited over the article, and after their failure to locate the identity of the correspondent, they sent word that they would come to town in a few days and mop the streets with me. They had a well-established reputation for making good on threats of this kind, and as the matter had become the talk of the town, my friends volunteered to watch for them and take a hand in the mopping business when they appeared. The Dutchmen learned that there would be something doing if they came and they sent word that their wives would do the job. The situation at once changed. My friends deserted me and insisted that the women should have a fair chance and that the fight should be to a finish. I am still congratulating myself that I was out of town when the ladies called.

There are three principal departments to the country weekly, the local, the editorial and the correspondence. A good local page is indispensable. It must be maintained. A great per cent of the country weeklies are not able to give liberal space to both editorial and correspondence. If you have to choose between them, by all means stay with the correspondence. When you delve into state or national politics you have as competitors the ablest of writers and your paper is in competition with the state weekly that runs many times as much state news and sells for a fraction of what yours brings. If you devote your space to the news of your county the low-priced daily or the state weekly cannot compete with you. They are in another class.

I have no fault to find with the fellow who devotes the greater part of his composition to editorial matter. It no dout affords him plenty of satisfaction, and if he is fortunate enough to have wealthy and kind-hearted relatives, he perhaps can keep his paper going. But if he could follow his paper to the rural home and watch it as it passes among the various members of the household, he would find that "Prairie Center" items are vastly more popular there than the columns of heavy editorial that he has burnt midnight oil in getting up.

The country correspondent is a subscription builder. He will increase your advertising and advance your rate. He will make your dollar paper sell for a dollar and a half and will put new material and new machinery into your office. He is the fellow I tied to some years ago and I am mighty glad I cultivated his acquaintance.

ITEMS OF INTEREST

The Illinois Press Association has accepted an invitation to meet in Ottawa on June 16, 17, and 18. The "For Ottawa" Club has the matter of preparing for their entertainment well in hand.

I. V. Park, who for years figured prominently in Joliet, Ill., and who had been editor and publisher of nemerous newspapers in that city, passed away in his home in Cincinnati, Ohio, last week, after an illness extending back two years. Death was due to meningitiss.

The Wisconsin *Leader* of Merrillan, Wis., has been purchased from R. H. Gile of Milwaukee by local business men. The plant will be equipped with new equipment and the force increased. The Wisconsin *Leader* was founded in 1875. J. M. Axtell, formerly of Pepin, will be the manager.

Through the retirement of Glen Griswoold from the Berrien Springs, Mich. *Era.* one of the strongest, if not the strongest, weekly papers published in the country, J. M. Russe of the Benton Harbor *News Palladium,* is to become connected with the *Era* in the capacity of editor and general manager.

J. K. Spier died at Bloomington, Ill., last week, aged 78. He was for many years interested in the Indianapolis *Sentinel* and was later publisher of the *Indiana Sun.* During Cleveland's first administration he was timber inspector for Wisconsin. In his early years he was a minister of the Christian church.

The Merrill, Wis., *Daily Herald,* which was started about a year ago by W. R. Jaeger of Wausau, has been sold to a party of Merrill business men. Postmaster C. N. Johnson, formerly editor of the Merrill *Advocate,* and others are interested. It will be enlarged and made to rank with the best of the county dailies of the state.

The American Press Association has concluded arrangements to open a branch in Des Moines to supply its Iowa patronage. Several hundred papers in Iowa are supplied with plate matter by the American press, either from Omaha or Chicago. A Des Moines branch will be an accomodation all around. It will bring to Des Moines a large force of editors, stereotypers and printers.

Notices have been sent out by the officials of the Illinois Central Railroad to the effect that in the near future the Illinois Central Railroad will begin the publication of a magazine. The first issue will probably appear in a month or two. L. B. Mackenzie has been appointed managing editor. The magazine will be published in Chicago. It will be distributed among the employes monthly without cost to them.

THE NEBRASKA EDITORS

ONE of the most profitable conventions of the Nebraska Press Association was held at the beautiful, growing city of Grand Island, Feb. 22, 23 and 24. The *Daily Independent* of that city gave very instructive and extended accounts of the meetings for the benefit of its readers.

Every one is reached by the home newspaper, and should be instructed in the principles and methods of its production. The people can help in the making a valuable, interesting newspaper, and should be made to understand that its usefulness and interest is very largely dependent on those for whom it is published. There should be perfect accord and helpful co-operation between the newspaper and its constituents. The newspaper, while a private enterprise, is, in a very wide and important sense, a public enterprise for the service of the community and all its worthy institutions and enterprises, including the schools and the churches in all their legitimate efforts for improvement, betterment and advancement. The citizens should be taken into full confidence by the newspapers and should be made to understand that it is safe and wise to be always candid and open with its editors and its representatives. Newspaper men, who are worthy of the name, never betray confidences or print anything that ought not to be published, if dealt with fairly. Concealment or lack of entire openness may lead to incorrect reports, but the news will, sooner or later, be told, and much good service can be secured by intelligent, fair, helpful treatment of editors, reporters or correspondents. A broader understanding between the people and the press cannot prove otherwise than beneficial to both.

The first meeting of the Nebraska association was opened with an appropriate prayer by Rev. Luther L. Lippe, pastor of the English Lutheran Church. It is well for the clergy to be recognized and to take part on such occasions. They should feel that the members of the press, no less than the ministers, are engaged in a work for the good and uplift of men. Mayor Schuff welcomed the editors, recognized the usefulness of the newspaper in securing better conditions in city government, and alluded "to the mighty power for good that could be wielded by a free press." President L. A. Varner responded, assuring the mayor that the editors appreciated the city, its institutions, its people and its welcome and would do the fair thing thereby.

A piano solo was then enjoyed, after which Mr. A. L. Bixby, of the *State Journal*, a veteran newspaper man, was introduced "as one of the oldest members, our beloved Bix," and read the annual poem. He portrayed the comfortable lives of the farmers, the business men, the lawyers and the doctors, and continued to deal with the editorial calling, in the following lines, by way of contrast, portraying the arduous duties and heavy responsibilities of the newspaper man:

> But we, the members of the press, are not
> Permitted thus to toil in grooves defined,
> So restful both to body and to mind.
> Not only must we toil for bread to eat—
> Work like the devil to make both ends meet—
> But it is ours with weary heart and brain,
> To strive to please, enlighten, entertain,
> Instruct, inspire and in some way make shift
> To be a factor in the world's uplift.
> And then, we owe this duty to the state,
> To groom the politican-featherweight,
> And in this manner turn a clever trick
> To serve the party—oh, the conscience-prick
> When he for whom we shed our blood, alas,
> Turns out to be no statesman, but an ass,
> For whom, instead of classing with the wise,
> We pour on ashes and apologize.
> Not that it always turns out so, praised be,
> Great glory is the lot of you or me
> When one for whom we shed the crimson ink,
> Makes good as has, for instance, Mr. Sink.
> In what that man has done we all take pride—
> Sheets nine feet long (and forty-five feet wide)—
> Have been the dream of many a gay old sport
> Who tried to rest in sheets a foot too short.
> I will not strive to recapitulate
> The varied duties that upon us wait;
> The pleasures and the pains; the love and hate,
> That through our daily efforts alternate.
> So many tastes to cater to, it's plain
> An effort to please all must be in vain.
> Our duty clearly is to print the news,
> Be brave enough to give our honest views.

Business was taken up and Mr. H. M. Bushnell of the *Trade Review*, Lincoln, was appointed to compile a history of the Nebraska Press. The State Historical Society, it was stated, had appropriated $1,000 for the publication of the book and the association arranged, through the appointment of a committee, for the raising of an additional $500. This consumed the time of the first morning session.

The Grand Island *Daily Independent* gave the following account of the subsequent proceedings:

The convention upon reassembling listened to an address by Editor Bushnell of the Lincoln *Trade Review*, who is also president of the State Association of Commercial Clubs. Mr. Bushnell reviewed the action of the association in departing, some years ago, at Kearney, from a former custom, and taking up public questions. At that meeting the anti-pass question was taken up. The matter was discussed, the convention resolved against the system, the newspapers more unitedly waged a campaign against it and had no little to do with the final passing of an act displacing this discriminating system: Mr. Bushnell thought that similar steps should be taken with reference to "The Conservation of Natural Resources," which was the theme of a most interesting address. Mr. Bushnell is an ardent student of such questions and his remarks were very highly appreciated.

There followed a most carefully and thoroughly prepared paper on "The Relation of the Newspaper to Politics" by Mr. Will Owen Jones, of the Nebraska State *Journal*, one of the ablest editors in the state. Mr. Jones reviewed newspaperdom with special reference to its political relations for

nearly a century and has obviously given the subject much research. The paper was a strong plea for reliability, truthfulness and the elimination of political prejudice and all "fake" work in reportorial and editorial work.

One of the features of the convention was the address by Mr. B. B. Herbert, a veteran journalist, and editor of the National Printer-Journalist of Chicago. Mr. Herbert covered the entire field of newspaper work, placing the news columns as the strongest feature. He detailed what he thought was good news, and commented approvingly on country correspondence. The editorial, the business and the mechanical ends of the business with their many sub-divisions were also carefully reviewed and the address was most attentively listened to and enjoyed.

The program, as have been all others, was interspersed by music by local talent and every number was heartily appreciated.

The afternoon's session closed at 4 o'clock when the visitors were taken by a special train, furnished by the Commercial Club through the courtesy of Trainmaster Cornell of the Union Pacific and Assistant Superintendent Flynn of the Burlington, and accompanied also by Agents Loucks and Connor and Mayor Schuff and the local press men, to the Soldiers' Home. The visitors were generally impressed with the importance of the institution. Commandant Barnes addressed them briefly in his office and committees of members and of the ladies of the Home took the party about in groups, Dr. Duncan and other officers and attaches of the Home, joining and showing every courtesy. The party returned at about 6 P. M.

On the morning of the 24th, after an opening musical number, Mr. A. B. Wood of the Gering *Courier* read an interesting paper on "Sidelines for a Country Printer." His paper had many good suggestions in the line of making both ends meet, and then some, for the country publisher.

A paper, handling the advertising, was next read and discussed.

Among other features of the morning session was the presentation by Mr. Carr, of Omaha, of an invitation by the Elks' organization of that city, to the members of the State Press Association(to attend the festivities given under the auspices of the Elks at Omaha in April. The invitation was received with thanks.

Mr. Carr later addressed the convention on the subject of the advertising agency's relations with the publisher.

In the afternoon, under the escort of Mrs. W. H. Harrisson and Mrs. C. G. Ryan the ladies of the convention were given a drive about the city.

A paper on "Benefits of County Organization," by E. E. Correll of the Hebron Journal, was vigorously discussed by the membership.

The election of officers resulted as follows: President, N. J. Ludi, of Wahoo; Vice-President, A. B. Wood, of Gering; Secretary, C. C. Johns, of Wood River.

A lively discussion at the final session of the annual convention of the Nebraska State Press Association, was occasioned by the following resolution:

Whereas, In the deliberate judgment of this association, such contemplated change would not tend to raise the standard of politics nor to enhance the purity of the ballot box, therefore be it

Resolved, That we, as an association most strongly insist that any legislation tending to facilitate the participation of a member of one political party in the caucus or primary of another party is not in the interest of good government nor calculated to promote the welfare of the people and would offer, in fact, a premium upon political dishonesty and prostitution.

The adoption of the resolution was contended for by the resolutions committee headed by Mr. Elliott of the West Point *Republican* and an intense debate followed, led for the negative by Mr. Maupin, the labor commissioner. Many of the progressive members of the association who believed heartily in the resolution, did not, however, advocate its adoption, but were contrarily inclined, on the ground that its adoption would tend to offend many members and while only plain facts were set forth, this was not the place for such action. President Ludi's final ruling the motion to adopt this resolution, out of order, was not appealed from.

The convention adopted the following further resolutions:

Whereas, Carefully compiled statistics show the average yield of corn per acre in the state of Nebraska is about twenty-three bushels and should this yield be increased through education of the farmer as to the proper selection of seed and adopting improved methods of cultivation, even to the extent of five bushels to the acre, it will mean an annual increase in the wealth of the state by this means alone, an amount in excess of $20,000,000, a wealth in which all citizens of the state would participate directly and indirectly, be it

Resolved, That this association commend and approve the efforts of the National Corn Growers' Association to establish in the west, an annual corn exposition, national and educational in character, and that the membership of this association individually and collectively give their moral support in behalf of this highly commendable movement.

Whereas, The retiring president of this association, Mr. L. A. Varner of the Sterling *Sun*, after long and honorable service as an editor and publisher and twenty-two years of loyal and enthusiastic membership in this association, has arranged to sell his newspaper and temporarily retire from the publishing business.

Resolved, That we learn of this contemplated retirement with deep regret and feel that the editorial profession of this state will sustain an appreciable loss from the retirement of Mr. Varner from active editorial work.

Resolved, That we extend hearty good wishes to Mr. Varner and hope he will continue his membership in and earnest support of this association.

Resolved, That we lay the flattering unction to our souls, that the 37th annual session of the Nebraska Press Association in attendance and environment has been one of unusual profit and pleasure.

Resolved, That we commend the officers of the association for faithful attention to duty and especially for preparing a program of real interest and practical benefit to the members.

Whereas, C. S. Paine, secretary of the Nebraska State Historical Society, has been appointed to receive subscriptions to the fund to provide for the publication of a history of the Nebraska *Press* of which Hon. H. M. Bushnell is to be the editor.

And Whereas, The money to defray the expense of such publication must be raised among active newspaper men of the state, therefore be it

Resolved, That as members of this association we pledge our hearty support to this enterprise and bespeak for its promoters the cordial co-operation of every editor and publisher in the state.

Resolved, That we commend the work of the State Historical Society in gathering and preserving newspaper files and endorse their effort to secure a fire proof building to protect these collections.

Resolved, That we heartily appreciate the generous welcome given by Mayor Schuff, the citizens of Grand Island, Editors Buechler and Curran and their able corps of associate publishers; that we have reason to feel profoundly grateful to the Commercial Club for the splendid reception and banquet tendered; to the Elks' Club for the use of its handsome

and commodious quarters, and to the ladies and gentlemen furnishing such excellent music; that we appreciate the Burlington railway in placing a special train at the disposal of the members, thereby enabling them to view the Soldiers' Home; and to all who dwell within the gates of this splendid city of prairies, our thanks are due and hereby expressed for the many acts of kindness, consideration and attention.

Resolved, That we tender our sincere thanks to B. B. Herbert of Chicago, for his excellent address and for the words of advice and wisdom which came from the father of the National Editorial Association, during his attendance at our meeting.

Resolved, That it was with extreme regret that we learned, during the year, of the demise of a veteran newspaper man of this State, as also a pioneer and founder of his own community, the Hon. Fred Hedde, former owner of the *Independent* and founder of the daily edition, and extend herewith our sincere condolence with his mourning wife.

Respectfully submitted,

J. C. Elliott, West Point *Republican.*
Frank O. Edgecombe, Geneva *Signal.*
Adam Breede, Hastings *Tribune.*

Music was a feature of the convention programs, the various numbers being very heartily received, and many expressions of appreciation of this innovation were heard on all sides.

The banquet tendered by the Commercial Club to the members of the visiting Press Association, at the Liederkranz Hall, was a most delightful and successful affair. The menu, in the hands of the Women's Park Association, and the serving, done by a corps of very charming young women as assistants, under the able guidance of the ladies, was all that could be desired. The decorations were unique. Newspapers and the American flag played the chief part in adorning the hall, while on the tables, where the color scheme of pink and white was carried out, there were placed carnations at each place, and the very original menu card, which was printed in imitation of a newspaper, with "specials" dated 1,000 years hence.

The "make-up" was quite technical, and readily appreciated by the editors. The Popular Orchestra furnished an excellent program during the courses, and the music was repeatedly applauded. Mr. C. G. Ryan, president of the Commercial Club, asquitted himself brilliantly as toastmaster. The first toast, "How to Expand" was responded to by Mr. F. O. Edgecomb, followed by Mr. J. C. Elliott, who had the very vital topic, "The Editor's Hereafter," and Mr. M. A. Brown, of Kearney, spoke on "Let the Office Seek the Man." In the place of Mr. R. L. Metcalf, of Lincoln, who was unable to be present, the company had the pleasure of hearing the inimitable Mr. Bixby, who, it is needless to say, made a most acceptable substitute. The only woman editor in the State, Miss Chattie M. Coleman, of Stromsburg, responded very happily to the toast, "The Lords of Creation." Another substitution was made necessary by the enforced absence of Mr. A. L. Gale, of Lincoln, whose place was taken by W. M. Maupin of Lincoln. Mr. Maupin, as well as the other speakers made many kindly remarks about the cordiality of their reception by Grand Islanders, and paid a very glowing tribute to the State of Nebraska. The last toast was that of the retiring president, Mr. L. A. Varner of Sterling, who spoke "For the Good of the Order."

PLEASING COMMENT AND POESY.

The *Independent* published the following from Mr. A. L. Bixby, in its issue of Feb. 26th:

Grand Island's hospitality was again strongly emphasized at the banquet board, where at a sensible hour a sensible, substantial and tasty banquet was served by the ladies of the City Improvement Club. The room was appropriately decorated with newspapers, and the menu was printed in terms that newspaper men alone could understand, and that without being able to interpret the meaning as applied to food. The toast list was not so long as to be tiresome, and right here I want to express the opinion that a banquet room is no place for a long-winded exegesis requiring exhaustive effort on the part of the speaker to keep a-going and the same on the part of the listeners to keep awake. Speeches, that go with a spread, ought to be short, sharp and decisive, like a campaign for a county office. Newspaper boys generally know when to let up, and their knowledge was happily put to good use on this occasion. Of the several speakers on the list, whom the witty toastmaster wittily introduced, Miss Coleman of the Stromsburg *Headlight,* was easily the star. Her subject was the men; and being, an old maid, she took advantage of the situation to hand the brethren a package from the tree of the genius citrus. She had no man, she said, didn't need one, didn't want one, wouldn't have one, but if she did have one she "wouldn't take a million dollars for him."

The thirty-seventh annual meeting of the association began, continued and finished with the best of feeling prevailing among the members.

It is a joy when brethren meet,
The brethren of the press,
To laugh and joke and talk and eat,
And make their troubles less,

By soul-diverting thoughts that lift
The eyes of everyone
Where they can see the silver rift
In clouds that hide the sun.

It isn't all of life to take
All time for business care;
To be forever on the make
Instead of on the square.

We ought to know each other well
While on this earth we mix,
And when we die and go to heaven
'Twon't be so lonely. BIX.

CIRCULATION.

THE HEART OF THE NEWSPAPER.

If there is a subject that will interest every publisher, it is circulation. It may seem to some publishers, mere child's play, yet today it stands foremost in the rank of what goes to make a newspaper.

To better themselves, to become more valuable to their employers, and to broaden their knowlege, the circulators from all parts of the United States, Canada and Mexico will convene in Cleveland for their Eleventh Annual Convention on June 15 for a three days' session.

The most interesting and beneficial program of the National Association Managers Newspaper Circulation will be that at the coming convention. Subjects that cover the successes and failures of more than 200 leading dailies in North America will be taken up and thrashed over. Articles backed by a life's work will be read. Addresses by prominent publishers and newspaper workers will be delivered.

Cleveland, Ohio, is the place of meeting, June 15, 16 and 17 are the dates. All live dailies who are interested in circulation should have a representative presnt.

THE FIRST PUBLISHER.

Mr. George R. Sims told the Associateed Newsagents recently that Eve was the first publisher, when she produced the *Drapery Record.*

THE RURAL EDITOR

The following is from a poem, written by Mr. J. Dumars, and read before the meeting of the Ohio Editorial Association at its sixth annual meeting in Dayton on January 19, 1859, and republished by the Springfield, O., *News*. It contains thoughts and hints of interest and value to all newspaper makers even in this year of 1909:

Once on a time—so run all tale prefaces—
(I make no mention here of dates or places,)
I knew an Editor—'twas long ago.

* * * * * *

Forth came his paper, neatly launched and freighted,
And when it came, the village was elated;
Ignoring party, in a party sense,
Avoiding all that might excite offense,
It praised the town, its prospects, its advances,
Its enterprise, resources and finances;
It praised the schools, the teachers so profound,
Until their fame was known for miles around;
It praised the village parson's eloquence,
His modest bearing, lack of all pretence;
But most his learning and his solid sense;
So it fell out, between the spring and fall,
That worthy from the city had a call,
With such an offer for his preach-ed word,
That he felt sure that call was from the Lord;
It praised the doctors as uncommon skill'd,
Adding with great suaviter and grace,
Their treatment cured more people than it kill'd;
It spoke—and of its truth some doubts will spring—
Of honest lawyers—an uncommon case.
In short, it praised so well, that people grew
To think that praise was merited and due;
It was his fault, and grew from an excess
Of aim to please and profit—nothing less:
And had been to self but half a friend
He was to others, he had met an end
That you might safely aim at and commend.

His influence was felt—the town's fair fame,
With all who read his paper, found a name;
The city pleasurists resorted there,
Enjoyed its quiet and its healthy air;
The artist came, and sketched such charming scenes,
That they were sought to grace the magazines;
And thither, too, came men of enterprise—
Blocks rose on blocks, and mills and factories,
Hotels palatial, and stores that vied
With those on Broadway, or along Cheapside,
In brief, the town, that ere the printer came,
Had scarce "a local habitation or a name,"
As though 'twere touched by magic, grew to be
An inland city.

* * * * *

A bunch of bad segars, that some one sends,
Expecting thrice their value in a "local;"
Unopened invitations from his friends,
Asking his presence at a concert vocal,
Or at a lecture, party, hop or ball,
At such a date (please mention) and such Hall;
Novels and books not worth a decent rating,
Sent out—they send few others but for cash—
By eastern firms, who take that way of baiting
The country press to advertise their trash;
In short, an hundred things by men devised
To get their baubles cheaply advertised,
There, patient toiler! ever at his work,
Himself his foreman, publisher and clerk,
He labored hard—few men had labored harder—
Grew lean in person, leaner in his larder;
And still he toiled, from dawn to twilight gray,
The first of men to court—the last to pay!
Some said that he was rich—it might be true,
Provided that you reckoned what was due;
But this his dearest friends both said and knew—
His wants were many, but his dimes were few.
His paper-bills came in, which must be paid,
So, to delinquents he appealed for aid;
He would take pork, potatoes, corn or oats,
Axe-helves or hoop poles, or, at worst, their notes
In short, take anything they had to pay,
Provided it was brought by such a day.

And thus he turned short corners, always pressed,
A sad example of Pope's sagest saw,
"Man never is, but always to be blessed,"
The victim of a fate that knows no law.
Beset by butchers, by his baker teased,
By creditors besieged, by bailiffs squeezed,
He yielded slowly, in the desperate strife,
His dingy office and his troubled life,
And gave to quiet earth and modest stones
His many virtues and his aching bones.
Some generous friends have built a cenotaph
Of spotless marble o'er the sleeper's breast,
On which the passer reads this epitaph:
"Here lies a man who died of too much trust!"

'Tis a plain story, rather roughly told,
Of one who trusted others and was "sold;"
By hope allured, in turn by fear assailed.
He gave credit all he had, and failed.
The moral you can draw. The Country Press
Should seek for independence—nothing less.
Ready to aid the good, sustain the wise,
Direct and counsel proper enterprise,
Revealing to the public gaze the way
Where toil may profit, and where skill will pay,
Where revenues are reaped and fortunes grown,
But should be careful to preserve its own.

The Country Press! though limited its sphere
Of influence, demands attention here,
Where it is free, the people will be free;
Where it is pure, the people will be pure;
Where shines the light, there liberty shall be;
Where it stands firm, there freedom shall endure.
In the great march of mind it leads the van,
The guard of public right, the friend of man.
Though humble toilers, they are not the least
Who sow the seed and garner for the feast;
By little means the noblest ends are gained,
By small advances victories attained.
Look to the sea; from out its wastes arise
Fair isles of beauty, kissed by summer skies;
Mere specks at first, they part the rippling seas,
Bald, barren rocks then rise by slow degrees,
And here extends a shoal, and there an arm,
Here swells a hill, there sinks a valley warm;
Along its beach clings fast the floating weed,
And spicy winds waft down the feathery seed;
To ardent suns succeed the gentle rains,
Green grow the hills, and flowers adorn the plains;
Fair trees spring up to whisper with the breeze,
And flashing fountains leap to join the seas,
Where birds of song with sweetst music come,
And build their nests and make their happy home;
And there it stands! a glory mid the isles,
Where spring eternal sheds her sweetest smiles;
Through centuries its builders toiled to raise
Another Eden in the later days;
A new creation under heaven's dome,
Where Love might dwell, and Virtue find a home;
Their toil was humble 'neath the surging flood,
Their aim was noble and the end was good.

O. humble toilers! ye who guide the press,
Though slow the progress, sure will be success.
Patient in labor, strong in hope; in faith
Outreachiing time, and circumstances, and death,
Be yours the aim, by Heaven at first designed,
To raise to higher range of thought the mind,
Building amid the floods of selfish life,
The storms of passion and the waves of strife,
A fairer island in each human soul,
Where Love shall dwell, and Virtue have control,
An Eden blessed, and fairer than the old,
By poets sung, by prophet lips foretold,
The home of Innocence, Religion's shrine,
Where God may reign, and Man become divine.

"When I send out manuscripts," said the conceited youth, "the editor always finds something he can use."

"I see," answered Miss Cayenne. "You enclose stamps."

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

I HAVE a friend down at Boscobel, Wisconsin, who (barring myself, of course) is about as smart a newspaper man as there is in these parts. I'm writing about a man I've mentioned before: Verne S. Pease, the brilliant and versatile editor and manager of the Boscobel *Dial-Enterprise*—the "Pease who knows beans." Along last winter sometime this splendid friend of mine wrote a little squib of an editorial on the subject of the suppression of news—which was only one of such prodigious effusions as apparently flow spontaneous from his inspired penpoint whenever he dips that mighty weapon of prose and poesy into a pot of ink, and which was so Horace Greeley-like that it really created a sensation. Now, while my friend enjoys more than the proverbial fate of the true prophet, inasmuch as many of those in his own home have sat up and taken notice of much that he has said and done, to be sure, I don't mean to intimate that this particular editorial of his created much of a stir hereabouts, for the stunt of stirring adjacent souls is seldom accomplished by seer or sage; but the thing got into the daily papers—even the big dailies of Chicago and New York. None of the critics had anything but compliments for the idea—and it never got a praise amiss, I ween. It's a big subject, this suppression of news for the pleasure of one reader to the limitation of the information of the many—too big a subject, in fact, for proper discussion in a single introductory paragraph for a department of newspaper review. It is an idea, however, that will be conceded as most appropriate and suitable in these columns, and one to which I seriously invite the critical thought of my fellow editors. Editor Pease made his declaration of independence in the matter, affirming his right and resolution hereafter and henceforth to give the many *Dial-Enterprise* readers all such news as is fit to print irrespective of the whims and caprices of the few; and those of us who will look the question over in the logical light of fairness and reason must agree, I think, that Brother Pease is right, even as Horace Greeley was right, in the same premises, before him.

In my February installment of "Newspaper Criticisms" I asked, in reviewing the Centralia, Washington, *Daily Chronicle*, that Brother Crawford, who is the managing editor of this enterprising sheet, kindly tell me "how it happened" that the *Chronicle*, which I remembered as a weekly publication, was now the *Daily Chronicle*. Hence, and therefore, is the reply which this request provoked:

CENTRALIA, WASH., February 17, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Referring to your paragraph in the NATIONAL PRINTER-JOURNALIST regarding the Christmas number of the *Daily Chronicle*, we want to enter an emphatic protest against your hasty criticism of the display advertising contained therein. The edition of December 24th was not really in the nature of a special edition. Several weeks previous to its publication we had ordered colored covers and our solicitor in gathering advertising for these covers found that the demand for space far exceeded the amount available. He was instructed to accept all the advertising offered, with the result that the size of the edition was expanded from twelve to twenty pages. This additional work had to be done by our usual force, in three days' time. Our ad compositor, with the assistance of a boy, had to put up about fifty columns of ads in three days, besides setting the regular run of advertising for the paper each day. Bearing these facts in mind, we ask you to take another look at our Christmas edition. All the work on it was done hurriedly, yet we think that it is a fairly good production.

You ask, since when did the *Chronicle* become a daily? You say that you remember it as a weekly, and you request that we tell you all about how it happened. That would make quite a long story, but we will give you the principal facts.

Two years ago the *Chronicle* was a weekly. You could repeat a thread-bare joke and spell it the other way. A copy of an issue of two years ago is sent to you by this mail, together with recent copies.

The writer took charge of the *Chronicle* in July, 1907, and at once put in a new plant and reorganized the force. The intention, of course, was to make it a daily paper. Conditions did not seem to be ripe for such a change, but as a preliminary step the paper was made a twice-a-week publication about four months after it changed hands. On May first, last year, the final step was taken and since then the paper has appeared as *The Daily Chronicle*.

One thing which is worth noting regarding the change in publication is that the weekly, afterwards twice-a-week, was carried into the daily. This is an unusual thing to do, but local conditions warranted such a radical change. The wisdom of it was doubted by some, but such doubts were removed by its success. The circulation of the *Chronicle* in July, 1907, was about 700. In April, 1908, it had grown to 1,250. In carrying this circulation into the daily we expected to lose about 400; but the loss never exceeded 200. Now it is up to over 1,400, and still growing.

Had we continued the weekly it is doubtful if the daily would have today more than 500 subscribers. The weekly would have sapped the life from the daily and left it an unprofitable proposition. With its circulation always above the thousand mark, and constantly growing, the *Daily Chronicle* has been a profitable advertising medium—profitable both to the publishers and the advertisers.

The *Daily Chronicle* was at first published as a six-column, four-page paper. During the heavy advertising season eight pages were printed for each issue. A few weeks ago we changed to the standard seven-column page.

This is "about how it happened." But, back of it all, is a story of good, earnest, hard work. And as the business grows week by week there is need for even more strenuous endeavors. That's what brings success; and it will almost certainly bring it in any field.

A bunch of copies of various issues of the *Daily Chronicle* goes to your address with this mail. Yours truly,

THOMAS CRAWFORD,
Managing Editor.

The story of the success and growth of the *Chronicle* is an interesting one, that we must all concede—but have any of us missed that didactic closing paragraph? "Back of it all," says Editor Crawford, "is a story of good, earnest, hard work." The same story that is back of every legitimate newspaper success. In exhibit (1) I show the upper half of the first page of the latest edition of this excellent young daily, which gives a clear idea of its general styles of makeup. If I mistake not, the advertisement composition is a shade or two better than that in the big edition last reviewed in this department. That which Editor Crawford has said relative to my late criticism of the ads of the *Chronicle* has not escaped me, but, since I have not preserved the edition reviewed

last February, I am unable to reconsider it. As I remember the advertisements in that edition, however, there was hyper-panelling in evidence. In view of Mr. Crawford's explanation offered along with his protest above, this was especially an unforgiveable fault, since that above all is not a style to adapt to rush composition. On March 1, inst., the *Chronicle* passed another milestone in its career of usefulness, being now in its twentieth volume, with a circulation of 1,500 copies daily. The editorial comment on this event was suit-

ably something of the nature of the story that Brother Crawford has related to us in the foreging letter. May the sun of prosperity continue to shine upon this worthy newspaper enterprise, and may its circulation be doubled again in the coming twenty months, as it was in those twenty months just past since the present management assumed control.

BROKEN BOW, Nebr., March 1, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—While Mr. Herbert was at the meeting of the Nebraska State Press Association, at Grand Island last week, I had quite a talk with him regarding you and your department and he kindly asked me to send you a copy of my paper for criticism. I am therefore sending you the last three numbers, and should you deem any of them worthy of mention, you may select whichever one you desire.

I have been a constant and much interested reader of your department in the NATIONAL PRINTER-JOURNALIST for a long time and I feel that you are doing the newspaper boys much good.

Very truly yours,

E. R. PURCELL.

Some people may object to this "talking behind one's back," but Mr. Herbert has my permission to keep right on talking about me behind my back wherever he goes, if his conversation tends to bring such new friends to this department. The Custer County *Chief,* which is the name of Brother Purcell's paper, is a neat six-column, all-home-printed quarto. It is truly a wide-awake modern publication, maintaining a clean front page, getting a liberal advertising patronage, and sparing nothing that makes a good weekly newspaper. Exhibit 2 illustrates how the *Chief* force endeavor—and succeed—in making their first page attractive. The title is doubtless out of the ordinary and fashioned after an antiquated style, possibly an obsolete style, and while I do not like it, it is nevertheless distinctive and suggestive of the great transformation that has taken place in the Broken Bow country within the past half-century. The local news service offered by this sheet is extraordinarily good, and all mechanical labors have evidently been performed by skilled hands. Heavy Gothics predominate in all of the display. Now I have never been the least bit backward in confessing my dislike for Gothic letters. I have never liked them because I have never considered myself enough of an artist to handle them successfully—and

few are the printrs I have met who were. However, having no alternative, I take it, the *Chief* ad-man digs into his Gothics, and once in a while, I must confess, his success is praiseworthy. (That's the trouble with these Gothic faces, though: The ordinary compositor is never sure; the proof may look all right, and it may not. His work lies in extremely dark material, and it's up to him to distribute the proper amount of white to tone down the result. And that's the rub.) Examples of this ad-man's highest success are to be seen in the several accompanying reproductions (Exhibits 3, 4, 5, 6). Aside from mention of the apparent too slight margin at the sides of the central subject matter, the first specimen may be passed without com-

ment; the second specimen's beauty lies in its abundance of white—enough to counteract the blackness of the type faces. The rules used above and below the central mass are too prominent, however. Six-point would have been better in type a size larger, with the period left off, and a little greater margin above the first line. The Security State Bank advertisement is a novel design. The setting of the word "Our" in a smaller face than that in the line following seems like an error to me, as this is one of the secrets of

success with Gothic, as with any other type, namely, getting along with the minimum of sizes in a single subject. The abnormal indention of the first line of the body matter in this specimen is a defect, too. I should have set it without any indention at all. Gothic, it must be remembered, in handling it, is simplicity it-

I am pleased to say, have been before me several times since I begun to write these criticisms seven years ago. I blieve it was an excellent paper the first time I saw it, and it has never been anything else. It has grown, of course, and improved in one way and another, and the same excellent specialty of giving the local news has never been allowed to lag or cease. When one looks over these great pages of the *Dispatch*, the first of which is just one grand expanse of straight reading matter, with the others filled with stuff that shows editorial skill and discretion, together with an overwhelming abundance of displayed advertising, if he has any imaginative powers at all, he cannot escape catching a few ideas, uppermost among which will be a feeling of admiration for the progressive people back there in Ohio who demand such a grand newspaper, and for the people who have the ability to meet and supply that demand, as the makers of the Mahoning *Dispatch* are so admirably doing. While the first page of this big paper is made up all right, its inner pages could doubtless be materially improved in that respect, since the arrangement of reading matter and ads in these is rather promiscuous; but otherwise there is little fault to find. In the main the advertisement composition is excellent, the compositor having the underscoring habit pretty bad, however. Two of the full-page specimens are being shown herewith as Exhibits 7 and 8, while in Exhibit 9 we have a striking argument in favor of appropriate illustration for advertising purposes, and brevity. This is surely the

"busy man's" ad. The picture tells the story, and the items are readily grasped. The name-plate in this

specimen is an unsightly one, being too large in the first place for an ad of this size, and naturally of an ungainly design. Typography is all right.

Clifton, Ill., Feb. 19, 1909.

O. Byron Copper, De Soto, Wis.

Dear Sir:—I have worked about two or three years in a small weekly office, and had never set an ad or a job until last fall, I gained a position on the Ashkum *Journal*, a small weekly, and worked about three months when the editor had me try setting ads. I am sending you a copy of the *Journal* and some of the ads which I clipped from the files while at work there. They are all of my setting and I wish you to criticise them, and if they are worth reproducing at all, to reproduce them in your magazine department. The N. P.-J. is a great help to a starter, I think, because he can note the difference between the good and proper ads and those which are poorly set.

Yours truly,
Robert V. Devenouges.

I take pleasure in reproducing, herewith, the best specimen in this budget from Brother Devenouges (Exhibit 10). Had the compositor employed the same style, face and size of type in the signature of this specimen, it would have come out a very creditable ad. It is a little weak, perhaps, especially in point of main

ASHKUM, ILLINOIS.

No. 10

display, but is clean and well whited out. There is too much space between the two lines of Roman at the top. Brother Devenouges unfortunately had a poor selection of type to work with, evidently, which is one reason in accounting for the low quality in the other specimens I am not showing. I am glad to learn that the National Printer-Journalist has proved helpful to this beginner in the trade, and trust that he may continue to profit by a perusal of its pages.

Under date of February 22, Editor B. B. Herbert wrote me from the Chicago office this letter which I quote in part for explanatory purposes. Along with the letter came a number of ads from the Boscobel *Dial-Enterprise:*

Dear Sir:—I enclose some specimens of ads sent in by Herbert W. Blashfield, of Boscobel, Wis. He is just out of the high school, and says that he has been a steady reader of the many useful and interesting hints and suggestions contained in the National Printer-Journalist, relating to advertising. With this help he has been writing and laying out the ads of the local dealers in his city. He wants these ads criticised that he may know whether he is on the right track. I am going to use his letter in the March issue. The samples came too late to forward you for criticism for that month. Do the best you can by the young man.

And later the following letter from Mr. Blashfield himself was forwarded me from the Chicago office:

Boscobel, Wis., February 24, 1909.

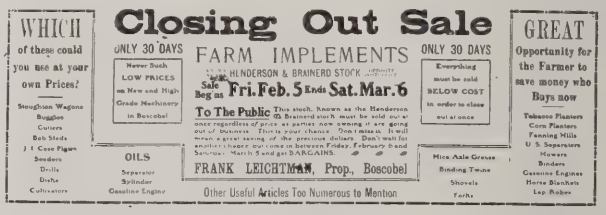
Mr. Copper, Chicago, Ill.

Dear Sir:—As the inclosed letter shows, I sent some ads to the National Printer-Journalist for criticism, some time ago. I inclose two others which I think are better than the first, and on which I would like your criticism. I know they are poorly done, but they are the result of only evening study from ad magazines, papers, and books. Am trying to build up the ads of our little city weekly, but having only just graduated from high school, my knowledge on such an undertaking is very limited.

Hoping I may be greatly benefited by your criticism, I remain,

Yours very truly,
Herbert W. Blashfield.

The unwonted delay in the review of Friend Blashfield's work has resulted, as I dare say he sees now, through his having addressed me at Chicago, instead



No. 11

of at De Soto, Wisconsin, which latter address is plainly given at the head of this department. I have four ads here from Mr. Blashfield, three of which for convenience sake I am reproducing as Exhibits 11, 12 and 13. Considering the first of the trio: I find the design or lay-out a peculiar one; somewhat original, though not to be highly commended because it makes the work too intricate, requiring many measures and necessitating much undesirable justification. The defect in the two outside panels is conspicuously the setting of the less important parts in the more prominent type. This very ad, though full of faulty detail, nevertheless shows fine constructive ability, some originality and a good idea of composition, for a young compositor. It was all right to have set the chief display line in the boldest and largest type, likewise to bring out the thing advertised strongly, as also the date of sale, but the display of "To the public," as sunk into the body, was unwarranted. This should have appeared in the same face as the rest of the body. In short, that is this specimen's great defect, the employment of too great a variety of type-faces, measures, panels, rules, borders, etc. The ad compositor should strive always for simplicity in his work, keeping himself down to as few faces, as few sizes of type, as few rules and as few ornaments, and measures and complications as possible. In the second specimen of the

trio the principal fault lies in the fact that the wrong idea has been given greatest prominence. It seems to me that "Iron Beds" was the principal thought in this ad. Instead of that, "A Sure Cure for Sleepless Nights" is the catch-line. This would surely interest

persons suffering from insomnia and seeking a panacea for their complaint, before it would attract anyone in the market for an iron bed. This is a point an ad-writer should never fail to bear in mind, to chose a catch-line that suggests the thing advertised. And likewise it is imperative knowledge for a good ad compositor, so that in case the writer has erred, the compositor can in a measure correct the blunder by displaying the proper line. Specimen 13 is probably the most technically correct of any of Brother Blashfield's trio, although this would have looked much better with a sharp, clean-cut border encircling it entirely. I hope this young compositor will continue to communicate with this department, and trust that he may find benefit in the new relation.

ILLINOIS EDITORS TO MEET AT OTTAWA

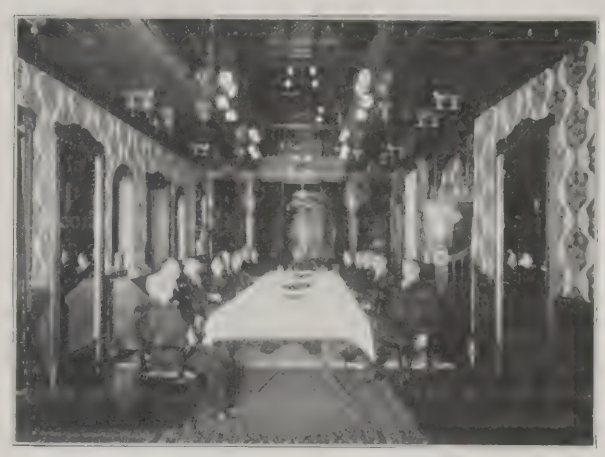
MARSEILLES, ILL., March 18, 1909.

Mr. B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill.

DEAR SIR:—The officers and two members of the Illinois Press Association met at Springfield to select a place and arrange date and program for this summer's meeting of the Association. On urgent invitation of three clubs, brother editors and business men, Ottawa, LaSalle county, was chosen as the place, June 16th, 17th and 18th the dates, and a program outlined. Included in the entertainment promised by the Ottawa people was a trip by boat on the Illinois river to Starved Rock, returning by interurban, and a visit, via interurban, to Marseilles. The rock referred to, with the canons, dells, etc., connected, forms one of the most romantically beautiful scenic attractions in the state. It is also famed for its early history and is now receiving the attention of the LaSalle County Historical Society and kindred organizations, all of which are planning together to make it the object of the state to acquire the site by purchase and transform it into a state park. The Illinois river which flows at its base is to be the future deep waterway channel, a part of the deep waterway route for the constructiion of which Illinois is to expend $20,000,000. Along with the excellent practical business features of the program, it is believed enough of value will be provided in the attractions to insure the largest attendance at the coming meeting of any yet noted. Full particulars will be sent to the editors of the state in due time by our state secretary, J. M. Page.

Ottawa is about eighty-five miles west of Chicago, on the Rock Island and Burlington railroads, and connections are made by interurban with it from Princeton to Seneca, also at Streator, with its seven centering lines, but a few miles south of Ottawa. At LaSalle, fifteen miles west, passengers on the Illinois Central have but a block to walk to take an interurban car to the meeting city. In all, facilities for getting to Ottawa are excellent.

LaSalle county is the home of thirty papers, most of whose editors are members of the LaSalle County Editorial Association which, with a few exceptions, has held two meetings a year since its organization in 1890. It is believed that this record stands alone in continued work in the state, outside of the state body. The officers are and have been for three years, Terry Simmons, president, *Marseilles Plaindealer;* William T. Bedford, secretary, LaSalle *Tribune;* E. B. Tabor, treasurer, Earlville *Leader*. A fair number of the members



LaSalle County Editors at Home of W. D. Boyce

of the county association are also members of the state association, and every one of the county editors will count it a special privilege to meet and greet the brethren from all over the state.

One of the gatherings of the county association was held in the palatial home at Ottawa of W. D. Boyce, the millionaire Chicago publisher, who served "the boys" a superb six course banquet. I am sending you by this mail a very fine flash light photo of the banquet hall and the guests ready to be served, the host being at the farther end and head of the great table. Each of the editors present was given one of the photos and all are being kept as a prized memento of an evening spent in rare pleasure.

I have been a member of the state association since joining it in 1890, have rarely missed a meeting in all that time, and am greatly pleased to know that now I can look forward with great pleasure to meeting and greeting the many brothers and sisters of the state press, whose acquaintance I have formed and whom I hold in high regard, when they take the side trip of seven miles from Ottawa to my home city of Marseilles; a city that has no superior, population considered, in Illinois, location, improvements, factories, business interests, churches, schools, residences and natural attractions coming in superior list.

Yours fraternally, TERRY SIMMONS

It was raining outside, and little interrogative Irma was in one of her worst, or at least most trying moods. Father, busily writing at his desk, had already reproved her several times for bothering him with useless questions.

"I say pa, what——"

"Ask your mother."

"Honest, pa, this isn't a silly one, this time."

"All right, this once. What is it?"

"Well, if the end of the world was to come, and the earth was destroyed while a man was up in an airship, where would he land when he came down?"—*Everybody.*

THE PRINTER OF TODAY AND THE MESSAGE OF ABRAHAM LINCOLN'S LIFE—A DESERVED BOUQUET FOR THE LADIES

BEN FRANKLIN CLUB, Chicago, is becoming a synonym for all that tends to fairness, living prices, and progress in the printing business. The members are wide-awake and in touch with all the current interests and the spirit of the times. They helped to celebrate the Lincoln Centennial week by a banquet and the *Ben Franklin Monthly* properly says that:

The grand finale of Lincoln week was fittingly consummated when five hundred and sixty Ben Franklinites of Chicago celebrated their fourth annual banquet at the Auditorium Hotel Saturday evening, February 13, 1909.

That the occasion was one of the most successful and entertaining events of the Club was due, not alone to the splendid program, but to the presence of the ladies, whose added charm and interest in the Club's work seemed to be an inspiration to each member to make the evening stand alone as an enjoyable and social affair.

The dinner, which was served at 6 :30, was truly "Auditorium" in every sense of the word, and was made more appetizing by the interspersing of songs written especially for the occasion.

First on the program was president, W. J. Hartman, who in a carefully prepared address, after bidding welcome to the guests, delved into the subject that is uppermost in the Club's principles, and incidentally made some interesting comparisons of the printer of the past and today as follows:

Mr. Toastmaster, Ladies and Gentlemen,

"This occasion is an unusual experience for me. I have talked in public at various times, but always before a gathering of men, and as I look upon the bright, smiling and beautiful faces of the ladies I feel an unusual pleasure, and consider this opportunity a special privilege. The presence of the ladies here tonight is only an example of the important part which woman has always played in the affairs of this great American nation. She it is, who has been the inspiration and incentive to man, who has spurred him on to the achievement of greater and better things. There is an old song which ends thus:

"'First came man and woman after,' and she has been after him ever since. Yes, she has been after him and many a man owes his success to the undying love, unselfish devotion, unbounded faith, self-denial and to the wise counsel of a good but persistent woman.

"How many of us today, who see and know of the vast amount of printing produced daily, ever stop to think that the introduction of printed books to the people was the real beginning of civilization and education as we know it today. There are many present here tonight, who can remember the time when reading matter, either good or bad was as scarce as roses in winter. That great man whose memory we have been honoring during the past week, was compelled to confine his early reading to the Bible, Aesops Fables and Pilgrims Progress, owing to his inability to obtain any other, and allow me to say right here that those three books laid the foundation upon which this man built a super-structure which in after years towered to the intellectual sky and will live as long as memory of man.

"This is an age of progress, but in no line has the advance been more rapid than in that of the printing art. The example of one of our great dailies, which put out an edition recently that the publishers claim would reach half way around the world if the sheets were laid end to end, is only an incident in the vast industry of printing. What would the business world do today without the aid of the printer, and the printing press?

"Printing as a trade or profession is considered by some as among the second-class occupations. This is undoubtedly true, if looked at from the financial standpoint, but what would our bankers, our merchants, our scientists, our inventors, our professors, and in fact every man, woman or child in every walk of life do if it were not for we poor printers? They would be about as powerless to accomplish much in any line as the most humble member of the tribe of Digger Indians.

"The impression left by the old time tramp printer with corn-cob pipe, slouchy hat, torn and tattered clothing, whose mode of travel was the box car or the trucks of passenger trains has clung to the printer of today, but conditions have changed. The old type is no more! But the public has not forgotten him and it is up to us to show that the printers of today are as a class, men of intelligence, honor and financial standing equal to any other profession or business, and the only way that we can show the world our worth, is to conduct our business on business principles. All our dealings must be above reproach and we must know what our product costs us and sell it at a profit, so that we can pay our help, our bills and have something left for our families. We owe it to our families to so conduct our business that when we are dead and gone we will leave them something to live on.

"We know the history of printers who have gone before us and left only a lot of old junk behind for their families, and we know why, they in their lifetime did not sell their product at a profit.

"Times today are different than they were years ago. Today business is done on a smaller margin of profit than ever before, and the *only men who can be successful are they who know what the cost of each job is, and this is one of the missions of the Ben Franklin Club, to educate the printers as to the cost of printing.* In this we have been more than successful, and when we will have taught all printers to do as our members are doing, we will have accomplished more than any other organization in our line and realized our ambition.

"I tell you ladies and gentlemen, a printer should be proud of the position he occupies in helping to civilize and enlighten the world. Give every nation good books to read and you will do more to preserve the peace of the world than all the battleships ever launched. As one factor in the printing industry the Ben Franklin Club has taken a high ideal. Its aim has been to dignify the printing business and at the same time help each man engaged in that business to feel that he is a factor in the business world and one that all other lines of business must lean on to aid in its success. I say, let every member of our Club, and every man engaged in the greatest of all industries in our great City, hold up his head with the knowledge that he is an important cog in the great wheel of industry, and with the rugged and sturdy honesty practiced by Abraham Lincoln as a beacon light to guide us, we can march on to the end and feel as Will Carlton, who says:

"'Thus it is with our noble profession,
And thus it will ever be still,
There are some who appreciate our labors,
And some who perhaps never will.
But in that great and glorious day,
When the trumpet shall loudly sound,
And they who have labored and rested,
Shall come from the quivering ground,
When they who have striven to teach and ennoble the race

Shall walk at the front of the column,
Each one in his God-given place,
As they march through the gates of that City,
With proud and victorious tread,
The Editor, The Printer and devil,
Will travel not far from the head.'"

Mr. Smith said, speaking to the theme, "The Message of Abraham Lincoln to Our Generation":

"I am not unmindful of the honor that you do me in inviting me to speak to you on this occasion. Your association, I hope, will have many meetings in the future as in the past, but I remind you today that you will never again hold a meeting commemorating the centennial birthday of the greatest of Americans—Abraham Lincoln.

"Lincoln came into our country's history in a crisis so peculiar that no man can possibly measure the influence of that life, and no man is able to say what might have been had we not had this man of master mind and mighty of heart to steer the ship of state in the stormiest waters of our country's history. It is impossible to measure the influence of his life. We may as well endeavor to go back into last summer and gather up the perfume of all its flowers, or the sweetness of the songs of all its birds, or the glory of the sunsets, and yet your presence today indicates that we are anxious to sing the praises of Lincoln, we are anxious to write his name on high, where it may forever stand to cast its majestic luster upon all the future history of our nation.

SEEKING A GREAT MAN'S SPIRIT.

"No man ever stands for a single hour in the presence of a great life and is able to have his own life so small again as it was before that contact, and so it is in the prayer of every heart today as by speech and memory and imagination we endeavor to introduce into this circle the spirit of this great hero, and great one in life, that our own lives may be so enriched and exalted, that our own vision may be so clarified that in all the future years of life we shall see all things more clearly, and judge all things more justly, and do all things more righteousy and faithfully and honestly because we have spent this hour in the presence of America's greatest power.

"In 1619, in England, Samuel Lincoln, forefather of Abraham, was born. In that same year on the rough coast of America a Dutch trading vessel sold to the inhabitants of that eastern coast twenty African slaves, and that Dutch trading vessel returned to Holland just in time to see the emigration of the Pilgrims in the old Mayflower. These three things were seemingly little related at that time, but we have lived to see that out of that slave trade came the most vexing and perplexing problem our country has ever had to grapple with—the rock upon which it wellnigh split—and out of that little immigrant vessel came much of the spirit of justness and righteousness that created an atmosphere in which slavery could not exist, and out of the loins of Samuel Lincoln was destined to come a man who would become an emancipator of a race and the savior of a nation.

WHAT IS HIS MESSAGE?

"The first question is, what was the secret of Lincoln's life? What is the key that unlocks his life and helps us to understand how it was that he achieved in the moral and intellectual, political and civil realms as he did? The other question is, what is the distinctive message of that life to our age and generation? I have studied for many years the life of this great man, and I have fully made up my own mind that all the achievements of Abraham Lincoln center in and root down into this great fundamental, elemental thing in his life and character, overmastering desire from youth, in every phase of life, to ascertain just what was the absolute and abstract right, and knowing that once, to do it with courage. We may say today that that is the ideal of all of us, and you know that there is a great realm of things that are wrong, absolutely, black and wrong, in the business world and in the moral world, and in the professional world, and everybody knows that they are wrong; and here is a great realm of things that are right and everybody knows that they are right, and just between the two is that great realm of what William Jennings Bryan would call the great 'twilight zone' of questionable things.

DELUSIONS OF THE TWILIGHT ZONE.

"In the business, moral and professional world there is this great twilight zone, and the difficulty of many men is that they are willing to steer their bark in the fog of the twilight zone instead of lifting up their heads into the great sunlight of the absolute and known right and justness of things. This great principle revealed itself in Mr. Lincoln's life in its various activities; it reveals itself in his life as a lawyer.

"This gentleman who sits by my side is a brother of mine, and he used to be a lawyer and I used to be a lawyer and we were partners, but we both quit practicing and went to preaching. (Laughter.) I say, the story of Mr. Lincoln's life reveals this thing in his life as a lawyer. He was not a great lawyer in that accepted sense in which we characterize men as being great lawyers by knowing every loophole and the like. He cared not so much for precedent, but he hung his all upon the justness of the case in hand, and so we are told that one day when his partner had been arguing for hours that a certain line of evidence ought not to be admitted, and had the judge about convinced, Mr. Lincoln settled the whole question by squaring around and saying, 'I reckon that ought to go in.' He reckoned that ought to go in because that keen, analytical mind that always sought out the truth, believed that this case could not be decided justly, no matter about the previous precedents, unless that line of evidence was weighed by those who had the case to decide.

IS IT TRUE?

"This principle reveals itself to my mind in his life as a politician and a statesman, as in that historical speech in the convention when he was nominated for the senate and said those prophetic words, 'a house divided against itself cannot stand.' When he presented it to his colleagues they told him that unless he drew the pencil through that first sentence he would stand no chance for election. But did he do it? No; he straightened his tall frame to its height and said, 'is it true?' and they said, 'yes.' And he said, 'then I will leave it there. I would rather be defeated and have the country talking about that thing if it is true than erase it and go to the United States senate.' It reveals itself in his life as a lawyer and in his political life and in his religious life as well. He had religious difficulties, it is true, because his judicial and just and truth-loving mind could not apprehend and conceive the justification of the tenets that were taught in his day; because there was no justice in it, and in order to ally himself with the church he must understand them as other people seemed to understand them.

HIS CREED.

"His clear, truth-loving mind could not understand the Bible just as it was interpreted in that time because the interpreters made all of its fiction stand out as history. He could not so see it; he could not grasp some of the things and therefore he stood without the pale of the church, but he said, 'whenever the church will write upon its altar this inscription, "thou shalt love the Lord thy God with all thy mind and with all thy soul and thy neighbor as thyself," that

church I will join and give to it all of my support and help.'

"What, then, is the message of this great heart, these silent lips, this great character that looks down over the years today upon this company of men and speaks to you and me? What is its message? There are, it seems to me, three things taught us, and I will name them in the inverse order of their importance. First, it is a message of integrity and honesty and justness and fairness.

AN AGE FOR THE LINCOLN MESSAGE.

"I realize that this is the greatest age commercially and industrially that the world has ever seen. There is nothing comparable with today in all the history of the world. The advancement and the progress of our own country in the commercial realm in the last few decades has been stupendous, but there is not a man here today but that knows that in some realms of all business life there is a kind of sharp practice, there is a kind of high finance that exists in certain quarters, that is a far journey from the message that his silent lips would speak to the business world today could they but open and tell their message. It is to you, to your high type of business men that Lincoln's message calls. It is for you to live his teachings in your own business world, and one was the great principle of a fair day's wage for a fair day's labor.

"The message of Abraham Lincoln not only was a message of integrity, truth and justice in the business world, but it was a message of democracy, of brotherhood, of charity and of humanity, each in the best and finest sense of that word. He is the great typical democrat in the history of our nation in the sense that he believed in the people and knew that some day the people would come into their own.

THE BUILDING OF SOULS.

"And, lastly, his message was one of dependency, of duty, of morality, of charity and of things that are abiding and never failing. He steered not by the temporary chart of expediency but by the great chart given into his hand by the hand of that great, supreme, personal Spirit whose law is truth, whose motive is love, whose essence is goodness and whose atmosphere is peace and good will to men. His character is most fittingly illustrated by the following bit of verse:

"'Souls are built as temples are—
Based on truth's eternal law,
Sure, steadfast, without flaw,
Through the sunshine, through the snows,
Up and on the temple goes,
Every fair thing finds a place,
Every hard thing lends a grace,
Every hand can make or mar,
For souls are built as temples are.'"

A $200 PRIZE FOR SOME ENTERPRISING PRINTER.

A large printing establishment is about to move into a new building, and its management desires to arrange the machinery and other equipment in the best possible manner with a view to economical operation. A pize of $200 will be paid for the best plan submitted for the purpose. The increased cost of equipment necessitated by high-priced machinery and the added expense of operation brought on by higher wages and shorter workdays make the matter of the economical operation of a plant one of very great concern to employing printers. This contest will therefore be of value not only to the firm which will make use of the best plan submitted, but to the trade at large. Full particulars giving the dimensions of the floor space, the list of machinery, etc., to be installed will be published in *The American Printer* for April. Its address is 25 City Hall Place, New York.

THE VALUE OF PRESS ASSOCIATIONS

President C. E. Bryan in his address before the Ohio editors, made many practical suggestions and among these scarcely any more important than the following:

Publishers do not devote sufficient attention to their state associations. You can nearly always distinguish, for their excellecy, those papers among your exchanges whose editors or publishers affiliate with their state organization. Newspaper association work broadens the individual. Left to himself and the monotony of his daily grind the editor is likely to become narrower and narrower in his estimation of the outside world and larger and larger in his own conceit. An acorn can't do much at growing in a flower pot, yet if the stunted tree could be given imagination it would likely look upon itself as the only real thing in the oak tree business. Let the editor attend a meeting of the state association and he will return home refreshed and invigorated from coming in touch with his fellow workers. He will carry away with him many new ideas, many fold the cost of his day's vacation.

In the old days, the State Press association meetings were looked forward to by the sociable—association—bibulously inclined as a gathering of kindred jolly spirits. A literary program was engaged in, mostly for pleasure, but the real benefits to be derived from press associations of today were almost unknown. Now the very ablest editors, publishers and managers give forth their experiences and tell of their successes and failures. Each member of the organization feels free to take part in the discussions of methods, material and management. He becomes interested in the laws governing a big share of his official patronage, and seeks to aid in preventing unjust legislation to his business. He gains knowledge of the trust methods which control the prices of paper and printing material and combines with his associates in an effort to influence legislation against such injustice. He registers his kick against the unjust rulings and threatened inquisitions of the postal department, and that kick combined with hundreds of others of the same kind becomes a mighty force that causes Uncle Sam's postal officials to stop and harken to its momentous import. Individually the editor can not accomplish these things, but collectively he can ask and it shall be given as he desires.

The Buckeye Press Association of Ohio is a power in the land. The combination, under the one banner, has strenthened its influence three-fold. Live, energetic publishers throughout the state are awake to its possibilities and have confidence in its virile influence in aiding the craft to obtain the greatest good to the greatest number.

As this is the day and age of cooperation; the times cannot be changed, yet the force of the movement for business centralization can be diverted into more beneficial channels. This is the work laid out for the press of the land and the future will decide how well or ill the press has taken care of this mission.

Smaller enterprises can well learn of the greater ones the economy of combined effort, and apply it to their own immediate fields. How often does the printer cut prices below a living figure to secure business from his near competitor? His competitor then retaliates, when opportunity offers, by repeating the same foolish deal; competition may be the life of trade yet such competition means death to prosperity, The better way is to arrange with his competitors for a scale of prices, then religiously adhere to it. You can't buy trust products at a discount. Every pound, every atom is disposed of at a fixed profit. The several printing offices in the average county-seat towns of Ohio can easily fix the prices of their products on the profit side of the ledger and keep them there.

THE JUNIOR LINOTYPE AND THE COUNTRY OFFICE

[Address delivered by E. Benj. Yale, Editor *Chronicle*, Waynesfield, O., before the Buckeye Press Association.]

The Junior Linotype and the country office are twin brothers even if the Junior has been but a recent addition and as you are well acquainted with the country office, I will try to put you "next" to the "Junior" member of the family.

Until last August Waynesfield was the best place in the country, because all the other places were in town, but since then a traction line has been built and we are living in town with the rest of the boys. Waynesfield is a village of less than six hundred inhabitants, and is just about as small a town as one would care to embark on the journalistic sea in Ohio. It is also the smallest town in which a Linotype machine has been sold. There are no peculiar conditions to make it different from the average country town, hence what is presented concerning the Junior Linotype may put confidence in some of you fellows from the larger towns who hesitate about installing a machine.

Before installing the Junior, a thorough investigation of all machines was made, and I convinced myself that one was better than the rest for the country office. The Junior involves the principal features and advantages of the Standard Linotype, in simplified form, metal matrices being composed in lines, with justifying wedges, and presented to a mold in which the slugs are cast from molten metal. The justification of the line, the casting, trimming and assembling of the slugs, and the distribution of the matrices, all take place automatically. They do not require any stoppage of the composition, or any attention of the operator. One line is cast and delivered while the operator is manipulating the keys to compose the next line. The Junior has two faces of type from one set of matrices and permits of instantaneous change from one to the other. It is a machine controlled by finger-keys, like a typewriter, of which there are sevenenty-eight. Slugs may be cast from six to ten points and from eight to thirteen ems long. The slugs cast are identical with those of the Standard and print just as well. I use a gasoline burner, and after getting it adjusted, it has been very satisfactory.

The speed of the machine is practically up to the operator. It is sold on a guarantee of being able to produce 3,000 ems per hour by an operator of a few months experience, but this is not the limit of the machine. It casts nearly six lines per minute and at that rate, if kept casting, would produce between eight and nine thousand ems per hour, but operators of that calibre do not remain in country offices.

My operator can now set very easily a machine galley, which is twenty inches long, in an hour and fifteen minutes, and has done so in fifty minutes. This was on solid eight point.

The Junior is not as complicated as many are led to believe, and I think my experience will settle that point. When the machine arrived the machinists were busy erecting other machines and as I was anxious to get it going, did not wait but erected it myself. I succeeded in getting the paper all set up before any machinist showed up, and I have not had a single line of hand composition on the news matter since.

The Junior is a practical and economical machine for the publisher who has work for it. It is generally the rule that the Junior is placed in the hands of a green operator, who, after a few days' instruction, is able to run the machine and there are a number of cases where even this instruction was not given. The company furnishes a book of instruction which describes all the working parts and the operation of the machine, so that one should not go wrong. It is a remarkable machine, for it is so nicely constructed that when anything goes wrong the machine stops, preventing breaks that would otherwise happen, and of course will not start until the trouble is removed. My machine has not caused any delay except once in the four months that I have been running it, and this was not the fault of the machine. The delay was only about an hour, so was not serious. The Junior has always consumed all the copy. There is one trouble every purchaser of a Junior is liable to have—it eats copy like a threshing machine. You take care of the Junior and it will take care of you.

This is the Buckeye Press Association, but nevertheless some of its members are from Missouri and have to be shown. The best testimonial I can give for the Junior is to show what the machine is doing for me. I purchased the six, eight and ten point faces. If I was to buy but two faces I would prefer the eight and ten point. Legal ads can be set in the eight point and will measure up as much as the six point and outside of that very few country offices will have use for the six point, and some of us could not live on mush if we depended on the legals. The ten point can be used on ads and job work and is a good investment. I have one advertiser that I could not handle if it was not for the Junior. I have produced everything in the way of straight composition that the country office has to contend with. I have set up grade cards and other blanks and saved a great deal of time. A short time ago I had a rush order for 12,000 tickets. The job was set on the Junior, making twelve slugs from each line and was printed with 1,000 impressions. Last week I set the body part of a large horse bill on the machine. I have samples of a few jobs and copies of the *Chronicle* to show what the Junior is doing for me and that is the all-important thing—what will it do.

It is true that some of the first machines put out were made to set as wide as twenty-one ems, but experience has proved that it was not safe to set a wider measure than fifteen ems, so the machines are now built for thirteen ems and under. However, an operator soon learns to butt slugs together and any length line can be set. A man, two girls and a boy were employed before the Junior was installed and now my operator and one girl do more work than the others did.

The Junior enables us to set more type and in a shorter time than was possible with hand composition. It produces a bright, new face for each issue and the matter in non-piable form which reduces the time for makeup about fifty per cent. We never run out of sorts and can keep matter standing at only the cost of the metal. A very valuable feature is the two-letter attachment which allows the operator to set either Roman or head letter and the head letter is good for ads and in job work.

A QUEENSLAND SUBSCRIBER AWAITS THE ARRIVAL OF THE N. P.-J. WITH PLEASURE.

Margaret St., Toowoomba, Queensland,
N. E. Australia, February 11, 1909.

Editor National Printer-Journalist, Chicago.

Dear Sir:—If not asking too much will you, please, send out to the address written on the margin of this letter, a copy of the Postal Regulations referred to in the excellent address of Mr. Henry Branson Varner, and reprinted in your issue of September, 1908. The part I particularly refer to is on page 595, and the sentence starts thus: "The delinquent subscriber * * *" I may state that we have been taking your paper for some years, and look forward with pleasure to its arrival by the mail from America.

Wishing you every success and thanking you in anticipation.

Yous sincerely,

H. L. Groom.

Entered at the Chicago Post-office as Second-class Matter

BENJAMIN B. HERBERT . . EDITOR AND PUBLISHER

Official Paper of the National Editorial Association

PUBLISHED MONTHLY BY THE
OFFICE OF PUBLICATION:
1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

SUBSCRIPTION RATES—In the United States, Canada and Mexico, $2.00 per year, in advance.

Orders for subscriptions will be received by all dealers in printing material in the United States and Canada.

FOREIGN SUBSCRIPTIONS—To countries within the Postal Union 10s. 6d.

FOREIGN SUBSCRIPTION AGENTS—International News Company, Breams Building, Chancery Lane, London, E. C.; F. O. Strong, 111 Fleet Street, London, E. C.; G. G. Turri & Co., Melbourne, Australia; The India Printers' Agency, 249 Mint Street, Madras, India; Successful Advertising Company, Bangalore, India; John Dickinson & Co., Ltd., Cape Town, South Africa.

The NATIONAL PRINTER-JOURNALIST is unequaled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the NATIONAL PRINTER-JOURNALIST COMPANY by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, APRIL, 1909

A newspaper needs friends and has unequalled opportunities for winning them, if it fails therein, it is because of lack of friendliness, kindliness and a generous spirit and a true desire for acceptable, honest serviceableness.

* * *

Discipline has been said to be the true preparation for greatness and for all accomplishment. There are no other callings that require, or that afford, better opportunities, or schools, for discipline, than those of printing and newspaper-making. The unlimited amount of detail, the necessity for exactness and accuracy in every step that leads to the production of printed matter or newspapers, to be seen read and criticised by all men, afford, and are constant spurs to secure discipline. Every word, punctuation mark, line and sentence, every statement, enunciation, opinion or theory remains in black and white to bear evidence of every error, every lack of care, knowledge, application, accuracy or honest purpose and appeal to every possible motive for the disciplined mind and the trained hand and eye.

* * *

We highly appreciate an invitation from President H. F. Childers to attend the annual convention of the Missouri Press Association to be held at Fulton, May 12 to 14. The conventions of Missouri Editors always have a start and go, an enthusiasm, a high purpose, an excellent grade of papers and practical discussions, a life and sociality that make them worth while in an educative way and in the pleasures to be enjoyed and the friendships to be formed or renewed. Missourians may like to be shown, but they like equally well to show how their affairs as publishers are carried on to a success, and ever accompany this showing with hospitality and the hand of friendship. Why should we not all be earnest in our lives and kindly and helpful to those with whom we meet and tarry for an hour, a day, a year or a lifetime, in traveling across the narrow continent of time? We will never pass this way again and the unexplored eternity lies before us, of which we certainly know little and still less of the opportunities it may or may not afford. We, assuredly, can take nothing with us on the long voyage, either of material wealth, station, position, dress or show. We are all equal when we take passage from time and earthly existence, through the grave, and our possessions must be confined to what may remain to us of memory, spiritual and mental growth, power and perfection. We have an idea that the memories of good and helpful deeds, nobly and lovingly done, will be much more precious than all the riches, pelf, power or position that we may have possessed or of the advantages we may have taken or gained over our fellow travelers in the uncertain journey, often beset with so many difficulties, and only promising in the opportunities of helping other travelers and contributing to the common good, betterment and upbuilding in those things that are ennobling and enduring.

* * *

There is nothing wiser, truer or more generally recognized among the most thrifty and successful, than that every one should take, read and study the papers devoted to his calling. The most progressive men expend from ten dollars to a hundred a year, and some even more, in the purchase of journals and books, in order to keep up with the rapid advances, improvements and new knowledge, and read them, too. The investment is the most profitable that can be made. It is very short-sighted, unprofitable and even silly for a man, in this age, to hesitate about expenditures for securing the means of advancing his knowledge as to all that pertains to his daily avocation in which all his useful and productive years are to be passed. Knowledge increases productive power and brings higher standing and new joys in work. It is up to the publishers to gather and give the best that is in reach, and there is so much to gather that it is sometimes difficult to decide just what is best to give or to omit. This month we are printing much as to the sayings and doings of practical printers and newspaper men in their conventions. It may be thought, by some, that we have gone too much into details but, then, in this way only can the full force of the personality of the workers be secured, and we have plenty of time and

space for didactic teaching, during the rest of the year, besides, it helps to know how organizations of earnest workers conduct their meetings and what they say therein. There is the power of example and also the influence of that somewhat mysterious force, called inspiration. Do not neglect these accounts. They will give you the methods, the thoughts and the motives of others from which you will get great and direct benefit, and be better prepared to propose, chose or elaborate; to discuss, understand, and also to make more pratcical the sessions of your own organizations and the topics to be considered thereat. Variety is needed, and men are much more influenced and more effectively and usefully informed through this personal touch, as we have indicated, with practical, successful men and what they are doing and saying, than otherwise. We know by observation, as well as by hundreds of assurances, that thousands of printers and newspaper-makers have been greatly benefited by what we have gathered from the great fields of endeavor, throughout the world, and from discussions, in all the States and all the city, county, state and national organizations of printers, editors, publishers, ad-men and circulation managers. We believe we have rendered a hundred-fold to those who have honestly, intelligently and persistently sought to understand and apply the information laid before them in these pages, from month to month, during the past twenty-one years and more.

* * *

Belleville, Kansas, was the place of meeting of the Northwest Kansas Conference of the Methodist Episcopal Church, on March 24th to 29th, and the *Telescope* of that city featured the coming event, that was to bring three hundred prominent visitors to the city, in its issue of March 19th, on the first and second pages of the paper, under the heading and sub-headings: "Among the Methodist Preachers;" "Bits of Church History—Items of Interest to All Methodists—Portraits and Sketches of Some who will be in Attendance." These headings indicate how thoroughly the approaching conference was handled. The portraits were shown in excellent halftones and illustration was given of the church building, where the sessions were to be held.

Besides the "Bits of Church History," pleasingly written and entertaining as to matter, the biographical sketches were made interesting and the full programs of the sessions were given in a neatly displayed double-column and special mentions were given of different lectures, addresses and numbers that were to be presented, including mention of the Wesleyan Quartette of Salina, Kansas, a group portrait of the members of which was given.

The paper was well printed on pure white stock and with the illustrations, made a most handsome number. All who were to visit the city must have been most favorably impressed and their good will secured in advance and a deep and broader interest must have been awakened in the conference as well as a cordial spirit of good will and a better understanding between the members and the people, have been established from the beginning.

This is good advertising. One of the speakers at the St. Joseph, Mo., banquet to the Advertisers' Association said of "the best advertising," "it may be the spirit of a report or it may be the expression in one form or another of just such hospitality and kindness as that being shown today in St. Joseph toward the representatives of her sister cities who have come here upon your kind invitation." The local press has many an opportunity of extending a city's good name and creating good will in the hearts of visitors by extending attentions and courtecies to those who come on their own affairs. It pays the press to obey the injunction of the Apostle Paul in his Epistle to the Hebrews, "Be not forgetful, to entertain strangers; for thereby some have entertained angels unawares"—angels of good will, friendship, protection and promotion of the city's good name, and evangels heralding abroad all that tells of the city's enterprises, worthy institutions, attractions, hospitality, intelligence and generosity. The press too frequently neglects the paying of proper attention to conventions held in their cities, disregarding them as something apart, instead of making them, for the time being, a part of the local interests and events from which the people are to gather good, and in which everyone should manifest the deepest interest. The result of such neglect is that instead of the visitors, the members of such conventions, going away with kindly feelings toward the press and the place, they go away with opposite impressions, that the press and the citizens are narrow, provincial, selfish, looking only after their own profit and caring only for what can be gotten out of those who should be treated as a honored and welcome guests. Even conventions of newspaper men are occasionally, though not frequently, met by this cold, indifferent treatment by the members of the local press, but always to the detriment of the best interests of the city visited and the loss of much of the valuable publicity coming from hearts touched and won by thoughtful consideration.

* * *

There is no career that calls for a more strenuous life, nor that affords greater opportunities of wide service to the public and of special, direct helpfulness to large numbers of employes than that of the management of a great modern newspaper such as is *Grit* of Williamsport, Pa., of which Dietrick Lamade has been general manager for twenty-five years. He has done well and been found worthy of honor. He has won the friendship and love of all connected with the publication and these took advantage of the rounding out of the quarter of a century of service to do him honor, and we are going to tell the instructive story in the May issue of this journal.

* * *

No employing printer in the United States, and no newspaper-maker, either, should fail to read the article appearing in this issue of the NATIONAL PRINTER-JOURNALIST by E. J. Ottaway, on "What is What About the Print Shop." It matters not how good a system an office may have, there are suggestions in the well-considered statements, based on experience, contained therein, that will prove of benefit. Commensurate profit can be secured in printing and newspaper making if only one understands and practices those methods necessary to economical and adequate production and the realizing the legitimate returns. The waste of time, the listlessness, the "loafing," the lack of system and thoroughness, efficiency and application are the causes of failure to reach the highest success, ten times, to one coming from lack of business or obtainable business. Men work hard and throw away their opportunities at the same time just because they do not work with system and purpose, redeeming the time and gathering up the fragments or loose ends, that nothing may be lost or go to waste.

The lack of system, loitering and mixing distracting affairs, gossip, sports, politics, sociability, trivialities, in business hours, are the fruitful sources of imperfect and low production. But read the article and then do some careful thinking with regard to your own business and methods.

MEN who do not think, who must have supervision and be told how to do each piece of work assigned to them, who lack in mind and feeling, have been wrongly taught to claim that they should have the same remuneration and consideration as the man who has mind and interest or enthusiasm to originate and the skill to execute such work as will be acceptable to customers or to purchasers. Such an one takes no account of the cost to the business of the overman. There have been great strides made in industrial education and the great thing to be kept to the front is that the mind and heart, hand and eye should all be equally trained. The mind should be taught to know and to think, the soul to feel, the hand to perform and the eye to take in the proper proportions, to see errors and inaccuracies. Aided by the heart to feel, and the imagination and reason to discern, the results should be known in advance of the performance. One of the great items of cost in the printing as well as in the newspaper business comes from the necessity of having work done over—in making changes, alterations and corrections. A. F. Sheldon has given and quoted some excellent thoughts, along these lines, under the topic of, "The Problem of Distribution," or in another word, salesmanship, for all that's done in the world is with a view of this "Distribution," or salesmanship—the meeting or creating of a demand; even the minister preaches with the view of meeting a demand with his sermons, and if he does not meet this demand, he is soon without hearers. Certainly the printer and the newspaper maker should recognize this fact and feel that he is neither a good editor, reporter or printer unless he can produce that which meets the demand in his line of work, and should not expect the remuneration or success of the competent, expert, creative workman.

But to quote from Sheldon's article, who, himself, quotes from Arthur Brisbane, the greatest editorial writer of the day, as follows:

"The greatest task that any man could undertake is the presentation, to his fellow men, of knowledge, simply, attractively, and put before the millions of readers at frequent intervals, in relatively small installments, always with a beginning and an end satisfying to the mind."

The call then goes out for educated men—men with true education.

Men who are truly educated are, indeed, "speakers of words and doers of deeds."

They have a message and know how and where to deliver it. (A message can be conveyed in an artistic piece of printing as well as in a fine painting.—Ed.)

As I have often said before, the value of a man depends upon his efficiency, that is, the amount of service he can render without supervision. The man who does things without supervision is the man who does the right thing at the right time in the right way. * * * *

I plead for the whole man. I plead for men and women who are developed mentally, morally and physically. I plead for the triune man—the man whose body, mind and soul vibrates in harmony with that Great Power which causes the sun to shine, the rain to fall, the grass to grow, the birds to sing—that great Cause whose identity we know not and perhaps never will know.

The world is waking up to the necessity for education of this kind. A time there was when intellectual training was all the schools attempted to supply. Germany is developing with astonishing rapidity.

"This great development of Germany has never come, because sordid interests gathered together and concluded that Germany ought to export more than she imported, or that Germany ought to be more rich in money than she had been in the past, or that Germany ought to take what we continually hear about—her place among the nations of the earth." I quote this from a speech made by Dr. Frank Gunsaulus, at a meeting of the Ways and Means Committee of the Chicago Association of Commerce. He continued:

"The education of a man from his ears up is the education simply of, at least, or at most, one-third of the man. The old formula, not as old as it ought to be in our own adoption, but so old as to become a commonplace, the one formula of head and heart and hand is a formula to which they have returned in Germany, and a return to that formula has given Germany the man who is behind the box that you see containing the goods marked 'made in Germany.'

"The sinmple fact is that one-third of a man can never become the entire American. You can never educate the part of a human being from his ears up so completely, so insistently that he will in that way compensate for the loss of the man's hands and the loss of the man's heart. As a matter of fact, there never has been any progress in any single line of productiveness which has not been a progress of heart and hand and head all together. * * * *

"When a man thinks with his head what he feels with his heart he really feels it. You and I know perfectly well that when you set a boy to work to do something and his heart refuses to furnish that head with rich warm blood of living enthusiasm he cannot do that thing well. This is the fundamental thing in the marvelous revivification of Germany. Somehow the heart has got into the head, rich streams of red blood go through the brain, and the German works with his heart.

"Is the heart right? That is the first thing in religion, and that is the first requirement in work. If you do not feel what you think, you do not think it very long, and if you do not feel what you think you do not think it very strongly, and an education that fails to ally these things fails to educate.

"Head education has failed because we have neglected the heart, we have neglected enthusiasm, love, ardor, sympathy, and all that is great and glorious. You cannot get good head education without hand education. You try to make a thing you dream and you will see whether the dream is a good dream. Your ideal will go to pieces just as surely as you refuse to make your ideal real, and the realizing of ideals is the fundamental thing in our education and it is the fundamental thing in all civilization."

Training has been wrong in many ways, and the deficiency must be made up in many cases by self-cul-

ture. We have a class of educators who have looked only to the training of the mind; another who have thought only of the heart, the sentiments, the religious emotions, and a third who have thought only of teaching the youth how to work with their hands and to commence the work of bread-winners as soon as nature gave the hands strength. Others have been left without any training only to exist in idleness and follow the leadings of the appetites and passions, to seek what are called pleasures, without any other aim or object in life. We have endeavored to remedy the resulting irregularities in society by labor organizations and laws that sought to put all on a level and to provide for curbing or caring for the ciriminals, the helpless, and the insane, that have been produced by these methods of one-third or unequal development, through reformatories, penal schools, jails, prisons, sanitariums, and insane asylums. The fact has been that until within twenty years, many boys and girls were deprived of any industrial education, any opportunity of even physical development, while being instructed intellectually and morally—deprived of the privilege of learning a productive, creative trade, without having first committed some offense against society or morality, and then being sent to a reformatory, where the state or society has provided, for its own preservation, the natural and necessary training of the mind, the hand, the eye and the heart, at the same time, as a measure of making good those whom a false system had already made bad.

* * *

"Prosperity Edition" is the name that the Hannibal, Mo., *Courier-Post* gives to its model business, building and manufacturing issue of February 27th. We, twelve years ago, passed three days in Hannibal attending the annual convention of the Missouri Press Association, and found it a very satisfactory city, in every way, but Hannibal has grown since then, and so has the *Courier-Post,* that justly puts on Metropolitan airs. This edition was the largest in the history of the paper and contained forty well-printed and illustrated pages, of seven columns, showing the growth and business of a city that never stopped a factory, but kept right on growing during the year of business depression. It is remarkable how much of information with regard to the city is crowded into the two hundred and eighty columns. While half of the space is taken up with advertisements of Hannibal's merchants, bankers, manufacturers, real estate dealers and others, these all tell of the city's prosperity, resources and growth. Such a paper is of great influence in a city's upbuilding aside from the entertainment and interest afforded by its contents or rather by reason of the enlightening, encouraging facts contained therein. There is much that is of historic value and the number should be preserved on that account.

Hannibal was the home of Mark Twain, whose fame is one of the glories of the city, and hence space is given to stories of his early life. The following with regard to the edition, from the paper itself, will be interesting, educative and helpful to newspaper-makers, as showing the points particularly covered and suggesting how a like showing can be made:

What has been attempted in this edition has been to summarize in a sketchy and incomplete way Hannibal's record for the past year and show to some extent the why and the wherefore. As the edition is one of which the *Courier-Post* is proud; so is the chronicled record, one in which every reader may take pardonable pride.

The opening article is devoted to a consideration of the city's commercial life: a review of the year in the various factories and industrial centers. For a year, when the panic was abroad in the land, the record is a truly remarkable one. Not a factory stopped work.

On an inside page of this section will be found a page devoted to the consideration of a subject closely akin to factories: Hanibal's railroads and transportation facilities, on which the factories are so dependent. The annual editions of a few years hence will have to contain an additional article on this city as an interurban center, from all present prospects. The railroads are an important factor in the city's welfare—the city which is the gateway to Missouri and admirably located for a great railway center.

Along with the commercial progress, as in any community, has gone social and cultural progress and, with a view of giving some attention to this, a few of the chief social events of the year are reviewed. In several respects the year has been an unusually brilliant one socially. The little folks will also find a page to their liking in this section, where they may find the names of a number of their friends entering early in public literary effort, and it is hoped will eventually attempt to put their own names there. The Junior department is constantly growing in popularity.

Since no annual edition could be called complete that did not contain some reference to Mark Twain, the city's most famous son, a number of typical incidents in the life of the humorist have been collected, one from the original Hannibal source. Interest in Mark Twain is universal and no where more intense than in Hannibal.

Since the *Courier-Post* is daily entering into thousands of homes outside of Hannibal, the local correspondents in the neighboring territory were asked to contribute brief summariess of the year in their own towns and, while a few important write-ups are missing, the big majority are to be found in print and will prove of interest wherever the paper is read, as well as in those particular localities.

One of the things, worthy of note for the benefit of other cities, is the successfully owned and operated municipal electric power and lighting plant, so conducted by high-minded, honest men, who are proud to do something for the common good, that it has proved a great benefit to the city and its industries, and to all the people.

Two years' work in the College of Arts and Sciences of the University of Missouri or its equivalent will be required for admission to the Department of Journalism beginning with the session of 1911-12. The name of the department will be changed to the School of Journalism, if the Board of Curators of the University approves the recommendation of the Journalism faculty. This will place this new department of the University abreast of Education and Engineering, the other professional departments requiring two years of college work for entrance.—*University Missourian.*

A METROPOLITAN ISSUE OF THE WINONA REPUBLICAN-HERALD.

IN a forty-six page issue, on March 20th, the Winona, Minn., *Republican-Herald* did high honor to the publication and its whole editorial, reportorial, business and mechanical forces and added to the fame of the handsome, enterprising city, that happily chose the musical name of the beautiful, legendary Indian maiden, who dared all for love. Winona has long been famed for the intelligence and enterprise of her business men, and as a home of learning and refinement. Besides its excellent public and high schools, it has been for nearly fifty years, the home of one of the best State training, or normal, schools for teachers, in all the great West. This school, with its faculty and teacher pupils, has had no small influence on the character of the city and its institutions. This issue might well be named, "A Spring Fashion Number," as there were three sections of ten pages each of a fashion supplement, leaving sixteen pages covering complete news features. The fashion supplement was an illustration of newspaper co-operation, as the same supplement plates were used by the Cleveland, O., *Daily Leader,* also a paper of the first class, but in a much larger city and this issue of the *Republican-Herald* places it in the ranks of metropolitan newspapers and further advances its reputation as among the top-notchers in the newspaper field in cities up to as high as one hundred thousand population. Winona has reason to be proud of its great daily, and the business men have wisely shown their appreciation by most liberal advertising.

The fashion supplement contains local advertisements and home reading matter as well as the articles and illustrations devoted to the fashions. Another big issue is announced for April 24th, as the "Nurses' Home Edition," by the Hospital Trustees, who are to have entire management, and have named J. R. McConnon as business manager and W. J. Whipple as editor for the issue. W. J. Whipple was the editor and publisher of a Winona weekly paper in 1873, when we first entered the newspaper field and had been for many years. We remember that he roasted us for admitting an ex-soldier of color, as a student in the Rochester, Minn., Seminary in 1866. He was a splendid man and we never held any grudge against him, but we only wonder as to whether this is the same editor or a worthy son. This idea of the "Nurses' Home Edition" takes our fancy as possibly containing suggestions of value to the publishers of other home papers for special issues along somewhat similar lines for the benefit of worthy, local benevolences. The origin of the idea and the outlines of the plan are given as follows:

It was a short time ago when a group of gentlemen were together in this city, among whom were D. B. Pritchard and Scott Laird, and at which time the doctor introduced a subject ever nearest to his heart, to-wit: The Winona Hospital, saying it was already endowed to an extent nearly sufficient for its maintenence, but that he hoped some plan might be inaugurated whereby a fund might be created to build a Nurses' Home adjacent to the hospital building. Ten thousand dollars would be sufficient for that purpose. The manner of accommodating the nurses now is both inconvenient and unprofitable.

Scott Laird, the business manager of the *Republican-Herald,* immediately responded by volunteering to donate the entire revenue of all the advertisemnts and subscriptions which could be obtained for the *Republican-Herald* for one day's publication. The doctor said he would confer with the trustees of the hospital and report the proposition made.

The trustees of the hospital thankfully received the generous proposition offered by Mr. Laird. This is the origin of the enterprise set in motion for the issuance of a special edition of the *Republican-Herald* on Saturday, April 24, 1909.

A public-spirited citizen of Winona, who requests that his name be withheld from publicaton, has offered to double the receipts which are secured by the day's publication, whatever may be the amount.

The mechanical labor, the paper, the mailing, office work, in fact everything required to issue the mammoth publication., excepting the work for soliciting advertisements and subscriptions, the editorial and reportorial services, which is a gratuitous contribution—is the magnificent donation of Scott Laird, the business manager of the paper.

Undoubtedly the contemplated newspaper edition will be the largest ever issued in this city. Some fifty pages of advertisements and reading matter will characterize it.

Interesting personalities of former residents of Winona will appear, to whom will be sent a copy, as to the principal medicine and drug journals in the United States, besides to newspapers everywhere, and these papers will mention the unique character of the issue, and also its charitable object. Such an edition will not only largely advertise the business men of Winona, who avail themselves of this opportunity, but it will be a splendid advertisement of the city itself.

ENJOYS THE NATIONAL PRINTER-JOURNALIST. AN EXTENSIVE WRITE-UP OF THE CANADIAN EXCURSION.

JACKSON, MICH., March 24, 1909.

BROTHER HERBERT:—

Enclosed I hand you express money order for $2 to renew my PRINTER-JOURNALIST subscription. I'm much interested in everything pertaining to journalism, and I thorughly enjoy perusal of the JOURNALIST. Was a member of the newspaper excursion through Western Canada last summer, and I wrote nine travel letters upon our sojourn in Minnesota and the Canadian trip, from two to five columns each, which were published. I have the letters mounted in a small scrapbook, which I will loan you, if you care to peruse them. I covered some features not touched by anybody else in the party, so far as I saw reports of the trip; and I think I saw nearly all of them. You might find in them something of sufficient interest to pay for the time 'twould take.

Let me know if you would like the book, and I will forward it by mail. Yours fraternally,

E. O. ROSE.

EDITORIAL TRIP TO ALASKA

Will A. Steel, of Seattle, who is looking after the arrangements for the Alaska trip, to be taken by the members of the National Editorial Association, writes that he has just succeeded in having the Alaska Steamship Company agree to put their largest and most luxuriously appointed passenger steamer on the run for the editorial party. This steamer is the "Northwestern," 336 feet in length, and will leave Seattle on Saturday, July 24th, immediately after the adjournment of the annual convention.

About 20 days will be occupied in covering a magnificent tour of Southeastern and Southwestern Alaska, and will inaugurate a new excursion route. Mr. Steel has made this trip several times and states that he has every confidence that all members of the convention who avail themselves of this splendid excursion will afterwards declare that it was the most enjoyable and instructive trip that they had ever taken.

The route from Seattle along the coast of British Columbia and Alaska amongst the thousands of islands that lie along the coast of the Strait of Fuca, is through Active Pass into the Gulf of Georgia and thence northward for nearly 500 miles through British Columbia waters and across the International Boundary in the Dixon Entrance and along Revillagigedo Channel and Tongass Narrows to Ketchikan, subport of entry, and the first port in Alaska, 662 miles north of Seattle. After the stop at Kechikan, the vessel returns southward for a few miles along Tongass Narrows and Nichols Passage to Metlakahtla, the most progressive Indian town in the world, located on the West shore of Annette Island. From Metlakahtla the trip continues northward to Douglas, Treadwell, and Juneau, 900 miles north of Seattle.

Thus far the trip has been through the "inside passage"; but after a stop at the mining towns of Treadwell and Juneau, the steamer will turn off to the westward, passing out through Icy Strait and Cross Sound into the open ocean. It is about thirty hours run across to Cape Hinchinbrook. The ocean trip will be a novelty and a great attraction to many of the party, and the scenery to the westward is worth crossing a sea to see. The coast line to the north, while the ship is crossing from Cross Sound to Prince William Sound, is composed of a most magnificent, rugged chain of mountains, including Mt. St. Elias and Mount Wrangel (the latter, a smoking volcano), inlaid with numberless glaciers, including the great Malaspina Glacier, one of the largest, if not the largest in the world.

An idea of the grandeur of the scenery of Prince Willam Sound, can be gained by this comparison. The "inside passage" to southeastern Alaska is along and through the edge of a mountain chain. Prince William Sound and its various and numerous channels and bays cut right into the heart of a range of high mountains. Valdez is built at the very foot of an immense glacier. At Seward, Mt. Wrangel is but a few miles distant. This point is the terminus of the Alaska Central Railway. A little farther to the westward is Port Graham on Cook Inlet, the transfer point between ocean steamers operating from Seattle and smaller steamers operating on Cook Inlet.

In addition to the Steamer voyage, the Editors will be given a delightful trip over an interior Alaska Railroad that is being constructed at a cost of many millions of dollars. Cordova, a thriving new town at the mouth of the Copper River, is the terminus of the Copper River & Northwestern Railroad, which has been built up the Copper River 56 miles and is to be extended an additional 150 miles this year. The railroad passes directly in front of two immense glaciers, the Miles and Childs Glaciers, and through Abercrombie Canyon.

EDITOR NIBLACK MARRIED

We received the folowing highly appreciated invitation in neat, engraved form, that will interest members of the National Editorial Association: "The officials of the State Administration request the honor of your presence at the reception in honor of the marriage of the daughter of Governor and Mrs. Charles N. Haskell, Frances Lillian, to Mr. Leslie Gordon Niblack, on the evening of Wednesday, the thirty-first of March, Nineteen Hundred and Nine, at eight-thirty o'clock, State House, Guthrie." Not every editor can marry the daughter of a Governor, and have a wedding reception tendered by all the officials of a State Administration, but no one will begrudge Mr. Niblack his good fortune. He is a hustler among newspaper men of the most strenuous sort, even in the hustling West. He has won his spurs and his laurels by exemplary enterprise, push and untiring industry.

He was elected a Vice-President of the National Editorial Association at the noted and ever-to-be-remembered convention at Guthrie. He is editor and publisher of the Oklahoma *Leader*.

We extend hearty congratulations, and regret the inability to accept the highly-prized invitation. Very happy and enduring are the recollections of the pleasant week passed in Guthrie in the winter of 1905, and the association with members of the press and of the Territorial Legislature, then in session, and with the officials of the administration and the visit, with the legislators, territorial officials, leading educators, clergymen and citizens, to King Fisher, and the participation in the splendid exercises and banquet in celebration of the raising of the first hundred thousand dollars of the endowment fund of King Fisher College. There is a heartiness and open-handededness, and earnestness, and "start and ago," as we have said elsewhere about the attendants at Missouri Editorial conventions, that make one long to return and enjoy again the happy, enlivening experiences. It was then a Republican Territorial Administration, that was in control but, Lord bless the American spirit, the people are just the same now, and partisan politics don't count, only to get one set of men in and the other out. We should have enjoyed these "officials of the State Administration," just as thorughly and found them filled with the same patriotism, Americanism, pride in and high hopes for the splendid new Commonwealth and all the institutions and industries thereof, as were the officials of the Administration of 1905.

Juergens Bros. Co., Engravers and Designers, is one of the oldest and largest and most favorably known engraving establishment in Chicago, and, like other judicious advertisers in the N. P.-J., report a large increase in business, the growth having been so great, in this instance, as to require moving into a more commodious building, as announced in another item in this issue. Two entire floors have been leased at 167 Adams St., for ten years, and will be occupied May 1st. More floor space has been taken from time to time , in the present location, but the place has been outgrown and in order to accommodate the increasing business and better to serve customers, the move was made necessary that would permit of still further expansion. Growth in this age of close competition is the very best proof of high merit and satisfying efficiency.

A MODERN MACHINE SHOP

VISITING a modern machine shop, is in itself a liberal education. This was our feeling, at least, after being conducted through the departments of the extensive manufacturing establishment of the Latham Machinery Co., 195-201 S. Canal St., Chicago, through the courtesy of its President, H. H. Latham, by one of his traveling representatives,who evidently knows everything about the process of the manufacturing of the machines, as well as about the demand and how to meet and fully satisfy buyers. The draughting room was first visitd. We remarked, that after machines had been so long completed and on the market, we would not sup pose that the necessity existed for keeping an expensive draughting department, as all the patterns must have long since been completed. We were soon convinced to the contrary. Many new machines are being designed and manufactured for the printers, bookbinders and paper box trade and improvements and new designs are all the time being perfected, the object being to simplify the parts and to devise means of performing the work more perfectly, cheaply and expeditiously, so that the able draughtsman, with his assistants, always finds new work to do, some new device, part, or machine to draw and to furnish for the making in accordance with exact lines, and measurements, carefully worked out, in order to accomplish a definite purpose. Among the new devices have been the inventing and perfecting wonderfully complete, new box stitching machines for manufacture of shipping boxes.

From the draughting room, the way was through a room containing second-hand machines of nearly every style and make, both old and new, that have been replaced by the improved machines of the Latham manufacture. Next comes the overhauling department where machines taken in exchange are thoroughly overhauled and are advertised in a second-hand list for the benefit of those who want cheap machines.

The department where the box stitching machines are made proved of great interest, especially the making of the Monitor No. 4 Box Stitcher, which stitches the lapped sides of shipping fibre boxes up to sixty inches long to forty inches deep. The working parts are operated by a cam movement which, by one revolution, feeds, forms, drives and clinches staples at a speed of 125 to 140 staples per minute. The feed is not only automatic but reversable—feeding the box in either direction and inserting staples at any desired distance from one to three and one-half inches apart. There are 8 other varieties of these box-stitching machines; No. 3 for heavy construction, that is very strong. It forms and sets a strong flat staple with ends clinched into stock and within 5-16 of an of bottom of box. No. 3, in construction like No. 4, is for stitching a lapped cover as on suit boxes. No. 1 varies in construction from other sizes. It is so designed that the same principle can be used on a foot-power machine. Then there is a corner-box stitching machine designed only for the stitching of corners of boxes. These machines stitch automatically, rapidly and accurately with flat wire, save a small per cent of stock and produce a neater, lighter and showier box than by the old, slow process of gluing. Of course, the wires are, or can be all hidden in the finished work by outside paper.

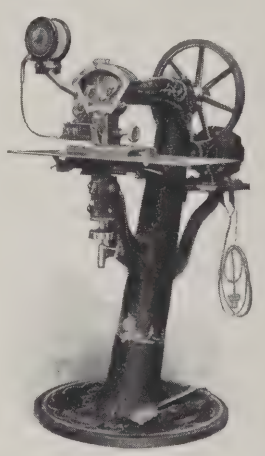
This much, merely to give an idea of the great variety of machines produced and of the patterns, parts and work required. Were we to undertake a description of all the different machines, it would require a large volume,

All working parts of the machines are made of hardened steel and the hardening process is by a specially-designed method and device, up-to-date, that secures absolute evenness and perfection. It was one of the things found worthy of examination and noting.

The monitor No. 1 Twentieth Century Stitcher, stitching from two sheets of paper up to ⅞ of an inch in thickness, in the recent improvements made, illustrated what we had learned in the draughting department. There are new direct feed, flat top and middle stitch devices, that enlarge the field of work and contribute to speed and accuracy. The pressure of the wire can be regulated to a nicety by an eccentric lever, securing even feed at each staple.

One machine, with tube device for stitching asbestos for covering steam pipes, stitching through 2 inches of asbestos, etc., was certainly novel and ingenious, We noticed one of these machines in course of construction for the H. E. Johns-Manvill Co., Milwaukee.

But among all the wonderful variety of stitching machines, the most noticeable was a Latham Monitor No. 000 Twentieth Century equipped with electric motor, with continuous gear



Monitor No. 1, Twentieth Century Stitcher

drive, rawhide pinion, covered gear, with starting button on the head of the machine. It is the most complete machine ever made. It is furnished with indicator, automatic gauges, and every convenience to insure speed and accuracy of work without delay. One of these machines, stitching through heavy stock, from a quarter of an inch to two inches, is found necessary in binding invoice ledgers and shipping books and the like. The work done, that we examined, two inches in thickness, was certainly satisfactory, the stitches being perfect and the wire laying flat and smooth, hugging to the stock closely and firmly.

Other machines in course of construction or already completed and assembled were the latest inventions and newest styes of the Monitor Lever Embossing Machines, Power Perforator Machines, Foot Power Perforator Machines, Paging Machines, Numbering Machines, Multiplex Power Punching Machines, Duplex Power Punching Machines, Power and Lever Embossers, Round Corner Machines, Index Machines, Roller Backing Machines, Job Backing Machines, Table Shears, Standing Presses, Stabbing Machines, Back Moulding Machines, Stub Folding Machines, Case Smoothing Machines, Gem Heaters, etc., etc.

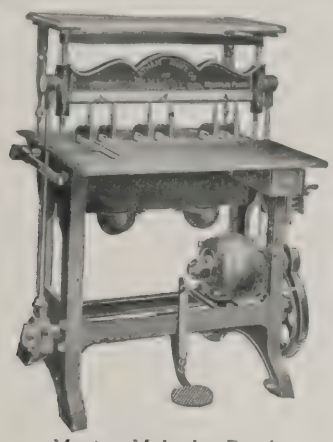
The perforating machines, foot power, Standard and Extra Heavy, show, easily, the care as to material and construction that is taken in every step, throughout all the departments of manufacture, in the hardened die plates and the hardened, Bessemer steel needles.

As interesting as the machines and their process of manufacture proved, still more interesting were the devices and tools with which they are made. One of the greatest items of cost in manufacturing is that of the appliances, often especially invented and designed, to make, economically,

the different parts. Without these, a machine would cost from ten to a hundred times the commercial selling price.

In the manufacture of a perforator, we noticed a workman, by use of a special machine, putting four hundred and twenty perfect holes, for the little perforating needles, fifteen to the inch, in a single die plate in an absolutely straight line. Think of the cost and difficulties, were it necessary to make each of these little holes by hand one at a time, with a single punch or boring apparatus. Yet this is only one part of the perforator, one of the simplest machines made.

The semi-automatic machines for the making of pieces of the stitching machine, turning the screw threads thereon,



Monitor Multiplex Punch

of different sizes, and boring holes through the pieces for the passing of the wire, cutting grooves or milling—all from the crude steel bars just as they come from the steel factory—were among the most interesting and complicated, though they seemed simple and to consist of comparatively few parts.

Then there were massive planing and milling machines, that, once set, do their work automatically. Many thousands of dollars have been invested in these machines and this is not all, for we passed next to the tool shop, where all tools used in the manufacture are made, and, in passing, the great punching machines are not to be forgotten. We have given only a glimpse of what was seen and examined, before passing to the shipping room, where we found boxed, or being boxed, all the varieties of manufactures that we have enumerated, for shipment to all parts of the United States and foreign countries. There are one hundred and fifty workers, including draughtsmen, machinists and all the rest, in the manufacturing departments. There are forty thousand

Monitor 28-Inch Hard-Die Perforator

square feet of floor space occupied. Three floors, 75 x 100, are given up to manufacturing. The office and store is on the first floor and the basement is given up to storage purposes.

Returning to the office, we met Mr. H. H. Latham, who had just returned, March 20th, from a visit to the Boston and New York branches of his company. He reported a very satisfactory trip and improved condition and tone of business in the East.

In addition to the three sales departments, twelve traveling salesmen are employed to look after the interests of buyers and to introduce and install machines.

Mr. Rayfield—who kindly showed us through the manufacturing departments and interested us with pointing out the steps by which the great variety of binding and other machines are perfected and made, to meet every demand of so many and varying lines of business—had, himself, just returned from his semi-annual trip to the Pacific Coast. He had traveled from Sandiago, Calif., to British Columbia, and found business especially good in the great and rapidly developing Northwest.

ALASKA-YUKON-PACIFIC EXPOSITION

Seattle, Wash., March 22.—It is because Seattle is the gateway to the world's markets for the centuries to come, that manufacturing and industrial concerns generally are taking much interest and participating so largely in the Alaska-Yukon-Pacific Exposition which is to open on June 1.

It is realized throughout America that the pathway to trade extension lies through the northwest and, by the shortest routes, to the Orient and Alaska. It is for this reason that the biggest manufacturing concerns in the country are installing exhibits which aggregate in value millions of dollars.

There will be, for instance, a complete meat-packing plant, which will show the process from the corral to the can.

One of the biggest watch-making concerns in the world is installing a modern watch factory and its whole process will be exemplified.

A jewelry factory will turn out artistic ornaments from crude metals and will manufacture table cutlery and the like.

A silk worm farm will provide cocoons for the delicate machines which, in the end, will turn out the finished cloth, and embroidery machines will illustrate the art of making fine embroideries.

The manufacture of textiles of all kinds, dress fabrics, blankets, "sweaters" and so on, will be shown in every phase.

There will shortly be in full operation a complete carpet-weaving plant, exposing to the public eye the secrets of the manufacture of ingrains, tapestries, Brussells, axminsters and the dozens of other weaves.

A rope walk, where Manila hemp will be made into good American hawsers, is now being installed.

Passengers and freight elevators, with every known safety device, will handle the Exposition "exchange."

Leather goods, trunks, valises, bags, card cases and all else in the line will be turned out of a fully equipped factory and craftsmen will produce the artistic products of burnt and stamped leather which have become so popular as ornaments for the home.

Sheet music will be printed and demonstrated on the piano and by a stringed orchestra.

Add to these every labor-saving device and every worthy product of the inventive genius of more recent years and a fair idea is to be had of the scope of the exhibits in the Manufactures Building alone.

On March 1, the Exposition was ninety per cent complete, which is ample assurance that it will be opened, a finished product the first day announced, June 1.

THE DAILY NORTH AMERICAN GIVES CREDIT TO THE WEEKLY PRESS AND THE MAGAZINES

ARE THE METROPOLITAN DAILIES SUBSIDIZED BY ADVERTISERS?

THE following as to the awakening of the public conscience and its source, and the attitude of the metropolitan press on matters appertaining to corporate and private interests as related to the public weal, that appeared in a double-column editorial of the *North American,* of Philadelphia, on March 20th, is worthy of careful perusal and consideration:

Readers of *The North American* are not uncertain about our estimate of the value to the nation of the awakening of the public conscience and the establishment of right civic standards during Roosevelt's seven years' tenure of the presidency.

But, rightly, or wrongly, we think it a novel example of candor for a metropolitan daily newspaper to admit that the progress made would have been impossible of accomplishment but for the work of a group of weekly and monthly publications.

The North American is not mock modest. When we do something that seems worth while we do not hesitate to blow our own trumpet. Most assuredly we should not dream of belitttling the splendid record of a free press that dates from Wilkes, pilloried.

But we believe in frankness in all things and in the correct chronicling of changes and develoements that affect national thought and conduct. So we feel it necessary to speak the conclusion forced upon us by careful retrospect of the past ten years. And that conclusion is that the new type of weekly and monthly magazine created in this country is the most impressive modern proof that a way always will be found to enlighten and express public opinion.

It is not with any feeling of cynicism or despondency that we record the fact that the influence for real, patriotic, right thinking exerted by the daily newspapers of America was dwindling almost to the degree of degeneraacy. That is the blunt truth, even though the daily newspapers have refrainod from speaking it.

But we never faltered in our belief in the poets, who are the true prophets, after all. And so, when we saw the world's strongest people sinking into subserviency to a sordid power, only because the people were being served by a press that was worse thaan subsidized, a press that had become enslaved, we did not doubt the outcome. We simply pinned our faith to the words that Kipling put into the mouth of "The American Spirit" in speaking of "The American," that

> "—through the change of mood and mood
> Mine ancient humor saved him whole.
> And in the teeth of all the schools.
> I! I shall save him at the last!"

And this is only a confirmation of the belief expressed by every deep observer of this unique nation, from De Tocqueville to Bryce, that when apparently completely throttled the indomitable American spirit kicks aside all precedent and finds an outlet.

The town meeting was the earliest expression of the American spirit. In Benjamin Franklin's autobiography we read how he paced the distance from center to outskirts of a meeting of Preacher Whitfield and reckoned, mathematically, that a crowd of 20,000 heard and were swayed by the orator's utterances. That preacher that day had an audience proportionately greater than the clientele of the newspaper with the greatest circulation today.

The era of oratory followed. It is not easy to draw the lines of differentiation. For the orator dominated the town meeting. The change, if we can mark it, came when people were stirred by the reports of the speeches of Webster and Clay almost as keenly as if the words had rung in their ears.

Newspapers meanwhile were multiplying. But they were venal, bitter, partisan broadsides. The people who read them did not trust them. Thought was guided by the men who spoke from the lecture platform.

For nearly twenty years this nation's course was shaped mainly by the lyceum bureaus. That era provides a lesson still lacking its fullest utilization, the combination of amusement and education. Especially in the sections where the puritan spirit presisted. theaters and everything purely esthetic were in disrepute. And so the voice of the nation spoke from the lecture platform.

All the political meetings down to the Lincoln-Douglas debates were just lectures campaignized. It was much later that public men began to make speeches not for the actual hearers, but for the readers of the printed reports. It was yet later when communication began with millions instead of hundreds by means of private letters written for publication, interviews carefully revised, and "inspired" conjectures by correspondents imparted under pledges of complete secrecy.

Future historians will be able to limit exactly the period that followed that of the lecturers. It was the era of personal journalism, the epoch of great editors, a time when the editorials of a few newspapers were awaited and studied day by day with blind faith and fidelity.

Those were the days of Greeley and Dana; of Medill and Storey; of Halstead, Watterson and McCullough.

There were giants in those days. But their papers were pygmies. Now the reverse is true. Development of mechanical possibilities, the perfecting pres and the linotype, the extension of the national area, the increase of population and the spread of circulation altered the entire conduct of American newspapers.

The editors of the older era faced clear-cut, simple issues. On one side or another, absolutely distinct, they maintained a virile and uncompromising attitude.

Every great newspaper then considered its editorial policy a part of the government in power or an exponent of the public in opposition. Less than half a century has made every such newspaper primarily a part of the community in which it is published and only incidentally a national factor.

This is the paradox. When the daily newspaper of America expressed and directed public opinion it was national in its editorial policy and parochial in its presentation of the news of the previous day.

Now it is a daily marvel in its internatioal summary of the actual world happenings of the previous hours, but either provincial or perfunctory in its comment thereupon

Reasons for the change are easy to cite. The cost of esablishment and maintenance of a modern newspaper plant; the amount given daily for a penny; the expenditures required for gathering and distributing the world's news are so great that a newspaper cannot live without a certain amount of advertising patronage.

The predatory interests were not slow to estimate how easily they could control certain interests by the granting or withdrawal of profits. From the allotment of official printing in the cities to the appointment of an able and therefore a dangerous man in the town to be postmaster

by grace of a corrupt state machine the system has been the same.

Debauchery has come from many an angle. The same bankers, suppliant to Wall street, are the ones from whom favors were asked by newspaper managers cramped finacially to keep pace with modern development. Volumes instead of brief comment could be written concerning pressure brought to bear by railroads, the liquor trade, the poisoners of food and medicines, the promoters of swindling mining and other stock schemes.

But two things above all others stand out as factors in the lessening influence of the daily press: The first is the purchase of newspapers by rich men, utterly destitute of any comprehension of the right functions of journalism. Jay Gould failed in his attempt at this sort of prostitution of public opinion. From Huntington, in California, to Morgan and Belmont, in New York, and from "Fingy" Connors, in Buffalo, to Oliver, in Pittsburg, we have only too many proofs that the plan now succeeds.

Yet even more potent, we think, is the yielding of the newspaper's sense of patriotism and right to the greedy demands of the great industries in the community in which each chances to have its being.

Read the comments on the Payne tariff bill, and every sane, well-informed American discounts the comment of the Boston papers regarding raw and finished materials that affect the factories of New England. Most of the Philadelphia criticism counts for no more than what New Orleans says of sugar, or Pittsburg of steel, or San Francisco of fruits, or Chicago of packing-house products. And it is common knowledge that what almost every big New York newspaper says is a Wall street echo.

And so when it had come to pass that the period of the daily newspaper as the exponent of enlightened public opinion had closed, as they became localized, the men of the magazines, with their touch upon the pulse of the national situation, came forward. A vacuum had been created. They filled it.

And the result has been that our civilization owes a debt to what has been done by McClure's, Everybody's, Hampton's, the American, Pearson's, Success. the Outlook, the independent, the Saturday Evening Post, and last, but most emphatically not least, Collier's.

We believe that an absolute new development, not only in the field of literature and the activitis of publication, but a thoroughly novel factor in our American civilization, has come into being within ten years.

Concerning it we shall have more to say in the future. Meanwhile, we ask our readers to think for themselves, as we have been thinking, to what extent thy have been informed and to what extent their attitude toward public affairs has been shaped by the periodicals that were either non-ex istant or negligible less than ten years ago.

WHEN THE OPERATOR TOLD ABOUT THE BOY REPORTER

AN INCIDENT IN THE BOYHOOD DAYS OF WILLIAM ALLEN WHITE, WHILE A "LOCAL CHASER" ON THE EMPORIA NEWS 23 YEARS AGO.

Twenty-three years ago, in a telegraph office in Emporia, an operator named Harned—a pink-cheeked, blonde mustached, red-lipped youth of many conquests among the ladies then, but who now probably is a fat, bald-headed, short-winded, watery-eyed, purple-faced man of fifty-five—sat with his feet on the table before him with an eye to passing girls on the walk outside, and told about the Walkup murder trial. I was a pimple-faced, long-necked, milky-eyed, loose-jawed, callowness of 18, chasing locals between school hours on the Emporia *News*, and just long enough out of the backroom of a printing office to think I knew all there was to be known in the printing business. Harned was a wizard. He conjured the court room into the dingy telegraph office; he pictured the defendant as a peri, and upon questioning, brought the reporters from the four corners of the earth and stood them at the counter before the clicking instruments. Then he added: "But there was the cleverest kid—boy only 16 years old; boy named Capper, down from Topeka. You ought to know him — just out of short pants — but say — he was a daisy."

That was enough. The romance of the picture was complete. But it needed the picture of the boy reporter to fix it in my memory. For I, too, was a boy, and fancied myself a prodigy. Every boy does that, but here was a boy, younger than I, who actually had been a real reporter, sent away on an assignment. He was my Highest Ideal. I was only a runaway chaser and "personal" purveyor, who rode with the driver of the hacks to the depot, and skirmished back to the office in the baggage wagon. But Arthur Capper was a real reporter, and only sixteen years old! It was like a fairy tale. So I bided my time and waited for Arthur Capper, to pay tribute to him.

In the meantime, the years lagged on as they do in one's teens. That fall I met Gerald Volk—the first real city reporter I had ever seen, and also I had seen from afar Van Benthuysen—afterwards managing editor of the New York *World*—and Albert, and Charley Duncan of Lawrence, who were "special correspondents" of the Kansas City *Times*, but while, of course, they were persons of consequence to me, I waited in eager anxiety to see and know the boy reporter. And then, in 1888, he came to Lawrence. There one night we met under the maple trees of Tennessee street, and I told him who I was—a local chaser and student reporter in Lawrence, and more I told him how I had heard of him, and always—which is true, for always when one is twenty doesn't date much farther back than the year before—I had wished to know him. And he smiled—like a cherub, and grunted, and looked pleased. And I became his vassal.

That was nearly twenty-one years ago. And he has worked and grown, and grown and worked, and made himself a great power in the West since then. And still the smile of the cherub has not rubbed off. He has quit grunting, but he still looks pleased. And in all these years we have been friends. To me, he is still the boy reporter—a person to be revered. To him, I am probably still that wild-eyed, impetuous youth who rushed up to him that night in Lawrence and shook his hand as if it were a force pump, and blatted about his triumphs, and told him of Harned, and tried to impress my importance on him, all in one breath. And so it will be to the end. Our first impressions last. We really change but little, and when we know one another in youth, when the veneer is thin, we see people better than we do who run plump into them in middle life. The soul is essentially the same, but it shows clearer in the days of our youth when the evil days come not. And so the cherubic smile, the patience of the youth who permitted the jay to assault him so blatantly with his exuberant foolishness in the night under the maple trees in Lawrence, is the same patient, kind-hearted gentleman he was then. The kindness that moved him that night to seem pleased, moves him to make the pleasantest work place in all Kansas for those who are near him. The same kindness that made men admire him as a boy, makes them respect him as a man, and has been the fundamental character of his whole life's work. For he has succeeded by smiling and working, and working, and working and working, and when in doubt, smiling. It is no very great miracle—but it is something worth trying.—*Topeka Daily Capital.*

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

AND NOW we shall get down to business on that contest which we have been talking about for some time. The letters which came to me in response to my invitation for suggestions, as well as those which have been received later, asking when the contest was to be announced, would seem to indicate that the readers of the department are much interested in having it "pulled off."

Out of the suggestions submitted, I have got many ideas, and the contest will proceed along lines which our readers have developed. Briefly stated, it will be a double contest. That is, there will be two classes of contestants—those who have taken prizes of some kind before (not necessarily in a NATIONAL PRINTER-JOURNALIST contest, but in any contest), and those who have never taken a prize of any kind on their printing. It is expected that this will have two beneficial results: It will, in the first place, develop some work of unusual excellence on the part of the leading men in the craft; and secondly, it will give those who have never entered such a contest an opportunity to test out their powers, with the assurance that they will not have to enter into what may appear to be unequal competition with more experienced men. I should not be at all surprised, however, if this latter class would develop some work equally as good as the first.

The piece of work on which we shall concentrate our efforts will be a letter head, that seeming to have the preference among the majority of those who have written me. It will not be a fictitious letter head, however, but will be bona fide copy furnished by a firm in Chicago which actually wants to place an order for some letter heads. This will give a zest to the contest which no other competition of this kind has ever had. The following specifications will govern the contest:

1. *Classes.* Class 1 will be composed of those who have ever taken prizes in *any* printing contest.

Class 2 will be composed of those who have never taken a prize in any contest.

2. *Copy.* The copy is as follows, to be set for an ordinary letter head, 8½ x 11 inches:

> The Cement Era. Devoted to cement, concrete and related machinery. Office of publication, 842 Monadnock Block, Chicago, Ill. Eastern office, 42 Broadway, New York, N. Y. Chicago,

3. *Stock.* The stock must be a white 20-pound bond of any suitable texture. The quality and texture of the stock will be taken into consideration in making the awards.

4. *Ink.* The ink must be in black and one other color.

5. *Specimens submitted.* Each contestant must submit five perfect press proofs of the completed job, and two press proofs of each color. These must be accompanied by a sealed envelope containing the name and address of the contestant. If in Class 1, the contestant must also state what former prizes he has won; if in Class 2, he must state positively that he has never before won a prize. This envelope must have on the outside the words, "Class 1," or "Class 2," according to which class the contestant is in. The envelope and specimens must be sent in one package, under letter postage, securely wrapped, to "E. S. Hanson, 925 Linden Avenue, Wilmette, Ill., Letter head contest," and must reach me not later than May 31, 1909. Each contestant may submit as many different speciments as he desires, but each lot must be sent separately and must be accompanied by the envelope containing information as noted above. The competition is open to all.

6. *Judges.* The judges of the contest will be the officers of the Cement Era Publishing Company.

7. *Prizes.* The first prize for Class I will be an order for five thousand of the letter heads at a price of $25.00, and $5.00 cash to the compositor. The first prize for Class 2 will be a copy of the Graphic Arts and Crafts Year Book for 1909, which is a valuable part of the education of any man connected with the craft, and $2.00 in cash.

Two other prizes of a year's subscription to the NATIONAL PRINTER-JOURNALIST will also be given in each class, together with honorable mention of any specimens in either class which may merit it.

This contest looks like a very live one to me, and I confidently expect that there will be a large number of entries. Begin now. Do not wait until the last moment, for something may delay you at that time. Send in something very soon; then if you have another inspiration later, try again. There is no limit to the number of times you may try for these prizes.

If any of those who think of entering the contest would care to see a copy of *The Cement Era*, and thus get in a little closer touch with the subject, send me a request for sample copy at my address given above, and I will see that it is sent you.

The proprietor of a large printing establishment related to me the other day an incident showing how a decided stand for the preservation of his ideals on the part of a printer will work to his own financial good. The case in point was that of a small pamphlet which had been delayed in the hands of the compiler, and which the customer was now in a hurry to have put through. As soon as the proofs had been given their final "O. K." the printer got orders from the customer to get it out by such a date—which was only a few days away—without fail. The printer said that he would get it out on that date if the customer insisted, but that it would not be such a job as it should be, and that he would by all means remove his imprint before the job was run. He rather insisted on his point of view of the case; and the customer knew him well enough to believe that the printer actually was working for the customer's interest, and not merely to gain time.

The immediate result was that the printer was allowed such time on the job as was consistent with good

work; and the secondary result was that a few days later the same customer turned over to the printer, without estimate or any understanding whatever ex-

From Schubert's Print Shop, Camden, N. J.

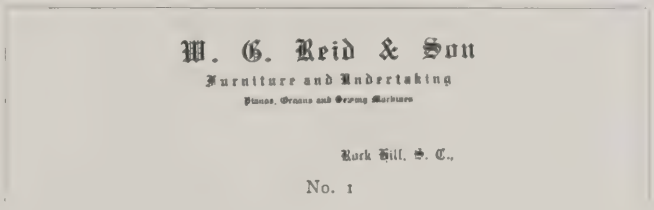
cept that it was to be a first-class job, a piece of work worth several thousand dollars.

The beneficial effect of many a good piece of printing is often largely lost because of being sent out in an

unattractive envelope. To a large number of men who send out printinng, the envelope is merely the wrapper, and need have no more hint of refinement or individuality than the piece of brown paper which comes around the steak from the meat market. Another man will see in it an opportunity for securing a favorable impression of the contents at first glance. He will make it of a suitable stock to harmonize with the enclosure, and will perhaps print thereon a catchy phrase or two to arouse the curiosity.

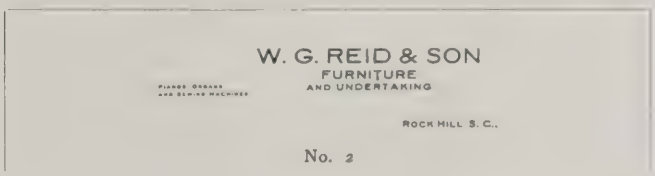
This paragraph has been inspired by a little book received from the Hart, Schaffner & Marx tailoring establishment. It is in an envelope made and printed like a well tailored overcoat, which tell you in refined Caslon that the Style Book is inside. In some respects the book itself is something of a disappointment, however. An effort has been made to introduce a "different" effect in the title page, with the result that, with its one monotonous size of type, it has about as much individuality as a coat made entirely in one piece. It has no lines of delineation or of beauty. It is about as artistic as a title page made with an alphabet of stencils. It seems strange that a good printing house (for the books give unmistakable signs of having come from such) would have made so great a blunder.

Sam H. White, Rock Hill, S. C., is another man who has run up against an ungrateful customer when he attempted to improve upon a job. After Mr. White had set the job as shown in No. 1, the customer in-



No. 1

sisted that he wanted his original copy duplicated. Mr. White tried to expostulate with him, but the customer was very sure that he knew what he wanted, and No. 2 was the result. "Who ever saw Old English spaced in that manner?" exclaims Mr. White disgustedly in in his letter. And echo answers, Who? The fault seems to have been with some unknown printer, who



No. 2

set up the job thus in the first place and spoiled Mr. Reid's taste for neatness in printing. See what a lot of esthetic undoing the incompetent printers are responsible for! Mr. White's first head would be improved by a little more space under the main line.

Here are two dainty pieces of work from the Observer Printing House, Charlotte, N. C. One is a blotter and the other a little envelope slip, the former with olive green predominating and the latter with brown. The halftone on the blotter is in three colors. It is printed on a separate sheet, die cut, and pasted

(Continued on Page 272)

WHAT'S WHAT ABOUT THE PRINT-SHOP

A TALK ABOUT SYSTEM, BY E. J. OTTAWAY, ST. CLAIR, MICH., REPUBLICAN.

THE subject suggests to me something of *absoluteness* and *finality*. It suggests *law*, and, therefore, *order* and *system*. To my mind, therefore, and for the hour at least, the topic, "What's What About the Print Shop," shall simply mean *system*.

We are all always willing to preach the doctrine of law and order in business, and, in fact, everywhere else. We insist that the railroad shall observe its schedule, or our condemnation is quick and emphatic. The housewife insists that the delivery boy be on time, or her wrath is likewise excited. We all demand even that the preacher shall preach an orderly sermon, and, likewise, it is perfectly apparent that the print shop should be in order.

To begin with, if there is any place in the print shop where order should reign, it is in the editorial room and the business office. The business office should be suggestive to the incoming customer that in the whole institution everything is "business from the word go." Above all else, to my mind, the business office should not be permitted to become a lounging place, not even for your business or social friends. The air of the front office ought always to suggest that you have something to do, and that when the customer's business is done, it is time for him to withdraw. I doubt not that when I speak of the lounger in the front office, there passes through the mind of each of you a vision of some one, two, three, or possibly more, amiable callers that drop in of a morning, or an afternoon, some times for no particular reason, except to kill time. How naturally they seat themselves on the edge of the flat top desk, open up a conversational lead that promises something in the way of gossip, and by the time they have somewhat carelessly reached for their watch and discovered that time flies, and that they have some other call to make, you have been cheated out of ten, twenty or thirty minutes of time that is more or less valuable to you. Some of these chronic loungers you tire of, and even dislike to see them coming, even though they may be good customers; others are very sociable and agreeable, and if you, as the business manager, are not careful, they soon have you in the bad habit of encouraging this sort of lounging, and the business office becomes a social center, where time is of no particular value; and this system becomes a habit that fastens itself, not only upon the front office, but sooner or later suggests itself to the foreman of the composing room or the pressman about his presses.

So I maintain that the business office of a newspaper or printing establishment should offer no encouragement to the lounger. Let the air of the business office be one of snap and you will just as easily impress the caller that you are the head of a *business* institution as you will, by more indolent action, impress him that you are not very busy and that he may just as well sit down for an hour. Unless my theory of the business is absolutely wrong, the front office is no place for a social call, but should be the ever active brain-center of the whole printing institution.

There may arise the objection in some minds that this is good theory, but not necessarily good practice. For instance, I know there are some editors who rely for a good portion of their news on just these loungers that drop in of an afternoon or evening and dispense to the indolent editor all the gossip that he may have gathered in his rounds; but this, I maintain, is not business, it is not reporting; it is simply sponging off the idleness and garrulousness of the gossips of the town. The business man will make more headway by making his home a social center, inviting his business friends there of an evening, than he will to maintain his office as a smoking room. I would not attempt to maintain that the man in the front office should not ever be affable and obliging, giving each customer the full measure of time that he should have in the transaction of his business, but I scarcely think that any of us believe that it is necessary to perform our social duties in the front office in order to maintain the respect and retain the patronage of our customers. Let the "society act" be done at home and leave the office strictly for business.

THE BUSINESS OFFICE.

I want to amplify a little the assertion I made a moment ago that the spirit of idleness and social restfulness in the business office suggests a somewhat similar spirit among the men in the back room. If you, as manager, have the time to entertain you friends in your front office, it will not be long before your foreman has callers that are stealing his time.

And, similarly, if your business office is full of the spirit of activity, you need not fear that the workmen will be wasting their employer's time in any lazy frivolity, or visiting with guests of their own. Therefore, to get the best results from your employes, in whom you are always anxious to cultivate the modern spirit of hustle, let the same spirit prevail in your own work. It is not an idle observation to say that both the *quality* and *quantity* of the work your employes turn out are directly affected by the spirit in which they are doing that work, and if the business manager suggests that time is of no particular account, and that *system* and *order* are not essentials, you will find in the product of your office results that will tally exactly with the prevailing spirit of the institution. Get rid of the lounger; get your news where it properly should be gotten—at the source of supply.

The business office should be a cheerfuld, inviting place in which to do business; order should prevail everywhere, from the counter to the waste basket. The day is past, it seems to me, when the business department of a printing office can transact its entire business around two spindles, on one of which, *the larger*, the unpaid bills are stuck, and on the other—and usually much smaller—the paid invoices are impaled. That system is just such a one as encourages the eternal lengthening of the spindle with the unpaid bills, and the final removal entirely of the spindle marked "paid.'

I say the day is past in any modern printing office where business can be transacted on this basis. Your customer demands results from you that are up-to-date. He wants his letterheads in the latest type; he wants his advertisements in something new and airy, and he wants his business transacted from the moment it comes to your business counter, until he gets his receipted bill, in the most orderly, accurate and systematic way. He wants to be assured that when he brings you his job of printing and you promise him a proof the next day, he has not to keep it further upon his mind. He wants the proof *when it is promised*, without his jingling the telephone two or three times, and finally having to come to the office to hurry you up. He wants the finished job *when it is promised*, he wants his invoice when the goods are delivered and he wants the invoice receipted when he pays his bill.

I propose to describe to you in detail the system in vogue in my office, not that I mean to maintain that it is the best system on earth, but as I told you at the start, I have to make my bluff good, having accepted the challenge of your executive committee. The old phrase, "Assume a virtue, if you have it not," may apply in this case. We will, therefore, follow a printing job from the time it strikes the business office until it is delivered to the customer, and thus exemplify

what I would call a fairly reasonable system for the print shop.

When the order for a printing job is received, no matter how small or how large, the first requisite, it seems to me in any successful office system, is that it be promptly entered in the order book. Delay in this respect may mean that in the hurry and bustle of the active office, if the job is not promptly entered, it may never afterward get into the order book at all, but may go through the process of printing, be delivered and no invoice ever be made, in which case, unless you have a particularly honest customer, your work will be done but never paid for. The order being entered, therefore, under proper date and with the proper name of customer and description, the next requirement should be the invoicing of the job in duplicate. If you know what the price is to be, put it down at once; if you do not know what the price is to be, this item can be easily supplied when the job is done. By this method every job in your office is always invoiced and on its proper file, the invoice to be taken off this file when the work is done and the job delivered, the original invoice to be sent to your customer, the duplicate to be passed on to your bookkeeper for proper entry in journal and ledger.

When entered in the order book, this job has its proper number and this number stays by the job forever. It appears on your job envelope, which is made out at the same time your invoice and order entry are made, and should have enough data thereon so that the job may always be identified by this envelope, (a sample of which I hold in my hand). At the same time that this envelope is prepared, a card is made out for the composing room, the same number being stamped on this card. (Describe card). Likewise, a card is made out for the press room, for the stock room, and bindery, and possibly for the linotype machine, the die cutting machine, and in some cases a card is made out for the packer and another for the ink record. It does not often happen that all these cards are required on any one job. When the job goes from the business office to the plant itself, each of these cards goes to its appropriate department *at once*. By this method the composing room foreman always knows what jobs are before him and when they are to be turned out. Likewise, the pressman has the same information, knows what jobs are coming and when he must deliver them. The card that goes to the stock room informs the stockman at once; he cuts his stock and it is always there when the form comes down.

There are two decided advantages in this card system which may strike you at first glance as intricate. The first advantage is that each department knows *all the time* what is before it, without having to meddle with the time or affairs of any other department, and the pressman cannot growl when the form comes to him and say that he is not ready for it because he did not know it was coming, for he does know that it is coming, and if the stockman has done his duty the stock is there before the form. Every man in the institution is ready for this particular job; indeed, he is waiting for it, and he gets his information without having to leave his department. This may be properly called the advantage of economy of time and effort.

The second decided advantage of this card system is that when these cards are filled out and returned to the business office, the manager has before him a complete history of this job and he can tell what it has cost and what it is worth to sell. for on the composing room card he has the exact time that was consumed in that department, his press room card tells him the whole story there, and without leaving his desk he has absolute data for figuring exactly the selling price of his commodity. Possibly the price has already been fixed. If it has, this data is equally valuable to him in that it tells him whether he made his price too small or too large, and when the job has to be done again he can raise the price if need be, or what is equally valuable, if he is in competition, he can lower his price, if the data at hand warrant him in so doing.

This whole system, in an office of small size, can easily be reduced to the limits of the job envelope, and all of the necessary data recorded for all time on the face of this job ticket or envelope. These envelopes, of course, should be filed away in an oredrly cabinet of some sort, so that they may always be easily referred to; the job number should be entered in the ledger account with your customer, and if he should send you an oredr for the same job again you have in this job envelope the former job, the copy, the proofs and sample of completed work. If your customer, therefore, telephones you that he wantes five thousand more envelopes the same as his last order, you do not have to send your boy after the copy, nor does your customer have to bring it to the office; you have it always on file and easily referred to.

In any office system, it goes without saying, that a good set of books is essential. It is not enough that your system in handling your customer's business should be ample and complete, but it is equaly essential to the success of your business that your own end of it be kept in systematic shape. Therefore, you must either be a good bookkeeper yourself or employ one. The ordinary journal and ledger accounting must be carefully attended to, and in the successful office you will necessarily go still further and keep such a set of books as will allow you to analyze your business thoroughly at such periods as you may deem wise, either monthly or quarterly, and certainly annually. Otherwise it is simply the wildest kind of guess work as to whether you are making or losing money.

I have no suggestions to make as to your ordinary accounting, except that to make a system effective and complete your journal and ledger and cash book must always tell the exact truth. But, for the final analyzsis of the business, I do want to call your attention to the system necessary to tell you accurately at the end of any stated period "where you are at." To do this in our office we have a voucher record in which from month to month we keep a complete account of our business and from which we may always know each month the history of that month's work. This voucher record is really a history of our banking account and I will read you an imaginary entry or two; for instance, here is check or voucher No. 5760; date paid, Feb. 19, 909; in favor of J. W. Butler Paper Company; for stock, $79.86. And then there are twelve columns in which one of these vouchers is sub-divided. These twelve columns are headed: Management Expense; Composing Room Expense; Press Room Expense; Bindery Expense; Stock Room Expense; Miscellaneous Expense; Stock; Tools; Machinery; Office Furniture and Fixtures; Machinery Repairs, and what is most important in every office, a column headed Dividends. Now, this voucher record, if properly kept, will, each month, give you exactly what you have paid out for any one of these items. By comparison from month to month you are able to see where the expense of your office is increasing, and what is very essential, you are able to determine the relative cost of labor, stock, managment or any other expense. This is important. For instance, we have found in our business that our labor expense should approximate 40 per cent of the total amount of our business. If we discover in a certain month that this item has increased to 50 per cent, we know there is something wrong and that some one has been doing some non-productive work.

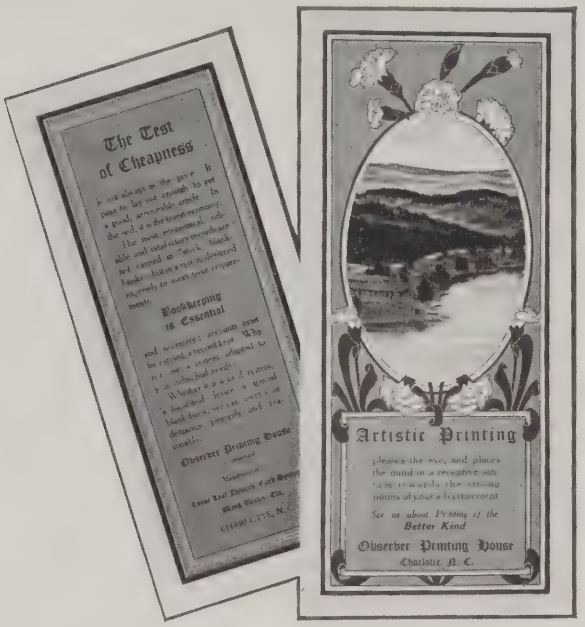
Likewise, we have learned that our expense for stock (paper and ink) should approximate 20 per cent of the total

(Continued on Page 275)

REVIEW OF JOB PRINTING

(Continued from Page 269)

on. In this way the office no doubte utilized a square halftone which happened to be available as well as a



border design which may have had something entirely foreign to the subject in the oval.

I am showing here a letter head printed from an ordinary zinc plate, the drawing for which was made in a very short time by a new device, the invention of Mr. Edward P. Noble of Chicago, called the automatic rotary pen. Its highest quality lies in the value of the line it produces, being the true drawing-pen line, of any desired width, and as it is rotary, it adjusts itself to any direction in which it may be moving. This specimen was made exclusively in free hand, and

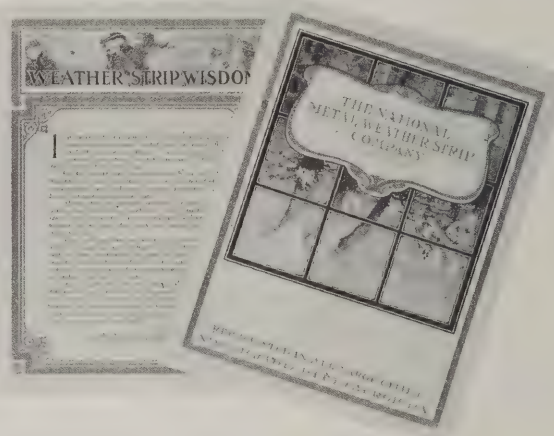
shows a quality of line that could not be achieved in any other way except by processes so tedious and laborious as to render their employment prohibitive on every-day commercial work.

For the purposes of this paragraph I should like to paraphrase the old saying of "The more haste, the less speed," by making it, "The more speed, the less efficiency." In many places where the eight-hour day has gone into effect, there seems to be a determination on the part of employers to so "speed up" the force that fully as much will be accomplished in the shorter day. Sometimes it seems that there is a passion for doing even more than under the old schedule. Long hours of overtime are put in, and immense strain is put upon the men. The result of all this is sure to be bad. The men become overwrought and are not as valuable as when they are working a normal number of hours each day. They lose interest in their work, and in many cases valuable men become sick and are away from their work, breaking the routine of the office, and paying out for themselves in doctor bills and losses what they have made in overtime.

The time sheets of a closely timed shop will show that the men do not accomplish as much per hour when they are putting in long hours as when working on a normal schedule. They come to work in the morning with hands moving listlessly and brains not thinking clearly. The customer who audits his bills closely will be quick to discover this, and it is more than likely that the proprietor of the shop will be obliged to cut down the bills of some of his customers on this account, thus bringing an actual loss upon himself for unproductive time.

An honorable workman starts out in the morning at a pace which will bring him to the fatigue point when the regular quitting time comes, and he should not often be forced beyond that point.

A number of catalogues of the faultless variety have come from the Werner Company, Akron, Ohio. They



are gotten up with the best of care, and an effort is made to make each one in some way appropriate to the

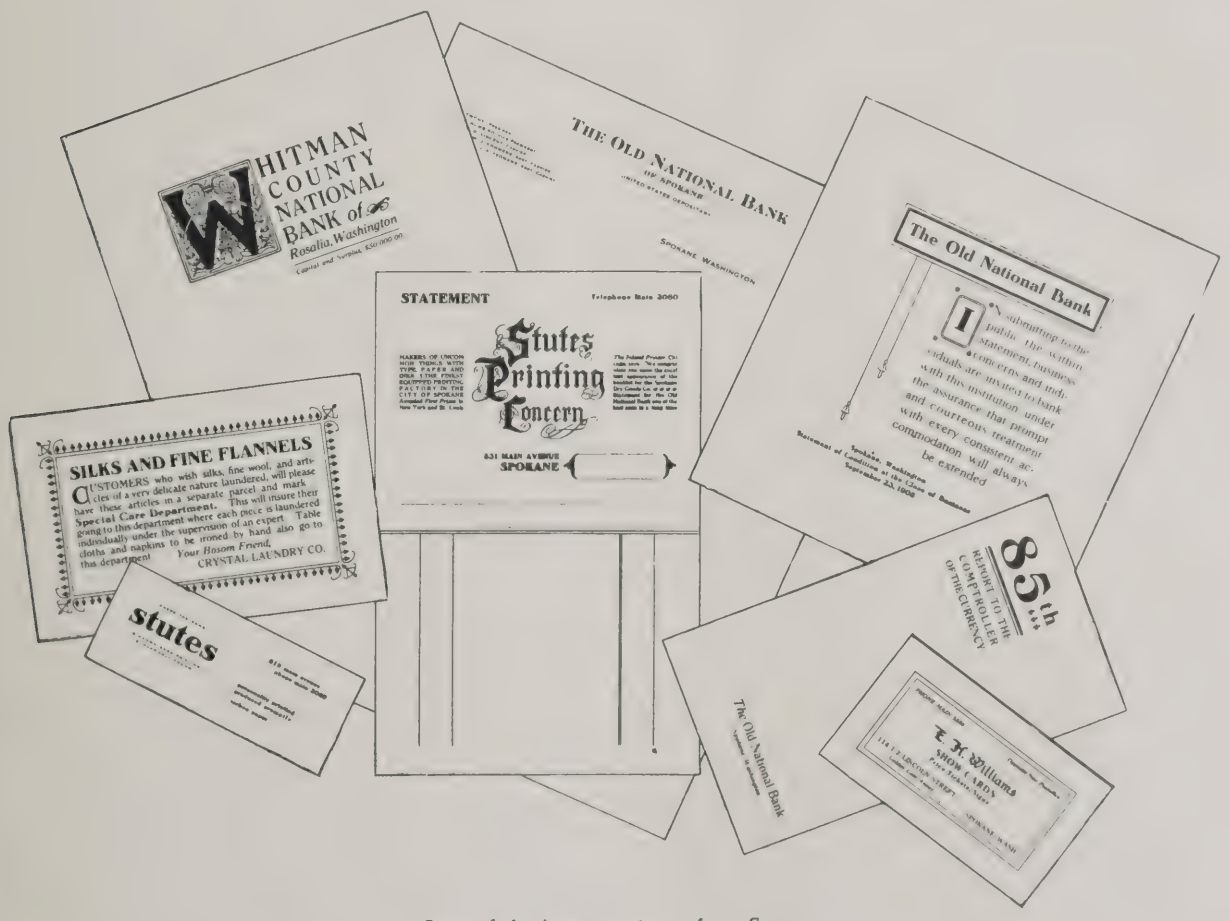
THIS LETTER BEING DATED

pany gives a touch of realism to a number of its productions.

No, Brannon has not disappeared from the face of the earth. But he has been "laid up," as he says in a note written on the bottom of a letterhead which is reproduced in this issue. The head is on white linen finish bond, the body of the matter printed in black, with the ornament and the words, "Boskoop, Holland," in red. Personally, I think I would prefer to have the ornament slightly less prominent, which might be done either by using a smaller one or printing it in a lighter shade of ink. If this latter method were adopted, the words in red could be set in a larger size in order to preserve their relative weight. There is just a suspicion in my mind that the main lines are not quite strong enough. If this is really so, they might be given a little more prominence by indenting the two lines below them. Good health and good luck to Brannon, and may we see more of him.

Stutes, according to the latest specimens received with the Spokane postmark, has organized himself into the Stutes Printing Concern. But he cannot lose his individuality in a change of name, and is still keeping his town prominently on the map so far as good printing is concerned. Nearly all the specimens shown here were in two colors in the originals, principally in red and black, which is a favorite combination with Stutes.



Some of the latest specimens from Stutes

MICHIGAN EDITORS.

ONE of the inspiring signs of progress and permanent upbuilding is the interest now taken in, and the character of, the papers and addresses made and the discussions had, at the conventions of organizations of newspaper makers, including those of the publishers and business managers, editors, advertising agents and managers, circulation managers, illustrators, writers and humorists, and at the meetings of printers. The members of these organizations have become the evangels of this age and there is nothing that pertains to human interests or advancement that does not find place for earnest, sincere and dignified consideration.

Among associations whose conventions are ideal is that of the Michigan Press. The recent annual gathering in Flint was of the usual high standard. The matters brought before the editors by the members on the program were ably treated and outside of the sessions the important institutions of Flint were viewed and investigated in a manner to bring profit to the editors, and the communities whose well-being is largely under their influence as well as to the best interests and the fame of the beautiful city visited and honored with these promoters of the commonwealth, who were among the people taking notes and printing them. The *Michigan Bulletin* tells the story in part as follows:

The meeting of the Michigan Press Association held at Flint Thursday and Friday, Feb. 25-26, was one of the most entertaining and profitable sessions, to the members of the profession generally, ever held. Flint is a highly hospitable city and there was not one dull moment while the visitors were in "The Vehicle City." In fact, the pace was so strenuous that not a few of the guests put in the following Sunday trying to make up lost sleep.

Howard H, Fitzgerald, owner and publisher of the Flint *Daily Journal,* the biggest small daily in the Middle West, and president of the Flint Improvement League, was head bugler during the Flint meeting of the M. P. A., and made an ideal host. One editor said Fitz ought to have St. Peter's job "welcoming the editors into Heaven" when our earthly labors are o'er. We're all willing and think we would all feel at home.

The "doings" opened Thursday noon, Feb. 25, when those who had arrived were taken to the Oak Grove sanatorium to inspect this magnificent health resort and be entertained at luncheon by the management. The opening session was held that afternoon at 3:30 in the supervisors' room in Genesee's splendid new courthouse. President C. C. Vaughan, of the St. Johns *Republican,* at that time gave his annual address reviewing what the association stands for. In speaking of Flint's wonderfully inspiring spirit of progressiveness, President Vaughan said:

" I am very glad we were accorded an invitation to meet in Flint, one of the great manufacturing cities of our state and one of the pleasantest places in Michigan in which to make a home. Flint is filled with broad-gauged men as well as handsome women—and by the process of absorption, if no other way, we ought to take away something of value from this meeting."

That evening, an informal reception was held in the parlors of the Dresden hotel and a smoker was also enjoyed by the gentlemen in the club rooms of this hospitable hostelry.

Many of the members of the Association also had access to the conveniences of the Elks' club. Flint lodge is one of the strongest in the state, having over 600 members.

The private car Yolande, of the Detroit United Railway, was placed at the disposal of the editors Friday morning for a trip to the plant of the Buick Motor Company. The car was filled. At the factory the visitors were taken in charge by W. H. Little, factory manager, and others connected with the company, and then began a personally conducted tour of inspection that did not end until nearly every part of the huge concern had been visited. The editors and their wives were shown the making of the famous Buick from the beginning to the finished product, and to state they were surprised at the magnitude of the plant, the number of men employed and the size of the factory's output is not expressing it fully. This concern employs 3,600 men and turns out from 65 to 100 completed automobiles every working day. The average pay roll reaches $38,000 per week.

On Friday noon the press party congregated at the Michigan school for the deaf where Supt. F. D. Clarke and wife held open house. James Slocum, of Detroit, one of the members of the board of control of this institution, was in the receiving line. A delightful luncheon was served by students of the school and at its conclusion all went to Brown hall where a unique entertainment was put on by the little deaf and dumb tots to give the editors an idea of the worthy work this institution is doing. There are about 350 boys and girls in the school and if the deaf and dumb ever need assistance every editor belonging to the M. P. A. will indeed count it an honor to "lend a hand."

A. E. McKinnon gave a report during the afternoon session concerning the proposed summer meeting and excursion of the association, when it is planned to take a trip over the Canadian Pacific railway and the Grand Trunk Pacific, using the latter's line through the northwest. Three routes are to be considered by the association, the first a trip from Sarnia to Laggon, in the heart of the Canadian Rockies, and a trip from Sarnia or Detroit to Vancouver. It is said the approximate cost of the trip to the northwest will be about $50, which includes fare both ways. Seventeen days are to be devoted to the summer excursion.

James Schermerhorn, of the Detroit Times, gave his splendid plea for cleaner advertising columns under the title "Patriot, Penman, Publisher" and this, too, will be reproduced in full in a future issue.

The annual election resulted in the choice of A. E. McKinnon, Detroit Free Press, for President; H. H. Fitzgerald, Flint Journal, vice president; H. A. Hopkins, St. Clair, seretary; Will R. Cook, Hastings, treasurer.

A report was heard from the legislative committee and an effort will be made to get better libel law legislation the coming season. One hundred dollars was voted to be used in drafting a bill. The old committee was re-appointed for another year.

The Association endorsed in strong terms the plan proposed by M. L. Cook, of the Hastings Banner, calling for the use of a portion of the primary school fund in promoting the extension of industrial education. The paper will be printed in a subsequent issue.

One encouraging feature about the Michigan Association is that the entire press of the State is represented therein. There is a common bond among all newspaper makers, whether they be workers on the large dailies or on the home weeklies, and there should be cordial accord, co-operation and interchange of views. Each can learn from the other, and all are in the same lines of service for the information of the people and aiding all their worthy undertakings.

WHAT'S WHAT ABOUT THE PRINT-SHOP.

(Continued from Page 271)

of our business, and, likewise, we note that our miscellaneous expense approximates a certain percentage. We take notice of any changes in these percentages at stated intervals and thus know at once exactly where to put our finger on the source of trouble.

There are many of the ordinary little matters of system that I have not touched upon and which will appeal to you in the office as obviously necessary, such as keeping duplicates of your orders for stock, type, ink, etc., but these are small matters of detail that fit themslves into any system that is adequate, and it has occurred to me that any value that my paper might have would be primarily to impress you with the necessity of adequate system, rather than trying to instruct you in any little matters of detail.

I have confined myself almost entirely to system in the printing department, and have said almost nothhing at all of system in the advertising and circulation departments of the newspaper. It is, of course, equally important that these matters be handled in every office with absolute system, especially the circulation.

* * * * * *

Don't use cheap labor in the print shop. Don't use cheap tools. Don't use old type. Don't use old machines. Get rid of your shafting, if possble, every bit of it. It is a dirt collector and a dirt nuisance that has no place in the modern print shop where the whitest of paper must be kept clean. Use individual motors, if possible, on each machine—it will pay in the long run. Encourage your employes to keep fully abreast of the business. If they do not take a good trade periodical, give them one for a Christmas gift. Send your foreman on an excursion occasionally to a shop where you know they are up-to-date; don't be afraid you will lose him, for if he is good enough for some one else to hire, he is probably deserving of an increase of wages, anyway.

The best system undoubtedly for the front office, for the composing room, for the press room, for the bindery and everywhere else throughout the printing establishment is to be up-to-date and stay there.

EDITOR AND PROSPECTIVE MAYOR, LON SANDERS

The receiving a copy of the St. Louis *Daily Star,* bearing, at the head of the editorial page, "By Lon Sanders," was somewhat of a surprise in the office of the National Printer-Journalist, where Mr. Sanders has been, for so many years, held in high esteem as the head of the Sanders Engraving Co. However, he has long associated with editors and publishers, attended their conventions and taken a place on their programs, with honor to himself and to the entire satisfaction of the members, and to their valuable instruction as to that very important part of modern newspaper making, proper illustration. While he imparted knowledge, he evidently acquired knowledge, for this issue of the daily under his name, was in every way creditable and worthy of an able and experienced newspaper man. Mr. Sanders has for many years borne a semi-official relation to the National Editorial Association as the illustrator or official artist of many of the delightful conventions that he has attended and excursions in which he has participated, but now he is entitled to be taken into full communion and fellowship.

The paper was filled with such noble sentiments and pleas for ideal citizenship and service for the common good, as are taught in model press organizations and have been advocated in the conventions of the Missouri and National Editorial Associations with which he has been closely allied and in which he is highly esteemed.

Now the good people are urging him for the position of mayor of St. Louis in the interest of improvement, reforms and good government. When in St. Louis, on our return from attending the Kansas Press Association, at Topeka, we learned that Mr. Sanders was being urged as a mayorality candidate by so good a man as Governor Folk, but really, we did not suppose that he had any ambitions in that direction. He never said a word about it himself, though we met him in his office. He only talked about improvement in his engraving establishment, and the moving of his office to the first floor of the building occupied by his company, in order to better facilitate transactions with, and to accommodate, his customers. The Sanders Engraving Company is not going out of business, but enlarging and improving, yet the people are earnestly booming the well-liked President of the Company for Mayor, and here are some of the reasons, coming to us by the way of a student of the Illinois State University at Champaign, clipped from a letter in the St. Louis *Times:*

"The Democratic party should nominate Lon Sanders for Mayor of St. Louis:

"Because he has the executive ability to fill the office.

"Because he has supreme faith in St. Louis and her future.

"Because he stands for the improvement of the streets of St. Louis.

"Because he is a progressive man in every sense of the word.

"Because he is well versed in the problems that confront this city at the present time.

"Because he represents the best element of the voters and has no connection with any political machine.

"Because he would administer the laws in the benefit of the whole people."

We are ready to endorse every word of this

The following statement is printed at the head of the editorial column over his own signature:

"If all or half that's good in thought, as published in the daily press, could be converted into deed and act, we'd have so much good news to tell there'd be no room for bad."

That sounds just right for one who has been, for near twenty years, a reader of the National Printer-Journalist, and we are proud of him as a faithful student and friend.

Cadillac, Mich., March 24, 1909.

Dear Sir:—I wish to thank you for your favorable criticism of my ads, and wish to say that the benefit I get out of your paper every month alone is worth many times the price of a year's subscription. L. Currey.

THE AD MEN IN SESSION

JOINT CONVENTIONS PROPOSED—"THE BEST ADVERTISING."

NEWSPAPER-making is so broad in its scope that within its all-embracing work, separate professions have developed. Advertising is a bi-product of the newspaper, yet it has become more profitable, in most cases, to the business, than is the direct product itself and involves or requires, in its development and handling, separate and special training and ability. Advertising has come to be studied and taught as a profession and the ad men have wisely formed separate organizations and hold conventions that are becoming as important, educative and promotive as have been the organizations of publishers and editors. It would be most useful, if these ad men would meet at the same time and places as do the publishers and editors and hold joint sessions at certain hours that would be convenient to both organizations. Why could not the Associated Advertising Clubs of America meet at Seattle, July 19 to 25, at the same time of the convention of the National Editorial Association and carry out some such plan? Arrangments could, doubtless, be made for the members of both organizations to join in the plans for journeying to and from that city and in all the excursions and entertainments. It would result in great good to get all the newspaper workers together for mutual conference. A great deal of the benefit at these annual gatherings results from the conferring together and the interchange of views, in friendly conversation, outside of the convention halls. A wise man said, many centuries ago: "Iron sharpeneth iron; so a man sharpeneth the countenance of a friend." These ad men could sharpen the wits of publishers for the mutual benefit of both and to the great advantage of the business. On February 23rd, the Southwestern Division of the Associated Clubs in America met at St. Joseph, Mo., and the *News-Press* says: "The St. Joseph Ad Club did the best advertising of its career yesterday, entertaining delegates and visitors to the first annual convention." So it is evident that the place visited would share in the benefits of the joint visit of the ad men and the editors.

The Topeka *State Journal* gives the following outline of the proceedings and entertainments at the St. Joseph Convention:

The Topeka delegation which visited St. Joseph yesterday came home today captivated by the hospitality and courtesies of the St. Joseph Ad Club and the people generally.

The occasion was the first annual convention of the southwestern division of the Associated Advertising Clubs of America. The local papers referred to it as one of the great events of the year.

The business meeting was held in the lodge room of the beautiful new Elks building, while the headquarters and the banquet were at the Robidoux, the lately finished new nine story hotel, said to be the finest between the Mississippi and the Pacific coast. The states in the division are Missouri, Kansas Nebraska, Oklahoma, Texas and Colorado.

A. E. Hutchings of Kansas City, president of the division,, presided over the meetings.

Dallas, Texas, was selected as the meeting place for the next annual convention in February, 1910.

Frank P. MacLennan of Topeka was chosen president by acclamation for the ensuing year, just as he had been selected by the Topeka delegates to nominate for the office another man. The Topeka delegation was anxious for the election of J. B. O'Brien, president of the St. Joe Ad club, but fate decreed otherwise. Topeka was also accorded the secretary Mr. J. L. Vincent of the *Mail* and *Breeze.*

The Topeka delegates were Charles P. Adams, president of the Topeka Ad Club; H. A. Heath, secretary; F. S. Savage, advertising manager Santa Fe company; L. P. Booth, Missouri Valley *Farmer;* W. B. Flowers, Topeka *Capital;* W. R. Gilmore, Topeka *Capital;* Frank P. MacLennan, Topeka State *Journal;* E. W. Rankin, Kansas *Farmer.*

The banquet room of the hotel was filled with a merry crowd. The entire menu "from soup to nuts" was made up of St. Joseph products.

BANQUET AT THE ROBIDOUX.

The toastmaster said in a neat speech: "The St. Joe club is proud of its own success, and that the next meeting will be Dallas, Texas, while the presidency goes to Topeka."

The banquet program follows:

Toastmaster—J. B. O'Brien, president St. Joseph Ad Club.

"The Best Advertising" .....Frank P. MacLennan, Topeka State *Journal.*

Ad Club Quartet .....Harrison, Hahn, Miller and Raidt.

"The Modern Advertiser" .....Charles Morris of the St. Joseph *Gazette.*

Baritone Solo, Selected .....Frank Lawlor

"Sidelights on the National Convention" Mayor A. P. Clayton.

"All Men Are Advertisers" .....Ewing Herbert of the Hiawatha *World.*

A. E. Hutchings of Kansas City, president of Southwestern division.

Ad Club Quartet, Auld Lang Syne

THE SPEECHES.

The eloquent speeches of the evening were those delivered by Lafayette Young of the Des Moines *Capital,* Ewing Herof the Hiawatha *World,* and Charles Morris of the St. Joseph *Gazette.*

Ewing Herbert is a great favorite with the St. Joseph people and all listened intently and applauded loudly throughout his speech, highly complimentary to St. Joseph, yet sprinkled profusely with the praises of Kansas.

Lafe Young, the silver tongued orator of Iowa brought cheers from his audience. After discussing advertising matters he closed with a dramatic description of the great success of the commission form of government in Des Moines.

Charles Morris of the *Gazette,* a spellbinder well known in Missouri and portions of Kansas, spoke with much entertainment and instruction upon modern advertising.

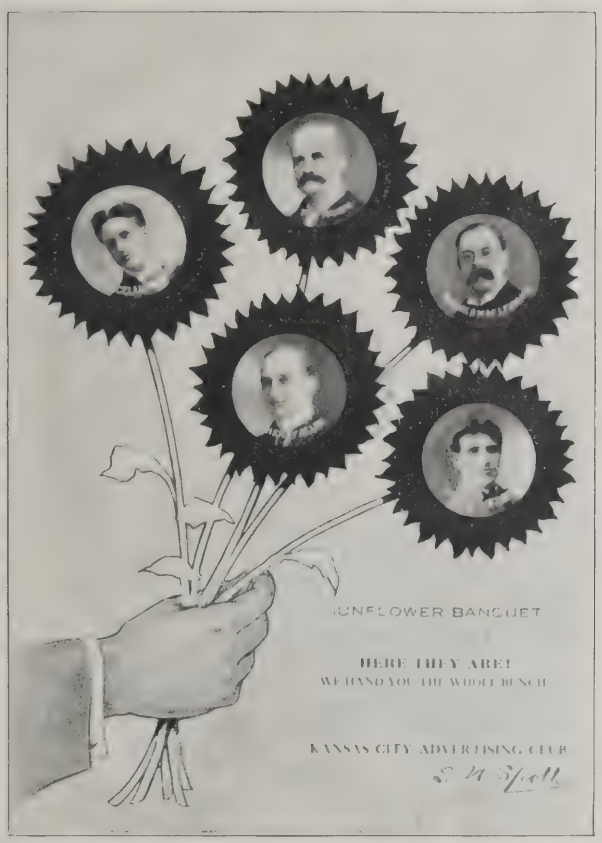
A. E. Hutchings, the retiring president, a great favorite, was exceedingly happy in his talk.

Mayor A. P. Clayton, one of the brilliant after-dinner speakers of the west, and mayor of St. Joseph, in his inimitable manner, with his lively wit earned the ovation as the representative of hospitable St. Joseph.

Mr. MacLennan, who was introduced as the newly elected president, gave a number of reminiscences of his experiences

and aquaintances in St. Joseph during the past twenty- five years, adding:

"While we cannot carry away with us your fine Convention hall or your magnificent hotel, we can carry away with us, without robbing you, that which is greater than either of them, because it created them both: the spirit of the energy, of the enterprise and of the enthusiasm of greater St. Joseph," closing with; "It has always seemed to me that the word 'advertising' was an especially fitting and appropriate one for the thing which it designates. In analyzing the word, you are reminded of the fact that its derivation is from the Latin



word 'ad' meaning to or toward, 'vertere' meaning, 'to turn.' In other words advertising means, a turning to-ward.

"Then the best advertising must be that which turns toward the best things.

"The best advertising may be an editorial, it may be the tone of a news article, or it may be the spirit of a report, or it may be the expression in one form or another of just such hospitality and kindness as that being shown today in St. Joseph toward the representatives of her sister cities who have come here upon your kind invitation.

"The best advertising is that which advertises, that is, turns toward the right; right thoughts and right living; that which turns toward charity, toward courtesy, toward promise, toward progress, and that which turns us to high purposes, to high resolves, to all the good things of this life and of the life to come, is truly, 'the best advertising.' "

THE NEWLY ELECTED OFFICERS.

The following are the newly elected officers:

President—Frank P. MacLennan of Topeka.
First vice president—George W. Baker of Dallas.
Second vice president—S. N. Spotts of Kansas City.
Secretary—J. L. Vincent of Topeka.
Treasurer—Jesse Schwartz of St. Joseph.

Directors—R. E. Bassett of St. Joseph, A. E. Hutchings of Kansas City, Charles Hutchings of Oklahoma City, Thomas P. Thornton of Dallas and J. W. Booth of St. Louis.

ITEMS OF INTEREST

C. A. Leicht of New Lisbon, Wis., has sold the Marathon *Times,* which he founded two months ago, to B. E. H. Manning of Ashland.

W. T. Ireland, formerly publisher of the Gilman, Ill., *Signal,* and later a clerk at Washington under appointment of Uncle Joe Cannon, has returned to Onarga, Ill., to fill a long-felt want, the starting of a new paper.

The body of Guy Seeley of Redbud, Ill., publisher of the *Pilgrim,* was found in the Okaw River, after a two days' search. He went duck hunting, fell from his boat, but caught his feet in a rope and was unable to extricate himself.

There is talk of another newspaper in Beloit, Wis. It is to be a morning paper and will be deoted to the saloon interests, and it is said that it will be a modern, up-to-date periodical and will be launched in time to deal heavy blows in the fight that is to be made for the saloon in that city within the coming four weeks.

At Marinette, Wis., A. E. Schwittay, the suspended district attorney, has secured $680 in subscriptions to start a newspaper to "print news fearlessly" and to defend him from the charges. He says it will be issued as a weekly first and daily later. The first issue is scheduled for Thursday, March 25. It will be called the *Compass.*

Roy R. Robinson, city editor of the Oskaloosa *Herald,* and Miss Sadie Dugan, also of Oskaloosa, came to Des Moines and were married last week by the Rev. Thomas Cassady of St. Mark's Episcopal Church. Mr. Robinson is the son of Ralph Robinson, the veteran editor of the Newton *Journal.* The bride is a popular young woman of Oskaloosa. Their wedding is a surprise, as they let no one know of the plans they had made.

At Milwaukee, plans are being prepared for the Social Democrat Publishing Company for the erection of a large up-to-date office building at Sixth and Chestnut Sts. The site has been purchased by the company. The building is to be three stories high. The basement and the first floor will be used by the company's printing plant, while the second floor will be used for offices and the headquarters of the Social Democrat party. The third floor will be used for halls.

Building Trades, a Chicago weekly newspaper of which Martin B. (Skinny) Madden is managing editor and publisher, has suspended publication. The paper will not be resurrected until the present crusade against labor "grafters" has blown over. It is said the collapse was caused by the failure of contractors to advertise, their council having legislated against the paper. W. W. Clark was the first editor of the organ, which was supposed to be strictly nonpartisan. Clark was succeeded recently by Paul Maas.

"RECEIVED MUCH BENEFIT."

LAWRENEVILLE, PA., March 18, 1909.

National Printer-Journalist, Chicago, Ill.

DEAR SIRS:—Please find enclosed check for $3.00 for which please give me credit. I like the paper very much and have received much benefit from it, especially the department relating to job printing.

Yours truly, M. J. BERNAUER.

IMPORTANT DISCUSSIONS

COMPOSED of the editors and publishers of the most successful "Inland Dailies" of the Middle West,—the Inland Daily Press Association ranks very high. The last annual convention was no exception, in the excellence of papers presented and discussions had, to the conventions that have been held for the past twenty years. We gave the program and one of the papers in our March issue. We here reprint the report sent out in printed sheets to each member, by the efficient Secretary, Mr. Wil V. Tufford, of Clinton, Iowa:

The Secretary-Treasurer made a detailed report for the year just closing.

The report showed a membership divided in the different states as follows: Illinois, 33; Iowa, 22, Michigan, 18; Wisconsin, 11; Indiana, 7; Kentucky, 3; Minnesota, 2; and four honorary members, with four strong papers as the gain of the year, and no losses.

The secretary called attention to the fact that Mr. Curtis, the retiring President of the association, had left the daily field and was now publishing a weekly at St. James, Minn., and thought it would be a courteous act to elect him to honorary membership, for the services he had given the association as president two years and in executive committee work. Mr. Sherman moved that Will Curtis be elected an honorary member. Several seconds were made and the vote resulted unanimously.

"THE MAKEUP OF THE PAPER"

Was called up, and was opened by Fred W. Sherman of the Port Huron *Times,* followed by F. D. Throop of the Muscatine *Journal,* and a long and interesting discussion of this important part of making a newspaper.

M. Sherman said the makeup of a paper reflects the personality of the editor or business manager.

Of the first section, "(a) Heading," We have the Hearst kind of papers with the big heads, and the Chicago *Tribune* kind with seldom more than a modest single head, each representing the extreme in its direction, with each of these papers money makers.

For himself he did not believe in big lines, except for sensational news. He runs a heading of the paper on ecah page and on the last page a large heading across the top of the page, for advertising value when paper is read in street cars, etc. He makes a different style news heading on inside pages from those on first page, yet he puts one or two important local news items on first page with telegraph news.

"(b) Classification." He thought the relation of advertising to the reading matter should come first into consideration, and he would discuss the question from the view point of towns of 20,000 to 40,000; with an eight page paper, seven columns, thirteen em measure as the basis. He thought the page should be about half ads and half reading. "We endeavor to make up our paper that way, he said. We increase our paper sometimes to ten pages, when the advertising seems to warrant, but will not rnu twelve pages unless we see about 45 columns of advertising in sight."

"He believed in classification of news. He makes a feature of social and woman's news, and groups it; has a strong railway and marine department and groups each; a live market page and a state news department, each being grouped, but he does not classify advertising, excepting want ads.

Mr. Lowrie asked if his makeup was in the hands of the foreman or not?

Mr. Sherman replied that the managing editor personally looked after the makeup of the first page, he himself did the editorial page, the advertising manager looked after the arrangement of the ads, if there were any special contracts, the foreman having general instructions regarding the general arrangement of the paper, excepting as noted. Mr. Sherman used a copy of his attractive paper to illustrate the points made, which were favorably commented upon.

The discussion was led by F. W. Throop, of the Muscatine *Journal.*

This paper was published in full in the March issue of this journal.

The paper was especially well received, and much instructive discussion followed on this subject.

Mr. Moore called attention to featuring news of ten and twenty years ago, which was found to be quite popular, generally, at the present time.

Scott Laird of the Winona *Republican-Herald,* said he was making an especially strong feature of his editorial page and thought it was popular. He would allow no advertising on the page and featured special articles there following the editorial, state comment, etc.

Mr. Adler, of the Davenport*Times,* made the announcement that his foreman on the *Times* takes care of all the contracts they have, he explaining the system of sending check cards and copy to him from the business office and the foreman doing the rest, with a desk and series of pigeon holes, standing galleys, etc., with the result that Mr. Adler thought he lost but little if any more than ten dollars a year, because of wrong or missed insertions. He said his foreman came down to the office every Sunday morning and went over all the copy for the coming week, cutting it for the machines as time copy, etc., and then through the week it was but a small matter of handling the type and cuts.

He said the syudicate Ottumwa and Muscatine papers handled the copy from the business office direct. His foreman handles all the home advertising, assisted by the business manager, making dummies only in case of an especialy large paper.

Mr. Moore asked him how he got his list of prospective advertisers to solicit from for the syndicate, Mr. Adler replying that he belonged to an association that furnished a weekly bulletin of prospective advertisers and in addition his New York and Chicago agents were supposed to be hustling all the time to create new business, as his local solicitors were, or to get that which was created, keeping in touch all of the time with prospective advertisers.

Replying to a question he said his bookkeeper checked each day's business from the paper.

Mr. Whittaker asked how many used adding machines for making out bills, saying he had used one for some time with splendid results, which brought out quite a discussion as to the merits of different machines, all having them admitting that any machine was better than no machine, one having a machine constructed with different fractions in one column, for advertising work only.

The discussion following Mr. Adler's subject drifted into the manner of keeping advertising accounts, Mr. Whittaker giving at length a description of his card system.

Mr. Lowrie said he recognized the value of the card system, but wondered if a bookkeeper and a ledger would not be better.

SYMPOSIUM ON WANT ADS.

This interesting subject, of the management of the modern daily newspaper of whatever grade, was opened by Mr. Groom of the Aurora *Beacon,* a paper that has made a decided success of the classified page.

He said it was not a part of his duties to take care of that part of the paper, that the *Beacon* has a young man who did nothing else, and he had developed into a past-master in the art of getting want ad business. He said his man had been a reporter but had been assigned to this stunt to keep him busy and his education to get scoops in the local work had been carried into the want ad page work and he was doing the work very successfully to a rgeatly increased volume of business. He used keyed locals, sometimes decoy locals, and kept the whole town talking about the want ad page of the *Beacon.* He had advertised a lodge pin that had been in the office a long time unclaimed, and had advertised it again and again, in some new manner, many calling to see if it was their pin, only to find that it was not, and this he had featured when he had no other sensation to spring in the page. He said the young man had the ability to magnify small things to much greatness, quality, apparently necessary in the want ad business. The young man is named "Bug," he said, by his associates, because he goes bug on everything he attempts to do, and that is why he was assigned to the page in question, when the start was made to boom it.

He gets adevrtising away from home by advertising for it; takes no want ad at any price from elsewhere if the cash does not accompany the copy. He goes after business personally, writes personal letters, and does everything he can think of, or anybody else can, to cultivate the business with.

The price charged is three lines 25c, cash with order. If cash does not accompany the copy from home advertisers, or get into office the day of publication, the price is 35c for the same local. That makes it cash business, he said.

He thought want ad builders were born, not made. He believed any town was a good ad town if properly cultivated. Pays his man $15 a week.

Mr. Lowrie said it was unfortunate for Aurora that it was in the same county with Elgin, or it would doubtless grow to greater proportions, but in want ads they certainly had Elgin beaten, and he was much interested in learning how it was done. He said his paper did not use any decoy locals, but had some methods that were successful which, Mr. McKenzie, his associate, who was present, would explain.

Mr. McKenzie arose and spoke very instructively at some length on the subject, from his viewpoint, saying they made a feature of "Too Late to Classify," charge 25c for two nights, 50c for six. He has a scheme of $13 a year for a local to run every day, and had cultivated that business by giving a premium on practically twice the basis, a contract of $26, which included the same $13 a year want adv and 130 lines of regular readers at the regular price of ten cents a line. He explained the scheme in detail. He said their want ad business ran some five or six columns a day. They solicited for it about town.

Wr. Whittaker says he charges a cent a word, 10c a line; takes contract to run some time on a low basis to get them started and tries to cultivate a steady advertiser out of the new prospect. He still carries his market basket column with good results.

Just before adjourning, Mr. Glessner announced that the Press Club would be in the new and handsome quarters, 118 Dearborn St., by May 1st, when they would be glad to put a splendid room at the disposal of the Inland for the June meeting.

OFFICERS.

The nominating committee reported on reconvening after luncheon recess, the following for officers for the ensuing year, Mr. Adler, secretary of the committee, reporting:

President—Frank D. Throop, *Journal,* Muscatine, Iowa.

Secretary-Treasurer—Wil V. Tufford, Clinton Iowa.

Vice-Presidents—Willis E. Beal, Laporte, Ind.; F. W. Harris, Macomb, Ill.; John C. Wise, Jr., Mankato, Minn.; Sam J. Roberts Lexington, Ky.; A. L. Waffle, Fond du Lac Wis.; E. W. Moore, Benton Harbor, Mich.; H. E. Oates, Clinton, Iowa.

Executive Committee—F. W. Sherman, Chairman, Port Huron, Mich.; David Brandt, Iowa City, Iowa; Chas. S. Robb, Michigan City, Ind.; Scott Laird, Winona, Minn.; W. Q. Adams, Owensboro, Ky.; F. S. Dodd, Decatur, Ill.; E. A. Tostevin, Racine, Wis.

Mr. Glessner moved that Mr. Adler be instructed to cast the entire vote of the association for the nominees above, which motion prevailed and he casting the vote they were declared elected.

Mr. Glessner then spoke of the delegates to the N. E. A., and said that the association last year had provided that each member of the Inland present would be a delegate, Mr. Glessner urging that all who could, attend.

He spoke at length of the beauties of the trip to Seattle, and side trips to Yellowstone, to Alaska, etc., intimating that the expense of the trip to Seattle would be about $60 and to Alaska additional of $60. The dates fixed are July 15 to August 15, but transportation could be extended.

W. F. Parrott, of Waterloo, the secretary of the National, seconded Mr. Glessner's invitation and remarks, adding much information to them,

ADJUSTING FIRE LOSSES.

Insurance adjustments after a fire, was the next section of the Symposium taken up, Mr. Oates being called upon to relate his experience. He said the *Herald,* when the fire occurred, somewhat anticipated the troubles of adjustment, and prepared for them before the adjusters got on the ground, relating some of the difficulties they had to contend with, but intimating that they had been generously settled with. He said the rule seemed to be that after the amount of loss was settled upon then depreciation of stock was fought over.

How much do you charge off on inventory for depreciation, was asked, in a general way, and this, with fire loss, was discussed at length.

Mr. Adler said he did not charge off anything. He charged repairs, etc., and additions to equipment to general expense, and intended to keep up the valuation of the plant in this way equal, to wear and tear, and then if he should have a fire there would be no such entry on the inventory to hold up to him for depreciation.

Mr. Brant spoke of general insurance laws governing such property as printing material, and after considerable study and advice from authorities, had printed a blanket policy on everything but stock, and then had told insurance companies they could insure his plant that way or leave it alone, and they had taken the risk, after they had haggled over it awhile. He has a separate policy for stock.

SPECIAL FEATURES.

Mr. Laird spoke on special features saying the A. P. was considering the matter of taking up the sporting report for afternoon members, at the next meeting, but that the morning members were opposing it as they claimed it for their special class.

Mr. Sherman said that Detroit evening papers had gotten out sporting editions, but this year had cut that out, giving a page of the regular edition to the sports of the nation.

Mr. Glessner spoke of a city paper with an aggressive policy that was making a special feature of short sketches of prominent men on their birthdays, and said it was taking splendidly.

Mr. Whittaker said he had asked through the paper for some time for the names of men who had voted for Lincoln and had worked out Mr. Glessner's suggestion in that way splendidly.

Mr. Brant told how he had gotten hold of building improvements, by sending to country school teachers asking for assistance from their schoods, reports being made of buildings, this way on blanks he had furnished, and had thus featured country improvements in a special edition.

CHAIRMAN OF THE N. E. A. DELEGATION.

Mr. Glessner offered a resolution that Mr. A. H. Lowrie be chosen as the chairman of the Inland delegation to the National association meeting. Mr. Whittaker seconded the resolution, which was adopted unanimously.

Mr. Sherman introduced the following resolution, which, under the rules lays over until the June meeting, to be acted upon:

"Resolved, that the time of the annual meeting shall be changed to the third Tuesday of March each year, and by-laws be amended and changed accordinly, so that Section 1, Article III, Meetings, shall read:

"Section 1. The annual meeting will be held on the third Tuesday of March, in each year, and stated regular meetings on the third Tuesdays of June and October, provided the president, if he deem best, may call either meeting on some other day of the month named."

There was immediately discussion of the resolution, the majority of opinion seeming to be against a change, after the date had been fixed so many years, Mr. Sherman's support of the idea being that there might be less chance of a blizzard in March than in February, and thus make it possible for more to attend.

Mr. Sherman spoke of the Hayes bill, that proposed to legalise the trading of advertising space for railway transportation, when several immediately spoke against it, saying they much preferred the present cash basis, even if they did not get enough to pay for all the transportation they wanted to use.

Mr. Goldthwaite came to the support of the idea of the bill by saying it was all right to have a cash basis with home roads, and much preferrable, but if he wanted to take a ride in the south on a road that would not think of paying cash for advertising with his paper in the north, he wanted the privilege of trading with them.

Mr. Groom said his paper got $300 cash for advertising the railways in his town, and spent a thousand dollars with the roads for transportation. If there could be a trade proposition his paper would be $700 to the good.

It was finally apparently mutually agreed that each should write to his own congressman expressing his views as he saw the matter.

THANKS HOTEL.

Mr. Herbert, who has a happy faculty of getting up to say something about the National Editorial Association whenever opportunity offers, arose and stated that he would like to have a strong delegation back Mr. Lowrie as chairman of delegates to the coming summer jaunt and meeting, when someone laughingly reminded him that the whole association had just been selected as delegates.

He read the very interesting program for the meeting and added to what Mr. Glessner and Mr. Parrott had previously said about the side trips, etc., that went with the tour.

Mr. Lowrie moved that a vote of thanks be given the management of the Hotel Stratford, by standing, showing the appreciation of the Inland for the courtesies extended so graciously. The motion carried unanimously.

Mr. Lowrie moved the meeting adjourn, which prevailed.

WIL. V. TUFFORD,
Secretary and Treasurer.

In our advertising pages the question is asked, "Who is Wesel?" We are, of course, not responsible for what our advertisers ask in their advertisements, so long as the inquiry is respectful, but in this case it is only fair to state the question referred to is quite uncalled for. Everyone who is anybody in printing can answer that question. We have seen Wesel grow in twenty-eight years from a one-man-and-a-boy shop to the present establishment in Brooklyn, one of the greatest in the world. It is the one concern that comes closest to having everything for the newspaper printer and the advanced general printing establishments—everything for the composing room, stereeotyping, photo-engraving, electrotyping, and for the Linotype room, and everything of superior quality.

* * *

We have had occasion, heretofore, to call attention to the taste and artistic spirit manifested by the Challenge Machinery Company, of Grand Haven, Mich., in the printed matter sent out, advertising the company's machinery and other manufactures. The high quality of the printing makes strong impression that the things made and advertised are of like character. A folding, sixteen-page leaflet, with the cover title of the "Challenge Gordon Job Presses" is the latest specimen to reach this office, and is of the Challenge standard—simple, substantial, clear, rich, convincing and convenient. The inner pages are of machine finished paper, 6x8¼ inches, with a first page insert of enamaled stock on which is shown a Challenge Gordon press in a very perfect, vignetted halftone. The cover is of linen finished paper of high grade, the first leaf being 3⅜ inches in width, so as to form a flap over the rest of the leaflet, when it is folded over, so as to make the size 3½x8¼ inches—very neat in appearance and convenient for mailing and for filing. The color of the stock throughout is light buff. The print of the body is black with marginal headings in red. On the second, or back of title page, are the words, "Our motto," in red, and "Quality First," in black. The subject matter is treated under the general headings: "General Construction;" "Exclusive Quality:" "Features;" "The Building of a Press," and, of course, these are thoroughly covered under the catchy and informing side headings in red, that are balanced by paragraph marks also in red, at the beginning of each paragraph. Testimonials follow under the heading of "A Few Opinions," and these contain strong and enthusiastic endorsements of the Challenge Gordon presses of different sizes and their "Exclusive Quality Features." The closing page is devoted to the enumeration of the Challenge presses and manufactures of printing machinery and devices for the printer, with the announcement that an illustrated catalogue of "Challenge Creations" will be sent on application.

* * *

Looking through the new "Stock Cut Catalogue," just issued by Barnhart Brothers & Spinder, of Chicago, impresses one with the almost innumerable interests, industries and branches of business served by the modern printer. Nothing that touches human activities or employments in the whole range of effort is foreign to the conductor of the establishment devoted to the art, so frequently and aptly denominated, "preservative of all arts." It is the servitor of all trades, callings, active benevolences, church, social, political, civic, and financial organizations. In this great catalogue of two hundred large quarto pages, are enumerated oer twelve thousand cuts and designs, half of them new and many so because of new developments in the trades, in business occupations, in social, civic, religious or other organizations and advances in knowledge of the sciences and social orders. Opening the book, one finds first, three pages of Masonic emblems, showing eighty-seven different designs; then Odd Fellows, and Knights of Pythias, with thirty designs each; then the emblems of Elks and Foresters, Ancient Order of United Workmen, Woodmen, Fraternal Order of Eagles, Epworth League, Christian Endeavor, Red Men, Maccabees, American Mechanics, Hibernians, Grand Army, and so on, in a miscellaneous collection followed by State Seals. The number of orders in the United States is a growing wonder and, yet, we think there ought to be one more to embrace all others, an open order of the Citizen Industrial Knights of Christian America, with subordinate orders of Cadets, Ladies and Maids. We are going to form such an order some day and have the emblems shown in some future book of this great Type Foundry.

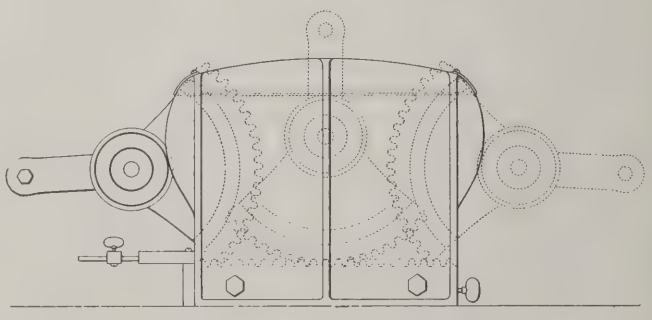
Following the showing the emblems are commercial logotypes and check blanks and such subjects as the following are amply covered: Agricultural products, implements and scenes; animals, auction, automobiles, balloons, barbers, baseball, bicycles, birds, election cuts, fish, flowers, locomotives, mortised designs, musical instruments, painters, photographers, policemen, restaurants, rural routes, Santa Claus, soldiers, stars, tally-ho, telephones, trees, Uncle Sam, wagons, etc.

The edition is a limited one, and those wishing this valuable collection should apply early, enclosing fifteen cents for postage, to Barnhart Bros. & Spindler, Type Founders, 183-187 Monroe St., Chicago, Ill.

* * *

A NEW PRINCIPLE IN PRESSES.

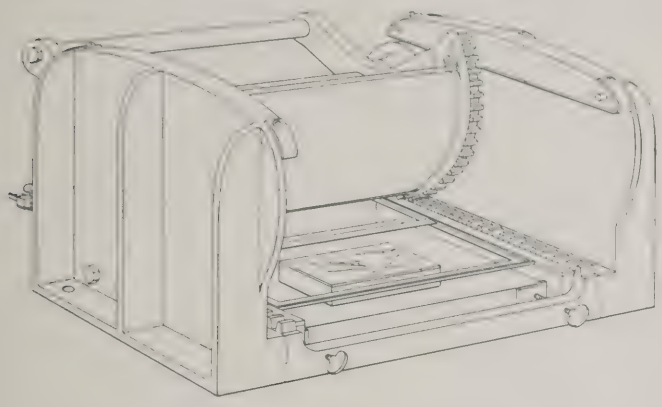
Mr. R. O. Vandercook, for many years a printer and a newspaper publisher of Evanston, Ill., has invented a device in printing presses which he has applied to the perfection of a new, light, serviceable and practical proof press, that has the advantages of simplicity and the securing an absolutely even, strong and perfect impression. We had the pleasure of examning a couple of the machines, of different sizes, under the direction of the inventor, and were impressed with the simplicity of the operation ond the convenience of the



device, and the small space required for its operation, making it practical to place the same right at the end of an imposing stone and to take perfect proofs without locking forms. Mr. Vandercook, in demonstration, set up a single letter on the bed and took a perfect impression or proof without the least difficulty. It will be a very convenient machine for engravers. Ways which face downward and which are part of the solid castings of the sides, prevent the possibility of any spring or side movement, so that the impression must be even and direct.

The accompanying illustrations give a good idea as to the working of the press of which the *Inland Printer* gave, in its March issue, the following description:

It is constructed on the "rocker" principle, by which it is impossible for the rocker to pull away or dip into its work. The bed is a heavy solid casting, with type-high iron beares and gear rack. The operation of the rocker (or platen) in taking an impression is shown in Fig 2. The wheels on the rocker travel in exact parallel with the type-high bearers below, over the entire printing surface. The impression is taken with the initial position of the rocker being on either side of the press. The rocker advances far enough on the



extension of the racks and gears to clear the bed sufficiently for inking and preparing for the next impression. The rocker is made to carry a regular cylinder press tympan three-sixteenths of an inch thick. The tympan is held in position by clamps similar to those used on Gordon presses.

The position of the form, which is to be proved, is shown in Fig. 1. The stock to be printed is placed above the form on a depressible frisket, which holds the stock away from the form until the moment of taking the impression. The frisket is made with a very simple but effective device for printing to register. The frisket is pushed quickly out of the way to clear for inking, and then bac kagain in register for the next sheet.

Because the rocker can not pull away from or dip into the work, it is possible to print a single hair-line letter or a half-tone with the same number of tympan sheets.

The construction of the machine shows that the pressure is bound to be absolutely uniform all over the printing surface.

* * *

In the advertisement of the *Boston Wire Stitcher,* on another page, there is a strong exemplification of the exceptional adaptability of American Type Founders Company's Clearface Bold and Clearface Bold Italic Types, for clean and legible business-getting publicity purposes.

* * *

News has reached this office during the last month of a most gratifying and healthful revival of business, in which the East, the Central West and the Great Northwest are especially favored. It is evidently not confined to any section, however, as the firm of Barnhart Bros. & Spindleer, type founders, who cover the whole United States with their central house and numerous branches, report not only a remarkable increase of business at the home office in Chicago, but that all of their branches and connections report similar activity. The sales of Barnhart Bros. & Spindler, for the month of February, 1909, were larger than for any preceding February during the forty years that they have been in business. The notable feature is the very large proportion of type that is called for in the orders received.

It appears, from their experience and observation, that the printers are not buying heavily, but are generally buying; that they are not, as a rule, buying large and expensive machinery, but are generally improving the equipments of their plants. With an experience of four decades back of them, this firm of practical business men, declare that, in their view, the outlook for the printers is becoming especially bright and cheering.

If the readers of the National Printer-Journalist will study the pages of this issue, they will find that one reason for the more cheerful outlook is found in the more intelligent, business-like methods that are being enforced and practiced.

* * *

Chicago, Ill., March 15, 1909.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—We wish to advise you that on and after May 1st, we will be located at 167 Adams St., between Fifth Ave. and La Salle St., and will be the only Artists, Engravers and Electrotypers within the loop. Increase of business has compelled us to take more floor space. At our new location we will occupy the entire 5th and 6th floors. All machinery will be run by individual motors and with the installation of all modern improvements and a lot of new machinery, we will be able to give our patrons better service and quality than ever before. Respectfully yours,

Juergens Bros. Co.,
Per H. Mawicke,
Vice-President.

A NEW ZEALAND PUBLISHER GETS INFORMATION AND INSPIRATION FROM N. P.-J.

Invercargill, N. Z., Feb. 6, 1909.

To Mr. Herbert, Chicago, U. S. A.

Dear Sir:—I obtain the National Printer-Journalist through a local bookseller, and derive a lot of information as well as inspiration from it. I am much interested in the Newspaper Criticisms you publish, and shall esteem it a great favor if you can send me say half a dozen copies of what you consider good examples of weekly or daily papers—any of those you receive for notice would do. If I can reciprocate with N. Z. papers will be glad to do so.

Yours truly, John Ward.

"DO NOT WANT TO MISS A COPY."

Belleville, Kansas, March 20 ,1909.

National Printer-Journalist, Chicago, Ill.

Gentlemen:—I hand you herewith check for two dollars, for which please renew my National Printer-Journalist for another year. Have been a student of this excellent publication for many years and do not want to miss a copy. Yours truly,

A. Q. Miller.

"NONE MORE INTERESTING."

Office of the Lebanon Journal.

Lebanon, Ill., March 20, 1909.

Dear Brother Herbert:—

It is a pleasure to forward you $2.00 for the National Printer-Journalst from March, 1909, to March, 1910. I read all the popular magazines, but I find none more interesting to me than the one edited by yourself. Each number is like a letter from home. May your prosperity increase and your burdens grow less.

Sincerely yours, W. L. Jones.

R. L. Ware, Associate Editor of Col. O. G. Munson's paper, has bought the Needah, Wis., *Republican,* and takes possession April 1.

FORESTRY STATION IN WISCONSIN

WILL BENEFIT PAPER, LUMBER, TANNERY, FURNITURE FACTORY, AND OTHER INTERESTS.

Madison, Wis., March 8—The announcement of the decision of Secretary of Agriculture Wilson to locate the experimental laboratory station of the United States Forest service at the University of Wisconsin was received with great satisfaction by the university authorities and others interested. The practical value of the work of the laboratory to the lumber, paper, tannery and furniture interests of the state makes for the advantages which will accrue to the institution through the opportunity which will be given students and instructors in research and institutional work in forestry.

In accordance with the offer of the regents, a building constructed from the plans of the Forest Service will be erected at the earliest possible date at a point on the university campus convenient to the colleges of agriculture and engineering and with adequate side-track facilities for handling the materials to be tested.

The proposal made by the Forest Service is to equip the laboratory at a cost of $14,000 and to provide the entire staff of investigators, whose salaries will aggregate $28,000 a year.

It is proposed to concentrate all experimental work, in the mountains, at the station here.

The work of the laboratory is to include tests of various kinds of wood for the manufacture of pulp for paper, for their strength for building material, as well as for various other purposes. Wood distillation to determine the best methods of securing turpentine, alcohol and resin from wood waste is also to be carried on on a large scale.

THE ADVERTISING UPLIFT.

"The advertising uplift of today is shown in the higher standards of advertising. The merchant knows that he must have the goods back of his announcements; that he must make good, in merchandise, what he has said on paper and that the purchaser must have his money back if he wants it.

"The advertising uplift is shown in the newspapers by the fact that liquor advertising is so widely barred from newspaper columns in prohibition states; that disreputable announcements are more generally suppressed; that racing advertising is tabooed, and that the swindler fails of publicity in respectable columns.

"The Kansas newspapers and the Kansas City newspapers as well., I think, are always glad to recall that as the word advertise means 'turning toward' they are ready to realize that the best advertising means turning toward the right—to right things, to right thoughts, to right living, and believe that the best advertising is that which exemplifies the advertising uplift, that which turns our readers to higher purposes, to higher resolves, to the best things in this life and in the life to some.

"It has been said that the greatest thing in the world is love. All of us know that one of the greatest things in this world is good advertising. Now with the love of good advertising, behold the happy combination, the advertising uplift. The happiest man is he who gives happiness to others. This is a natural law that cannot be violated."—FRANK P. MACLENNAN of Topeka *State Journal,* at Banquet of Kansas City Ad. Club.

Recently a receiver was appointed for the ChicagoChronicle Co., on account of large judgements given in favor of John R. Walsh. These have since been attacked in court by another stockholder, Mrs. Celia Russell, who alleges collusion.

The St. Joseph, Mo., *Star* published by F. W. Kellogg, has suspened publication. Kellogg announces that the plant will be dismantled and withdrawn fro St. Joseph, where it has been published three years as an afternoon penny daily.

Editors and publishers from the southern part of the state, forming the Southern Iowa Editorial association, met in Des Moines, this week.

Charlevoix county, Michigan, now has a daily paper. *The Boyne City Evening Journal.* It is managed by C. E. Ramsey.

A reception for all former presidents of the Milwaukee Press club will be held on the night of April 17. All of the nineten former presidents with the exception of George H. Yenowine are living. Twelve of them are now residents of Milwaukee. Several of those who now reside in other cities are expected to attend.

The Chicago Polish Daily, *Dzuennik Narodowy,* has passed into the control of Michael Kruczka and Martin S. Cyborowski of Kuryer Publishing Company, Milwaukee. These gentlemen, with Joseph J. Komorowski of Chicago, have been elected directors of the Chicago paper, and Mr. Kruska was elected manager. He will continue his residence in Milwaukee, directing the Chicago business from there.

The Fort Dodge, Iowa, *Republican* has been incorporated with a capital of $60,000. It will be a morning daily paper.

A LUSTY COLORADO BABY.

THE YOUNGEST GRANDSON OF W. E. PABOR, POET LAUREATE.

Hon. B. B. Herbert, Editor N. P.-J., Chicago, Ill.

DEAR SIR:—You, and perhaps some of your readers may remember that my youngest son, Frank G. Pabor was a delegate to the Guthrie meeting, and that he had with him his newly wedded wife, taking in the California trip as a wedding trip. Returning by way of Denver, they decided to

The Boulder Baby.

remain in Colorado and since then he has filled a responsible position on the *Evening Camera,* of Boulder.

The enclosed photo shows their first baby, born September 6, 1908, and my youngest grandson looks like a lusty little chap who will not need to come to Florida for his health, as I did.

Yours truly,

W. E. PABOR.

TO THE CRAFT.

We beg to announce that we have added to our line of paper handling machinery the Cross Continuous Feeders. Our exclusive selling agency covers all countries except the British Isles and Europe.

These machines will bear the same endorsement and guarantee as our own manufacture.

Our wide experience and knowledge of automatic paper handling machinery is at your disposal.

Appreciating your good will and patronage of the past, we trust to merit your continued approval.

Yours very truly,

DEXTER FOLDING COMPANY.

March 1, 1909.

"PLEASED WITH THE BOOK OF PROCEEDINGS."

RED WING PRINTING CO.,
Red Wing, Minn., March 3, 1909.

Hon. B. B. Herbert, Chicago, Ill...

MY DEAR MR. HERBERT:—Please accept my thanks for the copy of the Proceedings of the Annual Meeting of the National Editorial Association. I think the same exceedingly well gotten up and I don't see how you could improve upon it in any particular. That part which refers to Red Wing, and particularly the remarks with regard to the dedication of our new building, of course interests us the most. It will be a lasting memorial to an occasion which we are all proud to remember. I have distributed copies of the proceedings among the members of the entertainment committee, and they are appreciated very much by them.

With kind regards and good wishes, I remain,
Sincerely yours, JENS K. GRONDAHL.

APPRECIATED VISITS.

THE DOWS ADVOCATE,
Dows, Iowa, March 8, 1909.

The National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed, please find my check for $2.00 in appreciation of a dozen visits of one of my best friends.

With best wishes for the N. P. J. and its big family, I remain, Fraternally yours,
H. G. ZIMMERMAN.

TWO CIPHERS DROPPED.

By the dropping of ciphers last month from $28,000.00 and $14,000.00, Mr. C. M. Palmer was made to offer a paper that showed a net profit in 1908 of $9,000.00 for $2,800 with $1,400.00 cash. Mr. Palmer has some attractive newspaper bargains, but none quite as good as that. Proposition 446 should have been for twenty-eight thousand dollars with fourteen thousand dollars cash.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . . . .

NEWS—FIFTY WORDS GENERAL NEWS WIRED evening papers daily. $4.00 per month, you pay tolls. Also special and Chicago news. YARD'S NEWS BUREAU, 166 Washington, St., Chicago.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

EMPIRE LINOTYPE SCHOOL, 419 First Avenue, New York. Established 1906; $16,000 equipment; Technical School exclusively. Get our remarkable offer.

EDITORIAL WRITER, otherwise employed, would contribute to independent paper, regularly or as desired, at nominal price. Any amount; typewritten copy; always on time. Address, "G," care NATIONAL PRINTER-JOURNALIST.

WANTED—TWO-COLOR PRESS, TAKING SHEET not less than 42x56. A. F. Wanner & Co., Printing Machinery, 342 Dearborn St.

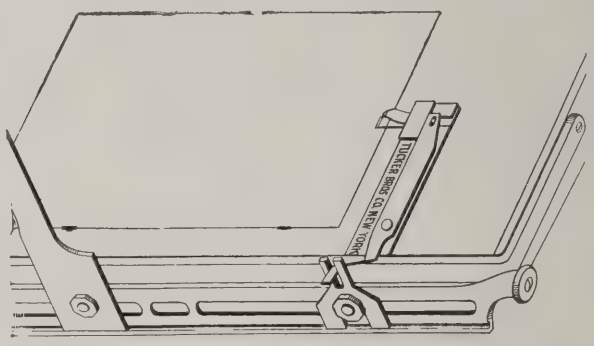
The Tucker Automatic Register Gauge

A Time and Paper Saver—You Cannot Afford to Do Without It



This is positively the only gauge used on platen presses that PULLS the sheets to a register. Every pressman knows that you cannot PUSH a thin sheet of paper to a register mechanically. This gauge does not push the sheet, as all others do; it does not matter how fast your press is run it does not "kick" a stiff sheet away from it, but, on the other hand, it pulls it to it and gets a register. If a sheet is placed within ⅜ of an inch of the gauge it will pull it to it.

It works independent of the grippers, and can be put on or taken off instantly.

Write your dealer.

The Babcock Optimus
The Babcock Optimus

The Optimus gives an extraordinary output. This itself increases profits, because of the proportionally reduced expense, without the often impossible increase of prices. An old press, or an inferior one, cannot give the best in satisfaction or the most in profits on the hard and exacting work now demanded everywhere.

We boast the ability of the Optimus on difficult work. It gives no bother in doing it. Just does what others claim to do. We offer seven of the most vaunted of these others, with their claims included, which we are just now replacing with Optimus machines for the better product and profits their owner required. They are not old; average use less than three years; one or two almost new; fine condition.

Other evidence of Optimus superiority in speed and quality is open to you. The best is a personal trial. We are not afraid. With much to gain, are you? The more difficult your work the greater Optimus excellence will appear. You will give it regularly the heaviest forms, the closest register, the shortest time; and always will you give it the expensive forms from which long runs are wanted. And you won't ask why after comparisons are made; nor are we asking what machines you are running now.

The Babcock Optimus

TYMPAN PAPER CABINET
Three Units and Base

STRIP LEAD & RULE CABINET

HAMILTON LABOR SAVERS

Two new low-priced additions to the line of modernized printing office furniture which should find a place in every office. **SAVE THE EXPENSE OF INSTALLATION IN THIRTY DAYS.**

Why do all the new additions to the line of modernized Printing Office Furniture come from the Hamilton shop? The answer is because the Hamilton Co. makes a study of the requirements, augmenting and perfecting the articles in this line. We do not follow a path blazed by others, or make a line of imitation furniture. That policy, pursued for a quarter of a century, has put us *alone in the field of printing office furniture.*

TYMPAN PAPER CABINET
The Jobber's Quick Make-Ready

A great time saver for the press room as well as a material economizer. A pressman without a Tympan Paper Cabinet will usually find his stock of tympan paper as required. He will search first for a suitable draw sheet and then for slip sheet material, all of which must be cut to size with much loss of time and waste of material. A fair estimate of the saving occasioned by the use of this Cabinet, properly filled with various grades of tympan paper, is one hour for each press.

Built in unit form to hold stock for standard size presses, 8 x 12, 10 x 15 and 14½ x 22. The lower shelf in each Unit holds draw sheets, while the three upper shelves in each Unit are smaller in size and hold various grades of slip sheets.

Units can be arranged in pyramid form, or single cabinets can be used separately in connection with each press. A separate base is supplied containing drawers for gauge pins.

Unit No. 1, for 8 x 12 press, list price - - $4.00
Unit No. 2, for 10 x 15 press, list price - - $5.00
Unit No. 3, for 14½x 22 press, list price - - $6.50
Base, with gauge pin drawer, list price - - $6.00

Less usual discounts.

STRIP LEAD AND RULE CABINET

For the storage of full lengths of leads and slugs and brass rule. Made of hardwood with ends paneled; finished antique.

Seventeen vertical compartments at top, one inch wide and six inches in height, for twenty-four-inch lengths of brass rule.

Twenty vertical compartments, thirteen-sixteenths of an inch wide and nine inches in height for twenty-four-inch lengths of leads and slugs.

On the right hand end, under the overhanging top, a drawer is placed running the full length of the cabinet, divided into two compartments, to receive cuttings from the mitre machine and the lead cutter; the cuttings being dropped into the drawer through openings in the hardwood top.

At the bottom of the cabinet is a large compartment for storing the mitre machine and lead cutter when not in use, allowing the top to be used for other purposes. The cabinet is fitted with two swinging doors, secured by a lock, which secures valuable material stored therein.

Occupies floor space 22½x26 inches; height, 38 inches; weight, crated, 175 pounds.

List price, $52.00, less the usual discount.

Send for descriptive circular covering these two cabinets, containing larger illustrations and a more detailed description.

WOOD TYPE All patterns and designs ever made in this country. Our type is guaranteed, *without reserve*, to be uniform in height and can be returned at our expense if not as represented. *Test your wood type for height*—it's a vital point.

A Legend

IT happened one day that the little god, Cupid, was exercising his wings above a garden of roses, seeking, no doubt, a mark for his arrows. In the garden a bud was just opening into a full-blown rose, blushing pink in the sunshine. Cupid stooped to kiss the rose, when a bee, sucking nectar from its heart, planted its sting in his lip. Cupid, in pain and anger, flew to Venus, his beautiful mother, who, to pacify him, gave him a string of bees tied to a bow. But she first removed the stings and set them up and down the stem of the rose; and so it was that the rose acquired its thorns.

NATIONAL PRINTER JOURNALIST

A Journal for printing and allied Trades

Volume Twenty-seven | Chicago, May, 1909 | Number Five

NEWSPAPER PROBLEMS

HOW extensively that ably edited journal, *The Outlook*, is read by our editorial subscribers, we have no present means of knowing, but we feel that it ought to find a place in every newspaper office, regardless of political affiliations. It is not only distinguished for ability but for candor and high character. It is helpful to read the productions of those who write with a conscientious desire to establish the truth, whether the writers are in entire harmony with our views or otherwise. In the issue of *The Outlook* for April 3rd, 1909, was published an address delivered by H. J. Haskell in All Saints Church, Kansas City, that measured well up to the standards of this admirable journal and contained thoughts of especial value to every member of the American press, and instructive, at the same time, to all the people, as to the difficulties with which newspapers are constantly confronted and the obligations which they assume from the very nature of the high and difficult calling. We are going to reprint the same here. If any have already read the article, a reperusal will not be unprofitable. The title given was "The Public, The Newspaper Problem," and it was broadly treated as follows:

The newspaper is such an insistent factor in modern life, it comes pounding on our doors so regularly and so persistently, that we are forced to adopt a positive attitude toward it. And there is a distinct tendency, I suspect, among earnest and cultured people, to regard it as a problem—quite like intemperance or the unemployed or some other dreadful phenomenon.

Why, people ask, is the modern newspaper so inaccurate—to put it mildly—so given to romancing, so frivolous, so sensational, so heedless of serious things? Why are so many of its accounts incorrect in details? Why will it exploit the story of a lost puppy, and give only brief mention to a lecture on the Cretan excavations? Why will it print details of crimes, and ignore the many fine and noble movements that always are in progress?

Now, these and similar questions, so far as they concern decent newspapers, grow, I believe, out of a lack of comprehension of the newspaper's problems and purposes. So, to-night, I shall not attempt to answer specific criticisms that are likely to occur to you. Instead, I shall try to interpret to you something of the aims and ideals of the newspaper, in the hope of clearing up various misconceptions. And as you are perhaps accustomed to thinking of the newspaper as the public's problem, I shall venture to turn things around and ask you to consider the public as the newspaper's problem.

In a sense this holds true of any profession. The public is a problem, I suppose, to the lawyer, the doctor, the clergyman, the merchant. But to none does it offer the complications that it presents to the newspaper. The lawyer deals with the public in a way, as for instance when he is addessing a jury. But for a large part of his work he is independent of a popular audience. The merchant may regard the public's taste as fickle and perplexing. But at least he deals in goods that admit of comparatively perfect manufacture. The newspaper not only has to face the problem of public taste; it finds in the public the raw material out of which it manufactures its product.

News doesn't grow on bushes. It isn't made up into neat cartons by machinery which can be depended on to turn out an endless succession of perfect packages. It is gathered from the people, and its quality partakes of the imperfections of human nature. You, the reader, see the final product as it comes from the presses, and it looks surprisingly simple. "Why," you exclaim, "anybody could do that." But "anybody" can't. Have you ever attended a session of a municipal court and heard the conflicting stories told by witnesses—many of them really trying to tell the truth? Well, that is the problem of the newspaper reporter day after day in the search of news.

You may recall the explosion in the basement of the First National Bank a year ago. Reporters hurried there and talked with all the persons they could find who had been in the vicinity. They discovered: That there was a strong smell of gunpowder; that there was no powder smell at all. That it was impossible for exploding gas to have had such an effect as that: that gas was the only explosive that would produce such results. That a piece of an iron bomb had been found; that the only metal discovered was bits of lead pipe. That immediately after the explosion a bareheaded man had been seen to rush from the bank and run north; that the bareheaded man ran south; that he didn't run out of the bank at all; he ran into it.

Out of such conflicting material reporters constantly must construct coherent and truthful narratives, sifting evidence, making due allowance for bias, and always reckoning with the personal equation.

Browning's "The Ring and the Book" is, to my notion, the best example of the newspaper's perennial problem in telling the story of the day. The whole elaborate poem, you remember, is founded on a simple incident recounted from many points of view. A young girl, Pompilia, is compelled to marry a man of middle age whom she does not love, Count Guido. A young priest, Cauonsacchi, helps her to escape from her misery. She is pursued and mortally wounded by her husband, who is tried and sentenced to death, the sentence finally being affirmed by the Pope.

First the story is told by "Half-Rome" from the view-point of the outsider who sympathizes with the girl. Then comes "The Other Half-Rome," which is inclined to justify the husband. "Tertium Quid" follows, attempting to do eve-handed justice. Later the story is told by Pompilia herself, by Count Guido, by the opposing lawyers, and the final summing up is by the Pope. And each time the new point of view makes a new story of it.

Day by day the newspaper is confronted with situations akin to that of"The Ring and the Book," regarding which it must get the facts as nearly as may be.

I have been referring here to the constitutional inaccuracy of human nature. But there is another side. The Psalmist said in his haste, All men are liars. It isn't pleasant to contemplate his language if he had been a reporter for a modern daily newspaper. In a newspaper office one is impelled to recall the lawyer who whispered the reproof to the too willing witness, "I don't believe in unnecessary perjury."

As in politics the average man is interested in a mild way in honest and efficient government so long as his personal interests aren't involved, so in furnishing news he is usually ready to tell his view of the truth unless he is interested in propagating something else. I am not complaining of this state of affairs; I am merely setting forth what I believe to be the facts regarding one aspect of the problematical side of the public with which a newspaper has to deal. In reality the uncertainties of the raw material of news add zest to the job of newspaper-making. A Western member, you will recall, was once expelled from the Senate for flagrant drunkenness. In his valedictory the Senator referred to his failing. "Nevertheless," he exclaimed, "I can only pity the man who has looked out upon the world solely from the dull and monotonous plane of ordinary sobriety."

But, having emphasized the responsibility of the public for inaccuracies in the news reports, I am quite willing to admit frankly, in passing, that the men who make the newspapers are human too, and that their shortcomings occasion much more grief within the office than outside it. "Faking," I may add, is not tolerated by decent newspapers. This is a disagreeable subject, however, and I hasten to invite your attention to another way in which the public proves an inscrutable mystery to the journalist.

An imporant newspaper is smearing ink on 100,000 pounds of wood pulp daily, at heavy expense, and marketing the product. If it is to exist, it must produce a salable article—something the public wants. And what does it want? The average successful newspaper has its theories, but it doesn't know.

This business side of a newspaper usually escapes public notice. You will pardon me if I emphasize it. Once it was possible for Horace Greeley to establish a newspaper like the *Tribune* in New York City. All that he needed was a job press and a handful of type. To-day it would be out of the question to do anything of the sort. Backing of a million dollars would be scant. A modern newspaper is a great manufauturing industry, supporting a community of ten thousand or more persons. Its plant is equipped with costly presses and typesetting machines. It maintains an art department and a library. To obtain the news of the world as promptly and accurately as possible it must maintain its corps of staff and special correspondents, and it must co-operate with other newspapers. The Associated Press, with its ramifications in every quarter of the globe and its leased wire service, is an expensive institution, but it is necessary to meet the modern news requirements. The expenses of the great newspaper will probably run in excess of $150,000 a month.

I have dwelt on this aspect of the newspaper to show you how very important it is, and what a momentous problem it sets for the management. For the metropolitan newspaper of today must study to create a product so attractive that the public will pay for it more than one and a half million dollars a year. This was something you might have reflected upon when the city editor told you he wouldn't be able to print in full the sermon or the lecture on mediæval sculpture, or whatever that serious-looking document was that you carried to him so enthusiastically the other day. He is responsible for making his department attractive. Perhaps his judgment was at fault in this particular case, and he would have made the hit of his life by printing three columns about Egyptian art. Perhaps.

The problem is complicated by a condition which I do not suppose exists in any other business. The direct reason for the newspaper's existence fails to furnish it sufficient revenue to keep it alive. It is sustained by a by-product. Advertisements must furnish the chief revenues. A very few metropolitan newspapers, it is true, charge a subscription price sufficient to pay a share of the expense in addition to that for the blank paper. But this fact limits their circulation sharply. The London *Times,* for example, published for more than one hundred years in the largest city in the world, has attained the moderate circulation of something less than sixty thousand with a price of six cents a copy.

Now, in general, no vigilant and aggressive publisher is going to be content with such a circulation. And it is well for democracy that he should not be. The newspaper may not be—as the old editors delighted to call it—the molder of public opinion. At least it arouses and unifies public opinion. It makes certain that the people scattered over a vast expanse of three million miles of territory shall keep in touch with each other's ideas, and shall not split up into an indefinite number of independent communities.

But in order to preserve this great function it must be read by rich and poor alike. So its price must be within the reach of all. Unless we are ready to adopt the aristocratic position of the late Lord Salisbury, and oppose cheap newspapers as incendiary disturbers of the old order, we must accept the fact that the advertiser must bear a share of the cost of publication. But the importance of the advertiser introduces a fresh complication. Not, as I suspect you suppose, that he attempts to dictate the policy of the paper. In the case of the sort of newspapers we have been considering to-night, he doesn't. But he must depend on the newspaper to get him returns, and as the great majority of his customers are women, the newspaper must print a paper that they will desire to read.

So the feminine portion of the public becomes at onec, as you will readily perceive, a part of the newspaper's problem. "Man," the publisher of a profitable Boston newspaper used to say, "is a poor, inconsequential creature at best. I am printing a newspaper for the women." In other words, since women are the chief readers of advertisements—and this you may verify out of your own experience—in order to obtain sufficient revenue to print the sort of newspaper that men like, the publisher must first of all be sure he is getting out a paper that is attractive to women.

It is always much easier to recognize a problem than to solve it. The newspaper knows that the average run of the news applies chiefly to that portion of the world which by con-

vention has been marked off as the man's. So it must depend on other material to interest the women, who, as Virgil pointed out, are as variable as they are charming. What do women want to read? Again the journalist has his suspicions, but he doesn't know. So he constantly experiments, if he is as restless as he ought to be, in order to find out. If a column of questions and answers on beauty of person seems to excite a lively interest in an important part of his audience, he retains it in spite of the fact that it may arouse derision among the *intellectuals*. The newspaper, as I have said, is a great manufacturing industry, and to the best of its ability—subject to certain limits which I shall refer to later—it must meet the popular demand or go to the wall, after the fashion of any other big business.

Its pretty girl column is on precisely the same footing as the counter where they sell cosmetics in the department store. So with the page devoted to the interest of housekeepers, and the column telling what to do when the baby has wind colic, and the department advising against eating ice-cream with a knife. They are all jutified, provided they meet a popular demand.

With the masculine part of the audience similar problems arise. The newspaper is a democratic institution. It goes into the home of the mechanic, the college professor, the clergyman, the prize-fighter, the farmer, the merchant. To get out a journal that shall appeal to everybody is something of a job.

It is assumed, of course, that you want to know the news. But what is news? Perhaps the best working definition is that it is what people want to read after dinner. And that, you see, throws the whole question open again. People complain that the newspapers dicsriminate in favor of the bizarre, the sensational, and that they overlook what is really wholesome and signficant. Well, newspapers are founded on human nature. And what do people talk about when they get together of an evening? Things that are out of the ordinary. If Tommy has been a well-behaved boy that day, his mother doesn't mention it to the neighbors. But if he upset the pie over a visitor's gown, that is likely to be commented on. Nobody thinks it worth while to note that Mr. and Mrs. Brown are getting on beautifully together. But if Mrs. Brown has applied for a divorce, that is a topic of conversation. The newspaper gossips along much after the fashion of a group of visiting neighbors, and on much the same variety of topics. If it didn't, people wouldn't buy it and it would fail.

You who are here tonight might have liked to read in full Professor James's lectures on "Pragmatism" when they were delivered at the Lowell Institute. But hardly a fraction of one percent of newspaper readers would have been interested in them. A handful of cultured people often get the idea that they constitute the whole Nation. But, as Arthur Brisbane told the diners at Delmonico's, they are merely the few shiny apples on the tree. They arn't the whole tree by any means. And if the newspaper is to be the weapon of democracy, it mustn't shoot over the heads of its audience. What I have said will throw light, I hope on the general query of earnest persons who feel deeply that the newspaper is casting away its opportunities, and that it fails to make its proper contribution to the Higher Life.

A friend once said to Mr. Nelson, founder of the *Star*, "If I owned a daily newspaper and wanted to make the largest possible returns, I would take the New York *Nation* as a model. I don't see why you don't do it."

"How large a circulation do you suppose a newspaper modeled after the *Nation* would have?" Mr. Nelson asked.

"Oh, I couldn't say. But it would be the largest in the country. Possibly it wouldn't be as large as the *Nation's*. That is a weekly and circulates everywhere. A daily would have a more limited field. But it would be large enough to produce an enormous income."

The latest newspaper directory was consulted. It showed the *Nation* to have a circulation of about seven thousand.

By courtesy C. M. & St. P. Railway. California State Building—Alaska, Yukon and Pacific Exposition, Seattle, Washington

The truth is that every decent newspaper publisher prints as good a newspaper as his readers will let him. He aims to give them a little better paper than they really want.

And here difficult problems arise. Dana used to say that what Providence permitted to happen he wasn't too proud to report. But that maxim won't work. Providence often needs editing. Some things no decent newspaper will print. Others it will modify by omissions. But there remains a good deal of news on the border line which it is difficult to know how to handle. Judgments will differ. British newspapers will print full reports of divorce trials which American newspapers will handle very guardedly. One or two American newspapers used practically verbatim reports of the first Thaw triral, which most newspapers carefully edited.

It is impossible to lay down hard and fast rules here. But you will understand that in this aspect of its work the public becomes a very real problem to the newspaper. The public insists—and for the most part rightly—that it shall know what the world is doing; that it shall not be treated as a child. In some points the newspaper will yield where it prefers not to. In others it will stand out against pressure, remembering always that while consideration must be given the conventional Young Person, the newspaper is published for mature readers.

This position will always appear halting and unsatisfactory to persons of academic temperment, who think it a virtue never to compromise. But, unfortunately, one of the greatest idealists in politics, John Morley, was correct when he referred to public life as offering only a career where "action is one long second best, and the choice is constantly between two evils."

I am quite ready to concede that, even with these principles admitted, the newspaper, like every other institution, constantly falls below its possibilities. Its information is frequently faulty and its articles imperfectly written. Unhappily, the number of perfectly equipped journalists is limited. There aren't enough to go round. In this respect the newspaper profession is like every other. People frequently lament the fact that theatrical managers refuse to produce good plays. I strongly suspect that the reason the managers refuse to produce large numbers of "Peter Pan" or "Arms and the Man" is that the supply is short. There are few clergymen or lawyers or doctors or merchants of the first order, and it is easy to point out defects in the work of physicians and college professors and canal-builders. The fundamental trouble lies in the limitations of human nature.

The true histories, you know, have the reputation of being unattractive, and the interesting ones of being untrue. The same difficulty occurs in the conduct of a newspaper. It

is rare that a reporter can be found who can write vividly and accurately, and with a background of wide information. Men who have any one of these qualities developed to a high degree command large salaries. The man with the perfect combination—well, nobody has ever had the chance to bid for his services.

After all the problems of the newspaper are those of democracy. Its difficulties are those that confront any great democratic institution that addresses itself to the Many, not the Few. There will always be many fine people who will feel that it makes too many concessions to its audience, that it is quite hopeless. Many persons felt that way about Lincoln in the Civil War. They feel so today about popular government in general. But their complaint is really against democracy—against human nature.

If the newspaper is to stand effectively for decency and the common welfare, for honesty and efficiency in government, for industrial progress and the square deal, it must appeal to a wide audience, not to any limited class, no matter how admirable that class may be. In making this appeal, in trying with Mathew Arnold's Sophocles to see life truly and see it whole, in attempting as best it may to interpret the world, the newspaper finds itself constantly baffled and perplexed by the inscrutable problem of the public, which helps make the job.

STAMPED RETURN ENVELOPES

THERE is an extended discussion, just at present, in all organizations of printers as to the printing of return cards, by the U. S. Government, on envelopes. This discussion has been awakened by a very thorough and effective advertising campaign by the Post-office department in the interest of the sale of these stamped, return card envelopes. There has been no change in the law but the attention of all has been called to the practice by this advertising which, as a means of enforcing the splendid bargains offered by the Government, in competition with the printers, could not well be excelled. As long as bankers and others, whose names indicate their business and afford all the advertising that they need, were left to search out the splendid service offered free by the Government, the printers, who do this kind of work, had come to pay little attention to a practice that has been condemned by the members of the press for a quarter of a century, but when it came to be urged in a strenuous manner that people should buy these envelopes as an aid to the postal service, and millions of circulars were sent out with an attractive sheet, printed in colors, showing samples and illustrating how the Government could serve the people free, it seemed that the office of the Third Assistant Postmaster General had suddenly been transformed into an aggressive selling agency for the sale of the product manufactured at Dayton, Ohio.

In a private letter, in answer to one written by the editor, the gentleman occupying the position of Third Assistant Postmaster General says:

"I note what you say on the stamped envelope question. There has been no change whatever in the policy of the Department in this respect, except that the recommendations which I made in my last annual report and which were referred to in my address at St. Paul, have been accepted by the Postal Commission and are embodied in the pending reorganization bill. Herewith I hand you a full discussion of the subject, including the scheme proposed in the pending legislation, in the form of a letter addressed to a personal friend, Mr. E. A. Remy, who is Secretary of the Indiana Republican Editorial Association."

The following is the letter to which reference is made:

POST OFFICE DEPARTMENT,
OFFICE OF THE THIRD ASS'T P. M. GEN'L
WASHINGTON, D. C., March 11, 1909.

Mr. EDWARD A. REMY,
Secretary Indiana Republican Editorial Association, Seymour, Indiana.

Dear Mr. Remy: I have your letter of the 8th instant, with which you enclose a copy of a resolution adopted by the Indiana Republican Editorial Association, disapproving the practice of the Government in furinshing special-request stamped envelopes.

The resolution is as follow:

"Resolved, That it is the sense of this Association that the United States Government should not be or become a competitor of the individual citizen; that this expression is intended to disapprove the printing and sale of envelopes to the

people in direct competition with printers and without profit to the Government, as well as to any other business of the private citizen in which the Government may be or may become a competitor.

You ask me as a practical printer and publisher and former member of your association to give you my opinion of the position taken, because you want the judgment of some one representing the Post Office Department.

I am very glad to have your courteous and candid letter, and will avail myself of the opportunity which it affords of discussing the matter fully and fairly from the standpoint of the postal service as well as that of the printer and publisher I will preface my letter with a direct answer to your request for an opinion by saying that I think an erroneous position was taken, and that the resolution would not have been passed had all of the material facts been before the Association.

Stamped envelopes, as now furnished, are manufactured and sold to the public under the provisions of the Act of July 12, 1876, which is section 3915 of the Revised Statues and section 136 of the Postal Laws and Regulations, and reads as follows:

"The Postmaster General shall provide suitable letter and newspaper envelopes, with such water-marks or other guards against counterfeits as he may deem expedient, and with postage stamps with such device and of such suitable denominations as he may direct impressed thereon; and such envelopes shall be known as 'stamped envelopes,' and shall be sold as nearly as may be at the cost of procuring them (including all salaries, clerk hire, and other expenses connected therewith), with the addition of the value of the postage stamps impressed thereon; but no stamped envelope furnished by the Government shall contain any lithographing or engraving, nor any printing (or advertisement), except a printed request to return the letter to the writer. Letters and papers enclosed in such stamped envelopes shall, if the postage stamp is of a denomination sufficient to cover the postage properly chargeable thereon, pass in the mail as prepaid matter."—

and the following proviso of the Act of June 26, 1906 (34 Stats. L., page 476), which reads as follows:

"*Provided,* That no envelope shall be sold by the Government containing any lithographing or engraving nor any printing nor advertisement, except a printed request to return the letter to the writer."

In connection with the foregoing provision of law the Department has issued regulations governing the printing of "special-request" envelopes, a copy of which regulations is enclosed. (Exhibit "A.")

The Department is constantly rejecting orders for special-request envelopes because the return-cards contain advertising matter or other printing in excess of that authorized by the regulations.

As a matter of fact, special-request stamped envelopes have been printed by the Government since 1865. There has been no radical change in policy with respect to this branch of the postal service. Schedules and price-lists have been issued to the public in some form or other from time to time, and under a previous contract the stamped-envelope contractor employed traveling solicitors, who, however, confined their operations to the large cities. It may be doubted whether the employment of solicitors in this manner was justified, but it is believed that it is justifiable for the Department to bring to the attenion of the public its rights and privileges wih respect to the use of special-request stamped envelopes, just as it brings to notice its rights and privileges in connection with the money-order and registry systems, both of which are conveniences for the general good.

The Post Office Department is essentially the people's department; it is conducted for the benefit of the whole people, and under no circumstances should it be conducted with special references to a particular interest.

There is hardly a public function performed by the Post Office Department which does not seemingly encroach in some manner upon some private interest. The business of the Post Office Department by reason of its nature is necessarily paternal in character. By some the operations of the Department are pronounced a species of state socialism, and justified as such on the ground that it is the purpose of bringing the greatest good to the greatest number. The fact that the Department in the performance of its prescribed functions necessarily enters into competition with private agencies brings upon it protests and opposition from many sources. For instance, the money-order system is opposed and antagonized by some of the banking interests of the country on the ground that it interferes with their legitimate profit in the sale and purchase of exchange, and even in the custody of money. The express companies likewise seem to assume an unfriendly attitude toward the money-order system for the same reason. The railroads and express companies prohibit their agents, when postmasters, from issuing other than express-money orders. The proposed rural parcel-post system, although favored as a rule by the people residing in the rural districts, is opposed by certain business interests as an encroachment upon their private rights and privileges. Other interests oppose the foreign and domestic parcel post for like reasons. In fact, there are advocates of the theory that the Post Office Department should discontinue handling fourth-class matter—merchandise—and confine its functions to the mere transmission of *intelligence* in some form.

The Post Office Department can not accomplish the best results if it is compelled to shape its policies so that no special interest is in any manner encroached upon. It must apply correct, impartial principles throughout the service. To show that there is another side to the question, I may state that the Department receives many letters commending its policy with respect to return envelopes.

The protests, as you know, come mainly from the country printers and publishers, although a protest is occasionally received from a large printing concern or envelope manufacturer.

From the postal standpoint the advantages in using stamped envelopes in place of adhesive stamps are many. Stamps may be easily lost, misappropriated or may become useless through sticking together. The time consumed in affixing stamps on the part of large users is also an item to be considered by them. Furthermore, a stamp may drop off in the mail.

Taking these facts into consideration, with the further fact that upwards of thirteen millions of pieces of mail matter are returned to the Dead Letter Office annually for want of a return address, you will appreciate the Department's desire to increase the use of stamped envelopes bearing the printed address of the sender.

If *all* mail matter bore a return address permanently attached thereto, the Dead Letter Office could be abolished, and many heart burnings prevented because of "the letter which never came."

There are many postal progress advocates who urge the passage of legislation authorizing a higher rate of postage upon matter which does not bear thereon a definite return-card.

Stamped envelopes, with or without return-cards, are required by law to be furnished for sale to the public at cost of production, including administration, as nearly as such cost may be ascertained.

You will note that the printing is limited to a simple request to return the undeliverable matter to the sender. Anything beyond that, in the way of an advertisement of the purchaser's business, or the use of special illustrations, cuts, etc., must be printed by private printers at the expense of the purchaser.

The printing of return-cards is done without extra cost to the Department, the contract providing that the envelopes shall be furnished with or without printed return-cards as may be ordered. Under the law no extra charge can be made to purchasers for the printing; but return-cards are not printed on envelopes ordered in less quantities than 500. The printing of return-cards is done by the contractor at comparatively trifling expense, as it is done on special machines simultaneously with the embossing of the stamp on the paper as the envelope is folded and gummed.

The Department pays not quite 79 cents per thousand, printed or unprinted, for No. 5 envelopes, and sells them at $1.24 per thousand in addition to postage. The gross selling value of stamped envelopes and newspaper wrappers issued to postmasters in the fiscal year 1908 was $25,416,344.54, and their postage value was $23,743,563.68. leaving$1,672,780.86 to defray the cost of manufacture and distribution. The contract cost of manufacture was $1,058,197.95, leaving $614,582.91 to defray the cost of distribution. It is therefore apparent that their producction does not contribute to the postal deficiency, but in reality yields profit.

The Goverment does not, in fact, compete with private enterprise, for the reason that the stamped envelopes are manufactured under contract with an incorporated company. That company operates a very large factory and printing plant which includes type-setting machines and presses, with a force of several hundred operatives.

The only difference between the business methods of this corporation and those of any other printing or envelope concern is that it receives its orders from the public through the Post Office Department, instead of directly from the consumer, because of the safeguards which must surround the production and issuance of stamps.

Protests similar to the one submitted by your association have been coming to the Department for years. In fact, as far back as 1872 there was considerable agitation on the part of printers, lithographers, stationers and envelope manufacturers in relation to this subject. At that time the matter was investigated by the Committee on Post Offices and Post Roads, seriously considered by Congress, and the subject was fully investigated by the committee on Post offices and Post roads, which rendered a special report to Congress in which the practice was approved and continued.

As a former practical printer, I sympathize with the publisher and printer who feels that his business may be encroached upon by this practice, but, as a public official, I am bound to conduct the public business in accordance with the law, and certainly in such manner, if possible as to produce the greatest good to the greatest number.

The policy of the Department, as herein outlined, is the result of years of practical experience with the question, and it is believed to be fair and just, all things considered. The Government, as you will recall, under the Constitution has a monopoly of the mail service, and certainly it should not be hampered in the performance of its Constitutional functions.

There is however, another aspect to this matter to which attention may be invited. That is, while the Post Office Department may in particular instances encroach upon private business interests, there is usually some compensating feature in some other branch of the postal service. This is especially true as to the newspaper man who is conducting a job-printing business.

A few days ago a complaint was received from a certain publisher concerning this matter. In this particular case it was found that the Post Office Department furnished last year to the business men of his town 19,500 special-request envelopes. There are two printing offices in the town, so that the average amount of printing of which each office might have been deprived could not have exceeded 10,000 envelopes. Conceding that the actual profit on these envelopes might have been $2 per thousand, which is excessive, considering the wages of the printer, each publisher in the town lost in possible profit $20 during the year. On the other hand, the Department carried free of postage in the county the publications issued by them, which by the records of the Department would average between 3,500 and 4,000 pounds per annum each, which, at the postal value of one cent per pound, would have amounted to $35 or $40 in each instance. In other words, investigation of the records of the Department would show that in practically every case wherein the country publisher has been deprived of job printing by the Post Office Department, he has been given in free country postage an amount at least double any profit of which he may have been deprived.

Furthermore, it is now conclusively shown that second-class mail matter is being carried at an average loss of a little less than 8 cents per pound. The Department last year gave to the people of the United States, through the publishers of newspapers and periodicals admitted to the second-class mailing privileges, some $60,000,000 in the cost of handling second-class mail matter over and above the amount of postage received thereon. Here, again, is compensation for any loss which the printer and publisher may sustain by reason of the printing of Government stamped envelopes.

For several years past there has been a popular clamor that the Department ought to apply "up-to-date" business methods; that it ought to conduct the postal business like a great business institution would conduct its business, and thus eliminate the postal deficiency, which many people consider a reproach. It can not do that and conduct it entirely free from encroachment upon what might otherwise be considered competitive interests.

If our printer friends would look into this question from a broad and liberal standpoint, considering the interests of the people and those of the Post Office Department as well as their own, I am constrained to believe that they will conclude that there is little ground for objection to the established policy of the Post Office Department in the matter of printing return-request envelopes.

The Department, however, desires to administer this question in a manner beneficial to the postal service and least injurious to the outside industry as a whole, and has recommended a new system of dealing with the matter, as you will see by reference to pages 25 and 26 of my last annual report. This recommendation has been adopted by the Postal Commission of Congress, and has been incorporated in the pending "Postal Service Act." It may, therefore, become a law.

The recommendation referred to is that the Act of Congress approved June 26, 1906, which reads as follows:

"*Provided,* That no envelope shall be sold by the Government containing any lithographing or engraving, nor any printing nor advertisement, except a printed request to return the letter to the writer,

should be amended by adding the following:

"*And provided further,* That under regulations to be prescribed by the Postmaster General, any person, firm, or corporation may deliver or cause to be delivered to the stamped-envelope agency, paper of suitable quality, color, weight, and finish with return requests not exclusive of advertising thereon in lithographing, engraving, embossing, or printing, and have such paper embossed with the stamps used on Government stamped envelopes and made into envelopes at the usual schedule price therefor less the cost of the paper which would otherwise have been furnished by the Post Office Department; and that paper in sheets with stamps embossed thereon, for manufacture into stamped envelopes, may be furnished to the public in lieu of stamped envelopes and at the same schedule price: *Provided further,* That all orders for the manufacture of paper into stamped envelopes and all orders for sheets embossed with stamps shall be made through the post office to which the person ordering the same makes his undeliverable mail returnable."

As you know, it is practically impossible to do artistic printing or lithographing, especially where cuts are employed, on finished envelopes, because of the folds and the gum; but under this plan the consumer will be in position to procure stamped envelopes artistically produced and to his exact taste. Any ordinary or special kind of paper not below a prescribed standard of qaulity could be selected by the printer for his customer, and any desired advertisement or cut could be printed or lithographed thereon, the paper thus prepared being shipped by freight or express to the Stamped Envelope Agency, there to be embossed with the stamp and either gummed and folded, or, if furnished by an envelope-maker, returned to him for gumming and folding. The charge of the Department would be for the value of the stamps imprinted upon the envelopes plus the contractor's charge at a rate to be agreed upon and the expense to the Department for administration and for delivery of the envelopes through the postmaster concerned. The printer or envelope manufacturer would be permitted to make such additional charge to his customer for the printing and design as may be agreed upon between them. The plan would largely increase the use of stamped envelopes, to the benefit of the postal service and all concerned, and tend to eliminate all cause for complaint of competition in this respect on the part of the Department with private business. The Department would be in position to furnish diagrams and instructions which would enable any printer to perform the work properly, and paper houses within a very short time would furnish paper properly cut for making into envelopes of prescribed sizes.

I am very sorry that your Association did not discuss this proposed change in legislation, so that the Department might have had the benefit of its views. Even yet I would like to have your views and those of any other members of the Association whom you are in position to consult about the matter.

May I not have the pleasure of hearing from you further on the subject? Very sincerely yours,

A. L. LAWSHE.
Third Assistant Postmaster General

Mr. Lawshe says that "The Postoffice Department is essentially the people's department," though we thought, in theory at least, all departments belong to the people, yet, in this matter of printed return envelopes, no one who is unable or whose business does not demand or justify the purchase of five hundred stamped envelopes at one time, and the expenditure of $11.00 therefor, can, in justice to himself, purchase such envelopes—the Postal Department does not sell in quantities less than 500. It benefits only the larger classes of business men and grants an advertising privilege solely to corporations, banks and firms whose names indicate their business.

In this connection it is well to refer to Mr. Lawshe's argument a little further on, where he says, "If all mail matter bore a return address permanently at-

tached thereto, the Dead Letter Office could be abolished, and many heart burnings prevented because of the letter which never came." Now, no business man whose business justifies his buying five hundred envelopes at one time, is sending out letters without a return card thereon. The letters that reach the dead letter office are those from people who seldom write letters and would not, in a life time, put $11 into stamped return envelopes, at one purchase. Besides, the government can require that the name or address of the sender be written, stamped or printed on the envelope, and can print a blank form "Return to ———— at ————Street ————City ———— State," by way of reminder and to make the writing the return thereon more convenient and secure orderliness and the desired position of the return address. That the Government should receive commendation from large establishments, banks and corporations, for doing their printing without charge, is not a matter of surprise. There is no one who asks the Government to cease the sale of stamped envelopes but only to cease doing the printing thereon. If any one is bothered by the loss, misappropriation or destruction of stamps he is certainly at liberty to buy stamped envelopes. Sending out from twenty to three hundred stamped envelopes daily for many years, we have not found a loss of a two cent stamp a year. Once in a very long time, a piece of mail matter gets into the mails without a stamp but, as we, without the beneficent aid of the Government, put our card on our envelopes and could easily write our address on, if we were sending out only one or a half dozen letters a day, such unstamped matter is promptly returned. We do not remember that there has been a failure to stamp a letter more than once or twice a year and this has been where a large number of lettres were sent out at the same time. The stamping of an envelope is almost as certain as is the directing of it. It is something never forgotten but only happens through an oversight, in the gathering up unstamped envelopes with stamped mail. The printing, it must be borne in mind, is only in the interest of the large buyers of envelopes.

Mr. Lawshe says that "The protests, as you know, come mainly from the country printers and publishers, although a protest is occasionally received from a large printing concern or envelope manufacturer." The country printer has just as much right to be protected as any one else, but the United Typothetæ of America, made up of the very largest printing establishments in America, has for fifteen years or more, fought this practice by resolutions and through committees. Among the members of these committees was an owner of one of the largest printing offices of New York City, himself a former member of Congress. The largest local organization of the owners of large printing offices in the United States, the Ben Franklin Club of Chicago, recently took action adverse to this practice, and the matter was not brought up by a member of any small concern, but by the President of the Club, who conducts a large establishment.

Many of the very large establishments, who have opposed this practice, have not been printers of envelopes, at all, but the printers of catalogues, books, calendars and high-class color work, themselves large buyers of envelopes for their own use. They have opposed the practice on principle, because unfair and a violation of the principles of a square deal and equal rights under our free Government.

Mr. Lawshee says: "There is usually some compensating feature in some other branch of the postal service. This is especially true as to the newspaper man who is conducting a job printing business."

But what, as to the job printer, who does not conduct a newspaper? The whole basis on which the carrying of second class matter is founded has been gone over time and again. It has been proven that the so-called privilege was granted with no view of granting a special privilege to any one or favoring the publishers but wholly in the interests of the postal service and of the public, for the benefit of the Republic and the spreading of intelligence and the advancing of knowledge, absolutely necessary to the conducting of a Government of, by and for the people. It is no justification for doing printing free for one group, and that the wealthiest group, of the people, to the injury of the business of another group of the people. The use of the word Government in this manner indicates that the officials at Washington have come to look upon the Government as something above and apart from the people. Public officials, Senators and Congressmen, too frequently, seem to think that instead of their being merely the hired men, the paid servants of the people, they are the Government, with all the rights, dignities and powers of potentates, kings and princes, who are granting largeses, privileges, rights, franchises and gifts to their subjects. If men ever get it out of their minds that because one works for the Government he is a ruler, possessed of powers and the right to confer honors and claim honors and authority above that which belongs to any other employee, many irregularities will disappear. The people constitute Government and if they want to aid the cause of intelligence by giving low rates for the carrying of publications to the people, it is their right and not a grant by officials. It is a measure for the public good.

We are not intending in the least to indicate that officials are responsible for this false idea of our Government and its relations to the people or rather its entire existence in and through them. The people all over the country are all seeking to get something out of the country and members of Congress are looked upon, not as representatives of the whole people to legislate for the Nation and to guard its interests in accord with their oaths of office, but to get something for their different sections and places, for political

workers regardless of the fact that the people pay tenfold therefor through indirect taxation. Mr. Lawshe says that: "It is now conclusively shown that second-class mail matter is being carried at an average loss of a littless less than eight cents a pound. The Department last year gave to the people of the United States, through the publishers of newspapers and periodicals admitted to the second-class mailing privileges, some $60,000,000 in the cost of handling second-class mail matter over and above the postage received thereon." We like this much better than the old charge that this was given to the publishers through a special privilege. Of course, the Department did not really give this or any other amount to the people. The Department, or its paid officials, merely disbursed this amount among the high officials, the postmasters, clerks, auditors, mail carriers and other employes, who are all the hired men of the people, and among the railroads and other common carriers. The people paid the amount by paying taxes. The people paid it all and got it back in the services rendered. Most of those who have investigated think the people paid too much for these services and, and if the Department were run as a private business, the Postoffice Department could be easily run on the present receipts and leave a margin of millions of dollars in profits, but if the people are willing to pay $60,000,000 or $70,000,000 a year more than is necessary for the sake of keeping up "the Government" with overpaid officials and transportation companies, and underpaid workers, the people are to blame. "Every man seeketh his own," and it is strange how valuable men, who have never been able to earn a hundred dollars a month for themselves, consider their services when rendered to the Government. It is a little strange, too, how corporations existing under charters granted by Government, consider any services rendered the Government worth about eight times as much as is charged or considered just when the same work is done for private individuals, firms or other corporations.

In all this, we have not intended, in the least, to criticise Mr. Lawshe. He has, in many things, been much more thoughtful, reasonable, candid and just than his predecessors, and we believe that he has striven to be fair and honest and has unconciously fallen into the falacy, prevailing among the people and throughout officialdom, that this Government is something apart from the people, from which benefits and salaries are to be gotten with little thought as to the returns made or the real, actual, market value of the services rendered. Benjamin Franklin, who had seen the bad effects of appealing, at the same time, to men's ambition and cupidity, in bestowing public offices, thought there ought to be some margin left for free, public services for the common good, as a means of fostering and keeping alive a public spirit, a wholesome pride in labors for the common good, that carry a high sense of honor and give a real, worthy glory as for something done for one's country. His wisdom, founded on broad observation and study, was disregarded and public offices have come to be looked upon as matters of special benefit only to the holders thereof and to their friends and partisans—a sort of public graft, instead of a patriotic service to the country or public trusts with a direct and sacred responsibility to the whole people and a conscientious glorying in having rendered signal benefits to the Nation instead of securing pelf, power and easy or over-paid positions for themselves, their friends, partisans and personal aiders or heelers. We believe in public benevolences but we do not believe that the Government should be considered as a benevolent institution or an asylum for incompetents, much less as a means of paying for personal or partisan services by Presidents, Senators, Congressmen, Governors or other officials.

Mr. Lawshe's plan for having paper stamped with the postage stamps thereon, for the use of printers, seems to have some attractive features, if a system can be devised for working out the plan without having it too expensive or cumbersome. It might be that orders could be sent through wholesale paper houses or envelope manufacturers. The trouble is, that purchasers of printed envelopes want the same immediately or very soon after giving an order, yet those who are now accustomed to give orders to the Postal Department could be supplied in a satisfactory manner and others could probably be soon taught to give their orders in advance. We believe that Mr. Lawshe's plan would eventually increase the use of stamped envelopes, as he suggests.

BILLBOARDS AND NEWSPAPERS

The Newspapers will have themselves to blame if they lose the most profitable source of their income, namely, advertising. By submitting so long and foolishly to the diversion of their advertising patronage from legitimate channels to scenery-defacing billboards, and to street-cars, subway and elevated stations, they have paved the way for what is now happening. A wide-awake Yankee concern in New England is making contracts with grocers, butchers, druggists, bakers, and others to display advertising cards conspicuously behind their counters in street-car style. Contracts for a term of years are being made for the exclusive use of store space for advertising purpose. It is very easy to see what will happen to the advertising columns of the local newspapers if this scheme is carried out. The newspapers in some of our larger cities have combined to boycott the publicity bureaus that have been "working" them so successfully of late. If they would display equal diligence in an attack all along the line against the sign nuisance they would recover some of the income they have been needlessly sacrificing during the past few years of indiscriminate, and in most instances illegal, publicity.—Editor John A. Sleicher in *Leslie's Weekly*.

At Harrisburg, Ill., the *Morning Chronicle*, published by Andrews and Shupp, has made its first appearance.

A NEW ZEALAND PAPER'S GROWTH AND NEW BUILDING

THE Christ Church, N. Z., *Press* recently moved into a magnificent new building and properly gave a review of the paper's history and growth and a description of its new home. We Americans are sometimes inclined to think that this "land of the free and home of the brave" has marked the world's progress for the past century, but a little investigation shows that other new lands, with all modern industries, institutions and the high ideals of human rights, liberty and law, have not lagged behind and that some, making a later start, have outstripped us in the guards placed around the equities of the people and the opportunities afforded and safeguarded to all groups of men and to the members of all callings. The United States can well go to New Zealand to learn lessons in government for the protection of the interests and the upbuilding of all. The press considering the population of the country, shows a glorious record of attainment as well as of service, and American newspapers can learn from the New Zealand *Press*. February 18, 1865, witnessed the first issue of *The Weekly Press* of Christ Church, and the paper has kept pace with the growth of the country which it has helped, signally, to settle-up and to develop, and now publishes, besides the great weekly that has been built up, also a morning and evening daily and has an extensive engraving and lithographing establishment. All this has been accomplished by an enterprise and by methods well worthy of imitation. The weekly was intended for "up-country circulation," but was early enlarged in its scope to cover the whole of New Zealand and this was done by meeting all the natural demands that existed or could be made available by the publication, and, herein, an important lesson is to be learned. Illustrations were introduced as early as 1882, wood cuts being used successfully in illustrating an International Exhibition and then in 1888, the *Press* became the pioneer in Australasia, in the use of halftones. The issue before us, in speaking as follows of these first attempts, reminds one of the early results secured in this country: "Its first efforts were of the crudest and there is a specimen, printed in August, 1888, which, if reproduced, would amuse those familiar with its lineal descendants today."

The National Printer-Journalist was among the first to use halftones in this country and if any one will refer back to the issues of 1888 and 1889 and compare the same with recent productions, the improvements made will be strikingly evident. We used one of the earliest productions of the three-color process, in showing "A Pansy Blossom," and while then considered a great accomplishment, it is wonderful what attainments have since been reached in color printing, in this country and all over the world.

New Zealand has inherited from England the love of sports and *The Weekly Press* has always given great prominence to these. It will be found instructive to read the following, printed in the daily edition of the *Press*, as to the progress of the paper along this and other lines, always keeping in the lead:

In 1891, the sporting side of the paper was strengthened by the incorporation of "The New Zealand *Referee*," with which "The Weekly *Press*" became the official record of sport in New Zealand. Besides being the official organ of sporting authorities, it has always catered for every health-giving recreation. In 1894, began the regular weekly publication of the beautiful illustrations, in halftone engraving from photographs, which have since attained such remarkable development. The public was quick to appreciate the superior fidelity of the new process as compared with the best efforts of the artist and the woodengraver, and from every news agent in the colony came the proof in largely increased orders. When, a few years later, the second Boer war broke out, the opportunity to cater pictorially for the national need of news was so energetically grasped (special correspondents and photographers being sent to the front) that the circulation rose to 40,000 a week, and then failed to equal the demand, in many weeks the fast printing presses having to stop running on the current issue because otherwise the next one could not be produced to time. It was a period of great labors and unlimited overtime for everyone engaged in the production and distribution of the paper, and for the office staff as much as any; but it left "The Weekly *Press*" recognized everywhere as the most prominent illustrated newspaper in Australia—a reputation since maintained.

The paper owes part of its standing to the high quality of its literary contents. A list of its contributions during the last twenty years would include all the most distinguished workers in the field of "belles lettres" in England and New Zealand, and a great many of the brilliant American company. It may be added that "The Weekly *Press*" published the work of many authors of the greatest distinction before they were distinguished, at any rate by the official critics. Its readers enjoyed some of the finest performances of Conan Doyle, Rudyard Kipling, and George Bernard Shaw, long before those great men had gained their present world-wide popularity; and to mention two of lesser degree, of Richard Marsh and E. P. Oppenheim. Another source of distinction is the service rendered to the cause of National Defence by the Volunteer and Service pages. These have been so ably conducted that they have become indispensable to the volunteer, and have exercised a most beneficial influence on his training.

Keep moving forward and improving is the road to newspaper success. Here, as to the time of the starting of the daily, and its work, is a showing of how every community and public interest was covered:

In 1861, "The Press" was a weekly, issued at sixpence the single number, and to be obtained at various North Canterbury centres from Rangoria to Akaroa. On October 8ith, 1862, was announced a bi-weekly publication, and on March 17th, 1863, the *Press* came out at threepence a copy, as the first daily newspaper issued in Canterbury with a list of agents, ranging from "Mr. Stanford, Charing Cross, London," to New Zealand representatives as far north as Auckland, and southward to the Bluff. Its progress had well justified the resolve to exclude an appeal only to narrow localism. Canterbury interests were not ignored, but there was nothing of that "stagnant frame of mind," which Wakefield had anticipated for our two contented settlers on the Plains, in articles dealing with New Zealand's native policy, with temperance and teetotalism, and with educational themes, varying from the high duties of a General Government towards young New Zealanders

yet to come, to the status of School Committees, the training of teachers, and the ventilation of schools. Mr.Fowlds, who claimed the other night for his Government the glorius conception of the free place system, might be interested to hear that a *"Press"* leader in the sixties already sketched out precisely the same means of "bridging the gulf" between primary and secondary education. And the Christchurch City Council, working out at last a scheme for general water supply, brings curiously to mind our early warnings that in a city of wooden houses no municipal scheme should aim at less than water-pipe with fire plugs in every street, and that the most righteous plan was one which would bring "water into every house in Christchurch." Acclimatisation was another important topic treated in 1861. At that time, deer, rabbits, hares, pheasants, and small birds from English hedgerows, had been shipped at great cost and with the one unfortunate exception of the rabbits, had not lived to try the experiment of settling in a new land. In the *Press* the first mention was made of the London Acclimatisation Society, and the foundation of a like society at this end was urged as the most promising aid towards populating our English trees with English songbirds, and our rivers with Scottish trout. The suggestion was quickly taken up, and how the Acclimatisation Society has worked, through good or evil report, has been matter for many a leader and much lively correspondence since. The Musical Society was also cheered by praise, or stung to its work by kindly criticism, lest the musical taste of Christchurch should decline. "Every concert of our Society is an opportunity lost or gained as they choose the program." And some early sins of visiting stars seem indicated by an article after the All English match in 1864, comparing this first-class object-lesson given by firstrate cricketers, with the conduct of singers who thought it quite enough for a colonial audience to hear "Villikins and his Dinah."

There is not a thing that concerns the progress, improvement and upbuilding, along every line, of the community, city or state served, in which a newspaper can afford to be otherwise than a pioneer, a leader intelligently informed, conscientiously concerned, earnestly progressive and urgently, perseveringly and untiringly insistent.

It would be interesting, briefly to sketch, the different departments described, but the description of the building gives the best idea of the extent and completeness of the establishment:

Despite the huge extent of the premises, the architects were eminently successful in avoiding the slightest suggestion of ponderousness, the vast structure being distinguished for its grace and artistic delicacy of outlines. The exterior has been constructed of brick and Oamaru stone, the whole fabric resting upon a massive bluestone base. The building which presents bold frontages on to Cathedral square and Worcester street, is 70 ft in height, and is surmounted on the southwestern corner by a tower 30 ft high. Ferro concrete (with steel girders and stout brick walls) has been exclusively used in the interior construction, the floors also being of this material. In the literary and commercial departments wooden floors have been laid over the ferro concrete, and, so far as it has been possible to secure, the entire building is almost completely fireproof. There are no fire-places anywhere (the premises being warmed with hot water radiators,) and as an extra precaution a domestic high-pressure water supply, with fire plugs everywhere at hand, has been installed. The construction of the building, and its being cut up into so many independent fireproof sections, is such that, should an outbreak of fire occur, its spread beyond the immediate vicinity would be impossible. The accommodation consists of a basement, four floors above ground, and a flat roof. There is 54,450 square feet of available floor space, and 10,890 square feet of flat roof, or, roughly an acre and a half. In the well-lighted basement the newspaper printing machinery, the suction gas and electrical generating plants and the publishing departments are located. Above ground the building is divided in the middle into two separate portions, each being cut off from the other by a solid brick wall, and the means of communication protected by fireproof doors. The southern half of the building is divided off as follows:—Ground floor, commercial department; first floor, editorial and literary staffs of the morning and evening journals issued by the *Press* Company; second floor, editorial, literary and artistic staffs of the Weekly *Press* and *Referee;* third floor, illustration department of the Weekly *Press.* The factory portion of the building is divided up into the following departments:—Ground floor, jobbing, paper-ruling and bookbinding; first floor, job-printing department; second floor, linotype department, news department; third floor, photographic department, photoengraving, lithographing and so on.

There are complete sanitary, electric and other arrangements and appliances for the comfort and convenience of the workers and the forwarding the work known to the most up-to-date and complete newspaper and job printing establishment.

The description of the job department is especially interesting, and how highly this branch of the business is prized may be judged by the statement that, "The backbone of every newspaper business is the jobbing department! So, at least, think those connected with that important branch of the business; and so it has been proved in many instances. And the backbone of the jobbing department is, undoubtedly, modern machinery, manipulated by expert workmen. In this respect the jobbing machine room of the Christ Church Press Company is exceedingly well equipped, the proof of which is to be found in the nature of the work produced—work that is acknowledged to reach high-water mark in the typographic art."

"The Press" Pigeon Post, as graphically described by "Fangier," will be found as novel, as entertaining, to the makers of American newspapers:

From the dawn of history to the present day pigeons have been employed in the capacity of messengers. Opinions will differ as to whether the story of the Flood as narrative indicates that at a very remote period the ability of pigeons as messengers was known. The classic writers make frequent reference to pigeons acting as messengers. Anocreon, the poet, who died by the skin of the grape(it is generally the juice that kills), sent love messages to a lady fair by pigeons, and the news of at least one ancient athlete's victory at the Olympian games was forwarded to his relatives by a feathered Mercury. As press messengers, pigeons seem to have been first used by "Bell's Life" in the early days of the last century, and are now used by the leading papers of the world. The first paper to employ them in New Zealand was the Auckland Evening *Star,* about forty years ago.

The *Press* pigeon post was established in 1886. The old birds, one of which has been at work for ten years, have now been pensioned off, and a new staff engaged. The new birds are descended chiefly from Ironsides and Little Wonder, two birds that were companions in English "Nationals," and there are also birds related to some which figured in Belgian "Grand Nationals," these races, both English and Belgian, being 500 miles, more or less, according to the situation. The birds attached to this office are comfortably housed on the flat roof, which is an ideal place for homing, in that the birds from their home have a fine view of the surrounding country, and

when away from home a splendid landmark in the Cathedral spire. All pigeons will home more or less, if trained, and many breeds have been bred at different times and in different countries. Carrieries, Dragoons, Antwerps, Tumblers, Owls, etc., and others have been used as messengers, but these varieties are now useless for the purpose and are bred for show purposes alone. The modern homer is an amalgamation of the best breeds bred in olden days, made more perfect by selection and training. In former times the message was tied round the bird's neck or to a wing or tail feather. Now it is attached to the leg. The message should be about the thickness of an ordinary lead pencil and three-quarters of an inch in length. Photos are sent in a similar manner. Mr. J. L. Wilson, the *Press* representative at Kaiapoi, has sent on one bird a message which made two columns of printed matter; and the writer is informed that many years ago a page of the "Thames Advertiser" was photographed and despatched by pigeon to the office of the Auckland *Star,* and reproduced in cold print. Pigeons do not, as many suppose, carry a message from their home, but from a distance to their home; and though there are cases of pigeons homing a great distance with training, they cannot be depended on to do even moderate distances in time for newspaper purposes, unless well traind. When this is done they seldom fail to make good time. Another important factor in connection with the pigeon post is that the birds enter their lofts quickly, when the message can at once be set in type. Some birds are very tame and trap at once; others are wild and will not enter until dark, and this weakness on their part is often responsible for upsetting the characteristic good temper of the printers and editors.

AS TOLD BY THE ADVERTISING MAN

Saturday afternoon I called on a merchant with the intention of separating him from some of his money for a good purpose—advertising.

But he wouldn't separate.

He was a good talker, however, and gave me half an hour of his time just to tell me *why* it wouldn't pay him to advertise his business in the newspapers.

This is the line of argument he offered:

"What—me advertise?

"Why, young man, I have been in business in Topeka in this very same stand for 27 years.

"Every man, woman and child knows me. Why, half the people in the town call me by my first name.

"No sir. Advertising is all right for the department stores and maybe for others in the same line of business with me, who are new in the field. But you see I've been here so long it would be throwing money away for *me to* advertise.

"And I know, for I've tried it. Why, only last month I spent 75 cents for a hole in a school play program, and do you know, I haven't had a single person tell me that they saw it. And it was quite a good sized hole, too.

"No, young man, advertising is all right for them that needs it, but I don't need it. I've been here 27 years, you know, and as I said before, everybody in town knows me."

Think of it.

This man has been in business in Topeka for the past 27 years and that 75 cents for the "hole" in the school program is the only money he has spent for advertising of any kind during the past ten years.

Have you thought?

There is another concern in Topeka that has been in business but a very few years.

They are young men, full of life, ambitious, progressive.

They are the sort that *do* things.

A year ago they discovered a demand for a certain kind of bread. A bread that was different from any other bread sold in the city. A bread that created a favorable impression with every person who tried it. A bread that was better, and much more expensive than any they had heretofore made.

They experimented with it; they made a large loaf and offered it to their trade at ten cents per loaf.

It repeated.

"It's a go," said one of the partners.

"It's a go," said the other.

"So here goes"—together.

They sent for an advertising man. They talked the matter over.

They decided on an advertising campaign.

What they lacked was a name for their bread.

Just about that time, Weston was making his celebrated walk from New York to Chicago. He was using a bread similiar to the new bread they were baking.

Happy thought.

A name was found—*Weston.*

Again they sent for the advertising man.

Together they planned, and figured, and worked out their idea.

The mere matter of expense never entered their heads. What they wanted was to sell this new bread.

Immediately the announcements of *Weston Bread* commenced to appear in the newspapers. The newspaper advertising grew month after month—so did the bread sales.

Then the advertising appeared on bulletin boards. Then it appeared on illuminated signs. Then it appeared on theater programs. Then it appeared on theater curtains—and lo and behold, it appeared in an (advertisement) on the dome of the Kansas State Capital building.

All this time the newspaper advertising continued.

All this time the sales of *Weston Bread* were doubling and doubling again.

The result.

An idea, plus an honest article, plus newspaper and general advertising, have made *Weston* bread a daily visitor to hundreds of Topeka homes.

It is establishing a great business for the makers of *Weston* bread.

It is making them money. It will make them rich.

Advertising is a great thing.

Think hard. —T. D. C.

From the *Topeka Daily Capital,* April 5, 1909.

"FIND THE PAPER VERY HELPFUL TO THEM."

Office of the Santa Ana Daily Register,

Santa Ana, Cal., April 1, 1909.

Col. B. B. Herbert, 1319 W. Ravenswood Park, Chicago, Ill.

Dear Father Herbert:—In renewing my subscription to the National Printer-Journalist for another year, I feel like trying to express my appreciation of the work to which you have devoted so many years of your life. But I have done this so often that it seems wholly unnecessary, so far as you are concerned, for me to add anything at this time. I wish there were some way for me to convey to the newspaper men of the country, in a convincing way, an adequate idea of the great benefit your paper has been to me in my newspaper work.

In a limited and desultory way I have tried to do this. Many years ago I subscribed for the National Printer-Journalist for some young men who learned the A B C of the newspaper business in my office, and I have had the pleasure of having more than one of them tell me, in recent years, that they are still subscribers, and find the paper very helpful to them.

With kind personal regards and sincere wishes for many years of usefulness for you, I am,

Very sincerely yours,

J. P. Baumgartner.

A HELPFUL FACTORY ORGANIZATION

EVERY one familiar with factory management knows that hardships and deprivation to the the family frequently follows even temporary disability of the bread winner. The System of "passing the hat" for disabled workmen becomes in places almost a continuous performance. Aside from the annoyance, loss of time and manifest unfairness of this method, it tends to pauperize the recipient and rob him of his self respect.

The Challenge Machinery Co., of Grand Haven, Mich., have found an unusually efficacious way out of this difficulty. On June 1, 1907, on the initiative of the Manager, Mr. J. Edgar Lee, a number of the workmen met and organized The Challenge Co., Mutual Aid Society, the object of which is to relieve members in distress, provide benefits, in cases of sickness and death, and promote good fellowship among its members. Members are divided into two classes. Class A, consisting of those earning $7.00 per week or less. Class B, those earning more than $7.00 weekly.

In Class A the initiation fee is 25 cents with monthly dues of 15 cents. In case of sickness or disability, continuing more than three days, a weekly benefit of $3.00 is paid, for a period not to exceed twelve weeks in any one year. In case of death, $25.00 is paid. In class B the initiation fee is 50 cents; monthly dues 30 cents; sick benefit, $6.00 per week; death benefit, $50.00. The Challenge Machinery Co., acts as permanent treasurer. All other officers are elected annually by the Association.

Nearly everybody about the factory, from the President to the apprentices, belong to the society. Its affairs are in a flourishing condition. Whenever the surplus in treasury exceeds $250.00, all assessments are passed until this amount is reduced to $200. During 1908 only eight assessments were collected.

This plan has worked admirably, and in many cases has proved a boon to the members.

Recently the Aid Society assisted by The Challenge Machinery Co., gave a banquet and ball. A portion of the factory was cleared and decorated. Long tables loaded with good things were provided, and a varied program rendered by members between dances. Below we give the program of the evning.

THE C. M. COMPANY MUTUAL AID SOCIETY BANQUET AND BALL.

Programme and Order of Dance.

The C. M. Company's Works, Friday Evening, March 12, 1909. From 8:00 to 12:00.

1—Overture—"Standard American Airs." .....
Orchestra.

2—Two Step .....
3—Quadrille .....
Address: "The C. M. Co., Mutual Aid Society."
Mr. J. Edgar Lee.

4—Waltz .....
Recitation: Mr. N. K. Thompson.
5—Quadrille .....
Duet: Messrs. James Smith and Harry Bishop.
6—Barn Dance .....
Cornet Solo: Mr. L. Slaughter.
7—Two-Step .....
Hornpipe: Mr. "Happy" Leland.
8—Virginia Reel .....
Ventriloquism: Mr. A. E. Ellingen.
9—Waltz .....
Supper.
10—Quadrille .....
11—Request .....
12—Two-Step .....
13—Request .....
14—Waltz "Home Sweet Home" .....

About 400 empoyes and their friends attended this entertainment. The work of the Socitey has been so helpful and so gratifying in every way that they are planning for larger things. Among the suggestions under consideration are a permanent club room, and a well equipped gymnasium, library and reading room. The Challenge Machinery Co., is encouraging the work in every way and are proud of the results obtained up to date.

We give as follows the constitution and by-laws of commendable organization believing that the same may be useful and helpful in encouraging, and the forming, of other like organizations, for the reason that everyone needs to be shown, and having a practical example in hand influences to the doing likewise:—

CONSTITUTION AND BY-LAWS

CONSTITUTION.

ARTICLE 1.

NAME.

This Society shall be known as The Challenge Machinery Company Mutual Aid Society.

ARTICLE 2.

OBJECT.

The object of this Society shall be for the mutual aid of its members in case of sickness, accident and death.

ARTICLE 3.

MEMBERSHIP.

All members must be employees of The Challenge Machinery Company and of apparent sound bodily health.

ARTICLE 4.

OFFICERS.

The officers of this Society shall consist of a President, a Secretary, a Treasurer and an Executive Committee of five (5), to be elected at the annual meeting for one year of office. with the exception of the Treasurer, who shall always be The Challenge Machinery Company.

ARTICLE 5.

MEETINGS.

Section 1. The regular meetings of this society shall be held on the first Tuesday of December.

Section 2. A special meeting may be called by the President upon the request of three members of the Executive committee or upon a written request signed by fifteen (15) members of this Society.

ARTICLE 6.

QUORUM.

Fifteen (15) members besides the President shall constitute a quorum at a regularly or specially called meeting and will have power to transact all business.

ARTICLE 7.

ELECTION.

Section 1. The officers of this Society shall be elected annually by ballot at the regular annual meeting of this society to serve for the term of one year or until their successors are legally elected. No member shall hold office of this society until he or she has been a member for six months with the exception of the members elected at the time of organization.

Section 2. Whenever an officer of this Society shall leave the employ of the Company, said office shall be de-

cared vacant and such vacancy shall be filled by the Executive committee.

Section 3. One week before the annual meeting, a special meeting will be called, at which time nominations will be made for the annual election.

ARTICLE 8.

SICK COMMITTEE.

The Sick Committee shall consist of the Executive Committee.

BY-LAWS.

ARTICLE 1.

DUTIES OF OFFICERS.

Section 1. It shall be the duty of the President to preside at all meetings of the Society, to appoint all special committees; enforce obedience to the Constitution and By-laws and excercise a general supervision over all the Officers of this Society.

Section 2. In the absence of the President at the annual meeting, the chairman of the Executive committee shall act as President.

Section 3. It shall be the duty of the Secretary to keep a strict account with the Treasurer of all the money received and paid and counter-sign all money orders, and keep minutes of all the meetings. For this service he shall be exempted from payment of assessments.

Section 4. It shall be the duty of the Treasurer to keep a strict account with all members, collect all money and pay all orders signed by the President and Secretary.

Section 5. The Executive committee shall at their regular monthly meetings, hear the reports of the Secretary and Treasurer and transact all other business of the Society. They shall pass on all bills before being paid and shall audit all claims for indemnity after being satisfied of their being just. They shall look after all members on the sick list. They shall pass upon all applications for membership.

ARTICLE 2.

MEMBERSHIP.

Section 1. Each applicant must be in the employ of The Challenge Machinery Company at least four (4) weeks before being admitted into the society.

ARTICLE 3.

DUES.

Section 1. The assessments of this Society shall be Class A, fifteen (15) cents, class B, thirty (30) cents, to be deducted by the Treasurer from each member's wages on the second Wednesday of each month. If a member has no wages coming, amount must be paid to Secrtary by him before second Wednesday of each month. If at the end of any year the amount of money in the treasury exceeds $200.00, a dividend shall be declared when the surplus reaches the sum of $250.00 over and above the original $200.00. The dividend shall be divided among the members pro rata as each has paid his assessments during the year or years in which said surplus ($250.00) is accumulating.

ARTICLE 4.

BENEFITS.

Section 1. Any member of the Society unable to attend to his or her duties through the sickness or disability of said member must notify the secretary within three (3) days after the date of such sickness on regular blank provided for that purpose. Should said member fail to notify the Secretary within three days, benefits will only be paid from the date of such notification. Said member shall be entitled to receive out of the funds then on hand, if a member of class B, not more than Three Dollars ($3.00) for the first week of sickness and not more than One Dollar ($1.00) per day, Sundays excepted, after the first week. If a member of class A said member shall be entitled to receive not more than One Dollar and fifty cents ($1.50) for the first week of sickness and not more than fifty cents (50c) per day, Sundays excepted, after the first week. In no case shall a member draw benefits for more than twelve (12) weeks in any one year, said year to date from first benefit paid.

Section 2. Any member who may be disabled by dissipation or any immoral conduct shall not be entitled to relief.

Section 3. In case of the death of a member the Secretary shall draw Twenty-five Dollars ($25.00) if member is in class A, and Fifty ($50.00) Dollars if in class B, from the Treasury and pay same to the person or persons last designated as his beneficiary.

Section 4. A doctor's certificate is necessary before payment of benefits. Said certificate shall clearly state nature of ailment.

Section 5. Any member who shall find it necessary to leave the city on account of ill-health shall furnish the sick committee with a doctor's certificate before taking leave. No benefits will be paid for the time spent out of the city unless the above is complied with.

Section 6. Any member who fraudulently claims or receives benefits will be expelled.

Section 7. Any member who receives a temporary lay-off shall be entitled to sick benefits only, provided he is in good standing.

Section 8. Any member leaving the employ of The Challenge Machinery Co., shall forfeit all dues and assessments paid to this Society and all benefits will stop on the first of the following month.

Section 9. That in case of permanent disability, beneficiary shall not receive any benefits over and above the full twelve (12) weeks: i. e., class B, $72.00; class A, $36.00. Beneficiary incapacitated for a period of more than a year (1 yr.) shall be considered permanently disabled. Year to be considered twelve months from date of first benefit paid.

Section 10. Any member receiving indefinite lay-off shall stand suspended on failure to pay his dues, but shall be fully reinstated, without initiation fee, upon payment of all back dues, unless in ill health at time reinstatement is applied for.

ARTICLE 5.

FINANCIAL STATEMENT.

A quarterly statement of the financial condition of this society shall be posted in the factory in February, May August and November of each year.

ARTICLE 6.

AMENDMENTS TO THE CONSTITUTION AND BY-LAWS.

This Constitution and By-laws may be amended at any regular meeting by a two-third majority vote of the members present notice of such amendment having been posted in the factory one week in advance of the meeting.

ARTICLE 7.

ORDER OF BUSINESS.

First—Calling meeting to order.
Second—Reading minutes of previous meeting.
Third—Reports of Officers.
Fourth—Reports of Committees.
Fifth—Unfinished Business.
Sixth—New Business.
Seventh—Adjournment.

ITEMS OF INTEREST

THE annual meeting of the stockholders of the *Evening Wisconsin* company was held at Milwaukee. After the stockholder's meeting there was a director's meeting at which Mrs. Harriet L. Cramer was re-elected president of the company and John F. Cramer was re-elected vice-president and treasurer. John W. Campsie, who had been elected a director at the stockholders' meeting, was elected business manager at the meeting of directors. Mr. Campsie, who recently purchased an interest in the company, began his connection with the *Evening Wisconsin* a quarter of a century ago, as a compositor, and at the end of nine years was advanced to the management of the printing department, where, closely associated with Mr. Aikens, he acquired experience and developed capabilities that will be useful in his new position.

At Niellsville, Wis., the *Good Citizen,* a bi-weekly, has just made its appearance, published by L. B. Ring. It supports county option.

Thomas A. Daily, president of the Adrian, Mich., *Times* Co., and manager of the paper, has been appointed postmaster at that place.

Miss Nellie Revell, press agent for a Chicago theater, has been engaged by the State of Michigan to exploit its greatness. She will devote much of her time to booming agricultural fairs.

Norstedt & Soner, The Royal Printery, Stockholm, Sweden, have recently installed one of the latest high-speed Oswego cutting machines made by the Oswego Machine Works, Oswego, N. Y.

Ignace McCreedy, formerly sporting editor of the Providence, R. I., *Journal,* has joined the Fifteenth U. S. Cavalry at Fort Sheridan, near Chicago. He enlisted as a private but will work for a commission.

J. W. Jarnagin, editor of the Cedar Falls, Iowa, *Daily Record,* was appointed postmaster to succeed E. A. Snyder, who has held the position for eight years and was for forty years a newspaper man there.

McIntyre, Iowa, now has a paper. Vol. 1, No. 1, of the McIntyre *Monitor* has put in its appearance, with D. H. Murphy as publisher. It starts out with a good line of advertising and full of good, lively editorial and local matter.

Leslie M. Fowler, who is in the course of the present month will retire from the Racine, Wis., newspaper to assume the position as city clerk, has been on the editorial and reportorial staff of the *Times* for more than sixty years.

The Illinois Press Woman's Association is to have a matinee benefit at the Garrick theater, Chicago, soon. It is expected the attraction will be the musical comedy "The Girl from Gosham," given with the same Colonial club cast that made so complete a success. The comedy is by Mrs. Mary Moncure Parker and her talented son Gilman.

The NATIONAL PRINTER-JOURNALIST has received from the Keystone Type Foundry a fine, large photogravure, size 16x20, of their Main Foundry building in Philadelphia. These pictures are presented with the Foundry's compliments to customers and friends who request them. The picture is very attractive and when neatly framed is worthy of a place on the walls of any business office or composing room.

Edward Tostevin, who for over twenty years has been the business manager of the Racine, Wis., *Journal,* has resigned his position and disposed of his interests in the paper and will move to Mandan, N. D., where he has purchased a newspaper. Mr. Tostevin is well known among the newspaper men of the state and served as an officer of the Wisconsincon State Press Association.

Arthur Capper, publisher of the Topeka, Kansas, *Capital,* has been appointed by Governor Stubbs to the position of Regent of the Kansas State Agricultural College. The appointment was immediately confirmed by the Kansas Senate by a unanimous vote. Mr. Capper was taken by surprise, as he had no intimation that he was to be honored by the Governor until his name was sent to the Senate.

J. J. Richardson, publisher of the Davenport, Iowa *Democrat,* has rounded out half a century as a newspaper publisher. He came from Vermont in 1859 and entered the business of publishing the Davenport *Democrat* with his brother in the same year. Since 1898 he has been sole publisher of the paper. Mr. Richardson has been for many years prominent in Democratic politics, and of late years has been a breeder of Jersey cattle.

M. H. Bassett, former editor of the Kankakee, Ill., *Republican,* and his family have left for Tulsa, Okla., where he will take the management of a new paper to be started there. The paper will be entitled probably the *News,* and is backed by influential men in Oklahoma. It will be independent in policy and enters the field now occupied by two other dailies. A. S. Sweeney, former city editor of the *Republican,* will become the editor of the new paper, while Mr. Bassett will attend more to the business than the editorial management of the paper.

Dowagiac is to have a second daily paper. It is to be known as the *Daily Herald* and is to be published in the afternoon. A deal was perfected whereby H. E. Agnew and wife and Abner M. Moon will merge their newspaper properties. The Dowagiac *Republican* and the Dowagiac *Herald,* both weeklies, and in company with Clifford Ward, of Hillsdale, Mich., will launch the second daily newspaper. A stock company to be known as the Herald Publishing Company, will be organized under the laws of Michigan. Their capital stock will be $10,000, consisting of the present Weekly *Herald* property, the Dowagiac Weekly *Republican* property and some cash invested by Mr. Ward.

At the annual business meeting of the Des Moines Press club, Mrs. James G Berryhill, was chosen as president for the ensuing year. Besides the election of officers, delegates, regular and alternate, were chosen for the biennial convention. Those who were chosen are as follows: Mrs. James G. Berryhill, president; Mrs. John R. Drake, first vice president; Miss Guilielna Vollinger of Newton, second vice president; Mrs. Nellie G. Tomlison, recording secretary; Miss Jeanne Loizeaux, corresponding secretary; Miss Emilie Blackmore Stapp, treasurer; Mrs. Frederick Weitz, historian; Miss Margaret Walker, librarian; board of directors, Miss Alice S. Taylor, Mrs. H. B. Hawley, Mrs. D. H. Reichard, Mrs. Preston, B. Durley and Mrs. George Young. Regular delegates to biennial convention: Miss Alice Tyler and Mrs. Frederick Weitz, alternate delegates, Mrs. George Young and Miss McClelland.

THE BOSS

By the boss we mean the active proprietor, the executive head, the owner of the business. He is sometimes called the "old man."

The success of an institution depends largely upon the example of the boss.

If the boss is careless in little things, if he is sharp in his practice, if he does mean acts, he may rely upon it his employees will copy him, and later on, when some blow strikes the business, he will find it has happend through the practices of the employees who got their cues from the boss.

Kindness wins kindness; love wins love. If the boss is generous and charitable, if he sets a good example, he will have an esprit de corps among his employes that is of incalculable value.

There is not one chance in a thousand for the boss to make a success unless he has risen to the position of boss, and climbed and earned his position through steady progress.

The boss must know how to do the things he hires others to do.

The boss who can show his employee his error in a kindly manner and point out a better method, leaves a good feeling in the heart of that employee.

The boss who shows his heart to the employee and is concerned in the things not necessarily business will be repaid a thousand-fold in loyalty and willingness on the part of the employee.

Employees deeply appreciate consideration, and especially the little kindnesses which are not what might be called business practice.

The boss should not be too far aloof; he should be just head and shoulders above those working under him; he should be just far enough above that he stands out as a commander.

He should be willing to grant an audience to an employee and work with him.

The boss should say we rather than I. He should talk with the employees and not down to them. He should make each individual under him feel that he is part of the institution and an element in its success.

Remember this—employees watch the boss and they copy him. Where you find hard-working employees you will find a hard- working boss.

The boss cannot run the whole business himself; he is dependent upon willing hands; he must have willing hands himself.

If the boss is alert and discovers wastes and leaks in his business, the employees will discover them, too, and the business will receive double benefit.—*Dollars and Sense.*

A PRINT SHOP THAT PAYS

The office I have in mind was established more than twenty-five years ago and has been continuously under the individual management of the founder. He has not sought to do a large business, but has gradually increased as profitable and solid business developed.

Certain general maxims have been in the mind of the manager, as follows:

First—Material is cheaper than labor.

The orders of the foreman for new type and material are immediately approved. Full series of type are ordered and fonts in sufficient number to fill the cases. The aim has been to have no more faces than would meet requirements, and of those to have a plenty. Of quads and spaces, leads and rules there never was any lack. In fact, the purpose has been to have the material at hand to set any job without picking, and not to be obliged in a busy time to take men off from composition to distribute. The labor at the press is looked after, and if type is becoming worn so that much labor is required in making ready, it is replaced with new. Also a great number of forms are kept standing—such as are likely to be used again in whole or in part, and which may require such changes as make electrotyping impracticable.

This effort to save labor is carried all through the plant. There is abundance of chases, quoins, wrenches and all tools used about the press room.

Second—Get good men and use them so they will stay.

The trouble maker and the intemperate man have no place in this shop. Many of those here have grown from boys in this place. The manager goes in and works with his men, keeps the same hours they do and seeks to make them feel secure in their employment, take a pride in the reputation of the house, and feel that so long as they take care of the business the business will take care of them.

Third—There is money to be saved in getting rid of some trade as well as money to be made by securing and keeping other trade.

This manager seeks only trade that is constant and amounts to enough to be worth while. The party who is continually looking for the cheapest place and asks quotations of half a dozen printers on every job is not catered to, nor is the transient or the man of small orders. Nor does he long to sell to those who are slow to pay.

Does all this pay, and does the balance sheet bear out the practical value of these maxims as applied to the printing business?

The results have always been satisfactory, and 10 per cent was figured off the machinery and the plates, type and material charged to expense.

To these three maxims this man attributes the success of his little business.—*The Franklin Printer, San Francisco.*

THE CONSULAR SYSTEM

There will be general agreement with the opinion of Dr. Richard D. Harlan, expressed in his article in the *Buyers' Index,* quoted in the *Sunday Times,* that the Consular system of the United States should be separated altogether from partisan political influences and the idea of patronage. The *Times* has labored earnestly to this end. The young Consular officer should, indeed, be able to look forward to a career, such as that of the army and navy, and he should have the opportunity of educating himself especially for Consular work. We have already commended the establishment of the College of Political Sciences of the George Washington University, the claims of which as a school for Consuls Dr. Harlan is promoting. His plan for the establishment of State scholarships in this school deserves serious consideration.

President Roosevelt and Secretary Root have done all they could, in face of the combined hostility and indifference of the Congressional majority, to improve the Consular system and establish it on a reasonable basis. But Congress should be compelled by the force of public opinion to enact into a law the provisions of the Executive order under which candidates for Consulships are subjected to the test of competetive examination, new appointments made only in the lower grades of the service, and vacancies in the more important posts filled by promotions for merit. Members of Congress still name candidates for Consulships, however, and these candidates are sent before the Examining Board. Dr. Harlan's idea that the service should be open to any ambitious young man is eminently sound.

With the enormous growth of our export interests the work of our Consuls has increased in importance.

Higher salaries in the upper ranks and a pension system will doubtless come to arouse public opinion to the necessity of reforming the whole system thoroughly and establish it permanently on a rational basis.—*N. Y. Times.*

COST

"That the cost question is important is a matter of record. The documents are on file in the archives of this club. Every trade paper, every printers' board of trade, every Franklin club is trying to get the printers of the country to study the question of cost and to adopt better methods and thus uplift the printing trades generally. It is a difficult task to uproot the ignorance that prevails in so many places and to get printers to see that all this discussion is meant for their uplift.

"Every good Franklin member is expected to know his costs and teach his neighbor. May the work so well begun be carried on to perfection.

"COST is the printer's worst enemy save one—*ignorance of cost.* It lurks in every job, creeps out in every expenditure, entraps the unwary, is deceptive above all you can think. Look out for him. He will get you, sure.

"COST is an enemy that many are afraid to reckon with An enemy in the dark that they have read about in the *Ben Franklin Monthly* but have never got close enough to, to recognize. As elusive and as terrible as the sea-serpent and as ready to devour at any moment. Eery little while some one gets a glimpse of him, and his description strikes terror to timid souls. This enemy always fights in the dark or from behind a wall. He will not fight in the open. Like the cuttlefish, he darkens the waters around him, confuses you and gets away unharmed.

"What is the use trying to pursue him?

"The reason for keeping up the fight is that you can not conduct your business with satisfaction and security as long as the beast is allowed to run at large. Take him! Tame him! Bring him under control or he will ruin you! Are you afraid to tackle the job? Then hunt for cover. If you are an 'innocent bystander' you will get killed, sure. Get a gun and go after him. The sword you have been sticking your friends with will not count in this fight. It is not long enough to reach the vital spot.

"Stop the guerilla warfare. You cannot fight the battle single handed. Make a concerted movement. It is only when all the printers in Printerdom, under the very best generalship, make the attack, that ehe enemy will be captured and controlled.

"This club has made a good beginning. Make another call for volunteers. If you cannot get them then, try the draft. Compel them to come in. They will get hurt if they don't. Enlist the help of the supply houses. They are partly to blame for the reign of terror. Thty will join with you in putting a stop to the depredations of the cost fiend..

"The strength and location of the enemy are well known; the points of attack selected; the mines laid; and the victory assured. The officers are ready. But what about the army of invasion? There are a few sharpshooters, some squads with machine guns and some heavy guns with range finders, but the rank and file are provided with the primitive weapons of the hit-and-miss pattern—the old flintlock guesser, the muzzle of co-operation. Each one sure of his own weapon and just loader, the air gun, and the pop gun—all without the discipline as likely to hit himself as the enemy if hurried into action.

"Out of this chaos must come order, more uniformity of thought and action, modern weapons of the most approved make, and then the attack may be made effective, the enemy subdued and peace and prosperity assured to the great army of printers."—J. Beckett, before Ben Franklin Club, Chicago.

TOPICS PROPOSED BY PRESIDENT MAYES FOR THE SEATTLE CONVENTION, AUGUST 19-25

Editorial Department—The Value of the Editorial Page, Telegraph Service for Small Dailies, The Problem of the Country Correspondent, Gathering Local News for Country Dailies, The Relation between City and Country Papers, Individuality in Newspaper Work, Profitable Departments and Features, Sunday Editions for Afternoon Papers, Editing the Small Country Weekly, Opportunities in Journalism for the Young Man, The Party Paper or the Independent Paper, Profitable Recreations for Newspaper Writers.

Business Department—Figuring the Daily Expense, Keeping Tab on Classified Advertising, Handling the Circulation on a Daily, Handling the Circulation on a Weekly, The Work of the Advertising Solicitor, Meeting Fake and Graft Schemes, How to keep in the Public Eye, Value of the Building and Location to a Paper, Relative Expense to Different Departments, How to Secure and Handle Foreign Advertising, Financing the Small Country Weekly, Premiums and Voting Contests, Clubs, Pratical Economies in Business Management, Profitable Side Lines for Newspapers.

Mechanical Department—The Ideal Make-up, Money Saving Methods and Devices, Combining Newspaper and Job Printing, Economizing in Ad Composition, Distributing Work on Small Dailies, Best Results at Least Expense, Keeping Up Appearances.

The Indiana State Leased Wire Circuit, of the Associated Press, was formed at a meeting of leading Indiana newspaper men in Indianapolis, April 13. F. A. Miller, editor of the South Bend *Tribune,* was elected president and R. A. Butler, of the Marion *News-Tribune,* was chosen secretary.

The papers represented were the South Bend *Tribune,* Marion *News-Tribune,* Terre Haute *Tribune,* Terre Haute *Star,* Fort Wayne *Sentinel,* Fort Wayne *Journal-Gazette.* Evansville *Journal-News* and Evansville *Courier.* Col. Charles Diehl, of Chicago, assistant manager of the Associated Press; Mr. Beach, of Chicago, superintendent of the central division of that great news agency, and George Cook, Indianapolis, manager of the Indiana Circuit, were also present.

The meeting was held in the Claypool Hotel. It was called to order by Mr. Cook and on motion of E. A. K. Hackett, of the Fort Wayne *Sentinel,* Mr. Miller was made chairman and Mr. Butler secretary. Later they were made president and secretary of the new organization for the first year. A committee was authorized to prepare by-laws to be submitted to each member. Evansville was selected for the next place of meeting on Oct. 12th.

The association was formed for mutual benefit and to assist in increasing the efficiency of the Indiana leased wire circuit of the Associated Press, already one of the strongest circuits in the country.

A LIFE SUBSCRIBER.

House of Representatives, U. S. Congress,
Washington, D. C., Apr. 12, 1909.

Mr. B. B. Herbert, National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

Dear Mr. Herbert:—I enclose my check for subscription to March 1910. Of course, you know that I am a life subscriber.

I leave tomorrow with a Congressional party for a trip to the Panama to inspect the Canal. With kind regards, I am,

Very respectfully, William A. Ashbrook.

ALASKA-YUKON-PACIFIC EXPOSITION

IT had been the intention of the editor of this paper, in harmony with a practice or plan carried out for the last twenty years, to visit Seattle, the Exposition, Tacoma and other points, in advance of the Convention of the National Editorial Association, and give the delegates a foretaste, by a description of the points and objects of interest, from personal view and observation, of the feast of sight-seeing that was in store, but this has seemed, so far, impractical and it looks as though the record of a fifth of a century were to be broken. However, the Chicago, Burlington & Quincy, the Northern Pacific, the Chicago, Milwaukee & St. Paul, and other great railroads and railway companies have issued a great amount of excellent descriptive literature, in the shape of pamphlets and folders so that no one need to be uninformed. This literature will be furnished free on application.

The Chicago, Milwaukee & St. Paul Railroad has issued an illustrated booklet of over sixty pages, entitled, "North Pacific Country," that is especially worthy of note. It is a superb specimen of illustrated work and printing, from the Northrup Matthews works of Buffalo, that will delight every admirer of "the art preservative of arts." Every lover of good printing will want a copy, on account of the artistic perfection displayed, but, besides that, it contains a great amount of very entertaining and instructive information with regard to the region and the great Exposition described.

We know that all newspaper men, who are the evangels and promoters, in this country, of what President McKinley so aptly named, "The time markers of Progress," the great industrial expositions, will be glad to read what is said, in this booklet, of the latest, that promises to be "the most beautiful of the world's fairs," as it will be the most typical and indicative of the past, present and future of the great region, where it is to be held. For this reason, with due credit and thanks to the Chicago, Milwaukee & St. Paul Railway and its genial, progressive General Passenger Agent, F. A. Miller, we reprint the same here, in place of what we hoped to write, believing that our readers will rather gain than lose by this necessary substitution:

The Alaska-Yukon-Pacific Exposition, at Seattle, from June 1 to October 16, 1909, will be ready on the opening date. This fact alone will distinguish it from previous expositions.

It is also confidently expected by the builders that this will prove to be the most beautiful of all the world's fairs. Certain it is that the surrounding country presents wonderful natural advantages, and the appearance of the grounds and buildings six months before the gates open shows a full appreciation of these advantages by the landscape artists employed.

Agricultural Building

On the slope of the Exposition grounds the highest development of landscape art is displayed.

Millions of flowers will be in bloom, their colors carefully blended into harmonious effect. The cactus dahlia, the official flower of the Exposition, will be everywhere in evidence.

The Cascades and Geyser Basin form the center of the general decorative scheme. Surrounding both of them are sunken gardens that will be rich in bloom from June 'till October.

South, in the distance, stands the highest mountain in the United States—Rainier (Mount Tacoma, if view from Tacoma)—but so outlined against the clear blue sky of the Pacific Coast as to seem much nearer. To the northeast are the Selkirk Mountains, and to the west the snow-crested heads of the Olympics make a rugged outline against the sky. Mount Baker, another magnificent peak, is plainly visible from the grounds in a northeasterly direction. In the immediae foreground are lakes Washington and Union, on the shores of which the Exposition will be held.

The Exposition monument stands in the plaza in front of the United States Government building. It will be entirely covered with gold from Alaska and the Yukon, and its splendor will be one of the features of the Exposition. It is

eighty feet high. At the base are four figures, emblematic of the Northland, the Southern Pacific Countries, the Pacific Coast, and the South Seas. The column is Corinthian, with an ornamental shaft carrying an astronomical globe showing the signs of the zodiac, and surmounted with the American eagle. About $7,000 worth of gold dust will be used to gild the monument.

Many of the States of the Union are participating in the Exposition. Several have buildings and many more will make exhibits. A number of counties in the State of Washington

View from Agricultural Palace

At the head of the Cascade Court stands a monument typifying the "Spirit of the Pacific," the sculptor having used the aboriginal races of the Pacific Coast countries as models for his central figures.

The main buildings of the Exposition are grouped around these central decorative features. They include the Agriculture, Manufactures, State Fisheries, Mines, Machinery, Fine Arts, Transportation, Foreign, Auditorium, Forestry, United States Government, Canada, Japan, Alaska, Hawaii, Philippines, and Government Fisheries.

The Exposition will stand on the grounds of the University of Washington, and seven of the buildings are of permanent construction, to revert to the University when the Exposition is over. They are the Auditorium, Fine Arts, Machinery Hall, Forestry, Washington State, Arctic Brotherhood, and Women's. In all, $605,000 has been spent in buildings that will be added to those already owned by the University.

Auditorium

Fine Arts Building

Many of the States of the Union are participating in the Exposition. Several have buildings and many more will make exhibits. A number of counties in the State of Washington will erect buildings of their own. The United States Government has five buildings, its main structure, and separate ones for Alaska, Hawaiian Islands, Philippine Islands, and Fisheries. Canada's building is one of the largest and most attractive on the grounds. The Japanese Government's building is typical of the enterprise and art of that nation.

The Foreign Exhibits Palace will house exhibits from Great Britain, France, Germany, Russia, the Netherlands, Chile, China, Colombia, Costa Rica, Ecuador, Formosa, Korea, French East Indies, German Colonies, Guatemala, Honduras, British India, Mexico, Dutch East Indies, Nicaragua, New Zealand, Panama, Peru, Siam, and Salvador.

The educational value of the Exposition will be great. If the visitor to the fair seeks information regarding Alaska

he can find out everything there is to learn about it by a few hours' study in the Alaska building. Every feature of that great north country will be exploited, from working models of the mines, that send their millions in gold to the outer country, to the little flower that lifts its head to greet the midnight sun.

Hawaii, too, and the Philippines will tell their stories. Their natives will come to give demonstrations of their handicraft.

Warships lying at anchor in Seattle's harbor, will tell the story of the Pacific. The United States navy department will have the entire Pacific fleet here during the fair; Japan will send her great war vessels, and Great Britain, Germany, China, France, Russia, and other nations that have to do with the commerce of the Pacific will have their navies represented.

A stadium has been erected to take care of the field sports. The Amateur Athletic Union contests for 1909 will be held here, and scores of the famous world's champions will participate in the events. Balloon, airship, and motor boat and automobile races will provide stirring amusement, as well as demonstrate the mechanical progress of the age. A United States life-saving station will give practical exhibitions of its work, and a submarine boat will frolic in the waters of Lake Union.

Band stands have been erected in various parts of the grounds, and famous musical organizations will soothe the tired sightseer.

The Exposition will amuse as well as instruct. What the Midway was to Chicago, the Pike to St. Louis, the Pay Streak will be to Seattle.

Any time is a good time to visit Seattle. As far as the fair itself is concerned, there will be no choice, for it will be complete from the first day, June 1st, and it will be ready for inspection any time until the close of the gates on October 16, 1909. Seattle has no extremes of climate. When the thermometer goes above eighty in summer Seattle thinks it is hot, and when it drops to thirty in the winter Seattle talks of the "cold spell."

Tickets will be good to return until October 31, 1909.

The Seattle spirit that created the fair will make it successful. When it was launched the citizens were asked to subscribe $500,000 in stock. They subscribed $650,000 in a single day. In October, 1908, when it was necessary to raise more money, Seattle people took $350,000 bonds in two days. The landscape department asked for 25,000 geranium plants, and on Saturday afternoon the people of Seattle took 40,000 to the grounds.

Following are some interesting facts about the fair:

Area, 25 acres.
Cost, $10,000,000.
Battleships in harbor.
Salmon cannery in operation.
Value of exhibits, $50,000,000.
Sub-marine boat on Lake Union.

Looking Across Geyser Basin

Uncle Sam is spending $600,000.
Washington appropriated $1,000,000.
Wonderful floral and landscape display.
First World's Fair to be ready on time.
Five double-tracked car lines to grounds.
Motor boat display on Lake Washington.
Opens June 1, closes October 16, 1909.
Amusement street is called "The Pay Streak."
Snow-capped mountains seen from grounds.
Will exploit Alaska and countries of Pacific.
United States Government has five buildings.
Principal monument covered with pure gold.
Grounds twenty minutes ride from business section.
Fourteen thousand gallons of water will flow over Cascades every minute.

Highest mountain in United States and three mountain ranges visible from grounds.

MISSOURI PRESS ASSOCIATION

A GOOD PROGRAM AND A MODEL ANNOUNCEMENT WORTHY OF IMMITATION.

Troy, Mo., April 12, 1909.

Dear Brother Editors:—The work of making a program for the meeting of the Association at Fulton, May 12 to 14, is almost completed. I have promises from the following gentlemen to give us papers on the topics named:

Mr. R. E. Douglas, of Charleston—"Type, Furniture and Material Equipment of the Country Newspaper and Job Office; its Purchase, Care and Use."

Mr. T. A. Dodge, Milan—"Machinery Equipment of the Country Newspaper and Job Office; Its Purchase, Care and Use."

Mr. A. J. Martin, Unionville—"The Circulation of the Country Weekly; How to Build and Maintain." Mr. Martin has a circulation of over 3,000 for his paper, published in one of the smaller counties of the State, and his paper should be a help to every member of our Association.

Mr. E. L. Purcell, Fredericktown, will tell us how to handle that department of our papers which helps so much to build up and hold patronage—"The Country Correspondence."

Mr. Phillip Gantz, of Macon, who handles more advertising than any other country weekly publisher in the State, will tell us all about how he makes money for himself and for his patrons out of "Home and Foreign Advertising."

Mr. Chas. L. Miller, a job printer of recognized ability in north Missouri, publisher of the Unionville *Journal,* will tell us "How to Make Money in the Job Office of the Average Country Shop."

Mr. C. W. Mulinex, of the Labelle *Star,* who has had some of the most successful contests that have been pulled off in Missouri, will give us his experience with "Contests as Circulation Builders."

Mr. Chas. Richards, of the Wentzville *Union,* will tell us "What Makes for Success in the Small Town," a topic that will interest a large number of the members of the Association, for the methods that win in the small town ought also to make money for those who are fortunately located in larger places.

Mr. Lee Shippey, well known as a writer on the Kansas City *Star,* will treat the "Grip of Fellowship," linking the good fellows on the metropolitan press with their brethern in the hamlets and towns of the good old State.

Mr. Walter Williams, known and respected by all good country editors who have met him—in and out of Missouri—will give an account of his stewardship in a talk on "This Year in the School of Journalism."

The Editorial Department and Politics as it Affects the Country Editor, are two interesting themes that will be treated by experienced thinkers and writers. The Business Department will also be handled by a good authority on that subject. Besides these set topics, at least 100 practical questions, details of these subjects will be taken up for discussion, and in which all will be urged to join.

The literary feature of the meeting will be given the evening of May 12, at which time Hon. Ewing Herbert will deliver an address before the Association which no newspaper man in Missouri should fail to hear. Mr. Herbert is the talented editor of the Brown County *World,* Hiawatha, Kan., and is one of the strongest writers and speakers in our profession.

With these practical topics on the program, treated by men who have succeeded in their sphere of usefulness, I am justified in saying that I can guarantee to every member of the Association a really profitable meeting. The pleasure of once more greeting your fellow-laborers, the social features of the gathering, the old fashioned hospitality of the city of Fulton, in the Kingdom of Callaway, need not here be mentioned.

Now, I have a few requests to make of each member of this Association:

First, Mention the meeting in your paper, and better still, also write a personal letter to all your editorial brethern in your own and adjoining counties and try to get them to attend the meeting.

Second, Sit down right now and think up five or six of the most troublesome questions that have confronted you in your experience and send them to me to be printed in my list of 100 or more for the Query Box-Help, Engine, Press, Paper, Collections, Rollers, Ink, Power, Light, any or all of the vexations so common to the average office. All will come in for a share of our time and exchange of opinions.

Third, Would you like to be appointed a delegagte to the National Editorial Association, which meets at Seattle, July 19th? I do not want to appoint any delegate unless he will positively agree to make the trip. Have no favorites in this matter and don't intend to have. Simply want to do what is best for the Association. If you would like to be a delegate, correspond with me at once.

Fraternally, H. F. Childers.

AN EASTER ISSUE OF A GROWING PAPER

The Ocala, Fla., *Evening Star,* Editor C. L. Bittinger's paper, sent out a handsome Easter numebr on April 10th, with an especially artistic and attractive cover, in colors, with chicks, Easter eggs and rabbits for border and a winged beauty as a center piece, typifying the spirit of Spring and all gladness. The liberal amount of advertising carried, showed that the patrons of the paper appreciated the efforts mad to please and instruct. One surprising statement, for a paper in a city the size of Ocala, is that all the cuts, except the first page color design, were made in the office. The editor properly indulges in a little talk about the paper as follows:

The business has been steadily growing and spreading. The machinery in the office is operated by individual electric motors, each machine having its own motor, separate and independent of the others. The advantage in this is great, especially in the saving of power, as only the motors need be run for just such machines as are used at the time.

As to the work we are doing. This comes from all over the state, more or less, in addition to a generous share of the home work. Several of our best customers are located in Jacksonville and we ship a great deal of printing to that city. We are just now doing a large quantity of work for Tampa, just as far south as Jacksonville is north of us. All up and down the road our printing goes, and the fact that we print for these same customers year after year, would indicate that they are satisfied.

The Chattanooga, N. Y., *Courier* has a new editor in the person of H. M. Doty, who succeeds . Wallace Darrow, to whom a deserved meed of praise is given. The new editor promises his best efforts to maintain the paper at its high standard and adds:

To succeed, however, he needs the continued co-operation of the paper's faithful correspondents and the support of the people in the many villages in which the paper circulates. This he earnestly solicited.

There will be no change in the policy of The Courier. It will continue to espouse the causes and projects it believes to be right and just, and for the best interests of its constituency, and to print, clearly and concisely, all the news in its territory.

LET US GET TOGETHER

A UNITED Press, working for a cause that is just and with a clear understanding, can accomplish any really needed reform, whether as to its own rights or those of the people. The way to unite is through an organization and proper representation therein. The National Editorial Association, made up of delegates who are representatives from all the States, furnishes the organization and, if not effective, it is the fault of the affiliating bodies. If each one goes off and tries to act for itself in matters that concern the printers and the press of the whole Nation, it will be found that there will be none or meager results. It will be found that the several organizations are acting at cross purposes or that each, presenting the influence or interests of the papers of only a single State, will be disregarded or beaten in detail.

It has been recently announced, that:

> The executive committee of the Minnesota Editorial association has taken up the matter of government competition with publishers and printers, especially in the stamped envelope business, with one who wields an effective influence in governmental and administrative affairs, and who emphatically indorses the views expressed by our own and other state publishers' associations. Further, he has promised to use his position in exerting an influence towards stopping the government competition with the press and printers of the country. It will not be feasible to perform this task at the present short session of the congress, but it will be energetically taken up at the December session.
>
> In the interim the executive committee requests every publisher in the state of Minnesota to send to the chairman of the committee, C. C. Whitney, at Marshall, clippings from their papers of any comments upon this subject, that may have been heretofore or may be hereafter published. Attach to the clippings the sub-heading and date of the paper from which taken. Do not send marked copies of the paper, as the same are liable to miscarriage or of being overlooked. Any matter pertaining to this subject, from any source, will be gladly received.

The Buckeye State Press Association of Ohio, another strong and representative body of a single State, is undertaking the accomplishment of the same objects as are other organizations of both publishers and printers. Why not send strong delegations of representative men, as far as practical members of Executive Committee of the different associations, to the Convention at Seattle on July 19th, and let there be an interchange of views and plans and then united, concerted action, along well defined lines? This was done in the matter of second class postal matters and millions of dollars, in the aggregate, saved to the press of the whole country, through the preventing of adverse action and the securing of just legislation, besides, the stigma that had been put on the newspapers of the country, through ignorance, prejudice and a mistaken zeal, by officials, was entirely removed and newspapers were placed in the true light as faithful servitors of the people who constitute the Government, instead of being branded as subsidized menials, enjoying special privileges. In united action there is strength as "in a multitude of counselors is safety."

For more than a quarter of a century, separate organizations have been striving to accomplish these very reforms. Why not get together?

Not only should all State and District organizations of the newspaper press be represented at the coming convention of the National Editorial Association, but the Federation of Trade Press Associations in the United States, the American Newspaper Publishers' Association, the United Typothetæ of America, the Ben Franklin Clubs, the Agricultural Press, and all other national organizations of publishers or printers. All these should be invited to send fraternal delegates to co-operate in this work and present their views and plans.

Mr. R. L. Blagg, of the Springfield, Ohio, *Farm News,* very sensibly said, in an address before the Buckeye Press Association:

> The press when united can accomplish almost anything. It makes or breaks politicians; carries or defeats legislative measures; advances or retards the progress of any movement. The policies of the seekers for popular approval are the policies of the press.
>
> Oftentimes, the press of the entire country and every section or class of the press is united in defense of the rights of the people, the integrity of the national honor or the support of some moral movement and success is invariably the result.
>
> However, when it comes to work for its own benefit and advancement, or the protection of its own interests, the difficulty is that the different branches of the press are never united.
>
> Lack of knowledge of each other's plans, purposes and mission; mutual suspicion and distrust; jealousy (without cause); rivalry (where there should be co-operation), and general selfishness, and, I had almost said, cussedness, disorganizes the forces so that the army as a whole is an easy prey to it enemies and despoilers.

The American Newspaper Publishers' Association has heretofore consulted and acted with the National Editorial Association and was represented on the program at the St. Paul Convention last year, in two important addresses.

The reform of the libel laws of the different states, set in motion at the meeting of the National Editorial Association at Cincinnati in 1886, and given more definite form by the Convention at Denver in 1887, has resulted in needed amendments to the then existing laws in many states, to the saving of hundreds of thousands of dollars to the newspapers. The agitation and clear discussions of the rights of the press in the National Editorial Association, taken up and carried forward by other organizations and by the press generally, has led to a clearer understanding and has acted as deterrent to unjust and inconsistent libel legislation and has prevented much litigation that formerly was so prevalent, vexatious and expensive even where verdicts were obtained favorable to newspapers. There are very few lawyers or shysters today that find it either wise or profitable to stir up libel suits

in order to blackmail newspapers out of money through settlements, to save costs and attorney's fees.

Co-operation and a general understanding throughout the country brought about through the National Editorial Association and its official paper, the National Printer-Journalist, have worked great reforms as to advertising rates and nearly eliminated cut-throat methods of advertising agencies and patent medicine advertisers.

In all this work, since its organization as an outgrowth of plans proposed at the annual convention, in Cincinnati, of the National Editorial Association in 1886, the American Newspaper Publishers' Association has largely co-operated. In the great work of needed legislation to prevent the extortions of paper trusts and a proper regulation of tariff rates to prevent monopoly, the last named association has taken a leading part, but has, all along, asked, received and recognized the aid of the National Editorial Association.

This friendly co-operation should be continued and strengthened.

The American Newspaper Publishers' Association held an important convention in New York, commencing Monday, April 19th, and the following from the published proceedings will show how closely the subjects considered are related to the interests of all newspaper-makers, and should have consideration in a body that represents publishers of every portion of every State in the Union.

In speaking of the proposed law relating to holding publishers responsible for the truthfulness and honesty of advertisements, discussed elsewhere in this issue, L. B. Palmer, General Manager of the Association, said:

"What we object to is what might be called fool legislation. We object to legislation of the sort typified by a bill introduced in the house of representatives holding the newspaper publsiher responsible for all the statements made in an advertisement. How is the publisher to know that a bottle contains seven ounces or that a removal sale is a genuine removal sale? Legislation or attempted legislation of this character is of no good to anybody."

On the subject of the tariff schedules on paper and pulp, and the investigations that come from the action of the Association, backed by the N. E. A. Convention at St. Paul, as the result of a paper presented by Don C. Seitz, and discussions thereon, the following resolutions were adopted:

The investigation made by the select committee of the house of representatives covering a period of ten months and surpassing in thoroughness any trade inquiry ever attempted in tariff history has shown that American paper mills actually make paper cheaper than the most modern Canadian mill, and therefore any import duty on print paper is in the nature of a concession to the American mills.

We are informed that the paper manufacturers are trying to induce the senate to raise the rate of duty fixed by the Payne bill. The success of such an effort would prevent the possibility of an arrangement with Canada, which arrangement the select committee deemed of utmost importance in order that we might continue to obtain from that country the considerable supply of pulp wood now used by American mills in news print paper manufacture.

The well matured and unanimous recommendations of the select committee, composed of representatives of both political parties, have safeguarded the interests of the papermakers and consumers against the possibility of hostile action by Canada. We protest against any procedure which will ignore the work and results of the house committee's investigation and which by provoking a trade war and stopping the exportation of wood pulp from Canada may bring great loss to American newspapers and destruction to American forests.

For a period of years the American newspapers have been the victims of paper combinations, mergers, corners, discriminations and secrecy in paper quotations. The failure of the papermakers to employ technical skill in the operation of their plants has increased the burdens of consumers. We want to put an end to these abuses by broadening the market and by stopping schemes such as that planned in the creation of the International Paper company, which aimed to destroy competition and to give value to a collection of antiquated mills by bringing them under one control with 7,000 square miles of timber land and undeveloped water power to the extent of 194,000 horsepower. We object to these gigantic speculations at our expense.

Every obligation which the papermaker owes to the government as a tariff beneficiary has been violated. Newspapers have been forced to bear the burden of frequent fluctuations and artificial stimulations of paper prices. The publishers ask fair treatment.

The following pronouncement was made regarding to subject of consolidation of libel suits that was presented at the St. Paul Convention in a communication from a representative of the American newspaper Publishers' Association:

Publishers do not ask for special privileges, and will not accept exemption from prosecution for offenses that they may commit, but they do protest against any effort that would deprive them, in effect, of their Constitutional rights and would subject them to unusual and extraordinary hardships and methods of defense.

If newspaper publishers may be tried for alleged libel in each and every community where one or more copies of their publications may have been circulated, defense becomes an endless and unbearable burden, involving not only the freedom, but the existence of the press.

All these indicate that all newspaper publishers of the whole country should get together for the good of each and all, and keep together. Let no one, through a mistaken ambition for the honor of working reforms, unaided, or through any spirit of jealousy as to other organizations, hold aloof. What will benefit the daily will benefit the weekly newspapers, the farm papers, the technical or trade papers and the magazines.

Periodical publications, whether news, agricultural, industrial, commercial, literary, scientific, dailies, semi-weeklies, weeklies, monthlies or quarterlies, have most things, as regards their business and their rights, in common, and pulling apart will eventually result in injury to each, while intelligent, united, fraternal, co-operative action along well matured plans, founded

principles and methods, will secure the rights of all and each and help to deserved influence, standing, profit and success. Let us get together.

The discussion of the following topics considered at the A. N. P. A., would be found profitable for our N. E. A. readers:

Under the head of advertising the following topics were brought up:

What is the best method of stimulating the reading of advertisements?

What should be the attitude of newspapers toward outdoor display, street cars, etc., both theoretically and practically?

Window displays arranged by Grand Island, Nebraska, merchants in honor of the convention of the Nebraska Press Association in that city—, Prizes were offered for best displays—The displays were interesting and served constantly to remind the editors that they were welcome and their presence fully recognized and appreciated.

What attitude should be taken toward an advertising agency when it refuses payment for advertising unless copies of all issues of each day are sent?

What is the proper definition of "full position?"

Is an advertising agent justified in ordering maximum space in order that he may secure minimum rates when he knows that he will actually use less space? If not, how shall he meet such competition?

Recent objectional legislation affecting newspapers. The new medical advertising law in Minnesota.

What publications have in operation an old-age pension plan, or have a profit-sharing arrangement with employees.

MISCELLANEOUS TOPICS.

In regard to objectional legislation, many of the publishers approved the new law in Minnesota prohibiting the newspaper to print certain kinds of medical advertisements, but great objections were raised to the proposed law in Missouri, drafted by some physicians of that State, prohibiting the publication of patent medicine ads. In other cases they thought the Legislatures of certain States were going entirely too far and were intruding on the freedom of the press.

PAPER COMMITTEE'S REPORT.

Thursday morning was taken up by the reading of the report of the paper committee, which was in part as follows:

The committee on paper reports progress in the effort to reduce the import duties on pulp and paper. The select committee of the House of Representatives, appointed in April, 1908, to investigate the pulp and paper industry, unanimously recommended: That mechanically ground wood be placed on the free list; that the import duty on news print paper costing less than 2¼ cents per pound be reduced from $6 per ton to $2 per ton; that the import duty on news print paper costing more than 2¼ cents per pound and not more than 2½ cents per pound be fixed at $4 per ton.

These recommendations were made with a proviso that they should apply to any country, province or dependency which should not forbid or restrict or tax the exports of pulp wood, ground wood or print paper.

The ways and means committee confirmed these recommendations, the House of Representatives passed them and they are now in abeyance in the Senate committee on finance.

As a result of information furnished to the authorities by the ocmmittee on paper, the fiber and manila pool was

broken. The work of that organization materially affected the price of news print paper. The Sulphite Pulp Association which also influenced news print paper prices changed its form of organization in December, 1908, to avoid action by the Federal authorities.

The Illinois Press Association is to be entertained at the Ottawa Tent Colony on June 17th, as we learn from *The Bug Times,* a paper published in the interest of this Colony, that is organized to make war on tuberculosis. The paper treats the conflict in a highly humorous vein, but gets in a good deal that is informing, all the same. The cartoons are racy, and at times, a little horrifying, when depicting the million times magnified—in size not in numbers—T. B. Army of bugs making inroads upon the battlefield of the human lungs, from unventilated rooms, feather dusters, spittons and other native regions of the T. B. Army.

* * *

The *Commonwealth,* of Greenwood, Mississippi, that bears, under its head, the motto, "Be just and fear not," issued a handsome Easter number on April 2nd, that showed the reviving spirit of the Spring-time in its advertising, illustrations and reading matter. It is worth while for newspapers ever to remember the days of gladness and good cheer. The editor properly said, and with good occasion for congratulation:

Our Easter Edition is all we claimed for it—one of the neatest and prettiest ever sent out by a Greenwood newspaper. The advertising patronage given it by several of our leading merchants is all that we could conveniently handle with our limited office force, hence no special effort was made to get others to take advantage of its advertising columns. The cover pages are the very best work of the artist's skill, and we are confident the public will agree with us that it would be a difficult task to excel the design or appropriateness. The *Commonwealth* always gives its patrons the best of everything to be had—hence this beautiful Easter cover page adorns the paper today. The paper is printed nine days prior to Easter Sunday—which is on April 11th—in order that our merchants may get more benefit from their advertisements.

The paper was artistically gotten up, the advertising composition was first-class and the printing was clear and perfect on the cleanest of white paper of excellent quality and must have carried brightness, joy and hope to every home that it reached.

* * *

The Cadillac, Michigan, *Evening News,* published a "Publicity Section" in connection with its regular issue of April 7th. It was printed on hard-finished book paper of excellent quality and profusely illustrated with halftones, giving exterior and interior views of Mercy Hospital and of public buildings, schools, mills, factories, private residences and farm views. The paper has named Sadillac "The City of Quality," and shows, by the reading matter and these numerous, fine illustrations, that the name is well chosen and fully deserved.

The facts that enter into the making of "Greater Cadillac" are given in two ruled squares on either side of a page of illustrations. In the center of each square is a seal consisting of a bee-hive surrounded by the words, "Cadillac, the City of Quality." In the one square are the words, "A City of Beautiful Homes, Substantial Business Buildings, Splendid and Well Paved Thoroughfares; Notable Enterprise—Inexhaustable Opportunities; Natural Facilities Unequaled; A Typical Abiding Place Amid Scenic Splendors." In the other square are the words: "Manifold Agricultural Advantages and Opportunities; Busy, Beautiful, Progressive Cadillac; Great Mills and Factories; Diversity of Contiguous Timber Resources; Prosperous Business Institutions."

It is a pretty effetcive method of making a city's good qualities strikingly prominent and those enumerated are of a nature to deserve all possible publicity.

* * *

The Easter Edition of the Belleville, Kansas, *Telescope* devoted large space, in its Easter edition to the Belleville Chautauqua, as well as to Easter illustrations, stories and poems.

* * *

Hillsdale's, (Michigan), first daily, the *Daily Standard Herald,* made its bow to the public on April 5th. Its motto is "Hustle for Hillsdale." The paper starts with eight, seven-column pages, in two four-page sections and presents a most attractive appearance. It is worthy of the beautiful city it seeks to represent, both in matter and in mechanical make-up and execution. The publisher makes the gratifying announcement:

We must acknowledge at the outset that, while we considered Hillsdale merchants thoroughly up-to-date, they have demonstrated an enterprising character beyond our expectations, and have nearly swamped the shop the first issue. We are unable to fully express our appreciation of their interest.

In giving the cause of the daily that represents a combination of the two local weeklies, the names of each being retained in the title or heading—the editor says:

This is an age of progress, a time of development, a day of advancement. With the development of the free rural route delivery of the mails to the farming community every day, practically every home in the country has its daily paper. With the advent of the telephone, the automobile, the electric trolly, the wireless telegraph and the flying machine, there has come a great change in the every day lives of the people. With this rapid advance in other lines the weekly local paper in a city the size of Hillsdale has become entirely too slow to meet the needs of either the readers or advertisers.

* * *

The *Democrat* of Dearborn, Platte County, Mo., issued a "Stockman, Horesmen and Tobacco Growers Edition" on April 2-9. The issue was illustrated with halftones, among the rest, being a "Partial View of the Dearborn *Democrat* Printery."

ATTACKS ON FELLOW MEMBERS OF THE NEWSPAPER FRATERNITY

After laying the foundation for the same, by relating an incident, bearing on the subject, that is local to Wisconsin and need not be given here, the Milwaukee *Journal* propounds the following question, that concerns all degenerate or unregenerate newspaper editors or makers:

"Why does the average newspaper man never fail of an opportunity to make a personal attack on a fellow worker and do all in his power to render him and his calling contemptible in the eyes of the public at large?"

To this question, Editor Ed. L. Luckow makes the following editorial reply in his paper, the Sauk County *Democrat* of Baraboo, Wisconsin, that we believe will not be found without profit to other newspaper workers, notwithstanding the advances made in the last few years in newspaper ethics along the lines of professional pride, feeling and courtesy and a long-needed esprit de corps in this calling:

After reading the above we feel that we are permitted to "butt in" with some sort of an opinion, although we are quite convinced that the real question cannot be answered satisfactorily. It has always been a mystery to us why a person will go the limit in trying to injure his neighbor simply because he differs with him on political or other questions.

In our humble way we have endeavored to spread the gospel among our colleagues, and offer as evidence the following extract from the published report of the annual meeting of the Wisconsin Press association held at Milwaukee in March, 1902:

In referring to the membership we said that certain cities were represented by only one newspaper, while there are two or more papers published in the place, and might perhaps be traced to a little ill feeling between those who are engaged in the calling in the same town. For a publisher to feel that he will not be numbered with an organization because his competitor is connected with it, is wrong. The very fact that they can meet in convention with brother publishers will be of benefit, as it may bring about friendly relations where they did not exist before. Why bear a feeling of hatred toward your neighbor simply because he happens to be engaged in the same line of work, when perhaps he is entitled to your sympathy? Nothing can be gained by abusing your "esteemed contemporary." Did you ever gain anything by heaping abuse upon your neighbor? No. Did you ever profit by doing work for less than a living rate simply to prevent the "other fellow" from getting the work? No. Then no good reason can be given for pursuing such methods. Editors can and must enter into discussions, but they should be carried on in such a way that the readers will not become disgusted, and that the writers can be on friendly terms. Don't endeavor to convince the public that newspaper people are the worst persons on earth, for in your own heart you feel that they are not. While your neighbor may have faults, just bear in mind that you, too, are not infallible. So instead of endeavoring to keep your brother down, try and lend a helping hand. You will feel better for doing so and in the end you will also help yourself. If your competitor performs a kind act, if he does something for the advancement of the people of the town in which you live, if he improves his paper or his plant, do not be afraid to speak of these occurrences in your paper, as your motive in maintaining silence on such occasions would no doubt be understood by the people. Do something for your neighbor and he may show appreciation at some future time, and even if he does not, you will feel better in the end for having done something to help him. It is the aim of this association to bring about such results—to promote the interests of the press, to cultivate friendly relations and a spirit of fraternal regard. By these gatherings publishers are brought together; they exchange views, methods and experiences; they cultivate sociability, grow broader, and go home with the mind and body in better condition to conduct the daily work.

NATIONAL PRINTER JOURNALIST
A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter

BENJAMIN B. HERBERT . . EDITOR AND PUBLISHER

Official Paper of the National Editorial Association

PUBLISHED MONTHLY BY THE
OFFICE OF PUBLICATION:
1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

SUBSCRIPTION RATES—In the United States, Canada and Mexico, $2.00 per year, in advance.

Orders for subscriptions will be received by all dealers in printing material in the United States and Canada.

FOREIGN SUBSCRIPTIONS—To countries within the Postal Union 10s. 6d.

FOREIGN SUBSCRIPTION AGENTS—International News Company, Breams Building, Chancery Lane, London, E. C.; F. O. Strong, 111 Fleet Street, London, E. C.; G. G. Turri & Co., Melbourne, Australia; The India Printers' Agency, 249 Mint Street, Madras, India; Successful Advertising Company, Bangalore, India; John Dickinson & Co., Ltd., Cape Town, South Africa.

The NATIONAL PRINTER-JOURNALIST is unequaled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the NATIONAL PRINTER-JOURNALIST COMPANY by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, MAY, 1909

The many special Lincoln Centennial issues and the large space given in nearly all newspapers throughout the whole country, North and South, East and West, show how deeply the character of the Great American appeals to the press of this country, and how firm a hold his life of honest worth, patriotism and sincere endeavor has come to have upon the American people in all sections of this firmly reunited Republic.

* * *

We republish in this issue an editorial from *Leslie's Weekly* by Editor John A. Sleicher that deserves the attention of newspaper publishers. It is in favor of an act to prevent the nuisance of billboard advertising. The people of this country have some rights in this regard that ought to be protected. The defacing of streets, natural scenery and every available space at elevated, and subway street railway stations, with flaunting posters, is an offence to the public. Our street railways are granted charters for the specific purpose of transporting passengers and freight as common carriers and have no right to go into the advertising business to the annoyance and discomfort of their patrons. Newspaper, periodical and magazine publishers, whose business it is to furnish information to the people in shape of news and legitimate advertising, have not only the well-being and comfort of the public to subserve but also have large money interests at stake. Editor Sleicher writes, in a letter to the editor of this paper: "I doubt if we have any idea of the amount of legitimate advertising that is diverted from us by the billboards and the diversion is constantly increasing." A good deal of this billboard advertising is not only a nuisance, an offense against good taste, but is a fraud upon both the advertisers and the public. It needs to be put under control, limited and in a large measure abated.

* * *

A Government for and by the whole people, through their representatives, is a very simple affair. In its administration there is need of no great amount of promotion, but only wide publicity to show that work is being honestly done. Its principle requirements are honesty and a clear understanding that what is to be done is for all the people, for the entire Nation, instead of for individuals, interests, corporations, sections, states or boroughs. Cities, counties, Congressional Districts and States now have representation, but who represents the Nation? The people pay dearly for all special privileges secured for the benefit of the different subdivisions, at the cost of the whole country. Narrow representation and special grants secured thereby are at the base of corruption, trading of votes to secure special favors as bribes to the different communities, with no thought as to the cost to all the people. The question should be not as to whether a grant is good for a certain city or Congressional District, but whether it is good for the country at large.

* * *

As an evidence of the prosperity of the rural papers of Iowa, it is to be noted that the senior editor of the Red Oak *Sun*, Mr. Wm. Boll, and members of his family, are making a tour of Europe, "going to Switzerland by way of Italy, visiting also Austria, France, Holland and England, probably returning by way of Canada and visiting Quebec and Montreal," being absent three months. Yet some of our editors seem to think that there is a great burden in the planned trip of the National Editorial Association to Seattle to attend, and take part in, an important convention of representative members of their life calling, seeing all the beauties and instructive exhibits of the great Alaska-Yukon-Pacific Exposition, and enjoying the grandeur and greater wonders of the Pacific Coast and of Alaska and the enchanting islands. The Exposition will be an education beyond all that can be obtained by traversing all Europe and it will be an American education, showing all the products, resources and opportunities of a region on which the future advancement and increase in wealth of the United States must largely depend. When Rome was the Imperial City of the whole world, in all its power, wealth and achitectural glory on its seven hills, it used to be said: "See Rome and die." Rome had attained all its grandeur and, as time has revealed, was ready for an early death or a decay that amounted

to the same thing. The Pacific Coast, with its stalwart young cities, is only entering upon the fullness of life and possibilities, so we say: "See the Pacific Coast, the Alaska-Yukon-Pacific Exposition, that will give some idea of the resources of the richest region of earth, visit Alaska and the islands of the sea in their unique sublimity of scenery, and then live." No one can realize what American life is, how grand it is to be an American without this view and the sensations and experiences it will bring.

* * *

The Boston *Herald*, that splendid, ideal newspaper of the city of culture, of the birthplace of American liberty, of American literature and of common school and higher education, announces in its issue of April 19th, another world's fair. It is to be held in 1920, in celebration of the three hundredth anniversary of the Landing of the Pilgrims and the Founding of New England. It is certainly very appropriate that an event frought with such stupendous results should be remembered and honored by all the people of America and of the world, for that matter, for there is none among all the peoples but that have reaped vast benefits and untold blessings from the achievements of the new Nation on this great Western Continent. As the *Herald* states, it is now New England's turn for a great Exposition. All other sections of the country have been honored. New England people and New England editors should cross the Continent this year and view the great show at Seattle and all the vast country, with its millions of people, mighty cities, vast agricultural, transportation, and industrial enterprises and development to be seen on the way, in order fully to understand the extent and grandeur of the possibilities and the needs for boundless provision to make its centennial worthy of the mighty commonwealths that have grown from the early planting. The editors of New England should attend the Convention of the National Editorial Association and come in contact with representatives of the press from every State of the Union, and enthuse them with ideas as to the grandeur and importance of this undertaking by the people of New England, whose sons and daughters are to be found wherever floats the Stars and Stripes. To make the Exposition as grand and complete in representative character, in extent and completeness, as the occasion deserves, and will demand, the faithful, earnest work and powerful influence of every newspaper of America will be found most useful, if not absolutely essential. Eleven years is none too long a time to secure the coo-peration of the whole people of this vast land and every section thereof.

* * *

It now appears that with few exceptions the writers of American plays are graduates of newspaper offices. This is probably owing to the fact that no other calling brings one into so close touch with all sides of human life, the sad and the gay, the earnest and the dilitant, the rich and the poor, the successful and the failure, the purposeful and the purposeless, the canting hypocrite and the honest Christian, the opimist and the pessimist, the liar and the truthful, the ignorant and the learned, the proud and the humble, the thorough-going business man and the careless, slothful drone, the wicked and the righteous, the upright, conscientious professional man, and the unconsciousable shyster, the politican and the statesman, with men, women and youth of all degrees, characters and aspirations. In reaching out and treating of news there is always found enough of the incongruous, the errant, the humorous, the novel, the unexpected, the pathetic, the dramatic, to furnish all the requisites for a farce, a comedy, a tragedy or a melodrama, every day of the year. It is an excellent school in which to study all the characteristics, all the strength and frailty of human nature.

* * *

Many editors have the satisfaction of witnessing the fruitage of their work, though the honor of what they have suggested and planned may be claimed by and given to others. Instances of this kind will be found in the article published elsewhere in this issue, in regard to the *Press* of Christ Church, New Zealand. Many of the very beneficial measures for the advancement of education and material interests of that new land became accomplished facts though it had been forgotten to whom the first honor belonged. However, to the man who has faith in his work, peace comes through faithful performance, even though the victory, or the complete accomplishment of the ends had in view, is not realized during his lifetime.

"THE BEST."

WILLIAM C. EASTWOOD, PRACTICAL PRINTER.

PIPER CITY, ILL., March 30, 1909.

The National Printer-Journalist, Chicago, Ill.

DEAR SIR:—I take pleasure in sending you $1 on account. Please give me credit. Your paper is the best of the kind I have ever seen, and would hate to be without it.

Yours very truly,

WM. E. EASTWOOD.

"PRICE SIZED UP ALONGSIDE OF BENEFITS."

THE OGLE COUNTY REPUBLICAN.

OREGON, ILL., April 5, 1909.

The National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed please find draft for $2, for which extend the date of our subscription to the NATIONAL PRINTER-JOURNALIST.

We read the PRINTER-JOURNALIST with a great deal of interest each month, and have found that the price of subscription from year to year is lost when sized up alongside of the benefits received.

Wishing you continued success with your publication, we beg to remain,

Yours very truly,

LANDERS & SON.

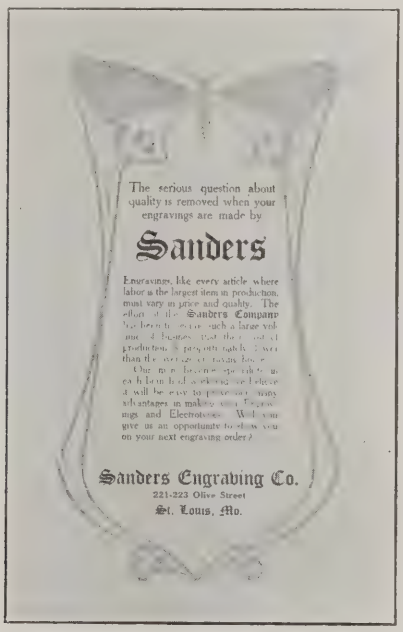
REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

GET in line for that letterhead contest. This department for the May number is being written before the April issue is fairly out to the readers, so that it is too soon to have heard any of you say anything about the contest. But it is a foregone conclusion that it will be well received and entered into heartily. The prizes are certainly worth working for.

As stated last month, the "copy" is not fictitious, but is furnished by a Chicago publisher who actually wants to place an order for letter heads, and has asked us to secure for him something in the way of a printed head that will be hard to surpass. I know that there are among the readers of this department several men



The serious question about quality is removed when your engravings are made by
Sanders
Sanders Engraving Co.
221-223 Olive Street
St. Louis, Mo.

An effective combination of type and engraving

who can come pretty close to the mark, and if they all get into the race it will be a veritable battle of giants.

The following are the specifications governing the contest, as published last month:

1. *Classes.* Class 1 will be composed of those who have ever taken prizes in *any* printing contest.

Class 2 will be composed of those who have never taken a prize in any contest.

2. *Copy.* The copy is as follows, to be set for an ordinary letter head, 8½ x 11 inches:

> The Cement Era. Devoted to cement, concrete and related machinery. Office of publication, 842 Monadnock Block, Chicago, Ill. Eastern office, 42 Broadway, New York, N. Y. Chicago,

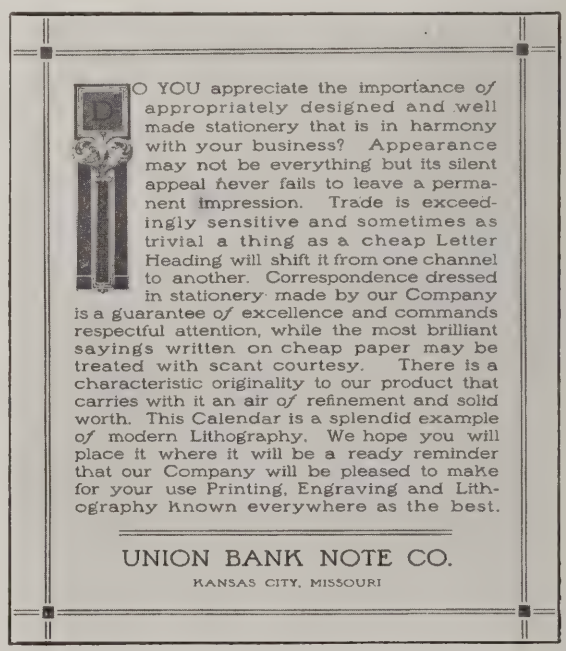
3. *Stock.* The stock must be a white 20-pound bond of any suitable texture. The quality and texture of the stock will be taken into consideration in making the awards.

4. *Ink.* The ink must be in black and one other color.

5. *Specimens submitted.* Each contestant must submit five perfect press proofs of the completed job, and two press proofs of each color. These must be accompanied by a sealed envelope containing the name and address of the contestant. If in Class 1, the contestant must also state what former prizes he has won; if in Class 2, he must state positively that he has never before won a prize. This envelope must have on the outside the words, "Class 1," or "Class 2," according to which class the contestant is in. The envelope and specimens must be sent in one package, under letter postage, securely wrapped, to "E. S. Hanson, 925 Linden Avenue, Wilmette, Ill., Letter Head contest," and must reach me not later than May 31, 1909. Each contestant may submit as many different specimens as he desires, but each lot must be sent separately and must be accompanied by the envelope containing information as noted above. The competition is open to all.

6. *Judges.* The judges of the contest will be the officers of the Cement Era Publishing Company.

7. *Prizes.* The first prize for Class 1 will be an order for five thousand of the letter heads at a price of $25.00, and $5.00 cash to the compositor. The first prize for Class 2 will be a copy of the Graphic Arts



DO YOU appreciate the importance of appropriately designed and well made stationery that is in harmony with your business? Appearance may not be everything but its silent appeal never fails to leave a permanent impression. Trade is exceedingly sensitive and sometimes as trivial a thing as a cheap Letter Heading will shift it from one channel to another. Correspondence dressed in stationery made by our Company is a guarantee of excellence and commands respectful attention, while the most brilliant sayings written on cheap paper may be treated with scant courtesy. There is a characteristic originality to our product that carries with it an air of refinement and solid worth. This Calendar is a splendid example of modern Lithography. We hope you will place it where it will be a ready reminder that our Company will be pleased to make for your use Printing, Engraving and Lithography known everywhere as the best.
UNION BANK NOTE CO.
KANSAS CITY, MISSOURI

Good Sense and Good Printing

and Crafts Year Book for 1909, which is a valuable part of the education of any man connected with the craft, and $2.00 in cash.

Two other prizes of a year's subscription to the NATIONAL PRINTER-JOURNALIST will also be given in each class, together with honorable mention of any specimens in either class which may merit it.

A copy of the *Walsh County Record*, Grafton, North Dakota, has by mistake come to my desk instead of Mr. Copper's; but as criticism is invited merely on one advertisement, and not on the paper as a whole, I shall try to do it justice. The advertisement is a full page, and is shown herewith. An advertisement of this size is a job of no small magnitude to be tackled in an office of the smaller class, but it has here been well handled. The compositor noted at the outset the probability of running out of sorts for the display figures, and he wisely planned beforehand so that the use of figures might be symmetrical, even though not uniform. The

whole advertisement is characterized by perfect symmetry. The two halves of the page are almost exact counterparts of each other. This is all right for occasional use, but for the most part I should prefer to see this symmetry slightly broken. The advertisement is on the whole, an excellent piece of work.

Max H. Ninman, Sauk City, Wis.—The first page of your folder is scarcely strong enough. The line "Buerki's Spring Opening," should be much stronger, and could well be made so, as the body matter on the page has been leaded out too much in order to make it fill. You of course had the large cut to contend with; but, if the customer would allow, it could have been set:

SPRING OPENING AT BUERKI'S.
SPRING OPENING AT BUERKI'S.

The matter on the other pages is well arranged but would have been materially helped by more up-to-date faces for display.

From the office of *The Dundee Hawkeye*, Dundee, Ill., comes a bunch of specimens which give signs of developing genius. I notice on two or three of the jobs a tendency to use round corners where square ones would suit the general design better, such as the cover page here shown. I think your letter head is spread over too much space. It might be reduced in depth

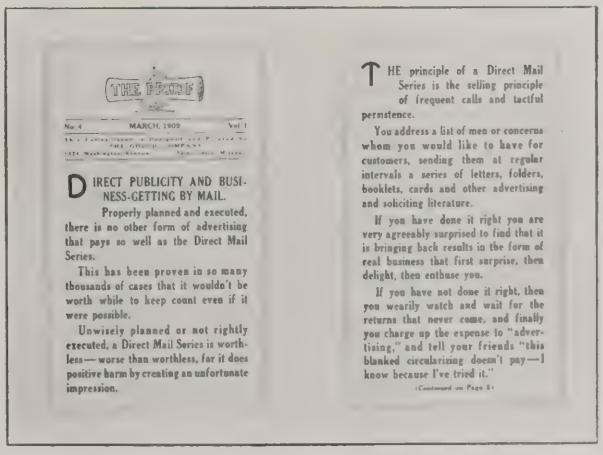
at least two picas. Then instead of the complicated panels at the ends, representing ornamental posts, I should use plain rectangular panels. They will fit better into the general plan, and will give more prominence to the "H" at the top.

"The Proof" is a neat and sprightly house organ of the Gould Company, St. Louis. It is not only attrac-



THE PROOF

No. 4 MARCH, 1909 Vol. 1

DIRECT PUBLICITY AND BUSINESS-GETTING BY MAIL.

Properly planned and executed, there is no other form of advertising that pays so well as the Direct Mail Series.

This has been proven in so many thousands of cases that it wouldn't be worth while to keep count even if it were possible.

Unwisely planned or not rightly executed, a Direct Mail Series is worthless—worse than worthless, for it does positive harm by creating an unfortunate impression.

THE principle of a Direct Mail Series is the selling principle of frequent calls and tactful persistence.

You address a list of men or concerns whom you would like to have for customers, sending them at regular intervals a series of letters, folders, booklets, cards and other advertising and soliciting literature.

If you have done it right you are very agreeably surprised to find that it is bringing back results in the form of real business that first surprise, then delight, then enthuse you.

If you have not done it right, then you wearily watch and wait for the returns that never come, and finally you charge up the expense to "advertising," and tell your friends "this blanked circularizing doesn't pay—I know because I've tried it."

(Continued on Page 8)

tively printed, but is a happy combination of sense and nonsense which insists upon being read.

The twenty-fifth anniversary of Dietrick Lamade as superintendent of the Grit Publishing Company, Williamsport, Pa., was celebrated March 17th with a complimentary dinner given by his fellow employes. If the event was as handsome and elaborate as the printed souvenir, it must hve been very elaborate indeed. It is a booklet of twenty-four pages, on heavy Strath-

more stock, printed on one side only, with heading embossed in gold, and various appropriate halftone illustrations tipped on. Mr. Lamade surely has not worked in vain; for it is a noble work not only to develop an organization capable of getting out such printing, but moreover an organization glad to do honor to this quarter-century chief.

Although Wietlispach has moved, as announced on the card here shown, he appears to be doing just as good work as ever, if not more so. This card, which

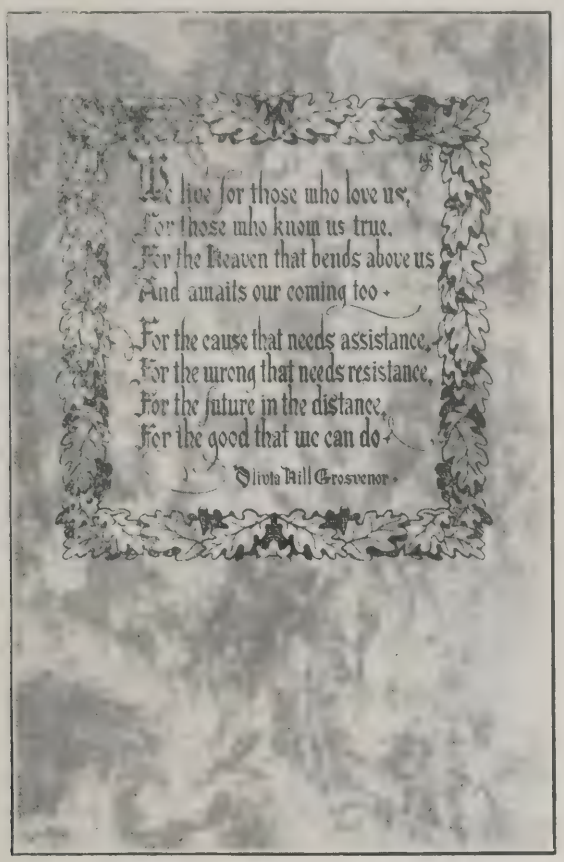
ing. This topic card also has an ornament which is appropriate to the subject and harmonizes well with the border and type. All your specimens are characterized by clean, snappy presswork.

I. L. Hansen, Fulda, Minn.—Your letter head is rather overdone in the matter of rule work. It would be helped by running the rules in a shade of red not quite so deep, thouh the Engraver's Roman does not lend itself readily to this kind of treament under any circumstances. On the envelope I should have used single rules where you have made them double.

Andrews & Lewerth, paper dealers, New York, send out a handsome sample of a new clouded cover stock,



We live for those who love us,
For those who know us true,
For the Heaven that bends above us
And awaits our coming too;
For the cause that needs assistance,
For the wrong that needs resistance,
For the future in the distance,
For the good that we can do.
Olivia Hill Grosvenor.

which they call silver. It is attractively printed and I hope will show up satisfactorily in the engraver's hands.

Here is a blotter from the Observer Printing House, N. C., which may offer a suggestion to some other

printer. It is printed in black and red on pink enameled blotter stock.

My Dear Mr. Hanson:—I thought I would forward a few samples of work, the first I have ever sent you, as I read your reviews in the N. P.-J. each month with much interest.

I am located in a small town, doing the several "stunts" of a country weekly, viz., printer, editor, reporter, etc., but I thought maybe you wouldn't object taking a squint at the samples of my work enclosed herewith.

Yours very truly, Fred F. Flatt.

Letts, Iowa, April 3, 1909.

Your presswork is very good, atoning in large measure for any shortcomings of composition. Your faults lie more in equipment than in taste and ability, however. I should like to see you turned loose in an office well stocked with the latest type. I imagine you would "show 'em a few."

CANDIDATE FOR PRESIDENT OF N. E. A.

Chambersburg, Pa., April 19, 1909.

Mr. B. B. Herbert, National Printer-Journalist, Chicago Ill.

Dear Sir:—Pennsylvania insists upon my being a candidate for President of the National Editorial Association and has appointed a committee to take charge of the campaign.

Under the circumstances I feel that I must not only consent to the urgent appeal that comes to me but must aid all I can. I will, therefore, fully appreciate anything you may do in securing your delegation for me.

I assure you that if elected I will do my full duty to promote the interest and harmony of the Association.

Thanking you for a reply, I am, Yours very truly,

A. Nevin Pomeroy.

Walter Williams, dean of the School of Journalism of Missouri, has been asked to deliver the chief address before the Institute of Journalists of Great Britain at its annual meeting in Plymouth, England, in August, on "The Professional Education of Journalists." Representatives of the universities of Oxford, Glasgow, Manchester, Dublin, Leeds, Birmingham, London and Cambridge are on the program for discussion of Mr. Williams' paper. At the last annual meeting of the British Institute of Journalists the paper on the subject was read by Dr. Michael E. Sadler, joint professor of the theory of education at Victoria University, Manchester.—*University Missourian.*

The Kentucky International News Company filed articles of incorporation March 13th, fixing its capital stock at $1,000 divided into shares of $2. The incorporators and their holdings are: J. Clifford Miller, 125 shares; Mose Mendelsohn, 125 shares; John B. Cox, 125 shares. The maximum indebtedness is fixed at $500. The company will carry on a general news vending business, which includes the sale of newspapers and magazines. The company is also empowered to carry on a job printing business. We find that many printers and publishers in smaller cities are combining the sale of newspapers and periodicals as a branch of the business. Where so situated as to make this convenient and profitable, a news depot and stationery store can often be profitably combined with job printing and newspaper publishing in a way to make the front business office more inviting and also justify larger purchases and the keeping a greater variety of stationery for the accommodation of customers.

Andreas Simon, editor of the *Brewer and Malster,* died last week at his home, 570 East Fullerton Avenue, Chicago, aged 64 years. He was born at Sleisinger, Germany, and came to this country when seventeen years old to look for a lost brother. Not finding him, he enlisted in the Civil War as a bugler, and served for three years. For twenty years he was connected with the Illinois *Staats-Zeitung.* He is survived by his widow.

AUXILIARY IDEAS AS ASSETS

IT IS THE WORKABLE IDEA THAT IS WORKED THAT COUNTS.

IDEAS are a valuable asset.

In the publishing business especially.

But the ideas must be of the workable kind.

The world to-day is all cluttered up with ideas that won't work.

Men fool their time away on them and go broke.

Ideas are the worst hypnotizers we have in the world today, and the more impracticable and visionary they are, the tighter they seem to grip the unfortunate victim.

Some ideas go in a circle, like a merry-go-round. The one riding the idea—or being ridden by it, perhaps we ought to say—think's he's having the time of his life, but the onlooker knows he's riding a delusion and going nowhere.

Then some ideas are built on the zig-zag plan. They're progressive, perhaps, but tiresome, and keep one going a long time before reaching a checking-up station.

Then, again, there is the idea which is of the start-and-stop variety. Like a jerky little donkey engine it works like the devil for a minute and then stops for a long breathing spell, and forgets the place for which it started out when it gets ready to start up again.

Then you've seen the sky-rocket idea. My, how it shoots up with a rush and a splutter, filling the heavens with its glory, and then—

dropping
like
the
spent
stick
it
is.

But there is no use trying to give the complete lineage and pedigree, the coat-of-arms and the family tree of the extensive idea family.

Just like a good many other families that cumber the earth, there are numerous undesirable members of the flock.

From such let us turn away.

But the workable idea! That's the kind you want to tie to.

You can't always tell it when you see it. It may be onery looking and insignificant, but if it is the idea that has got the right stuff in it, it is the one you want to tie to.

Again, let us repeat:

Ideas are a valuable asset.

And to go back to the publisher, let us add: Especially in the newspaper business.

You can run a wheat corner on nerve and margins.

You can run a department store on bankrupt sales and green trading stamps.

A doctor can get along with a medicine case, a solemn look, and a bill book, and a lawyer can read all his argument from dusty law books, but a newspaper—

Why, it just must have ideas or it isn't a newspaper at all.

It's the backbone and the sinew and the vitals all in one—that is, if it is a real live organism.

This explains, without further comment, why there are so many dead organisms called newspapers floating around in communities and trying to delude subscribers and advertisers into the belief that they are real live factors, in the life and the upbuilding of the community upon which they have fastened themselves.

Without doubt, the best thing which ever struck a publisher was a real, live, workable idea. Without it the type and ink and presses are impotent. Without it goodwill will soon change to ill-will, and subscribers to a minus quantity.

The workable variety of ideas spring into being from three principal conditions of mind and body, for it must be granted at the beginning that in addition to the printing plant, however small or large, the publisher must start with a mind that can think and a body that can act.

The three conditions are:

Observation.

Application.

Experimentation.

The publisher who ever hopes to get hold of an idea that is going to do much work for him has got to have an observation of telescopic and microscopic powers so that every detail and possibility of his field is revealed before him. That observation must also be as blind as a bat when it comes to seeing personalities, and idiosyncracies, and short comings of others, but it must be broad as the noonday sun in the purpose to shine with fairness for all and fear for none. And it must be narrow enough to get the focus upon every public question and read the issues aright.

Certainly! With that kind of an observation on the part of a publisher, he is going to get the workable kind of idea that will prove his most valuable asset.

Again, the allotted portion of the successful publisher is not to lie on flowery beds of ease and to sing his soul into everlasting bliss. Workable ideas do not spring from that kind of soil or climate. No! If he is trying the "flowery beds of ease" method, he wants to get right up and dig. Yes, it will make that flowery bed of ease look like a newly-plowed field, but something will come of it. In other words the publisher needs application and lots of it to make good on his job. Application will start many an idea to sprouting. Try it on the subscriptions. Try it on the advertising. Try it on the local news department. Try it on the general reading matter, Give them all a show. Apply yourself to your job, and lure the ideas—the workable kind—from their hiding places.

Experimentation. A newspaper is a fascinating laboratory, in which various elements and conditions peculiar to its local field are brought together for the purpose of forming that glittering something called Success. The reason so few find it is because they work the combination wrong. They don't have an intelligent understanding of the elements with which they are working—and they don't know just what they are after—except as they call it dollars—and the publisher that is primarily and solely after dollars has missed his calling and is dishonoring the profession.

The way some publishers go at the experimentation in the working laboratory of their newspapers reminds me of the first time I was turned loose in the chemical laboratory at school. There were all the chemicals, all the delicate weighing and measuring instruments, all the brunsen burners, test tubes, blow pipes, and what not. And what a busy and interesting time I had. I was like the baby with the toy engine. It sees the wheels go round, but it knows not the wherefor or the why or the how. Neither more did I. And there were no ideas born that day that I know of, save perhaps to realize what a fool I was and how much I had to learn. But perhaps that was a good start after all. And perhaps if some of our publishers could get to experimenting they would discover what fools they are and how much they, too, had to learn. That surely would be getting the ground cleared of the brush so the ideas could grow. And once the real, workable kind of ideas start to grow the publisher will find they are his most valuable asset, that they are the things he can do business with and reap Success.

Just ideas won't do.

You need the workable kind.

Get them by following our prescription.

Try it.—*Willis S. Edson, Editor Western Publisher in May issue.*

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

WHAT do you suppose? Third Assistant Postmaster-General A. L. Lawshe recently had the audacity to favor me (one of the printers he is robbing of much business that ought to be ours) with a price list of government stamped envelopes, together with a lot of other publicity "dope" descriptive of the advantages in using these goods. "Prices very reasonable," is one of the selling points brought out; and, I assure you, that cannot be disputed. The envelopes are furnished, as probably all of my readers are aware, at less than I could buy plain ones from the wholesale paper-houses, And this price list and circular (wihch also includes a number of detachable order blanks) state further that, "when ordered in lots of 500", etc., "the department will, if desired, print the purchasers' return card in the upper left corner of any of the envelopes described * * * without additional charge", which is also the statement of a fact well known among printers. Now, there probably isn't one of us newspaper men who hasn't expended his labor, space, and cold type without stint in crying down the mail order evil, to the direct benefit of the people—for I claim it just as much a benefit to the purchaser as to the dealer—and there are hundreds of us country editors who have struck firmly and patriotically in giving the American people a boost (which term, mind you, is but a true synonym for the American government) whenever the opportunity has presented itself; yet, notwithstanding this invaluable service, this Government thus virtually connives to deprive its most beneficial craftsmen of a certain line of legitimate business by supplying their trade with stamped envelopes at a positive loss, and, as if this were not enough, by printing the return cards thereon free of charge. And then, in the face of this ridiculous fact, men will continue to worry about deficits in the government postoffice departments. I am gratified indeed to see the country printers all over the United States awaking to the absurdity and injustice of Uncle Sam's postoffice department, and I hope they combine in a roar of protest that will ultimately cause those concerned to quake with apprehension and comprhension. Among all classess of craftsmen deserving the business competition of the government, all fair-minded men must surely concede the printer is among the last.

The publication of a newspaper as a unique vehicle of publicity for their "product, stock and chattels" seems to be a "stylish" idea with modern type foundries. I have been favored with copies of the first and second editions of the *American Bulletin,* by the American Type Founders Co., of Boston. I am charmed by the excellence of this little four-column folio, and I mention it here not with a view of gratifying its publishers' desire of publicity, but because I feel that a close study of its pages must certainly benefit that printer who entertains a desire to improve the typography of his paper. The *Bulletin* is set exclusively in the American's famous Century Expanded and Century Bold, and is an inimitable example of the value of that superlative letter in this class of work. The "editor" (?) makes "no bones" about the *Bulletin's* object being solely and purely for advertising American type, and as such it is unapproachable. I do not endorse the punctuation of head-lines, however, when the punctuation is unnecessary to the sense.

RUSSELL, KAN., Feb. 13, 1909.

DEAR MR. COPPER:—Am sending a few copies of recent issues of the *Reformer* (which paper I neither named or established). My thought is that I may be benefited by any references you may see fit to make to the general typographical effect or to specific defects or otherwise. We run on short help and practically all of the ads are my own work. I know of course that my first page ads will not strike your fancy on account of their location, but I cannot subscribe to your views on that line. The three ads shown and none others run practically every issue, two of them not having missed an issue for nearly three years.

With a word of appreciation of your department, I am

Respectfully, J. W. MORPHY.

It is quite evident in looking over Brother Morphy's paper that he does not subscribe to my views regarding the undesireableness of running displayed ads on the first page, nor to any of my ideas as to that which is correect and proper in the mechanical makeup of a newspaper; for, not only are these ads apparent on the face of the *Reformer,* but, I note, in other pages one is far more likely to find an ad in each corner and others scattered throughout the center, than to find them sanely and rightly set over to the right, with the greater spaces occupying the lower positions, and graduating according to size until the page is topped out with the smallest specimen. I always rather admire a fellow who has a mind of his own—on matters religious or political—for I am neither preacher nor politician, but when it comes to newspaper making I'd naturally much prefer they'd subscribe to the recommendations of this department, which, of course, is not depriving one of the free exercise of his "own mind" either. I have my reasons for standing against advertisements on the first page of a newspaper by heart, so often have I been given to repetition here—and I suppose that, ere this, my regular readers must have memorized them, too. But surely my logic cannot be evaded nor misappreciated even by those who haven't as yet endorsed them. We must all agree that the reader is the thing of most importance, for without circulation, without readers, the newspaper publisher cannot hope to interest advertisers, verily cannot reasonably hope to eat. This fact established, and granted, then it follows naturally that the publisher's first duty stands due and payable to his readers. Whence then the quibble over who has the legitimate claim, the first right, to the paper's first page? Let us aim to please our readers first, and our advertisers second; or, in other words, let us strive to make a *newspaper* first, leaving the money-making as a secondary consideration. And forsooth, I verily believe this is

the only substantial way to make any money in the newspaper business. For, when we attend well to our primary object, the secondary proposition follows, as immutably as that good seed sown in good soil and well cultured by both the hand of man and Nature brings forth an abundant harvest. The *Reformer* is an all-home-print folio, with regular six-column pages, and each of these is liberally "dotted" (using the term intelligently) with ads. Brother Morphy has his first page made up with modestly headed local stories, the heads being set in a neat bold Roman, commendably in upper and lower, and minus senseless punctuation. Why not consistently chop off the period in the title, too? At the head, just beneath the title line is this gem: "Decency and fairness is essential in any business, but more especially in the conduct of a newspaper." The *Reformer* boasts of no regular department of editorials but the work of writing the local stories is fairly well done. The body type, I should judge, "has seen better days", though a fairly good print is yet achieved. The very commonest, and, in the main, the simplest, forms of composition are followed in the setting of the advertisements, and this simplicity, coupled with the several excellent ad-faces employed, makes the displayed columns of the sheet not unsightly.

GENEVA, ALA., March 29, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Am enclosing you under separate cover copy of *Reaper*, which I wish you would please criticise. The present editor has just had charge of the office for the past two years, but has made a great improvement in the paper, as I think you will agree, when you compare the "before and after taking" papers that I am sending. We have been taking the N. P.-J. for over a year and will certainly continue to do so. Hoping thatt you will not score us too harshly, I remain,

Yours very truly,

O. K. WILLIAMS, (Foreman).

It does not require a long look at the "before and after" specimens of the *Reaper* to enable me to agree readily with my correspondent's statement to the effect that a great improvement has been wrought in this paper between March, 1907, and March ,1809, and I subscribe this affimation of the fact in spite of the apparent evidence that the *Reaper* has been reduced from a six-column-all-home-print quarto to a folio of the same style and calibre. It isn't always the biggest paper that is best, nor the biggest that contains the most readable stuff. The paper is at present much neater than formerly, and especially gratifying is the clean, newsy front page, in striking contrast to that of two years ago, when half of the front page space was occupied by a big, bad and bold advertisement. And particularly pleasing to me is the fine balance accomplished in the makeup of this first page of the *Reaper*. It denotes thought and careful workmanship. I wouldn't give a pinch of Copenhagen snuff for a workman who doesn't think as he works. The system in evidence throughout in the mechanical makeup is also worthy of commendation. A little department of "paid locals" under the apt caption of "Perhaps It's Here," strikes my fancy as something pretty clever. The advertisement composition in the paper is rather rigid, but shows earnest and careful treatment. Returning to the first page, it must be admitted that the typography here, despite the general perfect balance and mechanical precision as to the length of lines and location of masses, is nevertheless decidedly inharmonious. A Mazerine cap line, for instance, in conjunction with a bold condensed Gothic inverted pyramid, is anything but agreeable. And while the editor writes his heads with exemplary aptitude as to length of line, however, at times the wording is scarcely equal to the mechanical effect. For instance, take the first heading: The editor has apparently been unable to get more than one thought into the several departments of the head. The word "children" occurs in each of the four decks. Something like this might be suggested as an improement:

TWO CHILDREN PERISH
IN BURNING HOUSE

Vicinity of Vicksburg Shocked by
Frightful Accident

FOUR LITTLE ONES LEFT ALONE

Ten-year-old Boy Makes Desperate But Futile Effort
to Save His Companions from
Their Terrible Fate

My idea of a perfect heading is one that gives the reader the main facts of the story over which it appears, in brief but well connected thoughts, something as I have hurriedly attempted above. Of course, the head cannot tell it all—but it should tell enough to

The Geneva Reaper

satisfy the mind of him who hasn't time for anything else, and just enough to whet the mind of the reader, who has time for a full reading, to crave the story's details. Now, again, take the heading in this paper

which is a companion piece to the one just reviewed Here the same error occurs of reiterating a sameness of thought isstead of mentioning separate facts of the event. Would not something like this have been better?

MRS. BERRY DROWNED
IN CHOCTAWHATCHEE

Fell Into Water While Fishing Near
East Pittman

ACCIDENT OCCURRED TUESDAY

Husband Gives Alarm and Body of Unfortunate
Woman is Recovered After Long
And Tedious Search

Another criticism I feel moved to offer is in respect to the editorial work in evidence in this sheet. The stories are told not very entertainingly, nor in very smooth, fluent terms. The author should endeavor to improve and enlarge his vocabulary, and should especially practice the art of rounding out his sentences with greater clearness of thought and expression, and with a closer, truer view to sound. An excellent means of improving one's vocabulary and flow of language is the writing of verse; because the search for the rime and the effort necessary to maintain the meter naturally tends to increase one's knowledge of words and his ability for putting them together in a more pleasing, musical shape. But, to prove beneficial in the highest degree, the task must be entered into with at least some little inspiration and a great deal of earnestness. The simpler but serious study of a dictionary will also be found extremely efficacious in improving one's language and literature. That a part of the foregoing review may become the more intelligible, I reproduce the *Reaper's* first page as exhibit No. 1.

BLOOMSBURG, PA., April 6, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—We have sent you by mail a copy of our seventh anniversary and new-building edition of *The Morning Press.* Any comment that you care to make thereon will be greatly appreciated. It is, to a certain extent, the culmination of plans mentioned in a letter to you a year or more ago.

Thanking you for past favorable comment, and trusting you will consider we have made good in this edition, we are,
Very truly yours, VANDERSLICE & EVERLY.

I have written in the past an opinion about western people, and western publishers in particular, doing things on such gigantic plans—and it's true, too, they do do things in the west; but not even a Pacific Coast publisher could hope to excel the scale of this Bloomsburg, Pa., *Morning Press* Seventh Anniversary and New Building edition. Eight full quarto sections, aggregating some sixty-four pages, comprised this great special, divided as follows: Section 1.—The *Morning Press;* the first, or cover page, of this quarto is graced with a full-page cut of the magnificent new home of the paper, following which comes an exhaustive, semi-technical, yet concise and intelligent descriptive write-up of the new structure, which is 23x64 feet in outside measurement, and consists of three stories and basement. In the same section is a history of the *Morning Press* for seven years, which, in brief, has been one of hustle, inimitable enterprise and perseverance, three qualities that, when understood, easily explain the present greatness of this progressive modern paper. There is also an article descriptive of the jobbing plant of the *Press* and a well written "Glimpse of the Rush and System of a Daily Paper", clearly exploiting the ways and means by which a day's news gets into print. This first section is crowded with illustrations, showing interior views of the *Press* business office, editor's private office, reportorial department, employe's recreation room, together with views of the press, the composing room, job department, etc., and portraits of the "force who made this edition possible", being twenty fine looking men and boys and one pretty, young woman. Next is the Industrial Section which is devoted to Columbia county's multiplied industries and their wonderful development—mills, foundries, factories, plants and stores, furnish an unlimited field for print and illustration. Things professional form the subject of the third section, publicly airing doctors, men of the county bench and bar, hospitals, courts, etc., while the burden of the fourth section is educational matters. Here morals, high schools, superintendents, professors, principals and teachers all come in for a flattreing word and form subject for appropriate story and sketch. In the financial section, which is next in order, Columbia county's and Bloomsburg's banks, and bankers, financiers and capitalists and their remarkable doings are eulogized and illustrated in a highly entertaining and congratulatory manner; while in the following section an inexhaustible opportunity for a local public boost offers itself in the building and real estate topic. Next is the Religious section, telling of local churches and ministers and their spiritual work, and this is followed by the regular news section, completing a mammoth piece of work. While in the foregoing description several words have been brought to service, yet the vaguest idea of this special edition's magnitude and magnificence has been conveyed. There are hundreds of other subjects treated in this extraordinary special, all of which, for sheer lack of time and space, I must pass unmentioned. But we cannot afford to overlook the eminent standard of excellence of the workmanship manifested in every department in the making of this paper. Take, for instance, the high class literary style of each narrative, the artistic decoration and grouping of cuts, the tasteful arrangement of the matter throughout, the high class displayed spaces, and the neat and striking styles of typography in evidence in the heads and titles, and you have a combination, which in its magnitude and general perfection, becomes a thing to simultaneously wonder at and admire—and surely ought to be a source of great pride and satisfaction on the part of its makers, Messrs. Vanderslice & Eyerly and their efficient force of workers. The *Morning Press* special edition is a gigantic effort in which its makers have truly "made good". The idea, as outlined in the preceding brief description, of making each section exclusive—or nearly so—to some local subject impresses me as an exemplary plan. May the achievements of these successful and progressive newspaper men never grow less satisfying, yet may they never become satisfied, is the best wish I can extend them.

CANFIELD, OHIO, April 9, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I thank you for the very kind words in the N. P.-J. for the *Dispatch.* As you intimate, it takes lots of hard work to make a paper like the *Dispatch,* but I am fortunate in having surrounded myself with an office force that thoroughly knows and cheerfully does its work. For myself,

I claim no great credit for the showing the paper makes. In this mail I am sending you issues of the past two weeks. In one of them are marked paragraphs showing how papers in this field regard the *Dispatch*. I feel, however, that the neighboring boys in their spirit of kindness have been entirely too generous in bestowing compliments. The papers, anyhow, will show you that we keep the pace in the matter of size.

Again thanking you for your generous mention, I am,

Yours very truly, C. C. FOWLER.

This letter from Brother Fowler comes from a grateful heart—and a generous heart, too—for, note you, please, he does not claim the honor for himself, but for his force. Bully for him! He's welcome to any praise this department may have been able to confer—because he's worthy of it.

RUSSELLVILLE, ARK., April 3, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you three current issues of the Russellville *Rustler*. I do not claim anything great for this paper, for the fact that my facilities are about equal to those found in most country offices.

This paper is printed one page at a time on an old Cincinnati Nonpareil, (the first one I have ever seen) and it has been under my management less than two years. I was formerly connected with the Fulton, Mo., *Sun* for a number of years, during which time I was a frequent contributor to your department of the N. P-J. The town of Russellville, Mo., has less than 500 inhabitants and during my stay here I have built up the subscription list from four hundred to eight hundred and fifty, and have lately been made the official paper of Cole county.

I know that the paper is far from perfect in every way, and your criticism, whether of the favorable or unfavorable nature, will tend greatly towards making it perfect, in as far as we are able to follow your instructions along typographical lines.

Yours very truly, B. RAY FRANKLIN.

I had entirely lost track of this competent typographer, but I well remember his creditable contributions to this department during his connection with the Fulton, Mo., *Sun*. His present paper, which is well named the *Rustler*, is in the main a very commendable publication to hail from a village of only 500 souls. It is a five-column, all-home-printed quarto, and

SPRING STYLES ARE READY!!
Get in the well dressed circle—Wear Schwab Clothes
Get in the well dressed circle—Wear Schwab Clothes
Our spring styles in Men's and Young Men's Clothing are now ready for your inspection. Truthfully we can say that never before has there been such "nobby" stylish and good wearing material placed on sale in Russellville, and you will be surprised too, when you hear how low the prices are. You will wonder how we can afford to sell such a swell looking suit for such little money. All we ask is that you call at our store and give our clothing your closest inspection. The quality and price will do the rest. Notice the above cuts. They represent the latest styles.
Scrivner-Smith-Morrow Merc. Co.

No. 2

the abundance of the advertising patronage it receives is equal to, or away above, that seen in newspapers printed in much greater towns. The perfection of the typographical treatment of this advertising, too, is very good—the only defect which I could consistently mention being a little too fluent use of underscores. Exhibit No. 2 is one of the admirable half-page specimens. Probably the only material fault in this advertisement is the fact of the rule which cuts off the body from the tail, having been inserted wrong side up. I am sorry to note that Brother Franklin has not as yet joined my club of "clean front pages," although I must give all due credit for the neat, artistic treatment conferred in spite of the big front page advertisements. However, there's no legitimate excuse for displayed ads on the front page of a paper that is all home-printed, and whose regular number of pages is therefore easily increased according to needs,

No. 3

as is the case with the sheet under consideration. Exhibit No. 3 is a view of the *Rustler's* front page, cut off just above the ads, and it illustrates clearly the esthetic head styles and general arrangement. It is quite evident to an experienced eye that both the lines, "Officiel Paper of Cole County", and the date, are in too prominent faces. Eight-point Roman bold caps for the first line, and a ten-point Roman cap line for the date would be preferable. No pointers for the improvements of the contents of this publication suggest themselves, since therein it is already so excellent. The impression, too, is beyond adverse comment. When one scrutinizes this little paper closely and technically, it is not difficult to understand why the growth of its circulation has been so great during the past two years. It isn't hard to sell a paper of high quality.

GLIDDEN, IOWA, April 2, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you a copy of our last issue. We have enlarged the *Graphic* to a seven-column standard. As near as possible, I am trying to bring our paper up to your ideas,—and mine. My partner does not believe in a clean front page. He is an older newspaper man than myself and has always had ads on front page. You will notice the front page is "getting clearer," though. Am in hopes of being able to have it clean before long. Glidden is a town of about 850 inhabitants. Office not what we would like to have it, but we are figuring on a new cylinder press and cabinets for all type, and hope to improve in time. Now, go ahead with your roast, for, by criticism we learn.

Yours truly, H. F. RUBEY.

Brother Rubey's letter, as quoted above, is interesting because of its story of push and progress, high aims and great endeavors, fine enterprise and hope. The *Graphic* bespeaks the telling effect of such ideals in spite of the fact that the ideal has not yet been fully attained. It perhaps never will, because of the immutable law that each additional achievement only breeds within the soul of the ambitious another and higher goal. The Glidden *Graphic* is a fine, big weekly paper, with a copious amount of high class reading matter on its pages—not excluding the ads, which are all composed in a thoroughly modern and wholly pleasing manner. Exhibit No. 4 is one of the attractive half-page specimens, and exhibit No. 5 another exquisite example from the same edition. Both of these subjects may be accepted pertaining to typography as having the full endorsement of this depart-

ment. For the purpose it would be hard to suggest anything better than the design, display and general layout represented in these two ads. But the *Graphic's* excellence rests not alone in its advertisement composition. It's editorials are veritable gems of philosophy and cultured English, its impression clear, even and it is gratifying to observe, that, whereas the front page is cluttered with display ads, yet to a large extent the method of makeup advocated in this department of the NATIONAL PRINTER-JOURNALIST has been carried out successfully. One of the most obnoxious features

No. 4

noticeable in the issues at hand is the insertion of commercial items set in twelve-point Poster Antique and sandwiched in amidst pure reading matter. To my mind this is the height of ugliness and impropriety. Nothing so completely mars the beauty and sullies the virtue of a paper's local page as this abominable practice; nothing so quickly and surely degrades its dignity, and brands a sheet as the abject slave and prostitue of commercialism—the veritable harlot of

greed and graft—as this infamous sin. To yield to it, seems to me, a publisher must be utterly void of the finer sense of art, which every printer and every newspaper maker ought to do everything in his power to cultivate and possess. To come right down to the pure ethics of the matter, it is incourteous in the extreme to unsuspectedly spring business matters upon the innocent reader among the news items, and how doubly coarse and erroneous when the page's esthetic features must thus suffer by the setting of such items in scare-type, the direct tendency of which is to disgust and repel rather than please and attract. I regret to learn that both publishers of the *Graphic* are not so fully in sympathy with the recommendations of this department as Brother Rubey evidently is, but I am highly gratified with the improvements manifested, and trust that in time present ideals can be realized. Just one other little "tip" to the makeup man ere I close: I notice in making up, a single line from one paragraph is carried over from column to another, which should never be done. It scarcely ever happens that enough space cannot be removed from somewhere in the column to admit of an extra line, and it is dire waste of optic energy to make the reader's eye to travel the whole length of a column after the few words left to complete a thought or sentence.

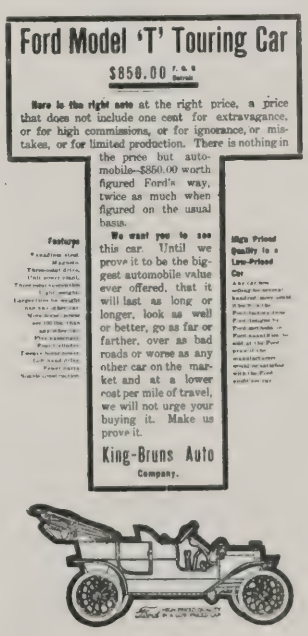
COOPERSTOWN, N. D., March 22, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Having been a reader of the NATIONAL PRINTER-JOURNALIST for a little over a year, I take this liberty of writing you and enclosing a few samples of ads taken at random from the *Griggs County Sentinel* on which I am employed, and, if you can find space and time, would like to have your valued criticism on same. I should have taken the time to take separate proofs of these ads, but time would not allow it, and so had to do the next best thing—clip them from the sheet. These ads were all thrown up in a hurry, as the rush of business does not always give a person the time desired to work on same. Hoping that your criticism may be a benefit to me, and possibly to others, I beg to remain,

Yours fraternally, M. A. JENSEN.

Brother Jensen's faults as an ad compositor can be summed up in few words: He has a deplorable proneness for over ornamentation, panelling and underscoring; in fact, he uses altogether too many brass rules in his work. The two best specimens from this contribution of nine ads are shown herewith as exhibits



Ford Model 'T' Touring Car
$850.00
Here is the right note at the right price, a price that does not include one cent for extravagance, or for high commissions, or for ignorance, or mistakes, or for limited production. There is nothing in the price but automobile—$850.00 worth figured Ford's way, twice as much when figured on the usual basis.
We want you to see this car. Until we prove it to be the biggest automobile value ever offered, that it will last as long or longer, look as well or better, go as far or farther, over as bad roads or worse as any other car on the market and at a lower cost per mile of travel, we will not urge your buying it. Make us prove it.

A New Finish on Furniture
We have added another new finish to our already large assortment of finishes. It's the TUNA—the best imitation of Mahogany made, experts cannot tell it from the real thing. The finish is put on genuine Maple, the best wood grown for furniture making, in fact it is a better wood for wear than the genuine mahogany. May we have the pleasure of showing you?
John Syverson

No. 7

6 and 7. Both are fine examples, the faults mentioned being the least in evidence. All of this contributor's work denotes skilled constructive ability, but, while the defect I am about to cite does not appear in either of the advertisements reproduced, Brother Jensen does

not usually allow enough white for margins bounding a black mass of type matter. He has a good idea of proper display, however, and is destined to improve his future work, as evidenced by his commendable openness for correction and desire for honest criticism.

WYOMING, ILL., April 19, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover we are sending you copies of our publication and if convenient would be pleased to have them reviewed in your admirable department of the NATIONAL PRINTER-JOURNALIST, showing us particularly the places for improvement.

Very truly yours, MOORE & SON.

Here is a paper that commands respect at first sight—with me forsooth, it has been a case of "love at first sight"—because Moore & Son appreciate the advantage and propriety of a clean front page. Exhibit 8 shows the neat and attractive manner in which the first page of the *Post-Herald* is arranged, the page

No. 9

panion, or finish, to good literature, and that is why a critic may find such complete satisfaction in reviewing the *Post-Herald*. In point of contents few weekly papers are so good, and fewer are better, than this one. The local news field is closely and cleverly covered, both by the editors and a goodly number of country correspondents, and other interesting "copy", is "ground out" each week in elaborate and entertaining style. The highest compliment one can receive for any literary production is a charge of plagiarism, and the department of editorials in this sheet are so good as to suggest syndicate origin. The literary style in evidence elsewhere in this paper, however, is equal to that in the editorials, and therefore I have no reason to doubt the originality of the latter. The *Post-Herald's* excellence is crowned with good presswork; while the style of composition of the displayed columns has simplicity and dignity as its keynote, with plenty of white reserved, which commendable combination culminate in some very fine serviceable ads, of which exhibit 9 is an example selected almost at random. Another nice feature in this publication which I must not neglect to mention while in the mood for praising, is the classification of all commercial items under a head, "The *Post-Herald* Bulletin Board," which, I am sure, is the right way to treat this sort of stuff. Having nearly exhausted the points in this publication calling for congratulation, I detect but two respects in which there is any great room for improvement. The first of these relates to the heads in use at present over the country news letters, which I deem entirely too big. The same head-letter ought to be used here as elsewhere in the paper for single-line headings. My second suggestion for betterment pertains to the mechanical makeup of other pages than the first, in which it would be well to follow my ideal plan so frequently outlined herein, namely, throwing all advertising to the right side of the page, arranging the ads according to the most natural method, the greater specimens at the bottom, graduating with the smaller ones at the top. I think that I have thus far failed to state that the *Post-Herald* is a six-column quarto and printed all at home.

CALEDONIA, N. Y., April 1, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I have only recently become an interested reader of the NATIONAL PRINTER-JOURNALIST and especially of your department.

There has been sent you two copies of the *Era*. Please criticise both through your valuable columns. Would be glad to have your ideas along the line of the editorial in the issue of March 31st, as it raises a question interesting to all weekly publishers in limited fields. What do you think of two papers in one, as with the *Era?*

Thanking you for whatever you may say that will help me and other readers, I am,

Yours respectfully, R. A. PECK.

Heretofore the Caledonia *Era* and Scottsville *Bee* have constituted a six-column quarto, but since the issue of March 31st these papers—or rather, this paper—has the same number of pages as columns. I consider that a marked improvement has been accomplished through the reduction in size, both typograhically and generally. "Good goods come in small packages," is now the motto the *Era* carries over its title, and the neat boxed squibs at both sides of the name are one of the improvements. So full of interest to a large number of my readers must be this question which forms the subject of the editorial to which Brother Peck refers in the letter reprinted above, that I deem quoting at least a part of it here advisable, as follows:

QUALITY RATHER THAN QUANTITY. With this issue the *Era* appears as a six-page paper, in which size it will be hereafter issued until such time as an increased advertising patronage makes a return to the eight-page form necessary.

It has long been a question with the owner whether the majority of our readers cared enough for the stories, serial or otherwise, farm hints, woman's page and other miscellaneous matter, to warrant the expense which its publication incurred. Recently we have made inquiries of our readers, village and country, Caledonia and elsewhere, to ascertain, if possible, whether they read those pages devoted to other than local and vicinity news. With a few exceptions those approached cared only for the local news.

With daily papers in almost every home, village and country, with every enterprising farmer reading one or more farm journals, and nearly every housewife reading her fashion paper, less and less interest has been shown by the reading public in the "plate" or "patent" features of the country weekly, especially in a community like ours where the standard of individual intelligence is so high, demanding the taking of magazines and periodicals, and in such close proximity to the great cities whose daily journals cover so completely the world news.

In the last five years the cost of labor and materials used in printing have advanced to such a figure that a large paper at $1 per year cannot pay the owner a fair return for his investment of capital and oversight, unless the field affords unusual returns from advertising. Caledonia is not such a field. Our merchants are not expending sums sufficient for advertising to warrant the issuance of a large paper. Like the tailor, we must "cut the coat according to the cloth" if we expect the paper to continue to pay its own way and a fair profit for the investment it represents. We are sure none of our readers asks more than that.

The trend of modern newspaper making is away from mere size and quantity toward quality, correctness, fairness and thorough covering of the paper's field. The *Era* believes itself to be one of the first papers of this section to heed this note and get into line with progress in that direction. The *Era* of to-day is a vast improvement over what the paper has ever been before, and we expect to go on improving in what we feel our patrons want from week to week.

This is not the first time of late that I have been asked for an opinion upon this important question. But there seems to be only one sane conclusion in the matter. Let each publisher decide this for himself, whether he will have an all-home-print paper of less pages, or a larger sheet with patent inside, for it all depends upon local conditions as to which is most adaptable, as Brother Peck intimates within the foregoing editorial. If it were but a question of reducing

the size of the paper, however, and that a dollar-a-year all-home-printed product, in which it were necessary to use some four pages of plate, more or less, each week, as has evidently heretofore been the case with Brother Peck, it would not take much hesitation on my part to decide in faver of reducing the size of the sheet to such number of pages as could be filled up exclusively of home-set matter. Especially for a sheet like the Caledonia *Era*, with conditions surrounding, as Editor Peck has outlined, the all-home-print and exclusive local news is the right plan—and I would naturally deem it ideal for all country weeklies in the congested east with its many great cities and well-informed people, although I believe the all-home-print feature is rather more a western idea than an eastern one, and more common in the former than in the latter section. In closing, it accords me pleasure to add that I have been pleased with my inspection of this "twin" paper, especially having admired the clean front page. The "two-in-one" idea is all right. Brother Peck is a brilliant and clever writer, and as a newsgatherer deserves my congratulations. A good

No. 11

impression is secured on his paper, and the advertisement composition is neat and economical. Exhibit 10 gives a glimpse of the taste displayed in the makeup of the initial page of the *Era*, and No. 11 is one of the attractive advertisements from its columns.

The *New Era* of Wynnewood, Okla., issued in two colors in honor of last St. Patrick's day, the date of the bi-colored edition being March 18. The subject of this novel deviation from the customary black and white was a poem entitled, "The Wearing Av the Green," which, of course, was in that emerald hue so dear to the hearts of all of us loyal sons of Erin. This was a clever idea, all right—the *New Era* is full of them, for that matter; but it's a shame there are so many things that must be attended to ere the paper can measure up very well with the ideals of this department. The style employed in the triple-bank heads is unsightly and the mechanical make-up extremely defective, a lot of displayed rubbish being stuck in on the front page in a most slovenly manner, and the other home-made pages being imposed partly at least with little regard to the Hoyle of art. No one could reasonably complain of the contents of this sheet, however, both the news-service and editorials being especially good. It is chiefly in a mechanical way that effort for improvement should be made.

COVINGTON, TENN., March 19, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I have just been shown a proof or clipping from the March number of the NATIONAL PRINTER-JOURNALIST of one of my ads which appeared in the *Leader* last December. I fail to call to mind when I sent you this paper and am sure I did not send it in for criticism; in fact, I haven't set many ads lately that I thought deserved very favorable criticism, and some of them I am sure would hardly stand the "strain." For this reason I appreciate the last criticism you made because it was unsolicited and just a plain every-day piece of composition. There was no special effort put into this ad like the one I set in the shape of a star. When my plain ads deserve and get the criticism you have given the last one I can hardly help but feel a little proud of the efforts I have made in the study of ad composition, and wish to take this method in showing to you that I appreciate what you have said about my work. I ordered a dozen copies of the N. P.-J., which I expect to send out to various printing and advertising concerns in the hopes of doing some little good. Hereafter I will endeavor to mail you the *Leader* more regularly, and in case

you run out of material for your monthly grind, you can then turn to the ad column of the *Leader* for something to "fill up" with.

Thanking you for bearing with me so patiently and for the nice notice you have given me, I beg to remain,

Yours very truly, TOM MCGREGOR.

In addition to the above appreciable letter I have a bill-head from the Covington, Ky., Leader Printing Company, on which an extract from my former favorable criticism of one of Brother McGregor's ads is reprinted, after which is added, "Let that printer set an

ad for you," which is making the most of comment in these columns to one's immediate profit, all of which is heartily commendable. Exhibit No. 12 is one of Mr. McGregor's late ad creations, which is remarkable chiefly for its simplicity and conciseness.

HYDEN, KY., March 5, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you under separate cover a copy of the Industrial Edition of *Thousandsticks* published on December 24, 1908, and will be pleased to have your comments and correction on same in your department of the NATIONAL PRINTER-JOURNALIST. The paper is a home production, except the insert of the Davis' interests and I think it making good for a newspaper man of the age of myself, reared in the wilds of Kentucky.

Hyden is a small town 50 miles from the railroad and the country surrounding is very thinly populated. The country is rich in natural resources, but has never been developed.

I think the distance from the railroad and considering the environments, the edition deserves some credit, and as I am a subscriber to the PRINTER-JOURNALIST, I would be pleased to see some comments as to my first effort in producing an Industrial Edition.

I am yours truly, H. C. CHAPPELL.

That is Brother Chappell's letter—but I wish you might see the letter head upon which it is written. It was all right for balance, but the word, "Thousandsticks", is set in caps of Engraver's Old English, producing an effect original enough and radical enough and eccentric enough to satisfy the Roycrofters of East Aurora. *Thousandsticks* will strike the average reader, no doubt, as it struck me, as a very peculiar name for a newspaper. At first sight methought I had some Odd Fellows' publication, but soon was this idea dispelled. The word is doubtless local and has been well and wisely chosen as a title. Brother Chappell's Industrial Edition is certainly a remarkable piece of work, and remarkably and peculiarly interesting to a Northerner, to whom it reads like a story. The edition consists of eight six-columned pages, all embellished with many large and beautiful half-tone illustrations of the scenic mountain regions and the hardy Kentucky mountaineers. As I view this interesting publication I am moved to the conviction that, in spite of the vast difference in magnitude between the two, this Industrial Edition of *Thousandsticks* represents by far a greater undertaking and a grander achievement than the mammoth Seventh Anniversary and New Building edition of the Bloomsburg, Penn., *Morning Press,* as considered further back in this same installment. To be sure the English *Thousandstick's* young editor employes might be improved in places, the tones in its cuts might at times be more clearly brought out, its impression might be more even and distinct, its displayed portions might be more attractively designed and stronger in display, but, withal, it stands as a mighty fine monument to the earnest endeavor of its young publisher, who, so far as I can learn, has been the sole maker of this remarkable special. From what I have been able to glean from *Thousandsticks* itself, Brother Chappell is the last of one of the noble pioneer families of this picturesque mountain country, born May 2, 1885. In 1892 his father died, leaving a large estate, but, as a result of the panic of that year, it was entirely lost. Young Chappell's education was limited, although he secured enough learning to teach at the age of nineteen, and during the same year he purchased *Thousandsticks.* As is frequently the custom of friends, Brother Chappell's friends did everything they could and said everything they could to discourage him in his new undertaking as a newspaper publisher, but he pushed on determinedly, in spite of evil prognostications, and succeeded, *Thousandsticks* today being an acknowledged champion for the welfare of Hyden and its people and a recognized power for good in the county. God bless this young Kentuckian and his *Thousandsticks.* May they become, as the name of the paper suggests, like a thousand sticks bound in a bundle, so strong in their union that they cannot be bent nor broken in their modest crusade for better things in Hyden and Leslie County. May their success and popularity increase with the growth and development of that rich and majestic territory. And may I have future copies of the regular editions, so that helpful suggestions for improvement may be offered.

HUMMESTON, IOWA, Feb. 20, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—We are sending you a few copies of the *New Era* for criticism in regard to general appearance, make-up, ads and news service, in town of 1,200. We are readers of the N. P.-J., and get many good ideas from it. Your department, especially, is enjoyed by us. Yours truly,

SANFORD & MCGUIRE.

The Humeston *New Era* is a six-column all-home-printed folia. It is not, therefore, as big a paper as one might expect to emanate from a town of twelve hundred inhabitants, but it is a very good paper. En-

ter again, therefore, Brother Peck's motto, as quoted some paragraphs back: "Good goods come in small packages." Exhibit 13 is a reproduction of the admirable front page, delightfully clean and carefully made up. The *New Era* is exclusively local in character of contents, and I might truthfully add that the gathering of the local news is most thoroughly and intelligently accomplished. The advertisement composi-

IOWA LEADS IN SWINE

Let Something Good be Said

James Whitcomb Riley

WHEN over the fair fame of friend or foe
The shadow of disgrace shall fall, instead
Of words of blame or proof of thus and so,
Let something good be said.

Forget not that no fellow-being yet
May fall so low but love may lift his head,
Even the cheek of shame with tears is wet,
If something good be said.

No generous heart may vainly turn aside
In ways of sympathy, no soul so dead,
But may awaken strong and glorified,
If something good be said.

And so I charge ye, by the thorny crown,
And by the cross on which the Savior bled,
And by your own souls hope of fair renown,
Let something good be said!

MARRIED FIFTY YEARS THE SCHOOL NOTES

HORSE IS STILL KING TWENTY YEARS AGO BACK WITHOUT MAN

No. 13

tion is done along plainest and highly serviceable lines, and the presswork is well nigh old-time perfection—being not quite so heavy as that commonly seen. There is but one avenue for much improvement that I have seen in this publication, namely, in the mechanical make-up of the second, third and fourth pages, which are not arranged exactly in accordance with my ideal plan. Get all advertising to the right-hand sides of the pages, build them up triangularly, big ones at the bottom, littles ones toward the page-top, and see how easily and nearly it becomes possible to attain a next-to-pure-reading-matter position for all of the various specimens, and at the same time maintain a pleasing aspect and reserve the column tops for your readers.

SPARTA, WIS., March 17, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Have just received the March number of the N. P.-J., and hasten to thank you for the nice things you've said therein about our double-page for the Dodge & Davis Co. As you no doubt know from experience, nothing is more gratifying to the printer than an appreciation of his work, by one who knows whereof he speaks.

Just to show you that we try to keep the character of our work up to that of the Dodge specimen, I am sending you under separate cover, samples of two half-sheet bills that we recently got out. These were also run in the paper. The Baldwin ad in red just as it appears in the specimen. I might also state that both of these were rush jobs.

Respectfully yours, J. W. SPAULDING.

I wish to reply to Brother Spaulding that it is likewise a gratification and a pleasure to an overworked

first I point with admiring emphasis to the delightful layout, the strong, clean display, and the perfect, yet soft, curving balance. The next exhibit is

fully as correct and charming, as is probably the third also. When specimens are so good as these, the critic

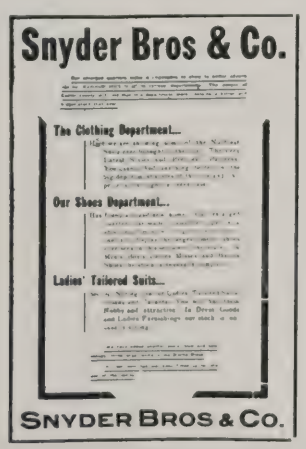
No. 20

has little more to do than admire them and then pass them mutely on for other admiring eyes to gloat upon.

I believe I had a word or two for Publisher E. R. Purcell's Custer County *Chief* of Broken Bow, Nebraska, in last month's installment, and here is some information concerning that paper, which in a way is both interesting and instructive:

THE CHIEF.

Circulation—2,900 actual subscribers. Size—Eight to twelve pages. All home print. Equipment—Mergenthaler Linotype machine. Up-to-date presses. Newspaper folder. The latest in type faces. Rank—The *Chief* ranks first among the coun-



No. 21

try weeklies of Nebraska in circulation in its home county. It ranks third among the papers of its class in Nebraska, in total circulation.

THE REASON WHY.

The *Chief* is a powerful county seat weekly, covering thoroughly every part of the territory it represents. It is not a political paper, so far as party politics go, but gives news—home news, county news, state news, and political news. It has fifty assistant editors, or reporters, located in all parts of this great county and prints more items of county news than any other weekly in Nebraska. For sixteen years it has been under its present management.

ADVERTISING RATES.

One insertion only, any size, per inch.....25 cts.
50 inches or less, (more than one insertion), per inch .....20 cts.
More than 50 inches, per inch.....15 cts.
Business notices and readers, one cent per word, each insertion.

The above rates are net. We make no deviations or exceptions. These rates do not apply to e. o. w. ads. Special position given where space averages ten inches each insertion. Under no circumstances will medicine advertising be sandwiched between local news matter.

I never saw a prettier thing than Barnhart Bros. & Spindler's booklet exploiting Barnhart's author's Roman and Italic, and as I pored over its charming perfection, I thought what an unlimited amount of instruction these perfect specimens of printing the big type companies are sending out as advertising matter offer to the wide-awake printers who have a mind

No. 22

to profit by them. I hated to part with it, but realizing that self-sacrifice is the shining jewel among all virtues, herewith, therefore, as Exhibit 22, may be seen one of the admirable ads from this Author's Roman specimen pamphlet. It ought to act as a tonic on any ad-compositor who is feeling a trifle rusty.

And here as Exhibit 23 is the upper portion of the beautiful front page of the second issue of the Barnhart Flyer. Perhaps some of my readers recall a

mild censure I leveled at this sheet in a late installment, but I'd like to see the color of the critic's eye who could find any serious fault with No. 2, or sug-

gest an improvement. Surely this issue is very near the ideal mark. Messrs. Barnhart Bros. & Spindler, in acknowledging my late criticism of their paper, thanked me for the rebuke and promised they would benefit by the suggestions offered, and I am gratified indeed to note that they have made good their promise.

I find the *Times* of Franklin, Ill., a very creditable six-column quarto weekly, with patent interior. It belongs to the "clean front page class," and makes a favorable hit with me in the skilled manner in which

it arranges its front page matter. Exhibit 24 shows up the beauty of it better than I could possibly tell you. The *Times* offers an extraordinary good local news service, carries a long string of correspondence, and puts up a department of editorials that reflects very creditably upon the ability of Editor Luttrell.

Publisher A. C. Nevin of the Laurel, Nebraska, *Advocate,* is another fellow newspaper-maker who comes in for my compliments and sincere congratulations on the fact that no displayed advertising matter is permitted on the first page of his sheet, and, as may be surmised, other things are equal. The *Advocate* gives an abundance of pure local news, and many news-letters from adjacent precincts. Its pages are well impressed and the abundance of advertising indicates prosperity. And Exhibit 25 shows how well the ads in this paper are set.

display, even to the sheet's title and its heads. Barring the displayed advertisement before alluded to, a very neat effect is attained in the make-up of the first page (Exhibit No. 26) and the contents are beyond reproach. An exceptionally able editorial department in double-column pica style; and, by the way, H. J. Metcalf is editor of the *News,* which discovery causes me to wonder if this can be my old-time friend, Herbert, of Lansing, Iowa. E. O. Strong is manager, and copartner in the publication of the *News.* Presswork is first class

And next is a copy of the Crary, N. D., *Public Opinion,* marked "For criticism—ads only." In the main I find the advertisements in this sheet very creditable. The compositor has excellent taste for designing, a fine appreciation of proper display, and an exemplary regard for white space. There are several ads in this issue of the *Opinion* quite worthy of reproduction, but, under the crowded circumstances, I feel justified in confining myself to the exhibition of but two specimens (Exhibits 27 and 28.)

No. 28

The Brooklyn, Wisconsin, *Teller,* a five-column quarto weekly on ready-prints, is another member of the "clean front page" school, and is generally a very creditable little sheet. It sets an abundance of type each week, devoting all of its efforts to the giving of the local news, which it presents in an enticing and relishable shape.

On the 17th of last February the *Democrat-Message,* a creditable twice-a-week six-column quarto of Mt. Sterling, Ill., finished a service of three-score years, and entered in upon its sixty-first year younger, fresher and stronger than ever before, with a new dress, new display type, new column rules, a brand new Babcock press, a new folder and 2,200 actual subscribers. The *Democrat-Message* is therefore something like good wine—it improves with age. The editor said a few timely words in an editorial review on the occasion, summing it up thus: "The world has moved, and the *Democrat-Message* has moved with it."

MORRIS, MANITOBA, CANADA, April 10, 1909.

O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—Since I commenced taking the N. P.-J., three months ago, I have read with a great deal of interest the department conducted by you. * * * I am enclosing an ad for criticism, and would appreciate it if you will point out the defects in it and also offer any suggestions by which I would be able to improve the appearance of the *Herald.*

Thanking you in advance, I am,

Sincerely yours, ROSWELL H. FADDEN.

The advertisement which Brother Fadden submits to my consideration is being shown herewith as Exhibit 29. There is little, if any, very adverse criti-

No. 29

cism to be offered. It looks to me as if the material at hand had been used to pretty good advantage. Of course the ad might have been empaneled, but it is seriously questionable whether the addition of rules would have materially enhanced the subject's publicity value, even if it might have improved appearances. However, I should have liked this specimen better if the main display line had have been somewhat stronger, (even if necessary to have set it in upper and lower, which, any way, is the most desirable in advertisement composition, because most easily read) and the underscore omitted, with the central blocks empaneled, setting the central mass in a face large enough to fill up the central space. Then a comma between the firm name and the address is really necessary to the sense, and wherever the meaning is the least impaired by the omission of a punctuation mark, it should never be omitted. As to the *Herald,* it is never easy to suggest how to improve a sheet when one's knowledge of conditions surrounding its creation is limited, as mine is as pertaining to the Morris paper. However, I would recommend first of all, the gathering and setting of sufficient local news to cover the four home-printed pages, and then the relegation of the half-page ad that now mars the face of the *Herald,* would be practicable; but I do not know whether such a radical departure is feasible for Brother Fadden just at present. With the accomplishment of a clean front page, a hundred suggestions crowd for uterance, as to possible improvements, in the way of making this up, and writing the matter, arranging heads, etc. And then a wide-awake editorial department could occupy one of the inner pages which is now filled with plates. The remaining local pages could be made up with local news-letters secured from reportorial assistants scattered throughout the surrounding neighborhood—and all made up mechanically after my ideal plan as twice or thrice repeated elsewhere in this installation. But possibly all this is impracticable just now for the one for whom I recommend it.

As those who know me can testify, I'm not in the least sportive, though I was about to declare that I'd bet a quarter that my dear old-time friend, J. Albert Hood is responsible, either directly or indirectly, for my receipt of a few copies of the Ocean Grove, N. J., *Times,* for which I'm truly and becomingly grateful, for I've gotten a great deal of pleasure, and I may

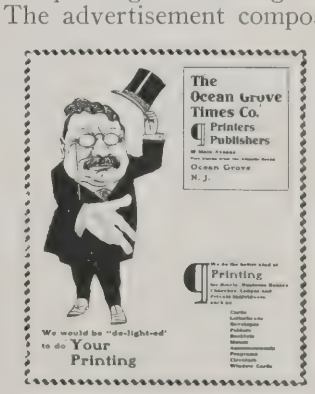
even say profit, out of their inspection. Exhibit 30 is a strip off the beautiful front page of this admirable weekly, its striking charm being attributable chiefly to the high rank of harmony attained through the sane choice of a similar face for all display. I haven't had the privilege of seeing more pleasing typography. The advertisement composition is of an



No. 31

out-of-the-rut variety, too. (Exhibit 31). The news service is superlative and the reportorial and editorial simply unapproachable, as is also that achieved in the pressroom. There is little to improve in the *Times,* unless it be the make-up of the pages other than the first one, which could easily be accomplished by the adoption of the method as outlined elsewhere in this same installment.

The slogan that "In Philadelphia nearly everybody reads the *Bulletin*" is becoming more and more to be accepted as a truth, fastening itself in the minds of

all to whom the clever saying has become familiar, especially when the claim is backed up by such convincing figures as 252,989 as the net paid average circulation of the *Bulletin* for February. There are only

about 300,000 homes in Philadelphia. Reproduction No. 32 shows one of the latest advertisements issued by the *Bulletin's* alert advertising manager.

The *Globe,* of Milton, N. D., from various points of view, is at present an extremely fine weekly. A great deal of pride is evidently experienced on the part of the *Globe's* makers in putting up an attractive front page (Exhibit 33) with no displayed advertisements

The Milton Globe.

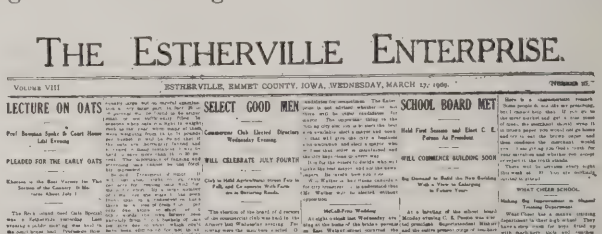
No. 33

on it, and an eminent degree of art and order in it. As usual, however, not so much care is devoted to making the balance of the paper so sightly, which is, to say the least, rather inconsistent.

On January 14 last, the *Gazette* of Elmwood, Ill., rounded out its thirty-sixth year of useful life, having for the past twenty-six consecutive years been edited and published by Brother M. H. Spence, which is a record not frequently equaled and less frequently surpassed. The *Gazette* is above the average in excellence of contents, maintains a clean initial page, bears a good, legible print, and carries an abundance of advertising matter, which is displayed in a manner indicative of master workmen. I wish the *Gazette* and its worthy publisher thirty-six year's more of prosperity, and then if it please Providence, thirty-six years more on top of that.

But when it comes to a newspaper one can admire entirely and thoroughly, surely one need not look further than the Estherville, Iowa, *Enterprise.* It is now an all-home-printed six-column quarto, and every page has something in it to commend and admire.



No. 34

Exhibit 34 will offer a fair understanding of the modest exquisiteness that pervades this paper's grand front page, whose matchless expanse of pure reading matter is too fine, too utterly chaste, to be polluted by even such positive works of art as an *Enterprise* displayed advertisement (Exhibit 35). My time and space are too limited at this stage of the game this month to enter into a prolonged eulogy of this charming speci-

men,—and what's the use, anyhow, since, with the one common exception of the mechanical make-up of its other pages than the first, there's naught that I could suggest for the better? Suffice in leaving this model publication to add that editorially and in point of contents, presswork and all, there is nothing found less praiseworthy than the typography, and that has already moved me to enthusiasm.

OBSERVER is a pretty good name for a newspaper. It is the name adopted by a new paper at Trumbull, Neb., with C. H. Stall as publisher, C. H. Richards, editor, and A. M. Brooking assistant editor. This word observer covers in its meaning very much that is important to the making of a newspaper that will command confidence and respect and establish and maintain that most valuable asset of a newspaper, a reputation for candor and reliability.

Courtesy of C. M. & St. P. Ry. Bird's-Eye View of Portland and Mt. Hood

An observer is one who "pays attention, to anything; especially one who is engaged in, or trained to habits of, close and exact observvation."

We know of fewer higher qualifications for a newspaper maker than that of close and exact observation. It is a lack in this very thing and its neglect, by writers, editors and reporters, that leads to the outcry against the errancy, the unreliability of the press.

This first issue, Vol. I, No. 1, of the *Observer*, that has reached our desk presents a very neat appearance and the usual opening "announcement" on the editorial page contains some excellent, practical, principles or maxims for a home paper, as follows:

> First, our motto will be, "Boost," and our object will be to Boost Trumbull first, last and all the time in every way that is legitimate. We will stand for no knocking, but will expect every citizen in town to lend a helping hand.
>
> Politically, we will try to conduct our paper in a non-partisan manner, saying a good word for every one and everything that favors our town or community.
>
> The same in matters pertaining to religion and we reserve the right to criticise anything that tends to lower or degrade the morals of our citizens.
>
> Our object is to conduct a Trumbull paper, for Trumbull people.

Boosting is the mission of the press, first through information, then through wise exploitation of opportunities and needed improvements, and then through encouragement and promotive publicity.

* * *

The press can not go far wrong in advocating a genuine, patriotic public spirit and service. That way honor lies. Wise retrenchment and intelligent, economic management are more essential in the management of Governmental, than in the management of private affairs. Government is nothing, after all, but business, the business of the whole people. As in all business there should be discreet liberality, but this is very different from unnecessary waste. Whatever is paid or received by the administrators of Government, over and above the value of services, is simply theft, yet men will deliberately steal in this way from their city, state or the United States, and still claim to be honest men and devoutly Christian. *Frank Leslie's*

Weekly of April 22nd, gave a striking illustration of this public dishonesty, as follows:

We have at hand a report on the administration of one of the smaller bureaus of the Federal government—that which looks after its printing business. No one can read this report without amazement mixed with indignation. The cost of public printing and binding has risen from $300,000 in 1850 and $3,000,000 in 1890 to $6,000,000 in 1908—an increase of twentyfold, while our population has increased only fourfold. Much of this work has been done in violation of the law, and so much of it was unnecessary that two years ago more than 9,500 tons were piled up as worthless. These documents would have filled three miles of freight cars. The accumulation of needless documents printed in excess of the demand for them is such that 3,000,000 volumes must be sold to save storage expenses. The commission discloses that the estimates made by the department were small, while the expenditures were always large; that official publications were loaded up with valueless matter, and that the expenditures of the public printer's office have regularly exceeded the charges made for work done, as it was left for him to fix upon the product of the office any charges which might suit his fancy. This is the experience of one department of the Federal government. In the State of New York also the public printing has become an abuse of such magnitude that it deserves an investigation.

There are many things that the Government could do for the people more economically than the same thing could be done by individuals, but so long as Government is looked upon as something separate and apart from the people, and all that can be filched therefrom is considered so much gain, the less the Government undertakes the better. We suppose that this idea of Government is an inheritance from the past, when all Government was supposed to belong to a separate group or class who held by conquest or inheritance and hence anything that could be wrested from the rulers was that much gain to the subjects. It is different when the people, through their representatives, hold the taxing power and have to pay all the bills.

* * *

While making everybody else famous, newspaper workers, with all their power, influence and usefulness, remain little known to the general public. Sometimes, after a quarter or a half a century of service, those, who have been served remember them at a banquet with spoken words of praise. This seems fitting and we are glad to record such incidents. They are generally replete with instruction and reaveal the sources of most that has been accomplished in public life, in the industries, in commercial accomplishments and in educational and other improvements. Just the other day, Geo. F. Babbitt, for twenty-five years an editorial writer on the Boston *Herald,* who had been thirty-seven years steadily in newspaper work, retired and Col. Wm. E. Haskell, publisher and the responsible head of the paper, tendered him a banquet at the University Club. Then the public were informed of Mr. Babbitt's work, and the Governor of the State, two former mayors of Boston, Nathan Matthews and Josiah Quincy, Police Commissioner Stephen O'Meara and other men prominent in public life did him honor. The *Editor and Publisher* of New York records the facts that many prominent men spoke in his praise:—

"The first speaker of the evening, Robert G. Fitch, one of the editors of the *Transcript* and an associate of Mr. Babbitt on the Post thirty-seven years ago, paid an affectionate tribute to his old-time friend. He was followed by Arthur Warren, the associate editor of the *Herald;* Josiah Quincy, Nathan Matthews, Dr. Morton Prince, Dr. Samuel A. Durgin, who dealt with Mr. Babbitts' long service on the board of health; Col. Frank B. Stevens, Col. John T. Wheelwright, Police Commissioner O'Meara, Prof. Arlo Bates, George P. Horris, Philip Hale, G. Howard Walker, Herbert S. Kempton and Joseph Smith.

"Mr. Babbitt thanked his friends for their tribute in a response of much feeling."

How very many faithful editors pass through life without even such recognition? Yet they are not without their reward. Useful work, a life of accomplishment is in itself the highest satisfaction. The Great Teacher, when He knew that the hour approached to leave his work as finished—though, so far as this world was concerned, there had been no recognition and He was without honors or position, or worldly possessions, having not even a place where to lay his head and facing arrest, imprisonment, scourgings, and an ignominious death—called his desciples around Him and said: "Peace I leave with you, my place I give unto you; not as the world giveth, give I unto you." It was the "peace" coming from a pure, righteous life of service, of love, of sacrifice, every duty performed, every right upheld, every wrong denounced, every good thing proclaimed; of deeds of mercy, healing the sick, comforting the disconsolate, pointing the way to better, higher, holier living, that He left with these desciples. It is a peace that nothing else can bestow, and it is above all other earthly possessions, or the praise of men. From the human viewpoint He could not even foresee the accomplishment of his mission, only through the knowledge that the eternal principles underlying the truths proclaimed and lived must in the end succeed.

* * *

The East Prairie *Eagle* republishes an article from an exchange that serves to illustrate why the newspaper is not always boldly truthful as well as why "The Public" is "The Newspaper Problem" spoken of interestingly and instructively in our leading article this month:

Did you ever read a wedding notice that departed much from the following: Miss Esti Mable Good and Mr. Sterling Worth were married last evening at the home of the bride's parents, Mr. and Mrs. Swell, on Prosperity Avenue, Rev. Mr. Big Fee officiating. Or did you ever read a school entertainment where the exercises did not "reflect credit on the teacher," or of a social gathering that was not a "most-enjoyable-event," or of a rich red-headed girl whose "auburn tresses" were not much admired, or of a funeral where the deceased was not the embodiment of all virtues and where the bereaved relatives did not have the sympathy of the entire community? asks the Lindborg *News.* No, and you

never will so long as you will insist on tearing the printer man's eyes or stopping your paper every time he tells the truth, unless it is something about your neighbor and then you are mightily pleased and come around and tell the editor: "That was a hot shot you gave old Brown. Served him right, too." But if you stop to notice you will remember that you never told the writer such a thing when anybody could hear you. You were afraid to, weren't you? And you don't want the truth. It is so, even if you are a good Christian, yourself, you want the poor journalist to risk his immortal soul and lie about you. Want him to go to hell vicariously, don't you?

* * *

Mr. J. M. Bridgman has bought *The American* of Brookville, Ind., of Edward J. Hancock, who retires on account of poor condition of his eyes, the unfortunate result of a severe attack of hay fever last fall. Mr. Bridgman, though engaged in school work, for many years occupying the position of Superintendent of Schools at Polo, Ill., has had newspaper experience, is a strong writer and likes the work. He only steps from one branch of educational work to another. The retiring publisher says of his successor and the future of the paper:

"He is a defender of home institutions and the home merchants and the retiring publisher hopes that he will be cordially received and accorded the deserved support and that the *American* will enjoy the most generous and loyal patronage of any preceding era of its existence, which began more than three quarters of a century ago.

"Mr. Bridgman believes the *American,* as it has been conducted, to be a good county newspaper and will take from it none of the qualities that have made it such, but will add at every opportunity new and desirable features. He will continue our efforts to make it 'better and better' and see that it more nearly covers the county.'

One last word to the people of Franklin county—I have made every effort within me to give the people of Franklin county a good newspaper. They have generously appreciated it and with their assistance the *American* has attained the distinction of being one of the foremost newspapers in eastern Indiana."

Here are some excellent, concrete, newspaper ideals, that will repay noticing and remembering.

* * *

It would appear from a bill introduced in Congress by Harry M. Coudrey of the Fifteenth Missouri District, that he has a grudge against the press of the country or is grossly ignorant of the publishing business, its requirements and limitations. The bill is H. R. 5470, introduced in the House March 19, 1909, and seeks to regulate advertising "in interstate commerce or within the District of Columbia or territories or dependencies of the United States.". So far as it is sought to make advertising decent, unobjectionable, moral and honest, the object may be commended, but when it is undertaken to place on publishers the burden of proving that every statement, in every advertisement published, is absolutely true, without exaggeration or misleading statements, it is sought to impose that which would be unjust; that could not be borne and that would make it a great risk for publishers to accept any advertisements that claimed for the articles advertised any qualities of value or excellence whatever. There are contradictory views as to values and the proverb is very old that says, "The purchaser must be aware;" he must be on his guard. What might be regarded by the seller as the absolute truth, many a time would be regarded by the dissatisfied purchaser as false, especially if, after the purchase, he concluded he did not want, could not afford or did not know how profitably to use the article. Here is in brief the provision of this proposed new law to regulate advertising:

Sec. 2. That all persons, firms, corporations, and associations are hereby forbidden to print or otherwise to produce for interstate circulation or for transmission into the District of Columbia or any territory or dependency of the United States, or, for the purpose of interstate commerce or commerce between a state and the District of Columbia or any territory or dependency of the United States, to publish, use, circulate, display, or transport, or to cause to be printed or otherwise produced for interstate circulation or for transmission into the District of Columbia or any territory or dependency of the United States, or, for the purpose of interstate commerce or commerce between a state and the District of Columbia or any territory or dependency of the United States, to be published, used, circulated, displayed, or transported, any fraudulent, false, or misleading advertisement or advertisements or any advertisement or advertisements which is or are objectionable or pernicious as hereinafter defined, and each violation hereof shall constitute a misdemeanor and be punishable by a fine of not less than $100 being left to the discretion of the court; Provided that in all cases where the violation is for the sake of direct profit as by pay for production, publication, transportation, or the like, said fine shall always be of an amount not less than three times the amount of such pay, unless treble such pay should fall below the prescribed minimum fine of $100.

Sec. 3. That each day's continuance of the production, publication, use, circulation, display, or transportation of an advertisement or advertisements such as prohibited by this act shall constitute a separate offense thereunder.

There is a lengthy enumeration of "Among the Kinds of Advertising" intended to be prohibited by the act; some of the kinds being such as no honest, self-respecting publisher would accept or print, as the following:

Advertisements of remedies for diseases or treatment for diseases wherein symptoms of diseases are enumerated, or wherein claims of superior professional skill are made, or where offers of "no cure, no pay," "money back if not cured," or "contract of cure," or similar offers are published; advertisements in which are contained so-called guaranties or promise to guarantee a cure of disease, or references, direct ir indirect, to private diseases of men or women, as when the words such as man medicine, diseases of men, irregularities of women, disordered male or female functions, or the like, are used, or fictitious testimonials as to effectiveness of any remedy or treatment for any disease; advertisements of seers, clairvoyants, fortune tellers, mediums, or the like, wherein are contained any so-called guaranty or promise of guaranty, assurance, or claims of ability to predict future events, or claims of miraculous or unusual psychic power; advertisements, offering employment wherein is contained a so-called guaranty of results, or where money or other equivalent is asked to be paid in advance for samples or outfits.

Such lines of advertising have come to be considered by all decent newspapers as either fraudulent or, to be refused on the grounds of immorality.

When publishers are to be put on the defensive, to prove the truth of all statements made by advertisers that are put in question by dissatisfied purchasers; to be prosecuted as criminals and mulcted in fines and three-fold penaltis, if they fail to prove the advertisers' assertions all true, it is quite another thing.

To show the impossibility of compliance, note the following enumeration in the act itself, letting alone the thousands of other deceits, that might be used, entirely beyond the province, if not the possibility, of publishers to ascertain their truth or falsity:

Within the meaning of this act, an advertisement shall be defined to to be any means of publishing or giving notice or information of certain things, and shall include oral as well as physical forms of publication intended to reach a plurality of persons. Among the kinds of advertisements which, within the meaning of this act, shall be deemed either objectionable or pernicious, or both, and prohibited thereby are the following: Advertisements of "damaged goods" sales, of "fire sales," "bankrupt sales," and the like, where merchandise not a part of such "damaged," "fire damaged," or bankrupt stock," or other stock represented in the advertisement is offered, represented, or sold as a part of such stock; advertisements stating former selling values or former worth, in excess of recognized trade standards of such selling values or worth, or where valuse or worth are stated and are represented as worth more than such prices at which the goods or commodities advertised were sold in the regular course of business to numbers of persons within a period of 18 months prior to the date of such advertisement; advertisements which represent merchandise to be other than as stated upon labels or other markings upon containers or packages of such merchandise, as in the case of food labeled and sold in compliance with pure-food laws of the United States or other jurisdiction; advertisements wherein is contained any statement or statements of quantity or quality of merchandise to be sold, and containing exaggerated or false statements of quantity, or where the goods offered are seconds, inferior quality, or otherwise not of standard quality and such facts are not disclosed in the wording of the advertisement; advertisements offering for sale any merchandise or other commodity described as of one material or substance only, when it is a combination of two or more materials or substances, especially where the undisclosed material or substance is an adulterant or material used to cheapen the merchandise or other commodity, as in instances where goods are represented as "all wool" goods, but are "cotton and wool;" advertisements containing statements as of fact, when it is a matter of opinion, unless clearly stated as opinion, as where the words "The best in the world," "finest cheviots," and so forth, are used; advertisements in which are contained so-called guaranties or promise of guaranty of future increase in value of shares, stocks, bonds, real estate, merchandise, or other commodity; advertisements predicting future greater values or stating present value of other commodities, and wherein is contained, as an incentive to purchase the stocks, bonds, lands, merchandise, or other commodities, a description of the procedure, success, or results of any similar enterprise or process of manifacture or similar merchandise.

We believe that no publisher should, nor can afford to accept or print an advertisement in any way tainted with fraud and should be especially on his guard against all patent or proprietary medicine advertisements, or any article that may do an injury to buyers; should not be so desirous of gain as to enter into partnership with rogues to defraud his patrons, but there is always a line beyond which a buyer must look out for himself.

If any misrepresentations are made in the sale of goods, an action for damage in the courts will always be open for the relief of the purchaser, but government can not attempt, through special penal statute, to guard every citizen against possible imposition or loss in his purchase. There is too broad a margin as to possible misunderstanding or disagreement as to values, conditions and facts.

THE BILLBOARD MUST GO

The newspapers of this country have every reason to support the bill introduced by Senator Heyburn, of Idaho, providing for a tax on advertising signs. In foreign lands these signs are taxed and afford a considerable public revenue. Senator Heyburn proposes a tax of two cents per superficial square feet on signs advertising products which enter into interstate commerce. The taxes are to be paid to the United States treasury, and to be collected annually. This new source of revenue might well be considered in connection with the effort to revise the tariff and re-impose war taxes of an objectionable character. Throughout the country an effort is being made to suppress the advertising-sign nuisance. It has been tolerated altogether too long. It meets no public want, because the newspapers, magazines, and other publications are the legitimate channels for the use of the advertiser. They contrubute to the education of the people and to the prosperity of the nation. If the press will stand solidly behind Senator Heyburn's bill, its passage will be assured, and it will be effective in suppressing what has come to be an intolerable nuisance. The billboard must go!—*Editor John A. Sleicher in Leslies Weekly.*

A POPULAR EDITOR

It is Judge Green now, the people of Brookhaven town, by their ballots, having authorized Lemuel B. Green, editor of the Patchogue *Argus*, to don the ermine of a magistrate He is now a justice of the peace-elect and ex-officio a member of the Brookhaven town board. Squire Green is famous as a "j'iner"—holding membership in nearly a dozen fraternities and organizations, and laterly as president of the aggressive Suffolk County Board of Trade, has been much in the public eye. His friends are congratulating him upon the fact that his dish was right side up during Tuesday's rain of "political pudding."—The Brooklyn N. Y., *Daily Eagle.*

The South Bend Chamber of Commerce recently conducted a contest in the three South Bend dailies to obtain a fitting slogan for the city. Identical coupons appeared daily in each of the dailies for several weeks with a request that slogans be written upon them and mailed to the paper publishing the coupan used. A prize of $10 was offered the winner. The Chamber of Commerce directors received 1,623 coupons. The returns brought to light an interesting situation, and one which must appeal forcefully to advertisers, with reference to the popularity of South Bend's three dailies. Of all the coupons returned, 16.4 per cent were cut from the *News*, a morning paper; 29.4 per cent from the *Times*, an afternoon paper, and 54.2 per cent from the *Tribune*, also an afternoon paper and the oldest daily by many years in South Bend. The returns showed that 4.2 per cent more than half the coupons were cut from the *Tribune*.

READS EACH ISSUE FROM "KIVER TO KIVER" —THE TEXAS PRESS CONVENTION,

THE TEXAS PRESS ASSOCIATION, OFFICE OF SECRETARY,

RICHARDSON, TEXAS. April 19th, 1909.

Hon. B. B. Herbert, Edt. National Printer-Journalist, Chicago, Ill.

DEAR SIR:—Your statement to hand for subscription to your Journal. I am enclosing you check for the amount due, $2.00. The Journal is a very valuable adjunct to a country shop as well as to the job and larger departments. I find many interesting articles in the Journal and read each issue from "kiver to kiver."

I am enclosing a program of the next meeting of the Texas Press Association, at Marlin. Would be glad that you could make arrangements to be with us.

Yours truly, SAM P. HARBIN,
Sec'y. Texas Press Assn.

Marlin, May 27-28-29.

T. P. A. PROGRAM, 1909.

THURSDAY, MAY 27, 1909.

Association called to order promptly at 8:30 A. M.
Prayer
Welcome address
Response, Sumner Lansdale, McKinney.
Annual address, Association President.
Roll call.
Appointment of all committees.
Music by Marlin Orchestra.
Adjourn for dinner.

AFTERNOON SESSION.

Call to order at 1:30 P. M.
Music by Orchestra.
2 P. M.—"Does a Good Make-up Help a Paper as Much as it does a Woman?"—Joe Sappington, of Temple.
"The Advantages of Assisting Merchants in Preparing Copy for Advertising"—Senator Perkins, of McKinney Daily *Courier-Gazette.*
"Is a Clean Office Worth While?"—Thos. B. Lusk, of Italy *News-Herald.*
Report of all committees and officers and election of new members.

THURSDAY NIGHT.

Banquet and Reception by Marlin Citizens at Arlington Hotel.
Violin Solo—Little Cadel Yantis, daughter of Hon. R. E. Yantis of Athens *Review.*

FRIDAY, MAY 28, 1909.

"The Challenge of the Sky Line" and "Schools of Journalism," Walter Williams, Chair of Journalism, University, Columbia, Mo.

AFTERNOON SESSION.

Called to order promptly at 1:30 P. M.
Music by Orchestra.
"The Next National Meeting," at Seattle—Will H. Mayes, Brownwood Bulletin.
Election of officers. Selection of place of next meeting.
Song—"God Be With You Till We Meet Again."

Mt. Rainier, from Seattle (Mt. Tacoma)

On this afternoon the citizens of Waco will extend the courtesy of a special train for a visit to that city. Train to leave immediately after adjournment of Association. Announcement of the arrangements will be made at beginning of to-day's session.

Byron Williams, a Chicago newspaper man and contributor under the pen name of "Uncle By" has been elected president of the village of Glen Ellyn.

With the sight of one eye destroyed and that of the other seriously impaired, results of an assault said to have been made on him at the instigation of politicians angered by his editorials, William D. Merrell, veteran editor of the *Courier,* Prairie du Chien, Wis., has been in Milwaukee consulting oculists. This is the first time Mr. Merrell has been able to leave his home since last fall, when the assault was committed. The presidential campaign in Prairie due Chien was a hot one, and this democratic editor, with many of his party associates, refused to support Bryan, Mr. Berrell says. For the first time in forty years, Prairie due Chien failed to go Democratic. Mr. Merrell's friends say that, angered by his editorials, the Bryanists and Prhibitionists hired a "liquor soaked tramp" to assault the editor when alone in his office.

BUSINESS AND OTHER NOTES

New officers of the Chicago Press League were elected at the annual meeting. Those named were: President, Mrs. Ella Lane Bowes; First Vice-President, Miss Leta Wellers; Second Vice-President, Dr. Eliza H. Root; Recording Secretary, Mrs. Mary Hayes Davis; Corresponding Secretary, Mrs. Rena S. Tuthill; Treasurer, Miss Florence King, and Directors, Mrs Jennie Green, Mrs. Laura Willoughby Green, Mrs. Laura R. White, Mrs. Mary Onahan Stallary, Mrs. L. Colby and Mrs. Jennie Donahue.

Thomas E. Knotts, president of the Gary, Ind., town board, has announced that within a short time he will begin the publication of a Democratic paper to be the official organ of the party in the northern end of Indiana and probably of himself in his campaign next fall for Mayor of Gary. The election will make Gary a city and Mr. Knotts wants to be its first mayor.

The Chicago *Citizen,* founded twenty-five years ago by the late Colonel John F. Finerty, has changed hands, Mrs. Finerty and her son disposing of their interests to John F. Quinn of Joliet. John P. Autton, who has been editor since the death of Colonel Finerty, will continue in that capacity. James A. Hogan has been chosen president, to succeed Walter J. Gibbons, and Mr. Quinn is vice-president.

Mrs. Ella Lane Bowes, who has been elected president of the Chicago Press League, is the wife of Frederick K. Bowes, and lives at 541 West Adams St. She is well known in club circles and founded the Chicago Culture Club, of which she has been president and which she has represented in the state convention of woman's clubs. Mrs. Bowes is also well known as a member of the Daughters of the American Revolution.

Charles Lowry, a well known, popular newspaper man in Elgin, Ill., was the unanimous choice for president of the Elgin Press Club, at its annual business meeting and election of officers. The organization is planning to expand, and various methods of how to broaden the membership clause of the constitution were discussed. The matter will be acted upon at the next regular meeting, May 8th. The other members of the "pencil pushers" organization honored with office are: Vice-president—Colvin W. Brown, Secretary and Treasurer—Miss Lillian I. Johnson. Board of Directors—B. A. Pratt, Chairman; Dr. R. C. Brophy, Lee B. Judson, Bertram Yarwood and Franklin Sorn.

Edwin J. Doering, publisher of *The Medical Reporter,* Chicago, and Miss Edna T. Jeffery, daughter of E. T. Jeffery, Chicago, slipped away quietly to Milwaukee and were married. They returned and went to the Doering home, 1205 Ridge Avenue, Evanston. Mr. Doering declined to give out any information about his marriage but his mother said: "My son has known Miss Jeffery ever since she was a child. They did not elope. Both families knew they were going and approved the match. Their reason for desiring a quiet wedding was that there was serious illness in the Jeffery family."

Notice of the dissolution of the Vorwaerts Publishing Co. of Milwaukee has been filed in Madison. Hitherto the two papers, the Social Democratic *Herald* and *Vorwaerts,* have been published by the Social Democratic Publishing Co., and the Vorwaerts Publishing Co. This practically has been one company with two names and has caused extra trouble and expense in the bookkeeping department. To do away with this the name, Vorwaerts Publishing Co., has been changed to Social Democratic Publishing Co.

The will of the late Richard Michaelis, publisher of the Chicago *Staats Zeitung* and *Freie Presse,* has been filed in the probate court at Chicago. It disposes of property worth $85,000, but within the two months immediately before his death Mr. Michaelis gave over $100,000 to his wife and children. The will provides that after the death of Mrs. Michaelis the estate is to be divided among the three children, Mrs. Hedwig Baumann, Mrs. Helena Landweer, and Walter Michaelis.

"The Girl from Gotham," a musical comedy by Mrs. Mary Moncure Parker, was given under the auspices of the Illinois Woman's Press Association at the Garrick Theater, Chicago, for the bentfit of a fund to secure down-town quarters for the Association.

Arthur Capper, publisher of the Topeka *Capital,* and Ex-United States Senator W. A. Harris, have been appointed a special committee to select a new president for the Kansas Agricultural College. They announce they are looking for the best man in the country, and will visit some of the country's leading agricultural colleges.

The *Journal,* an afternoon daily which began publication in Mishawaka, Ind., Nov. 16, 1908, has suspended. This is the second daily venture in that prosperous and progressive manufacturing city that has proven a marked failure. Mishawaka is so close to South Bend and the field is so thoroughly covered by the *Tribune* and other South Bend papers that it is virtually impossible for a daily to be successfully issued in the town.

The Boston Staple Binder, an advertisement of which is printed on another page, is a product of the makers of the popular Boston Wire Stitcher. It is the nearest approach to a wire stitching machine yet devised, and it is difficult to distinguish its work from the best wire stitching. American Type Founders Company, general selling agent, will furnish circulars, etc., upon request.

SUCCESSFUL PUBLISHER FAVORS WESEL.

All the great newspaper offices favor Wesel machinery and materials, because Wesel is always in advance in time-saving devices and every thing he builds is made extra strong to withstand the extra wear and tear of a newspaper plant. The impression has gone out among the lesser establishments that Wesel caters entirely to the big fellows. This is a wrong idea, for Wesel makes and sells every thing for newspaper and commercial printing and is better able to outfit a small plant than those firms who never get a look in on a really big order. Every body, small or big, can get better value from Wesel because his manufactures are more durable. Wesel is now filling the largest order ever placed by a newspaper for a composing room equipment, which includes every thing except types, rules, and make-up tables and chases, which were previously ordered. This equipment will cost the Boston *Globe* $12,600. It is all iron, and nearly every piece is of special design. The newspaper publisher whose business is progressing will want stereotyping outfits, and photo-engraving plants, automatic proof presses, mailing room electric proof presses, and they ever do well to remember that Wesel's is positively the only establishment in America that can, from its own manufactures and stock , supply these necessities of progress in newspaperdom, as well as chases, composing sticks, galleys, and every small item used by the printer. Wesel's specialty is supplying materials above the average in quality at the same prices charged for the average.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . . .

LEAGUE BALL RESULTS FOR MORNING PAPERS, $1.00 per week. General news for evening papers. Special correspondence. Yard's News Bureau, 166 Washington St., Chicago, Ill.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

EMPIRE LINOTYPE SCHOOL, 419 First Avenue, New York. Established 1906; $16,000 equipment; Technical School exclusively. Get our remarkable offer.

EDITORIAL WRITER, otherwise employed, would contribute to independent paper, regularly or as desired, at nominal price. Any amount; typewritten copy; always on time. Address, "G," care NATIONAL PRINTER-JOURNALIST.

WANTED—TWO-COLOR PRESS, TAKING SHEET not less than 42x56. A. F. Wanner & Co., Printing Machinery, 342 Dearborn St.

NEW HIGH-GRADE TYPE, ANTI-TRUST PRICES. Empire Type Foundry, Delevan, N. Y.

EN GRAVING METHODS.

ANYBODY CAN MAKE CUTS WITH MY SIMPLE Transferring and Etching Process; nice cuts from prints, drawings, etc., are easily and quickly made by the unskilled on common sheet zinc; price of process, $1; all material costs, any drug store, 75 cents. Circulars and specimens for stamp. My Simplex Mailer only $2.50. THOMAS M. DAY, Box P, Windfall, Ind.

DOUBLE YOUR SUBSCRIPTIONS and LINER ADS. with the Money Mailer. Brings cash from the busy as well as the postponer. If it carries your ad astray, it will frequently return with its pockets full of money. Cheap, effective, novel. The greatest puller known for want ads and trial subscriptions. Samples free. 1 Dozen 10c. Paper Folding Boxes and Novelties made to order. Agents wanted.

L. LINLEY BOX & PAPER CO., Louisville, Ky.

RAPIDLY GROWING

Pennsylvania daily without competition in excellent small field. Volume of business now over $9,500.00. Will probably reach $15,000.00 within a relatively short time. Can now be bought for $8,000.00; $5,000.00 cash, balance deferred in such manner as will allow it to be paid out of the income from the property. An opportunity to double value of a property in a few years.

Proposition No. 481

C. M. PALMER, Newspaper Broker

277 Broadway, New York

A RICH OPPORTUNITY

The printer has the richest opportunity for effective advertising imaginable—the equipment is all at hand and he can do the work at cost. All he lacks is our monthly color-cut-and-copy service to connect him with this great opportunity, and "cash in" handsome dividends. Cost very low. Samples and details free.

The Babcock Optimus
The Babcock Optimus

Distribution is a special feature of the Optimus.

The composition ductor takes ink from the fountain to the steel vibrator on the first pair of table rollers. The contact is made at the instant the bed is at the reverse *and the vibrator still,* and lasts until the bed reaches the opposite extremity of its travel. During this half of each impression the ink is diligently worked between the ductor, vibrator and two rollers. It is well distributed before it reaches the table. Here it is again worked by the four rollers, two vibrators, and the table. *While both are at rest* at the opposite reverse, the ductor leaves the vibrator, and arrives at fountain *without rotary motion,* and is in contact with it during the other half of the impression.

No undistributed ink can reach the form.

Whether the rollers are in contact with the table or not, distribution between them and their vibrators never ceases—a point worth remembering. *They work all the time, while the ductor works one-half the time as a distributor.*

To this thorough work add the action of the form rollers on the table so splendidly prepared for them. On these rollers are geared vibrators, upon which riders are provided for. Form and table rollers are of the same size, and interchangeable. Any one of them can be used as a rider. A rider is therefore always at hand, and of a size to be most efficient. With interchangeability all around, and the ductor protected against abuse, there is positive economy in roller cost. Each roller can be thrown out of action quickly and independently of any other, or can be easily removed without changing its set.

The entire action is easy, noiseless, thoroughly effective, as fast as the press, and furnishes a distribution superior to that of any other like machine. It is more than ample for the heaviest work, and susceptible of the finest regulation.

The Babcock Optimus

COURTESY AND PROMPTNESS

HAMILTON'S MODERNIZED PRINTING OFFICE FURNITURE

Is Internationally Recognized as the Standard of Its Kind

HERE ARE TWO ENDORSEMENTS WHICH INDICATE THE TREND OF OPINION

An American Endorsement of Hamilton Furniture

Cleveland, Ohio, April 17, 1909.

Gentlemen—We are very much pleased with the new equipment which you recently installed in our composing-room, and find it will greatly increase the efficiency of this room. We already notice a considerable saving in the hours of time required to do different jobs by reason of our workmen having type cases and all material systematically and conveniently arranged. We expect the saving in cost of our composition will soon pay us back for this outlay.

Another important feature is this greatly improves the sanitary condition of the room. Yours very truly,

THE J. B. SAVAGE CO., W. S. Pettibone, *Vice-President.*

In telling us about the installation of this new equipment, our traveler, Mr. DeWitt S. Moses, well known among printers throughout the United States, and who has now been on his travels for us for twenty-three years, writes us as follows:

"Mr. Savage told me that identical jobs of composition which formerly came down to the office with 120 hours' composition, now come down, since the new furniture was installed, with but an average of 100 hours, and other jobs which formerly had an average of 80 hours, are now coming down to the office with about 65 hours' composition."

A British Endorsement of Hamilton Furniture

Extracts from a report of an illustrated lantern lecture by Mr. George Eaton Hart of the St. Clements Press, London, in the South London Art Gallery, on Thursday evening, March 11, 1909, before members and others interested in the artistic typography classes of the Camberwell School of Arts and Crafts. The report of this lecture was published in the *British Colonial Printer and Stationer*, dated March 18, 1909:

"A number of slides were here thrown on the screen, beginning with a view of Franklin in a printing-office of his day and shown as an example of what may be obtained by perseverance and temperance, the composing-room of a by-gone day here illustrated. The lecturer then turned to the economical arrangement of the composing-room fittings that had begun to be carefully considered by thoughtful printers of late years. Continuing, he said, first 'The Hamilton Company, of America, with their fine models of cabinet frames and fittings, have not only given an impetus in this direction but have distinctly shown that the fittings of the composing-room can be both a thing of beauty and far more practical than the clumsy, dirty old timbers of a century ago.'"

The above is a simple statement of the results obtained in re-arranging the composing-room in one American printing establishment. What we have done for the Savage Co. we can accomplish in any composing-room where the furniture equipment has not been modernized. It is a remarkable fact that printers are most conservative in changing their equipment. There are hundreds of composing-rooms where, with a small investment in new furniture requiring less outlay than the purchase of a new cylinder press, a saving could be made amounting to from 10 to 25 per cent in labor, and from 25 to 50 per cent in floor space, with a very large increase in the shop output. If you are interested in this very large question of printing-office economy, fill out the coupon on this page and let our representative show you what can be done with your office. Remember it is *up to us* to *show* you.

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

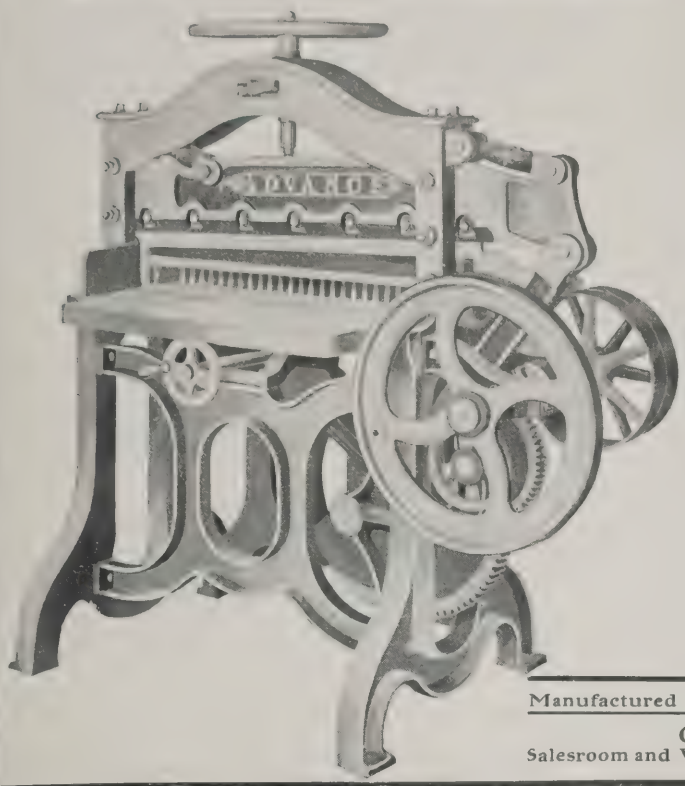
SOME VITAL FEATURES



The Advance Power Cutter completes a cut in less than three seconds. The new improved friction clutch makes this speed possible and also protects the machine from sudden strain.

Great cross braces directly under the clamp and knife hold it rigid. The half-inch cutting sticks have eight cutting surfaces, same as large ones, take only one-fourth as much metal from the bed and cost only one-third as much. The Patented Side Frame Protector is a valuable feature. The "Easily Squared" split back gauge and the side gauges back and front, on both sides, effect economy of time and money.

It will pay you to write for a descriptive circular and get posted on the Advance Power.

Manufactured by **The Challenge Machinery Co.**

Megill's Patent Automatic Register Gauge

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet nnd then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

National Printer Journalist

A Journal for Printing and Allied Trades

Volume Twenty-seven | Chicago, June, 1909 | Number Six

BEING ALIVE, USING OPPORTUNITIES, HAVING A PURPOSE AND BELIEVING IN YOUR CALLING

DAWDLING, neglecting opportunities and undervaluing your work and imagining that the lot of others is the more desirable, are the fruitful causes of unrest, discontent and failure. The looking upon the mere accumulation of wealth as the chief end of life and the envying the rich are other prevailing sources of unrest, an unrest that tends to paralyze effort as well as to cause unhappiness. It is every man's right and duty to receive proper reward for his labors, but an observation of sixty years, as well as the testimony of the wisest and best men of earth, teaches us that every dollar that a man receives without earning it, or deserving it, is a "curse rather than a blessing," and the permitting oneself, through mere considerations of lack of equal accumulations with others, to become slothful is the surest way to misery and to failure.

Useful activity, the using, to the best advantage, the opportunities presented and the believeing in your work, are the ways to contentment and worthy thrift, to real development, to strength and growth. A man's life and his happiness depend not upon the things that he possesseth but are measured by the character of his deeds not by dollars. Activity and the power to understand and to make the most of opportunities are what count, and these come very largely from the view that one takes of his daily employment. Mr. Charles Beecher Lahan, in an address recently delivered before the Ben Franklin Club of Chicago and published in the May issue of the *Ben Franklin Monthly*, well said, in urging his fellow workers, and members of the Club to the improving the advantages offered by the calling of the printer and by the organization intended for mutual betterment and advancement:

Since you men are dealers in one of the world's greatest powers, the power of printing, it is well that you at least should possess the knowledge of your own importance. As purveyors of force, that of the printed word, as merchants of ideas, you should at least know of its price. Without this knowledge you will be in the bitter experience classroom, groping in uncertainty and darkness, instead of traveling on the path of security and solvency.

The power of the printed word! Who knows its far reaching, never failing potency? Take it from me and view it from whatever angle you will, educational, religious, commercial, financial—the printed work comprehends the greatest influence in the world today. In the sweep of its rays it illumines the globe, and in its possibilities it is almost sublime. Do you desire a knowledge of the world's affairs? Then read. Do you desire that a good thing should be made better? Just publish your wish and it will be done. Do you want a wrong righted? Publicity is at once a check and a cure. Through scores of avenues the printed word reaches the people of the world, and it is your vocation to feed the never-satisfied faculties of the mind. You have every curriculum in your clutch and your business comprehends every school of thought.

Even with your vibrating pulse-beats you will find the work of educating the human race a process of slow growth, but never since the dawn of the first day has the means for the installation of enlightenments been so widespread, because knowledge can now be partaken of by everyone as never before.

There is no place for dawdling in the face of such considerations as these. Here is life as well as intelligent inspiration to living and to the making of the most of all that life presents. Now, instead of writing a thesis on our theme, we are gong to quote further from this address as the best way to illustrate and to enforce what is implied or expressed in the subject chosen, as applied to all real workers and to the true philosophy underlying and making valuable and properly fruitful all worthy efforts:

The real men of the world are those who perform the work of the world. There are many things in which men engage and there are many things that people strive and labor for, which are of debatable importance and frequently are of little permanent value. But there are a great many things the value of which there can be no possibility of a doubt concerning, and upon which all can agree as to their actual importance.

As an example, the man who builds a house in which to shelter a family performs real work. The man who plants a patch of potatoes to feed the hungry performs real work. The

man who has cleared up a farm, the woman who has cared for a home, made a coat or reared a child has rendered most important service; that man who tunnels the mountain and levels the hill that the sinewy lines of steel may be laid down does a real, a necessary work. There are no skeptics as to the utility and ennobling dignity of such work, because those who do these things are the real flesh-and-blood people. They are the actual heroes and heroines of the world.

The man who takes a bundle of indecipherable copy from the hands of a customer, arranges it in sequential and symmetrical order and transmutes the repellant and unsightly heap of junk into an attractive trade-winner by means of which is sold a million dollars' worth of goods contributes more to the wealth of the world than all the popinjay dreamers and high-art critics that have come and gone since Adam To read the newspapers and hear some people talk, one would think doctors, lawyers, preachers, politicians, military men and the like include all the great men of the age. As a rule they make nothing; they produce nothing; they create nothing; they attempt to manage, to protect, to direct, to oversee, to dictate concerning the things which other people have created, but these are not the real people, and never have been the real people.

The man who plows a field, turns out a job of printing or throws a bridge across a chasm; the woman who has taught school or made a dress or washed for her husband and children has really done indispensable work. Teaching, farming, building a railroad, cutting down forests, mining ores constitute essential effort and take an important place in the real activities of life. It is these men, who produce something, that are the benefactors of the race.

In all these vocations who is the one that receives the poorest compensation? Who is the one who receives the least recognition? In my judgment it is the one who contributes the most to the general good of all—the printer

The warrior's sword, the doctor's scalpel and the law book, the sermon, the editor's pen have always been greatly overvalued and written about as if they were the only things worth mentioning. The real people are the producers, those who make something or cause something to grow or in some manner provide for the necessities of the human race. The man who directs a business is in every sense greater than the man who has directed an army. These, and many others like these, are entitled to all the honor, all the credit that the breathing world, enriched by their tireless industry, can give them, and they should be acclaimed, as they deserve to be, the sponsors of all progress because they have brought it about by their courage in the field of endeavor.

The author of the expression, "Nothing succeeds like success," Richard Brinsley Sheridan, was in many ways the most brilliant man of his day. He was a great lawyer, a brilliant orator, a playwright, whose productions delight the world even to this day, a poet, a wit and statesman all combined. Even with these extraordinary endowments its possessor was a failure from a business standpoint, because he gave away more than he received. This seems to be the inexorable law of business, in fact it has always been so. Few have been able to overcome this, although many have made herculean attempts at doing so.

In the last analysis of the topic the man who wins success can be recognized as the one who attracts about him the legion of friends, those who enjoy the warm atmosphere of plenty rather than the frigrid blasts of want. The successful man, the one who is showered with invitations to the course dinners, while the down-and-outer, "bumming for his chuck" gets few hunches that dinner is ready. I believe my hearers are sufficiently discriminating to see the force of my allusions, and I will pass to the purposes of the Ben Franklin Club.

Every successful man must have a purpose. Purpose is, that subtle fluid which gives the tone and color to all our legitimate activities. It demonstrates the real reason for living, our complete mastery over the slothful tendencies of our own infirmities. It is our glory banner in the battle for mastership, our Marathon pennant in the free-for-all. Men and even organizations drift along rather than stem the tide. They are neither victors of the course nor helpers in the field. They live but have no definite purpose in living. Men, clubs, associations do not drift into the harbor of goodness and security as a chance port on an aimless voyage; they tug and sweat and fight against darkness, adverse winds and unseen dangers that but inspire to greater effort and final entrance to the port of success.

No peril of the sea is more to be dreaded than the derelict. It carries no lights on bow or stern, no passengers, no rudder, neither pilot nor crew. Bound nowhere, it carries no cargo to no port. Helpless in itself, it is a positive menace to all. Do you know of any? Human derelicts are those ignored as hopeless, purposeless by others, but they became first entitled to the designation when they were deserted by themselves. Purpose transforms the commonplaces of life and makes man so that he can make himself what he will.

Your purpose as an organization is to educate your fellow that he is entitled to a living because you are followers of an art that has made it possible for every being to have a little larger share of the richness of the earth. You have done the biggest educational stunt in the years that you have been in existence because you have standardized your calling, have fixed an understanding on your own labor. You have brought sight to those who had eyes but would not see; hearing to ears that would not hearken to the thunders around them.

Effective as your labors have been, you must not halt, because the same causes that allowed the cockle in the field in the past, without vigilance, without the higher education, will sweep away all your practical, all your splendid progress.

The opportunity is here; the situation confronts you. Chicago, with its more than 600 printing plants, is the greatest printing center of the world. You all know it will so continue. Will the Ben Franklinites turn back and not raise their vision to behold the bow of promise in the heavens, that as far as rewards for patience and long-suffering are deserved the Chicago printer can enter boldly and get that compensation which only waited for him to put forth the claim as to his legitimate belongings?

The solution is in your hands. If you wish to be in the class of successful mariners who can guide their crafts to safe anchorage, press the possibilities of your club organization. You will be cheered on by the factor of public discrimination which admires a winner and you will be blessed by those who come after you for standing for your rights, and you will be further rewarded by the consciousness of having done your part for the art which ennobles potentate and peasant because it is the stimulant to enlightenment as it is the lamp which brightens the path to the channel of universal welfare.

"GREAT HELP."

Cooperstown, N. D., April 21, 1909.

National Printer-Journalist, Chicago, Ill.

Dear Sir:—Enclosed within find check for subscription to the National Printer-Journalist for the year of '09. Enjoy each number very much and find things in it which are a great help to me and which I have been unable to find in other Journals relative to our trade. I think it is especially beneficial to the country printer, more so than others, and can only say that those who do not take the National Printer-Journalist do not know what they are missing.

With the best wishes for a good business year, I am,

Yours fraternally,

M. A. Jensen.

IN a paper before the recent meeting of the Buckeye Press Association, Editor Chas. E. Yost of Fayette, O., told some instructive experiences with reformers, that while not new to the older and more experienced members of the newspaper calling, teach lessons worth remembering. As we read, many, if not most, the ordinary reformers of the community, who are in business, like to have their reforms carried on by the newspaper man at the expense of the paper as to its home business and expenditures, and are perfectly willing to take the business and money of the wicked whom they want the editor to reform. Reformers must of needs be, as a rule, of one-sided or narrow views and quite generally they are supremely selfish. We do not refer to those men and women who patriotically or religiously devote their lives to reform work, but to those people who talk loud for reforms in their own circles and are ready to pat an editor on the back for his good work and even to contribute anonymous articles to the paper, but would not sign their own names for fear it would hurt their private business. They would think that the editor committed an outrage if he charged for space used by them for secretly advocating their views, and a monster of iniquity, if he openly sold space to their opponents, though he plainly marked the matter therein advertising. The conclusions of Mr. Yost as to the editorial policy, long experience and observation have taught to be absolutely correct. He said:

> One of the features of the Fayette *Review* is a special column devoted to editorials. These editorials represent the editor's views on various subjects and express his honest convictions. Sometimes they are objected to very strongly, but the opposition has not the least idea of quitting his subscription list or withdrawing his business. Sometimes he comes to the office and talks it over but never in an angry mood. I never put a thing in that column that I do not firmly believe and everything I try to say as hard as I can say it. Judging from comments and letters I receive from subscribers I think they like it because they know that it is not written just for effect.
>
> The editor should do what he thinks is right and do it hard, fearing nothing. There is just one qualification to this. That is don't run advertising for either side free. Express your feelings if you like but, what the others bring in, charge for at rates in proportion to the risks you think you have to run.

* * *

A recent issue of the Mandan, N. D., *Pioneer*, announce the retirement of W. Harry Shear from the paper, having been succeeded by E. A. Tostevin, of Racine, Wis., and E. Z. Bitzing of Mandan, who have purchased a large controlling interest in the paper. Mr. Bitzing was formerly with the *Pioneer-Press* and later with the *Daily News*, St. Paul, Minn. Mr. Tostevin was for over twenty years connected with the Racine *Journal* and other papers of Racine speak in highest praise of the man and his work. He was well known and popular among the newspaper men of Wisconsin and served as an officer of the Wisconsin State Press Association. The *ournal* says of him:

> The Journal office loses one of its members who has been associated with it over two decades, Mr. Edwin A. Tostevin, who first entered the *Journal* service March 22, 1887, the office at that time being located in the Belle city hall. Thus for a period of twenty-two years Mr. Tostevin has been connected with the Journal, the better part of a generation, and he has witnessed its steady growth from the old time facilities to those it now enjoys. He has not only witnessed the steady progression, but he has been one of the contributing elements to this growth and no one more than he, has enjoyed the healthy progressive advances of the *Journal* and its business, in which he has been so much of a factor.

By courtesy of the C. B. & Q. R. R. Co.

Government Buildings at the Head of Cascade Court—Alaska-Yukon-Pacific Exposition, to be visited by members of the N. E. A.

Mr. Shear, in retiring from the Mandan *Pioneer,* gives utterance to sentiments worthy a true newspaper man, saying in part:

The writer in leaving Mandan to again take up the pen where he spent so many years, does so with regret because of the severing of the many pleasant relations that we have were appreciated. With these few words we say to one and all, farewell.

Mr. Tostevin makes his bow in entering upon his duties and briefly says:

In assuming contol of the *Pioneer* the writer wishes to assure the people of Mandan, and Morton county, that the

By courtesy of the C. B. & Q. R. R. Co.

Buildings of the Great New City of Billings, Montana, where Delegates of the N. E. A. are to Unite on way to the Convention at Seattle

enjoyed, not only socially but in a business way. We will always have pleasant memories of our stay in the Flickertail state. While we may have erred in judgement, yet it was, we assure one and all, errors unwittingly and not from desire. We have faithfully, as far as our ability, ever tried to keep up the high standard of the *Pioneer* that our predecessors so ably set us the example and we are satisfied that our efforts policy of the paper will not be changed, that it will be found loyal to those Republican doctrines and principles under which the nation has prospered. To issue a bright, clean, newsy paper one that will deserve the loyal support of the people of this section, will be the ambition of the writer.

There are points to be learned in all this as to a newspaper man, his interests, sentiments and work.

We have heard from the Executive Committeeman of South Dakota, who gives the very cheering report that South Dakota will have the largest delegation at the Seattle Convention that the Association has ever had and looks forward to the coming convention as one of the grandest gatherings of the N. E. A.

* * *

Pennsylvania sends word that the Association of that State will have full representation of the very best newspaper men of the State at Seattle, and it looks as though the South and Central West would be represented in force. We hope for like news from the Atlantic and Pacific States. New England should be on hand to strike the first blow for the coming Ter-Centennial Exposition in Boston.

* * *

William H. Taylor of Putnam, Conn., used to be an active and most efficient officer, in years past when we used to attend conventions of the Connecticut State Press Association. He has since engaged in the "Souvenir" publishing business until he has come to be known as "Souvenir" Taylor, but he has never lost his interest in the Press Association and frequently favors this paper with accounts of meetings. In his work as a newspaper man he evidently learned the way, and formed the habit, of doing things for others. The Hartford *Evening Post* of May 11th, had the following with regard to Mr. Taylor:

Some men are made famous by others and others are made famous by their own efforts. William H. Taylor of Putnam belongs to the latter class for, by his exceeding generosity he has come to be known all over Connecticut if not beyond the borders of the Nutmeg state as "Souvenir" Taylor. More people know him as "Souvenir" than as William H., but between the two names he is known to a majority of the people of Connecticut.

"Souvenir" was born in Artic, R. I., which is decidedly cooler than would be expected of "Souvenir." Records show that he first saw the light of day on March 2, 1862. "Souvenir" soon shook the icicles of his birthplace from his person and migrated with his family to Putnam, which place has been proud to claim him as a citizen ever since. He learned his A. B. C.'s and following instruction in the public schools and High school of Putnam. At an early age he showed the proper spirit by entering the journalistic profession which he has since followed with success. He has been editor, business manager and proprietor of several journals in Putnam, Rockville, New Haven and Danielson and at various times has served as correspondent of papers outside of the state.

"Souvenir" first showed his ability as an organizer in 1888, when on January 16, he founded the Connecticut Editorial Association which has flourished on the proper ideas as infused by "Souvenir." He has had considerable experience and many experiences about the State Capitol, acting in various capacities and always at some capacity. He was a messenger in the House in 1884; door-keeper in 1889; assistant to the superintendent of the Capitol during the constitutional convention in 1902 and during the present session. In 1901 he represented his town in the legislature, where he gained much valuable experience, and in 1903 he was a member of the republican state central committee.

"Souvenir" is prominent fraternally, being a member of Quinebaug Lodge, No. 106, A. F. and A. M.; Putnam Lodge, No. 33, I. O. O. F.; Court Hearts of Oak, No. 16, F. of A. of Rockville, and Killingly Grange, No. 112, P. of H.

"Souvenir" is the publisher of the Souvenir of the General Assembly and produces what is recognized as the best book of its kind in the United States. But he is most at home when giving away some little token to his friends. It was this manifestation of his generosity which led to the prefix to his name. It is said that he orders his tailors to make extra pockets in every available corner and seam in his clothes and in addition to filling these pockets with all sorts of tokens for free distribution he usually carries a box full of these gifts. He really is contented only when he is passing a gift to a friend and to keep all his friends supplied requires as much labor as a dozen would rather shirk than do. And yet "Souvenir" does it willingly, for he likes it.

* * *

The Traer *Star-Clipper* of Tama County, Iowa, has made a wonderful record of success and has shown that enterprise and good newspaper making will win in any field where subscribers are to be obtained. The better field the better the possible results, but the methods of the paper that wins in a limited field, in the face of difficulties, furnish very profitable subjects for study everywhere. A business may prove profitable under favoring conditions without much system, or great effort, but no business is fully successful that does not reach up to the highest attainments made possible by opportunities, and when we see a paper, in what seems to be a circumscribed field with limited opportunities, surpassing papers in larger, richer fields, or in more populous districts with greater wealth of advertising and business on which to draw, it is time to set up and take notice. The *Star-Clipper*, in a town of less than two thousand and a county of less than twenty-five thousand population, gives, in its issue of May 7th, a sworn statement of circulation of three thousand and ninety-eight copies each issue, an almost unheard-of record for a local weekly in a village of 1,500 people. The paper was started thirty-one years ago, and has been enlarged six times, the last enlargement, on May 7th, making it a full eight-page paper, seven twenty-two-inch columns to the page. Twenty-three out of the fifty-six columns are filled with local, neighborhood, and county news and news-letters or reports from every town in the county, and three or four other columns are filled with editorials, notes and comments, that nearly all have a local bearing or application. The news items are short, pointed and crisp, running from two to four lines in length. We counted fifty-six different news items in a single column and we believe that twenty of the news columns would average fifty items each and the other three, forty, and the editorial and notes and comments columns twenty, each. This would give a grand total of different items in this one issue, of fifteen hundred and eighty. If each news item was about only one person, the *Star-Clipper* could mention each of its sbuscribers every two weeks. Doubtless a majority of the news items are read with interest throughout the whole field covered by the newspaper and the rest are of direct interest to the

towns and neighborhoods from which they originate, and, in a general way, to all the people of the community.

Besides the local, neighborhood and general county news, thirty-two different points are represented by correspondents, whose reports run from one-eighth of a column to a full column. It is evident that the paper's unusually large circulation results from the fact that every item of news, of interest in the field covered by the paper, is given. Having the news, the paper's representatives, in each neighborhood, doubtless find subscribers to be easily obtainable. Having this large circulation among interested readers, the advertisers naturally respond readily to all suggestions as to the value of advertising. It would be hard to keep sensible, experienced, local business men or merchants, who know the value of publicity, out of such a paper. There are seven columns of local matter on the first page, the longest, except the column given up to an interesting leader giving the facts as to the history, growth and enlargement, is less than a half column in length. Brief advertising readers are sandwiched in throughout this page, which, to our way of thinking, is hurtful and not carrying out the underlying principle of publishing a paper for the subscribers and treating advertising, as it is, as a by-product, valuable only as the paper is appreciated by its readers. It may be argued that these items furnish valuable information to readers as to opportunities for wise, profitable purchases, but we believe that they would be more effective if given a classification and position elsewhere. The putting the items among pure reading, seems to be like an effort to take advantage of a reader and something like the story of the advertiser who printed a hymn-book for a church, interling the hymns with business announcements.

* * *

We print elsewhere in this issue an article coming to us from the Queen City Printing Ink Company, of Cincinnati, with hearty approval, that proposes a plan that would work great benefit, would be a gain in comfort, accomplishment and pleasure, without any expense and without interfering with established working hours or business customs. It is simply a plan to keep up with the sun and use more daylight without shortening the hours for rest, recreation or sleep. It is simply that of setting forward all timepieces for two hours on May 1st and changing back to the present standard on October 1st. This would make seven o'clock come at the hour now designated as five o'clock and four o'clock at the hour now designated as six o'clock. Noon would come at the hour now designated as ten o'clock. It would give two hours in the fresh cool of the morning for work and two hours earlier quitting time at night, so there would be a good stretch of daylight for recreation or out-door work in gardens in the afternoon. There is not the least doubt but that the plan would work benefit to health and add to the enjoyment of life. The article is entitled, "Something for Nothing," read it and see if you are not convinced of the value of a reform that is all gain with no outlay or expense.

PENNSYLVANIA STATE EDITORIAL ASSOCIATION.

Office of the President
Tyrone, Pa., April 28, 1909.

Mr. B. B. Herbert, Chicago, Ill.

Dear Sir:—The Pennsylvania State Editorial Association has unanimously endorsed Hon. A. Nevin Pomeroy as its candidate for the Presidency of the National Editorial Association at its meeting at Seattle, on July 19th next.

Mr. Pomeroy is a gentleman of vast experience in the journalistic field, having come up from the case and is familiar with the work in all its details. When Governor Pennypacker of Pennsylvania, was desirous of enlarging and advancing the character of the State Printing, he appointed Mr. Pomeroy to the position of Superintendent of Public Printing. Mr. Pomeroy at once proceeded to reorganize and improve the service. He prepared a bill which he had adopted by the legislature which elevated the Department of Printing to a position not enjoyed in any other State of the Union. So well did he perform his work that the present Chief Executive, Governor Stuart, reappointed him for another four year term.

Mr. Pomeroy has been actively connected with the Pennsylvania State Editorial Association for over twenty years. He is one of its past Presidents, and is at present the First Vice President of the National Editorial Association. He is a man whose character is above reproach and is one of the most honored and respected of our profession in the Keystone State. He is editor and owner of the Daily and Weekly Franklin *Repository,* published in Chambersburg, and, in addition, conducts one of the largest and finest equipped book and job printing plants in the State.

I am sure the National Editorial Association can not make a better selection for the position of president. Mr. Pomeroy has served several terms in the State Legislature, and, owing to his thorough knowledge of parliamentary rules, was frequently called upon to preside over that body. His election to the position of President of our National Association will not only bring credit to the N. E. A., but it will be the just recognition of a State that has always done its full part toward promoting the interest of the National Editorial Association.

May I not have the assurance from you that you will aid all you can in the election of Mr. Pomeroy?

Yours very truly,
Harry H. Thompson,
Pres. Pennsylvania Editorial Ass'n.

The 1909 National Encampment of the Grand Army of the Republic will be held in Salt Lake City, August 9th to 14th. An unusually attractive folder in red, white and blue, replete with information concerning Utah, Salt Lake City and the Rocky Mountain region, is being distributed by the passenger department of the Denver & Rio Grande Railroad. One feature that will be of particular interest to Grand Army men is the reproduction of speaking likenesses of all the Commanders-in-Chief from B. F. Stephenson, the organizer in 1866, to Henry M. Nevius, the present Commander. This is the first time that this set of portraits has been assembled. The familiar faces of John A. Logan, Ambrose E. Burnside, John F. Hartranft, Russell A. Alger, John C. Black, James Tanner and many others appear in this interesting series.

THE CONNECTICUT EDITORS

AS has been the practice in some other States, and as has been frequently suggested in this journal, the press organizations of Connecticut meet on the same date, in the same city and hold both separate and joint sessions. Meetings of the Connecticut Editorial Association and the Daily Newspaper publishers' Association were held at Hartford, May tenth.

The two associations met separately in the morning at 11:30 o'clock. President A. S. Barnes of the "Bristol Press" presided over the meeting of the editorial association. Besides him the following were present: Elwood S. Ela, *"Manchester Herald"*; George C. Woodruff, *"Litchfield Enquirer"*; William J. Flood, *"South Manchester News"*; George A. Beers, *"Farmington Valley Herald"*; R. Rodgers Jones, Jr., *"New Hartford Tribune"*; F. W. Lyons, *"Greenwich News"*; T. A. Tracy, *"Bristol Press"*; L. O. Williams, *"Putnam Patriot"*; E. Hugh Crosby, *"Manchester Herald"*; A. E. Knox, *"Woodbury Reporter"*; Charles E. Perkins, *"Hartford Times."*

A delegation was received from the Hartford Business Men's Association who desired the members to acquaint their constituents with the difference between the mercantile and manufacturing interests in regards to the bill before the Legislature which proposes to regulate the working hours. Charles E. Perkins was appointed a delegate to the National Editorial Association meeting in Seattle from July 19 to August 5. The appointment of the other two delegates was left with the president. A committee comprising E. S. Ela, H. Roger Jones, Jr., and Charles E. Perkins was appointed to present resolutions opposing any increase in the duty on paper above that stipulated in the Payne tariff bill. The association also passed resolutions favoring free wood pulp.

While this meeting was in progress the "Associated Dailies" were holding a meeting in another room at the hotel. The members present were: President J. M. Emerson, *"Ansonia Sentinel"*; Secretary W. J. Papex, *"Waterbury Republican"*; Treasurer Alexander Troup, *"New Haven Union"*; W. H. Oat, *"Norwich Bulletin"*; George W. Hills, *"Bridgeport Telegram"*; F. W. Bolande, *"Bridgeport Post"*; E. E. Smith, *"Meriden Record"*; Frank E. Sands, *Meriden Journal."* Resolutions were passed opposing the customary legislative grants and gratuities to newspaper reporters or legislative correspondents on account of real or imaginary services during the present session, "regarding this abuse as an imposition on the state and an unjust reflection on the integrity of the newspaper profession."

Resolutions were also passed opposing any increase in the tariff on wood pulp and paper and favoring any movement having for its purpose the advertising of New England. Following the business meetings the two associations assembled together for dinner, which was served at 1 o'clock.

At the joint session in the afternoon, the principal speaker was Captain Charles W. Burpee, formerly with the *Courant*, whose subject was "The Human Interest Story." His paper is published in full elsewhere in this issue.

A tribute was paid to the memory of the late Governor, George L. Lilley, by George C. Woodruff of Litchfield, a close friend and associate of the Governor during the latter part of his public life.

VINDICATING A PUBLIC MAN.

It may be a question as to whether the vindication of the life of a public man by the press of Connecticut is a matter of importance to the newspapers throughout the Nation, yet much was published throughout the entire press as to the course of Hon. George L. Lilley in Congres, derogatory to his good name, and editors and publishers, all over the land, ought to be set right, besides, the manfully standing by a maligned, public servant by the press of his State is a wholesome example and for these reasons we have concluded to print, in part, what was said and the action taken.

Mr. Woodruff said, among other things:

Only twelve months ago the newspapers of Connecticut, practically as a unit, gladly and willingly took up the cudgels in behalf of George L. Lilley, and defended the fair name and character of Connecticut's Congressman-at-large against the malign and malicious attacks of as dangerous and unscrupulous a body of grafters as Congress had ever known. During the succeeeding months you, gentlemen, stood manfully behind George L. Lilley in his campaign for the Governorship of Connecticut. When less than three weeks ago this noble soul was called by a loving Father to the great Home beyond the grave, the only Governor of Connecticut who, to use the language of one of our members, "was ever murdered," the press of Connecticut was unanimous in its tributes of respect and affection. All this you have done not because the one who has gone was an honorary member of the Connecticut Editorial Association, but because you knew him, loved him, honored, respected and believed in him, as a man and brother.

Only one who has himself suffered can really appreciate the trials and sorrows of another. It has truly been said that "Be thou as chaste as ice, as pure as snow, thou shalt not escape calumny." Next to Governor Lilley, no public man in Connecticut was ever more villified and maligned, than our brilliant and honored former Chief Executive, George P. McLean. He too had been through the furnace of calumny, and had come out unscathed. Hence, in that magnificent oration and tender tribute to his cherished friend of years, so justly described as a "classic," delivered in yonder Capitol, on the 24th of April, Governor Mclean spoke from the inmost depths

By courtesy of the C. B. & Q. R. R. Co.

Water Front, Seattle, Washington, Place of Meeting of the N. E. A., July 19th to 25th.

of his heart and soul. In view of what I have just said, it is with feelings of the greatest delicacy that I attempt to pay my tribute to the life and memory of George L. Lilley.

Though my acquaintance with our friend has been of only a few years duration, yet, especially during the last few months, it has been very close and particularly sweet to me. Mr. Lilley had the rare faculty of making friends easily, but of retaining their affection lastingly. This was through no conscious effort on his part, but because they recognized in him a man who meant what he said, a soul pure far above the average, one who had the highest and loftiest ideals, and who earnestly and sincerely endeavored to live up to them. This was strikingly shown during the last two or three weeks of his campaign for the governorship last fall. No matter how dark the outlook, how malicious and false the attacks upon him, how discouraged his friends might be, George Lilley never once wavered in his belief that he would be elected

Courtesy C. B. & Q. R. R. Co,
Yellowstone Falls, Yellowstone Park, to be visited by members of the N. E. A. on return from Convention at Seattle, Washington.

governor of this commonwealth, because he knew its voters and believed that he had their trust and confidence. I would that I were at liberty and had the power to give you a pen picture of some of those scenes last October; working day and night, often accompanied by his brave and loyal wife, George Lilley put all that was best in him into his gubernatorial campaign.

Mr. Lilley was by nature extremely sensitive, but he was also too proud to show to the world how deeply he felt the venomous attacks that were made upon him. Himself true to his pledges, he could not understand why others should not be equally true to him. Do not imagine, gentlemen, for a moment, that I would intimate that George Lilley ever whimpered or querulously complained. He was far too much of a man for that, and took his medicine bravely. He was essentially a fighter, for his whole life had been one contest against tremendous odds. But he fought in the open, and though he despised those who employed underhanded methods, their unjust attacks wounded him deeply.

Just here a word as to the so-called submarine investigation in Congress last year. I am perfectly well aware of the fact thaat this is a subject that must be handled most delicately, and that the time has not yet come to tell with regard to it, "the truth, the whole truth and nothing but the truth." This I do wish to say, George Lilley introduced his resolution in absolute good faith. He believed that there was the worst kind of graft in connection with certain naval affairs, and contracts for submarine boats. Having been in politics he knew what effect a searching investigation would have upon his party's prospects in a presidential year, but he had always found that the people could be trusted to do the right thing when they found out the truth, and so he introduced his resolution in the face of the strongest opposition from certain unscrupulous and selfish would-be leaders of the party. Mr. Lilley depended on the information personally and privately furnished him by persons who, he had every reason to believe, were as honest and true as he was himself. And in this connection a statement from the Hartford Courant in its account of George L. Lilley the day after his death, is very significant. That paper states that Mr. Lilley had a long interview with President Roosevelt the day before he introduced his resolution of investigation in Congress. The farcical nature of that investigation is well known.

I desire to go down on record as saying that George L. Lilley was made the scape-goat of men and interests who had the very best reasons for fearing the results of a fair and searching investigation. More than that, I emphatically state, contrary to at least one state writer, that submarine and like influences were directly responsible for the bitter attacks upon Mr. Lilley preceding and following his nomination. "Machine dictation" sounds well, but in this instance, it is a straight bluff and a very transparent one at that. I know whereof I speak. In the eyes of the people of Connecticut Mr. Lilley needed no vindication for his course in Congress. They knew the man, they believed in him, they honored him, they trusted him, and they elceted him Governor against the most tremendous odds and the stiffest and most unprincipled fight ever waged in Connecticut. It is some slight consolation that Admiral Goodrich and other writers have recently declared that Mr. Lilley was absolutely right in the position he took on naval matters and that the facts bore out what he said and did. But this comfort and consolation will not bring back to us the one who was hounded to his grave by those unworthy to bear the name of men.

At the close of this eulogy the members of the joint convention of the two associations adopted the following resolutions, drawn up and signed by a committee comprised of George C. Woodruff of the *"Litchfield Enquirer,"* W. J. Pape of the *"Waterbury Republican"* and E. S. Ela of the *"Manchester Herald"*s—

The members of the Connecticut Editorial Association and of the Daily Newspaper Publishers' Association, assembled in joint meeting, desire to inscribe upon the records of both bodies, and to make known to the public, the grief that moves them when they consider the sudden and untimely taking away of the late Governor. As active newspaper men, the members of these associations have come into frequent contact with Mr. Lilley and in his public life he has been constantly in the field of their watchfulness and criticism. Irrespective of party lines or partisan feeling we find ourselves agreed in our final estimate of him as one of Connecticut's worthiest public servants and one who deserved to the fullest extent the confidence which his state had reposed in him. The sincerity and the courage with which he battled against the greatest odds may well be emulated by those who in the future find difficult tasks to undertake and stubborn evils to overthrow. The loss to his loving wife and family of the husband, father and friend who can never be replaced is at least assuaged by the stream of tributes of condolence, affection and esteem from the people of the state of which this minute forms a small part.

HUMAN INTEREST STORY

BY CAPT. CHARLES W. BURPEE, HARTFORD, CONN.

ONCE a newspaper man, always a newspaper man. That shuts out the man who takes up "journalism" as a plaything or out of idle curiosity on leaving school or college, and I regret to say also shuts out that considerable class who have leanings towards newspaper work but on entering it, with conditions as they are today, find the wages too small to keep them and feel compelled to choose some other calling. In all callings I suppose, however, there are some men who love the particular work, and with them their love is greater than much riches. I know that this is so with newspaper work. I know that a true newspaper man must be fond of his profession, through cold or heat, through poverty or wealth, always a newspaper man.

Circumstances in later life may impel him to take up some kindred occupation, but to have any attraction for him, it must be of the same kin since he cannot change his spots. And if he is true to the newspaper fraternity he never will be a "four flusher."

I have in mind the case of one young man who gave up his position in the best newspaper office in America to go with the best life insurance company in America, and it is out of his experience as studied by me that I am able to lay down so emphatically the maxims just enunciated. All of you here assembled accept these maxims. There are comparatively few things upon which real brainy newspaper editors agree, but this principle, that I have set forth, is among them.

Now I feel somewhat as I did long ago when I used to have to rise to recite in trigonometry. Having stated the proposition correctly, it seemed to me that in all fairness I was entitled to sit down. But you remember, some of you, how it is in those old books, that you have got to go ahead and talk—usually a bluff in a class room, so that at the end you may say "Which was to be demonstrated." Your worthy president has some of the hall marks of the mathematical professor, and I have a grave suspicion that he got me up here to demonstrate the problem, believing, with an innocence that characterizes all professors, that I had studied the lesson.

The first part of the proposition then, that the once young man, to whom I have referred, having been a newspaper man must always be a newspaper man, is an axiom and therefore needs no demonstration. (I think I am quite right in that this time, though I can recall when I have tried to throw a bluff of that sort before the professor and have been called.) Of course he is a newspaper man today. He cannot let pen and paper alone, and if he sees a good piece of news he cannot pass it by on the other side of the street. And as to the fellowship of newspaper men, he would not part with it for all that the world can offer.

Thus our proposition works on to this: What is there in the life insurance busines which makes it kindred with journalism? First, let me ask what shall we accept as evidence of kinship, as the unit in our calculation that the sum of the squares on the life insurance hypothenuse is equal to the sum of the squares on the other two newspaper sides? The human interest story we all will accept as the evidence, the unit—the touchstone, even as it is the lodestone with the newspaper man, the thing which draws him to the calling and holds him there without envy of men in more lucrative work—Wall street speculators or United States senators.

After this once young man had turned his coat, if not his trick, he got not infrequent inquiries like this: "When you were on the desk you always were rushing into the city room and asking for more human interest stories. You used to try to make the cubs think that such stories could be found anywhere and everywhere, and your longing for them refused to be satisfied. How can you settle down into the humdrum of life insurance? Are you not simply following the fashion of men in this Home of Insurance?"

The inquiries came rightfully with a tone of reproach, as toward one disloyal—for "journalism is a jealous mistress." It was up to him to make good. Well, then, his newspaper office had had its scouts and its lookouts scanning the horizon in search of the human interest story. Days would go by when none were forthcoming. And they were dull days. The editor would seize his paper in the morning and would agree with the obtuse readers that there was "nothing in it," his regret the more poignant as he reflected upon the nerve-racking work the staff had done through the all too short hours of the night. Times when they had sweat most blood the evidence was hardly discernable in the morning's columns—for there was no human interest story; nothing but a few scraps in Washington; a court decision or two to be reversed the next week; a long report of some tiresome convention;

Courtesy of the C. B. & Q. R. R.

Pioneer Square, Seattle, Washington, Place of meeting of the N. E. A., July 19th to 25th, 1909.

formal election of officers by associations; the theatre with its everlasting pictures, the stock market, and the prospects for the cabbage crop in surrounding towns

Now we all know that human interest in a story varies according to location, circumstances and individual. The correspondent who sent in the cabbage story thought that that was human interest, as indeed it might have been for his community, could the paper's chases have been elastic enough to carry it as written? Nothing has keener human interest for a large number of readers than those very town items which the whirling dervish of a city editor disdains.

I once asked an editor of a country weekly, whose affability as well as whose opulence I envied, not to mention his dexterity in setting type—in which towns he had the largest circulation. His reply was: "New York, Hartford, New Haven and Cincinnati." That meant that former residents and their relatives could not get along without the home pa-

per, and that to them the items about the painting of the fence or the meeting of the grange were human interest stories.

A murder may be wholly without "human interest," the theft of a $2 ring may be full of it. The kidnapping of an aged widow by an avaricious lover has elements of human interest—the kidnapping of a child is much better. The acme of interest, the real screeching head-liner, is reached only when the aged widow is returned to herself or the child to his parents.

Say what they will about newspapers magnifying stories, the editor never is so happy as when his columns are breathing cheerfulness, when he is telling the public about some pleasing adventure that has befallen. A bootblack inherits a thousand, a man recovers an estate from a scalawag, a widow has an unexpected windfall—all these things the editor knows are read with avidity and keep up the circulation.

One reason why they are valuable is that they are rare, in newspaper life. When you learn that the human interest story is the regular daily thing in life insurance, you begin to see that the sum of the squares is coming up pretty near equal. If in a fortnight your reporters in the field, the agents, have sent into you as editor half a dozen rattling good stories of familes relieved from distress, you would sit up and pay attention, would you not? If they turned in every few days stories of the bestowal of a windfall by your own company upon some needy widow or orphan, how would you like that? The once young man gave me several stories of this kind hot off the bat, one of which shall suffice in my demontsration to you.

An agent in Pennsylvania wrote in, describing an aged lady living out in the country with some distant relative, trying to eke out her existence by sewing, knitting and housework. She evidently had seen much better times and the case had excited his sympathy. He had heard a rumor that her husband was once wealthy and had carried insurance. Could the company bother to inquire around and see if this name were on any company's books? The company bothered to the extent of finding the name on its own books.

The husband, reputed to be very wealthy, had carried insurance for $5,000 for several years, but had ceased paying premiums in 1899. He and his wife lived luxuriously in New York. He gave a marble memorial library to his native town in New England. In 1899 he began to travel extensively with his wife and dropped his insurance, evidently without consulting her. The company never heard from him again. In 1904 he died suddenly in Berlin. When the estate was settled it was discovered that his property had become worthless. After a time his aged widow had to make her home with these people in Pennsylvania, where her life was embittered by the thought that she was dependent, despite the few little things her unaccustomed hands could do.

By the provisions of the company, that policy was still good in 1904. There was no trace of it anywhere in the world except on the company's books. That with the proofs of death was enough; so one afternoon the agent called on the old lady and dropped in her lap a draft for $5,000 in cold cash. Other stories told of the sending out of representatives who found the astonished beneficiaries under policies where the insured had not been heard from by the company in many years.

I believe you will admit, professor, that the proposition is demonstrated. Now for the corollary. It is said that newspaper training is valuable for a man whatever kind of busines he goes into. When we newspaper men say that, we have in mind some benefit it would be to the average man rushing into print if he only knew how writing reads when it becomes print; or, again, the advantage to be derived from knowing how easy it is to win a newspaper's esteem and helpfulness by treating its representatives not after the popular churlish or sarcastic manner but as men, or even going out of one's way now and then to deliver an item of news. Surely, the newspaper know-how is valuable, but above all invaluable is the newspaper know-how-to-work, how to get things done at a given moment and be ready for the next thing; how to keep alert; how to turn aside wrath; how to endure heat and cold and hunger and—yes, thirst (how to resist thirst;) how to be like a soldier, quick to obey any direction, to follow any lead on the instant, without a suspicion of a murmur even in the bottom of one's heart,—all summed up in that expression,

Minerva Terrace, Yellowstone Park, to be visited by members of the N. E. A. on return from Seattle Convention.

how to work. I am old enough to have seen a good deal of the world. Latterly I have seen quite a bit of it, and I am free to say that I believe that in no calling is there such a training for efficient work as there is in journalism.

That is my corollary, and the once young man, who hesitated long before he abandoned the life in which he had been trained, and in which he had been reasonably successful, says that whatever success he may attain in life insurance, whatever possibility he may have of serving well those who put trust in him, he owes in largest measure to his discipline in the newspaper office.

ITEMS OF INTEREST

H. W. Armstrong, of Findlay, O., has joined the reportorial staff of the South Bend *Tribune.*

Charles W. Dunkley, of Kalamazoo, Mich., who was with the South Bend Tribune for some time, has gone to the Chicago *Inter Ocean.*

The Duncombe, Iowa, *Tribune,* has been re-established, beginning May 20, after several years of cessation. C. A. Bohnenkamp, formerly of Breda, Iowa, will be the editor and publisher.

R. D. Thompson, a South Bend newspaper man, who was operated on a few weeks ago on account of appendicitis, is convalescent. Mr. Thompson was formly a newspaper writer in Washington, D. C.

W. W. Dunklo, advertising manager of the South Bend *Tribune,* is collaborator with E. . Welsh, manager of South Bend's leading theatres, in an interesting play entitled, "The Lincoln of Labor." Its first production in South Bend created much enthusiasm.

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

VERY appropriately, following my introduction to this department of last month, comes this editorial from the pen of Brother Roy L. Ware of the Necedah, Wisconsin, *Republican:*

UNCLE IS INCONSISTENT.

"The printers throughout the country are endeavoring to get together in a concerted movement for the purpose of opposing the present practice of our Postoffice Department of printing envelopes at cost.

"Dear old Uncle Sam, we love him; he protects our property rights; he gives us religious and governmental freedom, such as is enjoyed by no other people in this world; we'd fight for him at any time he needs our services, but at times we think him a little inconsistent. About a year ago he monkeyed with the newspapers' credit system by making them collect up back subscriptions or stop the paper. This wasn't so bad, because some of the accounts were no good anyway. But the practice of furnishing patrons envelopes at cost, when thousands of printers throughout this country are striving to make an honest living by means of the art preservative, is rather harsh. Uncle Sam buys in bigger lots than we can, hence gets a better price, and we can't stand the competition. Why don't you start a wholesale grocery, dry goods, coal, oil, candy business, Uncle? Why don't you sell Easter hats and ladies' hosiery at cost? What have we poor devils, the printers, done that you pick us for competition? Get after 'em all."

As those who read my words last month can testify, those are my sentiments exactly, and I'm glad to see other printers concerning themselves with the subject.

Mr. Ware but lately purchased the Necedah *Republican*, a substantial six-column quarto on ready-prints. Brother Ware is one of the most able young newspaper men in the state of Wisconsin, and will doubtless make good in Necedah. As a personal and admiring friend, I could not wish him any worse luck.

BOSCOBEL, WIS., April 21, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—I wish to thank you for your rigid criticisms on my ads in the April issue of the NATIONAL PRINTER-JOURNALIST. Am sorry my last ads failed to reach you in time, but I am enclosing several more which I think you will say are somewhat better than my others.

I sincerely hope this department of the NATIONAL PRINTER-JOURNALIST will continue to prosper, for it is a department which is lacking from many of the advertising magazines.

Yours very truly,
HERBERT W. BLASHFIELD.

The above welcomed letter from Brother Blashfield shows with what exemplary disposition of mind this contributor accepts caustic words in these columns; and, whether or not it is fair for me to assume so much credit, yet I trust I may hope, without seeming to appear immodest, that the suggestions offered in this department may in some small measure at least have helped in bringing about the marked improvement that is conspicuous in this brother's work as an ad-writer and compositor. Exhibits 1, 2 and 3, are reproductions of his latest creations, any and all of which are far superior in merit to the specimens reviewed last month or the month before. In the first example, there is faultless display, neat design, perfect massing, and a good expression of selling points. The language is commercial and the typography first class. The second specimen is more original in layout, less perfect in massing and hardly so pleasing to the esthetic eye. The

No. 1

third ad is better in several respects as compared with the second. It is especially well laid out, and a perfectly

correct idea of display is evidenced; but from top to bottom, the lower portion of the ad is somewhat crowded, which effect might readily have been obviated

SPRING CLOTHING FOR YOUNG MEN
How Do You Like these Styles?
NOW is the time to get that spring suit you have been waiting for. We can fit you in any size, style or color. Our spring clothes are of all late stylish patterns in stone color and brown. Each suit is made to wear and give satisfaction. It will not pay the young man from the country to send away this year for his suit when odds are so reasonable in price. Come in, boys, while the assortment is large. Next Saturday will be a good time.
Suits $15.00 to $20.00
Top Coats $13.00
Rain Coats $10.00 to $20.00,

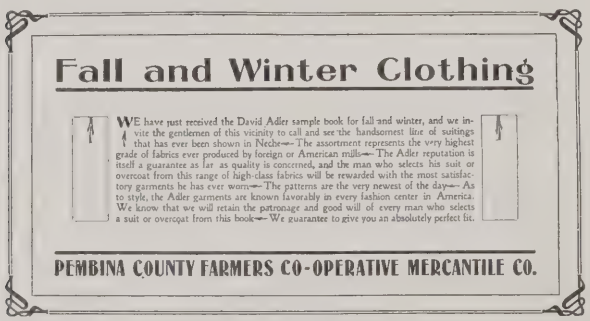
No. 3

by having set the prices in a twelve-point letter instead of eighteen-point, with the signature reduced a size

or two and appearing in caps. Brother Blashfield's remarkable improvement in ad-making is gratifying indeed, and I sincerely trust he will continue to keep this department of the NATIONAL PRINTER-JOURNALIST appraised of his progress.

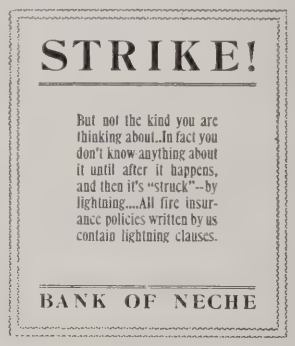
A letter written to me during April, from a friend of my esteemed friend, Rex H. Lampman, of the Neche, N. D., *Chronotype,* informs me that the latter young gentleman "at the present time is having a pretty stiff fight with a 'bunch' of party-collared business men of Neche, who are so narrow-minded that they refuse to patronize his paper—and even go so far as to try to boycott it and starve Lampman out" simply because Lampman with his *Chronotype* showed up the record and opposed the election of one Judson LaMoure, state senator from the first district of North Dakota. This "friend," continuing in his letter to me, says further: "My opinion is that Rex is wasting his time at Neche. He should go to some live town where he would be appreciated. I have told him this, but he wants to stay and fight it out." If Rex had wanted to do anything else, he would have surely fallen short of the eminent opinion I have had of him and proved a disappointment. I do not believe in mixing politics with the business of making a newspaper; but political independence as applied to the character of a newspaper, as I take it, does not mean the entire ignoring of current political issues nor failure to strike at perfidous politicans, to expose graft and political corruption, or to fight, if necessary, when the welfare of the county or state may require it; and I dare say this, in Brother Lamp-



Fall and Winter Clothing
WE have just received the David Adler sample book for fall and winter, and we invite the gentlemen of this vicinity to call and see the handsomest line of suitings that has ever been shown in Neche—The assortment represents the very highest grade of fabrics ever produced by foreign or American mills—The Adler reputation is itself a guarantee as far as quality is concerned, and the man who selects his suit or overcoat from this range of high-class fabrics will be rewarded with the most satisfactory garments he has ever worn—The patterns are the very newest of the days—As to style, the Adler garments are known favorably in every fashion center in America. We know that we will retain the patronage and good will of every man who selects a suit or overcoat from this book—We guarantee to give you an absolutely perfect fit.
PEMBINA COUNTY FARMERS CO-OPERATIVE MERCANTILE CO.

No. 4

man's opinion, is about the state of affairs in North Dakota. I have written the well-meaning and solicitous "friend" not to despair; that Rex Lampman is not wasting his time; he's getting valuable experience—the kind of experience that makes character and men. Editor Lampman is a brilliant young man; he has a splendid mind endowed with talent, and it is therefore natural for those who love him to want to see him rise to greater and grander fields; but things usually work out pretty fair for our geniuses, after all. Of course, all of our genuinely great men do not get their names inscribed on the pages of history, nor is their fame always wide-spread; some of them probably go down to their graves poverty-ridden and unknown; but my idea of true greatness has nothing to do with either fame or fortune; which, you may think, is neither here nor there in a department of newspaper review; so, to get back to consistent subjects, permit me to show these pretty ad-creations from Brother Lampman's *Chronotype,* which stand as proof that his little row with North Dakota politicans has had no detrimental effect upon his ability to manipulate the "art-preservative" material. (Exhibits 4 and 5.) It is but fair to explain in conclusion, that the foregoing remarks form a thing that Rex Lampman has had coming to him for some time; personal over-work on my part has prevented its earlier expression; as a consequence the advertisements reproduced herewith are taken from issues of the *Chronotype* of severtl months ago. And in this connection it is past due to add that last October, H. H. Lampman, Rex's father, relinquished his connection as publisher of the *Chronotype* to the latter gentleman; and in making this relinquishment, the older man threw



STRIKE!
But not the kind you are thinking about..In fact you don't know anything about it until after it happens, and then it's "struck"--by lightning....All fire insurance policies written by us contain lightning clauses.
BANK OF NECHE

No. 5

in an expression that I deem worthy of repetition even at this late date: This is what Mr. Lampman said:

"During the years in which the writer has been engaged in the publication of the paper he has made many warm friends in Neche and Pembina county, and has, as a natural consequence, acquired some equally warm enemies. The former will long be most kindly remembered, while the latter will be charitably forgiven—and forgotten."

I'll freely admit this last may not be orthodox doctrine; but it strikes me that, if all of us could "forget our enemies," the world as a whole would be happier. Psychologically, it would be better for us, and, as a rule, better for our enemies, too.

COEUR D'ALENE, IDAHO, April 20, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—We have just put out a special Coeur d'Alene Indian reservation edition of the *Evening Press* as a "Booster" for our lively little city and surrounding country. We have one criticism—will know better next time—the paper on which it is printed should have been lighter weight, but when it gets into your hands and goes under your critical eye there will undoubtedly be other defects developed, but on the whole we consider it a very creditable piece of work for our mechanical department.

We read your criticisms and comments in the N. P.-J, with much interest, because they are valuable to the fraternity.

Yours truly, J. T. SCOTT.

The special edition referred to in the foregoing letter from Brother Scott is indeed a very creditable piece of work for the mechanical department of the Coeur d'Alene *Press,* and, contrary to his expectation, a very critical examiination on my part has failed to reveal many defects, but rather many additional features for special admiration. This edition consists of sixteen six-column pages all greatly illustrated and largely patronized by local business concerns. A lighter weight of paper, as Editor Scott suggests, might have folded better and proved less liable to breaking in that process, but the quality used has been fine for the printing of the many handsome half-tones with which the edition abounds, and I congratulate the pressman on his success in the printing of these cuts, as everyone of them shows evidences of competent make-ready and shows up with as much clearness and beauty as the original photograph. Much of the subject matter of this creditable edition possesses a literary style and interest to make it worthy of preservation, covering, as the title inti-

mates, the many subjects pertaining to the Coeur d'Alene Indian reservation, its native people and their peculiarities and characteristics. And then there are the almost inexhaustible topics of local educational institutions, commercial enterprises, towns and hamlets, history, timber resources, game, railroads, homes, climate, scenery, lakes, public buildings, etc., none of which have apparently been slighted by the editors of this fine special edition. This Coeur d'Alene Evening *Press* if you have forgotten, dear reader, is that devotee of DeVinne, and nearly all of its displayed columns have that face predominating in them. And I have written before about how sightly DeVinne creations are.

FENNIMORE, WIS., April 15, 1909.

Mr. O. Byron Copper, De Soto, Wis.

MY DEAR MR. COPPER:—Under separate cover I am sending you some of my ads taken at random from recent issues of the Fennimore *Times* for your kindly attention and criticism.

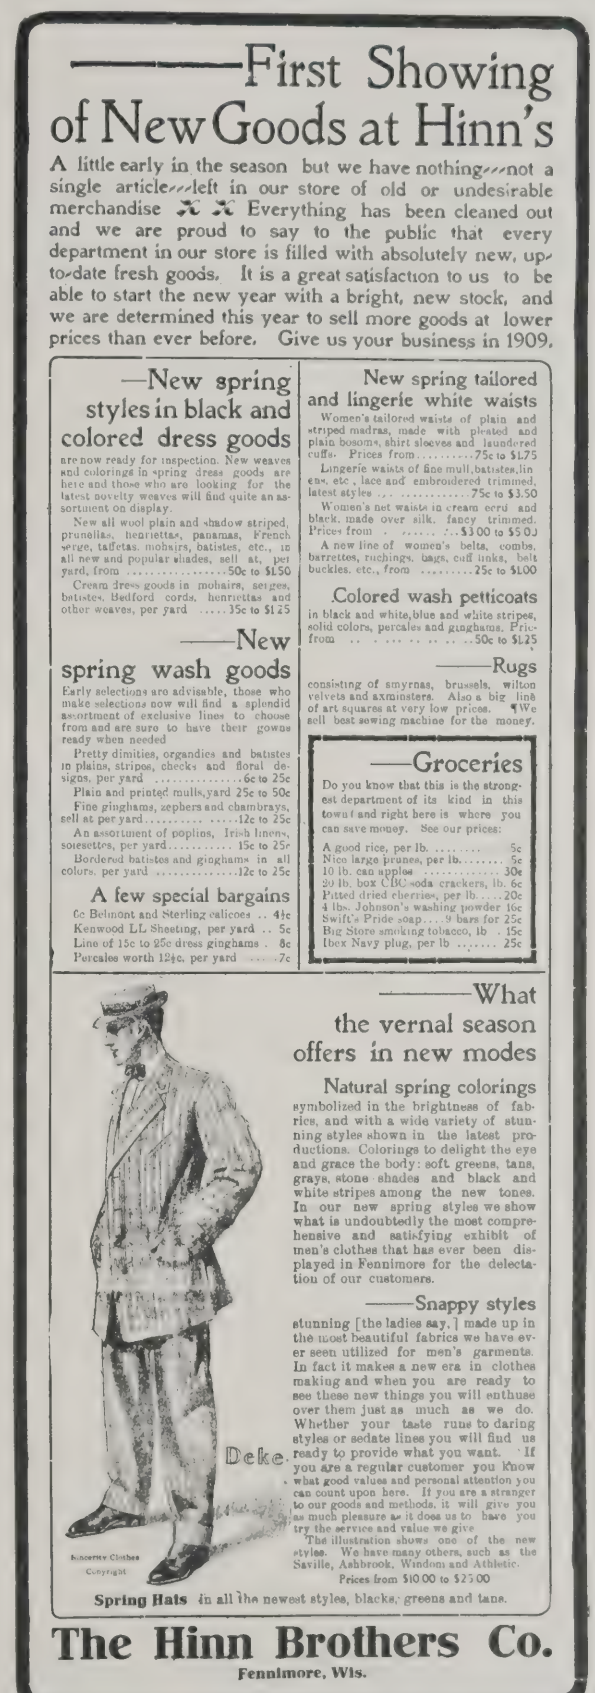
I am also sending you two copies of the Ambassador, issued in the interests of the United Amateur Press Association, of which we are glad to number you as one of our alumni. The *Ambassadors*, however, are not for criticism as they are not the product of my work.

With kind regards, I am,

Most sincerely yours,

LOUIS G. BRECHLER

Need I say that I am very much pleased to have the above communication, and claim it a pleasure to review Brother Brechler's advertisements? He sends among others a very creditable double-page creation, which has received able treatment for so big a specimen. The chief defect lies in the use of too great a variety of type faces in the display, which was probably unavoidable, as is so frequently the case even in some of our largest and in many ways the best equipped country offices. I observe that the two outside columns of this advertisement are divided from the wide central column by double brass rules separated by at least a nonpareil's space. A much neater effect would have been attainable by running one of these rules on each side of these two columns, allowing them to connect with the rules at top and bottom, as they do now. In the Gunderson, Lomas & Nelson page ad, the deep grey border with so little margin between it and the type, the black pica border employed as dashes in the top display, the heavy and incongruous pica border surrounding the body, the variety of type faces, and the plan of empaneling with double rules widely separated, are the objectionable features. The heads in the price lists are altogether too large. Get away from the idea that to be strong a line must be set in a gigantic face. In many instances an eighteen-point heading properly whited has more strength than one of thirty-six-point crowded. In the half-page specimen for the Hinn Brothers Company, in two respects only, the compositor failed in making a very pleasing ad: That lay solely in the manner in which the type portions above and below the main display line were treated. Both of these specimens should have been set in thirty-six-point Jenson (except perhaps the last line) after the long-and-short-line scheme, and all centered. In the triple-column specimen which I reproduce herewith as Exhibit 6, Brother Brechler has done his best work. The style of display is perhaps a trifle freakish, but not beyond toleration. In detail this example has been pretty well treated. In leaving this contributor, I wish to thank him for the kindness of handing me the copies of the *Ambassador*, which were much enjoyed, coming to me as happy reminders of my past pleasant experiences in "Amateuria." The Uapa cannot be more proud of my former connection with their association than I am myself. Of course, I cannot help counting my labors in the amateur field of journalism among the most pleasant, if not the most profitable, of my life, and I shall



First Showing of New Goods at Hinn's
A little early in the season but we have nothing—not a single article—left in our store of old or undesirable merchandise X X Everything has been cleaned out and we are proud to say to the public that every department in our store is filled with absolutely new, up-to-date fresh goods. It is a great satisfaction to us to be able to start the new year with a bright, new stock, and we are determined this year to sell more goods at lower prices than ever before. Give us your business in 1909.
—New spring styles in black and colored dress goods
are now ready for inspection. New weaves and colorings in spring dress goods are here and those who are looking for the latest novelty weaves will find quite an assortment on display.
New all wool plain and shadow striped, prunellas, henriettas, panamas, French serge, taffetas, mohairs, batistes, etc., in all new and popular shades, sell at, per yard, from .....50c to $1.50
Cream dress goods in mohairs, serges, batistes, Bedford cords, henriettas and other weaves, per yard .....35c to $1.25

Big Store smoking tobacco, lb . 15c
Ibex Navy plug, per lb 25c
—What the vernal season offers in new modes
Natural spring colorings
symbolized in the brightness of fabrics, and with a wide variety of stunning styles shown in the latest productions. Colorings to delight the eye and grace the body: soft greens, tans, grays, stone shades and black and white stripes among the new tones. In our new spring styles we show what is undoubtedly the most comprehensive and satisfying exhibit of men's clothes that has ever been displayed in Fennimore for the delectation of our customers.
—Snappy styles
stunning [the ladies say.] made up in the most beautiful fabrics we have ever seen utilized for men's garments. In fact it makes a new era in clothes making and when you are ready to see these new things you will enthuse over them just as much as we do. Whether your taste runs to daring styles or sedate lines you will find us ready to provide what you want. If you are a regular customer you know what good values and personal attention you can count upon here. If you are a stranger to our goods and methods, it will give you as much pleasure as it does us to have you try the service and value we give.
The illustration shows one of the new styles. We have many others, such as the Saville, Ashbrook, Windom and Athletic.
Prices from $10.00 to $25.00

always reserve a warm spot in my heart for the society and any of its members who may condescend to communicate with me.

HOOKER, OKLAHOMA, April 30, 1909.

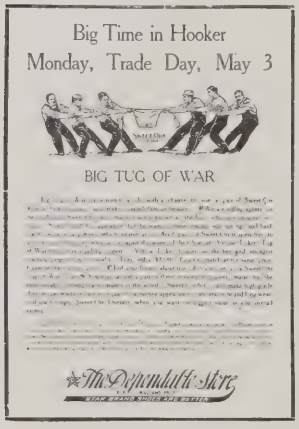
Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am enclosing some ads which I set and wish your opinion on and also I am sending you under separate cover some copies of the *Advance*. The editor has lately left us and "we boys" are running things now, but have hardly got ourselves straightened out yet. As for myself I will say that I have just begun setting ads and these are some of my first attempts with the exception of a stray that was given me now and then. The "Dependaable Store" ad gets the most of its style from the proprietor as he tells us to use enough white space to make it look well and to put the body in good clear type with as few display lines as is consistent with the ad. We wish more of our advertisers were of the same mind. I know you will agree with me when I say there is much room for improvement in the *Advance*, and that is one reason why I am sending you this copy, to get your opinions and also to let you see the difference after we "get our hand in."

Yours truly,

CHAS. E. HOOLE.

I've heard it said, "When the cat's away, the mice will play," and I've heard the proverb aptly applied to printers—I say "aptly," because I know what I'm talking about, having been both a "mouse" and a "cat" under the application, you understand—but I cannot see any evidences in the Hooker, Oklahoma, *Advance*



No. 7

No. 8

to denote that the "mice" have been playing during the "cat's" absence in this case. The *Advance* is a creditable six-column quarto weekly, neatly printed and having some excellent facees of type in its displayed spaces. The only really obnoxious feature in the paper is the appearance of so many displayed advertisements on the first page. Otherwise the mechanical makeup is tolerable, although far from up to the standard recommended in this department. The ads which Brother Hoole sends indicate that he has some excellent ideas of composition. For instance, he seems to appreciate the advantage of simplicity of design and display and the value of an abundance of white space. With those two conceptions intelligently possessed, little is in the way of the compositor's success. The instructions to the compositor from the Dependable Store advertising man, as given in the above letter, are giltedge advice, and how well such advice works out in actual application is demonstrated in the fine ads which the *Advance* boys are putting up for the Dependable Store man. Exhibit 7 is one of these ads, as set by my communicant, Brother Hoole, while exhibit 8 is an equally attractive example taken from an earlier issue of the paper. It would take more of a dyspeptic than I am to file any adverse comment anent them.

BRECKENRIDGE, MINN., April 18, 1909.

Benjamin B. Herbert, Chicago, Ill.

DEAR SIR:—Having a few minutes' leisure time on my hands this morning, I picked up the JOURNALIST of the past month to see what the "boys" were doing, and find that some of them are up and doing, while others the reverse.

I am not a subscriber to the JOURNALIST, never have I sent in any of my work before, but in looking over some of the reproductions in your valuable paper, thought I would send you a few ads. The enclosed twelve are the changes I have

No. 10

I was "rushed" on, and that is my own ad—the insurance ad, and the one of Mr. James, the proprietor, his jewelry ad. If the enclosed samples meet with your approval and you wish I will send you some more.

So closing and hoping to be on your list soon, I am,

Fraternally yours,

BENJ. F. HATCHER,

The Ad Man of the Telegram.

A number of the advertisements in this budget from Brother Hatcher are ordinary examples, due, as he ad-

mits, to rush treatment, no doubt. Then there are others in the bunch which are neat and tasteful. A link between these two divisions is exhibit 9. Why, in this example the compositor brought out "Arrivals" in caps, while it is surely of no more importance than the preceeding part of the display, is a question beyond my ability to answer. Exhibit 10 is an excellent insurance ad, being well designed and worded with a burden of conviction. The Donaldson Studio ad is also a neat thing, but is not reproduced here. The James and

Hatcher specimens (Exhibits 11 and 12) as those on which the compositor confesses having devoted adequate time and thought, go to show beyond cavil how valuable time and thought are in advertisement composition. The main reason why some ads are bad is that they were set with no definite thought(and frequently with little care) as to what they would look like when completed. The compositor throws them up in a hurry with his mind frequently on something of a foreign nature, and it is frequently a wonder to me that the results are not worse. Some wise one has defined drawing as "thinking and marking around the think;" and since advertisement composition is one of the fine arts, too, the same definition might be applied to it. In fact, anything and everything that the human hand does is simply the result of the thought; hence, if the thought is indefinite in just that degree will the work be imperfect. I hope Brother Hatcher will become a regular subscriber to the JOURNALIST and simultaneously a regular contributor to these columns.

MEMPHIS, TEXAS, April 17, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—I am sending you under separate cover a copy of the *Herald* of which my father is the editor, for your criticism. The paper has been under our management for eighteen years and we have done the best we could with it. What I specially wanted was a criticism of my ad work. Our foreman leaving us four months ago, I was compelled to leave college and come home and take his place, as we could at the time secure no one. My practical experience in ad-settting dates from then, a period of a little less than four months, although I have been studying the N. P.-J. ever since I could read, it seems. I am responsible for all the ads in this issue except the two marked with red ink. What do you think of them? Are they passable for a 19-year old foreman with only four months experience? The two ads on the front page are run under contract and are the only ones allowed on that page. We soon intend enlarging to six columns.

Hoping to see a criticism on my work (and shoot it to me hard if I need it) in the N. P.-J. soon, I am,

Sincerely yours,

EARL C. JOHNSON.

The Hall County *Herald* is a five-column all-home-printed quarto, with an abundance of straight matter and a very poor print. Besides the two displayed ads on the front page, the mechanical makeup is far below the standard so frequently outlined in detail in this department of the NATIONAL PRINTER-JOURNALIST. Exhibit 13 gives a clear idea of the correct method of makeup of a five-column newspaper page. I ask the reader to note that of the seven ads on this page, but one

of them does not border on pure reading matter. I ask them to note further the order, symetry and general neatness which this method imparts to the page as a whole. Referring to Brother Johnson's advertisement composition, since that is the point to which he has directed my attention particularly, as a starter let me say that for one with so limited a term of experience as he, his efforts are very commendable, notwith-

standing that they are yet somewhat crude and unfinished. I am reproducing the two best specimens in the paper (Exhibits 14 and 15.) The first of these is pretty badly cut up into empaneled blocks, but in the main I pronounce it a fairly creditable piece of work. The only feature in it which I cannot tolerate is the employment of those two vacant panels flanking the main display line. They are wholly useless and certainly not ornamental. Of course, I understand the purpose of their use: They were inserted to fill out the line, and if that object were impossible without them, why, I'd give in; but this Roycroft face may be letter-spaced almost to extremes with perfect propriety, and I'm sure the ad would have looked much better had the latter suggestion been followed out. There is a high degree of mechanical ability and good taste evidenced in this

ad, however. Exhibit 15 is better if anything, than the first specimen. The effect of the design is original without being very freakish, which is an advantage. The fact that there are greater margins of white on the sides of the panels bordering on the center than on the opposite sides is to be deplored; and I can see no reason why in this design the corresponding spaces could not have been equalized without any deleterious effect. This same design built of lighter faced rule would be

No. 15

more pleasing to me, because then the rule would not overbalance the type. This compositor must wed himself to simplicity, court layouts that offer the use of abundant white masses, divorce himself from the use of ornaments, be temperate with the exploitation of heavy rule faces, study carefully good examples of typography, think well and carefully before he sets a line, and there's little doubt but that he may become one of the country's best ad-men.

MORRISTOWN, TENN., April 20, 1909.

Mr. O. Byron Copper, Editor "Newspaper Criticisms," N. P. J., De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you copies of the Morristown *Republican*. I have been a very interested reader of the N. P.-J. for the past few months and find it of much interest and help to me, especially your department.

I am foreman of the mechanical department of the *Republican*. I set the advertisements, make-up the paper and do job printing for a fair and growing patronage. So you see I haven't much time to give to technical details. Oftentimes it is necessary for me to set several columns of advertising and make-up, lock-up and put on press four pages of the paper in a single day and this with the facalities of a country shop.

The advertising type and rule is badly worn and very deficient as to quantity, considering the amount of advertising and poster work I have to set. So it is not always what face or size I *want* or *ought* to use but what I *can* use. The use of reglet oftentimes prevents good corner fits with brass rule. I have to lock up the forms wood furniture so it is very hard to lock up a type page so the column rules will be straight. In making-up I try to follow your instructions and put the advertising on the right of the page but it is impossible to always get the smaller ads on top of column as some of our large advertiseers demand position at top of the page. The paper has been under the present management a little over a year and the hustling owners are adding facilities as fast as possible. As you will notice they have added a new 10 pt body in the last few months. Also many of our cuts are made on our own stereotyping outfit which was added less than a year ago.

I state these facts not as an apology but to enable you to be fair in your criticisms, if you consider the work worthy of any of your valuable space.

Yours for better newspapers,
PAUL D. CONVERSE.

Brother Converse has favored me with a large bundle of the *Republicans* which I have looked over very

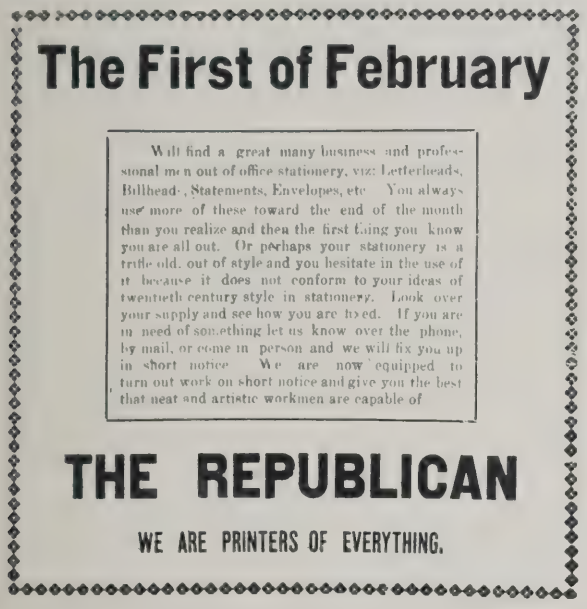
No. 16

carefully, getting several impressions from my critical inspection. First among these is the conviction that the *Republican* is a hustling, enterprising, wide-awake, public-spirited paper, and everything about the sheet itself suggests that everything about its making goes

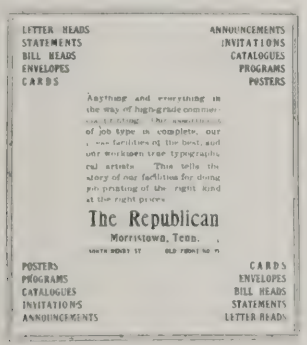
with a "rush-slap-bang," and therefore, as may be imagined, composition, presswork, makeup, etc., do not measure up to the standards of some less hurriedly manufactured papers. Sometimes, however, Brother Converse achieves some pretty favorable results with both his ads and his makeup, as in evidence especially in the issue of March 12 last, of which the first page was especially pleasing, being neatly balanced and wholly free of displayed advertising matter. The ads in this issue, too, were considerably better than in al-



The First of February
Will find a great many business and professional men out of office stationery, viz: Letterheads, Billheads, Statements, Envelopes, etc. You always use more of these toward the end of the month than you realize and then the first thing you know you are all out. Or perhaps your stationery is a trifle old, out of style and you hesitate in the use of it because it does not conform to your ideas of twentieth century style in stationery. Look over your supply and see how you are fixed. If you are in need of something let us know over the phone, by mail, or come in person and we will fix you up in short notice. We are now equipped to turn out work on short notice and give you the best that neat and artistic workmen are capable of
THE REPUBLICAN
WE ARE PRINTERS OF EVERYTHING.

No. 17

most any of the other copies at hand. I take it that that week more time was at the workman's disposal. Brother Converse has explained well why his work is not of a higher degree of excellence, and while I regret to learn of such conditions, I am all too familiar with them, and can see nothing that I may say to help matters. In the lives of many printers the daily motto is



No. 18

"Make the best of it." It isn't what we *want* or *ought* to have, but it's what we get that does us good. There's one thing about this Morristown *Republican,* by the way, that's worthy of note, and that is its proneness to self-advertising. In nearly every copy of the various issues at hand I observe an ad for the shop itself. Exhibit 16 shows a page ad announcing a bargain sale of yearly subscriptions to the *Republican,* while exhibits 17 and 18 are ads for the jobbing department of the plant. If newspaper advertising is good for the merchants, why hadn't a little of it ought to prove all right for the editor, too?

O. Byron Copper, De Soto, Wis.

Am sending you under separate cover several copies of the *Free Press,* wish you would tell me through the columns of the JOURNALIST what you think of it.

Respectfully, L. A. WISENER,

Brother Wisener's paper, The Idaho County *Free Press,* is a six-column all-home-printed quarto, with a clean front page, neat typographical styles, a liberal advertising patronage, all of which the compositor has

stories. All of the editorial work is creditable. But among all of the many pleasing and praiseworthy features of this excellent paper perhaps none exceeds the fine advertisement composition, of which the accompanying exhibits (Nos. 19, 20 and 21) are fair examples. The first two are handsome specimens of that which can be accomplished with the old true and tried DeVinne, while the third is a study in Cheltenham Italic. Brother Wisener has asked me to tell him what

I think about his paper; I have tried to do so briefly; when a contribution is so good as this Idaho County *Free Press*, I usually find it doesn's take half so many words to dispose of it as in instances where the paper is bad, requiring many criticisms, citations of errors and suggestions for improvement. I shall therefore finish, congratulating the *Free Press* force on their conspicuously successful work.

Grangeville, Idaho.

OPELOUSA, LA., April 17, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—It is only recently I took charge of the above paper, and I am sending you copies under separate cover, and will await your criticism. I will also appreciate any advice that you may give me personally, as my whole desire is to make it a first-class weekly paper. I get the NATIONAL PRINTER-JOURNALIST from the news-stand and find some good information in each issue. Hoping some day to meet you personally and have a heart-to-heart talk with a man so much my superior in the journalistic world,

Yours truly, ANO JACOBS.

In many respects the St. Landry *Clarian* (the paper to which Brother Jacobs refers in the foregoing letter) is worthy of this department's praise and admiration. Chief among these is the big, clean front page. No less gratifying, and even more important, is the excellent news-service, which is both extensive, timely and thorough. The profuse use of half-tones to illustrate the sheet's contents is a characteristic of the *Clarion* that adds no little to its interest and attraciveness. The paper is prined exclusively in the home office, with pretty fair success on the part of the pressman, although that gentlemen is not very strong on half-tones; nevertheless, in the main the results are not bad. The typographical styles will pass, but a trifle too much space is allowed in the single-column four-deck heads; that is, the space is improperly distributed: I should prefer a trifle less space between the first two stairstep lines, less space between decks and more space between the lines in the inverted pyramids. Most of the displayed advertising matter is composed after a plain, strictly commercial style, rather than after artistic lines, and the larger specimens are even unsightly with their multifarious faces of type and nefarious ornaments and rules.

The *Clarion* is a seven-column quarto, has a strictly metropolitan aspect, carries an enterprising department of editorials and imparts an air of public-spiritedness that is most becoming and ought to prove exhilerating to its local readers. I hope this may not prove its last visit to my desk.

COON RAPIDS, IOWA, April 12, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you under separate cover a copy of the *Enterprise*, I want you to pass on the make-up of the paper, and the ads of E. V. W. Garst and Speicher and Rough. Please point out the weak spots.

I think that your criticisms in the N. P.-J. helps one to be able to please the advertiser, and makes a satisfied customer. Yours respectfully,

T. E. WEST.

It is a pleasure to find the Coon Rapids *Enterprise* a veritable model newspaper in nearly every department. Beautifully impressed, with a delightfullv clean front page, neat headings, exquisite ads, excellent contents, many country newsletters and first-class editorial work, there is little left unfinished. Exhibit 22 is a portion of the front page, and exhibits 23 and 24 the two ads to which Brother West has directed my attention especially. He has asked me to "point out the weak spots" in these ads, but I can find none in the first specimen; and, while the second is not quite so good an example, yet I have seen many worse. The second specimen seems to lack that fine artistic touch

The Coon Rapids Enterprise.

No. 22

in the treatment of detail so conspicuously in evidence in the first. This is all I have time to offer at this writing, but if Brother West will favor me with a

Your Spring Clothes
It is your aim, of course, to be correctly dressed. It is our aim to see that you are correctly dressed. You want that which is most becoming to you and you want it from the prevailing fashions. We know that this is your first and deepest interest and knowing that we are in the best position to satisfy you and meet your desires in every particular we are sending you this brief description of a few of our suits, coats, and hats with the view of calling your attention to ourselves long enough to have you take a look at what we have to offer you. We have some of the best made goods in the world to offer you. They are made of the best materials to be had and they have all the style that can be given them by any talent so we are proud of what we have to offer.
And Don't Forget
that while we are showing you all the style we have not forgotten the Clothes for Older Men
Many men desire garments of the more subdued styles. Our men's styles will appeal to them with the touches of the extreme left off and they will still have that finely modeled and perfect fitting suit that is a constant satisfaction
Our Young Mens' and Boys' Hat Department
Has become very popular and we can say with the greatest confidence that the season surpasses all others for the really dressy hats for this department. We are showing a striking line of novelties in the prettiest green, olive and sage effects. The few illustrations that we show here will give you an idea of the shapes but they are better appreciated when seen. Price $1.50 and upward
Here is a suit for those who desire an attractive suit without much outlay. The patterns are stylish and while the material has some cotton they have excellent wearing values and they are the most attractive values for the money we have seen but do not have the fine tailoring of the better suits. Price $10.00 and upwards to $18.00.
You surely need a Raincoat. No wardrobe is complete without one of these very desirable garments. They are serviceable in all sorts of weather and are more than ever the ideal garment for every day use. We are showing a good line of the above garments at $9.00 and upward
Here is the decidedly pretty set except of small dimensions that will be much worn this season. They come in all the leading shapes. $1.50 and upward
You will notice here one of those extremely handsome suits that you are sure to admire. It embodies all the latest ideas on the young mens apparel
Price $15.00 and upwards
This is a very pretty hat of the more conservative style. A very becoming hat to most people. Colors mastix with dark brown trimmings black and sage. Price $2.00 to $3.00
The Stiff Hat is very popular this season and always looks well. We are showing them in small medium and large shapes to suit all faces. Colors black and sage. The best qualities $2.50 and $3.00
If this spring overcoat appeals to you, you will wear one of the newest conceptions of the day. They come in different lengths to suit. All of these garments possess pleasing character and win the admiration of all who most appreciate style in its full sense. Price $12.00 and upward
Here is one of the popular hats worn by both the boys and young men. They come in a variety of shades and colors. Boys' $1.00 and up. Mens' $1.50 and up

copy of the *Enterprise* some time in the future, I shall be pleased to take up the subject again.

ELMORE, MINN., April 12, 1909.

MR. COPPER:—I am sending you under separate cover a copy of the Elmore *Eye* for criticism. The present management has owned the paper four months and is making improvements as fast as possible. We have a town of 800, are on the state line in Minnesota and ten miles from the county seat which has two papers.

I am man of all work. Have read the PRINTER-JOURNALIST off and on for years.

Yours, W. A. BRUSS.

There is something so enterprising about this little sheet that, in spite of the several defects that I may be constrained to mention during the course of this review, I cannot forego a feeling and an expression of admiration. Despite the generous advertising support, a clean front page is maintained, which goes a

Easter Showing of New Neckwear
The novelty shades are all wanted by the best dressers, time is short so get here tomorrow sure.
25c to $1.00
Speicher & Raugh
The Most Reliable Store For Correct Styles

No. 24

long way toward creating a good impression with anyone who knows what's what. But there is ample opportunity for improving this front page: Instead of opening every column with a heading, the makeup should plan it so that only every other column is so opened. And a better and exactly uniform style should be adopted for these heads. First, let the first line be a full one. Let a two-line inverted pyramid follow this. Then insert a cap key-line (if desired) and follow this with a three-line inverted pyramid. The first line should, of course, be of caps; and by all means each heading should be an exact duplicate in style of the other. Defective presswork is noticeable, and advertisement composition is of an inferior grade, due partly to the antiquated faces in use. The make-up can be improved by following the model illustrated in this department by exhibit No. 13. If the makers of the *Eye* will do their best in inaugurating the improvements suggested here and favor this department with future copies, perhaps further advice will occur to me. At any rate, I wish them success.

LINCOLN, MO., April 22, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am mailing a copy of this week's *Independent* for your criticism.

The *Independent* is printed on a Washington and with the exception of the type used in the country correspondence, all the body type is very old. I expect the first words of disapproval that you will have will be concerning the advertising on the front page. I would rather not have any there either, on the front page. I would rather not have any there either, and in an endeavor to keep them off charge 9c. per inch for front page while the rest of the page is 8c, as that has done but little towards keeping advertisers off the front page I shall raise it to 10c.

I would be pleased to have your opinion of the Lumber Co.'s ad on front page, People's Bank on page four, Farmer's Bank, Joe Hunt and Rhodes drug store on paage five.

Your department in the NATIONAL PRINTER-JOURNALIST has proved of immense benefit to me.

Yours very truly, R. R. GILBERT.

The *Independent* is a well impressed six-column quarto with ready-print interior. Barring the many front page ads (of which I shall have more to say before I have finished) and a rather too haphazard fashion of make-up of other pages, the mechanical arrangement of the matter might be said to be all right. In point of contents no adverse words could be offered, there being lots of local news and an enterprising department of exchange clippings and an editorial column. Referring to the ads to which the brother has called my attention, I shall consider them in the same order in which he has mentioned them in the letter above: I have a very poor opinion of the Lumber Company's ad on the front page. It is rather too crowded to be attarctive, and borders on the freak order. So far as I can see there is nothing very pretty or original about this ad. Still, in all fairness I must add, on the other hand, that there is really nothing typographically "rotten" about this ad. Save for the disagreement between border and type, the effect is quite harmonious—but there is such a thing as typographical monotony, too. The ad of the People's Bank is probably more pleasing than the Lumber ad, but I doubt if it is as nearly correct in detail. It is certainly not without novelty. There is a certain degree of art in it, but its typography is weak, especially as peraining to display. Whiting out is also very imperfect. The ad of the Farmers Bank is a plain little specimen, very ordinary in aspect, but much better in detail than the one just reviewed. It has better display and much better massing. The Joe Hunt specimen lacks display and would be far better with the pica panels removed from around it. The Rhodes Drug Store ad is freakish and of a style not to be commended. The best two ad specimens in the paper are those of J. B. Calbert & Co. and F. Boehmers. Neither of these have a flaw in them, are neatly displayed, simple and strongly whited. (Exhibits 25-6.) Now, a

No. 26

word anent ads on front pages, and I'm through: That publisher who hopes to keep advertisers off his front page by charging a higher rate for space thereon is just the laddie who's going to be disappointed. The wise advertiser wants the best space he can buy, and he naturally concludes that if front page space is higher in price than back-page space, front page space must be better; hence, he bids for front-page space and gets it. There's but one way to make a clean front page and keep it clean, and that's simply adopting the rule of "POSITIVELY NO FRONT PAGE SPACE FOR SALE." The wise advertiser will then take the next best thing. You can bet he's not going to stop advertising just because he can't have front-page space. He knows too much for that.

DISGUSSIONS BY CHICAGO EMPLOYING PRINTERS

SOME two hundred leading firms of employing printers in Chicago are members of the Ben Franklin Club. On Thursday noon of each week, they take lunch together and have at least one paper presented on some practical subject, and on the second Thursday of each month, they take dinner together at 6:30 o'clock, generally in the dining hall of the Chicago Advertising Association and follow the dinner with regular business session, during which members of the different committees present matters covered in their purpose sometimes interspersed with numbers by a professional entertainer.

We believe that the plan followed out and the matters considered will prove valuable to all organizations of printers and newspaper makers, for a live interest is kept up in the organization and a great deal of information is secured and friendliness and good comradeship are nurtured, individual members are benefited and the calling advanced in many ways.

On Thursday evening, May 13th, the program was as follows and not a number was omitted nor a subject slighted: "Banking and the Printer," Mr. W. F. Whitman, Excelsior Printing Company; "A Printer and His Advertising," Mr. H. J. Buckley, Buckley, Dement & Company; "The Work of the Cost Committee," Mr. J. A. Morgan, C. H. Morgan & Company; "The Needs of a Publicity Committee," Mr. B. B. Herbert, NATIONAL PRINTER-JOURNALIST; "Our Club's Interest in Legislation," Mr. John J. Miller, Barnard & Miller Company; "If You Should Invoke the Court's Aid," Mr. Harvey T. Fletcher, Attorney for the Printing Trades Credit Association; "Advantages of Membership in Our Club," Mr. W. H. Sleepeck, Sleepeck-Helman Printing Company.

BANKING AND THE PRINTER.

Mr. Whitman had made a careful study of the standing of printers among bankers and had discovered some things, that, while not entirely flattering or pleasant, were wholesome and instructive. He had found that printers as careful, prompt, efficient business men did not have a high standing at the banks as deserving of high credit. His inquiry resulted in the discovery that in the banks, of Chicago at least, printing presses, machinery, and type, even though the investment might be one hundred thousand dollars or more, were given no consideration in making loans to printers. The things considered most are the earnings of the business, the live credits, the cash bank balances and the reputation or character established for business methods and promptness. A printer with a quarter of a million dollars invested in his business might not be able to secure a loan at a bank at all, while, one who could make a good showing of earnings, of good book accounts and healthy bank balance, with a reputation for successful business methods, could borrow much above the amount shown his due on accounts or bills receivable. He gave an instance of a printer who could, by making a showing of live or active accounts, or bills his due, of some $40,000 easily borrow $50,000. He had a reputation for carrying a cash balance of $10,000 and of always meeting his obligations promptly. The inference, we presume, was that the loan would nat be asked if it were not needed as working capital, to carry forward his prosperous business and accomodate or give judicious and necessary credit to responsible customers and that the business, in this way retained or secured, would earn the means of meeting the loan when due. It was a most forcible and practical lesson as to the value of thorough methods and promptness in meeting obligations, and taking advantage of all trade discounts in the conducting of the printing business

A PRINTER AND HIS ADVERTISING.

Mr. H. J. Buckley in speaking of " A Printer and His Advertisinng," put satisfied customers as first in value as a means of advertising a plant but advocated a thorough, continuous follow-up system of discreet ciccularizing. The printer who shows attractive printed matter to his customers has an advantage over the other advertisers for he is always showing what he can accomplish in the way of attractive publicity. He strongly advocated "the making good," telling what he can do, and then doing it. He made many other points as to good advertising by the printer, the output of whose office must so largely be that of effective publicity for others. The Work of the Cost Committee which had been constantly presented at the meetings of the Club, when taken up later, was shifted into the consideration of "Reciprocity in Business" that proved intensely interesting.

THE USES OF PUBLICITY FOR A CLUB OR ASSOCIATION.

The committee on Press and Publicity had not previously presented a report or given any outline of the necessity of this branch for the benefit of the organization. The subject assigned covered a field, as to "The Needs of a Publicity Committee," that was so wide as to embrace therein the needs of publicity of all organizations of workers who are striving to better their callings through mutual interchange of knowledge and effort, but speaking especially as to the Ben Franklin Club of Chicago and its objects, work and influence. Mr. Herbert said: "The Ben Franklin Club needs a publicity commitee because its deeds are good and not evil and hence prefers light to darkness. Having the light, the desire is to follow the scripture injunction not to hide that light under a bushel but to place it on a candlestick where it may be seen by all men. Early in my study of the classics, I came upon a saying of one of the old Greek philosophers to the effect that, he who carries a lantern at night and lights another on his path, does that which does not discommode himself, but greatly benefits the other. There is more than this, however in a calling, the course in which needs light, for such enlightenment to the other brings a reciprocating benefit. It is much more profitable to have competitors walking upright than to have them stumbling and encumbering the way through dark ignorance, barring the progress of others. Publicity is the good genius of this age as against the evil genius of concealment of the past, when it was thought that the way to success, or to all rule, was through the ignorance of patrons or of subjects. Even the highest, most successful diplomacy, which in the past consisted in skilled deceit, has come to be the clearest and most convincing statement. Publicity means honest information and clear understanding. It removes all causes of distrust and prevents wrong. If war ever ceases, it will be through a publicity that removes all grounds for misunderstanding among nations and shows that each is acting with honest purpose and with due consideration for the rights of other nations. Some have found fault with the greatest disciple, promoter, and producer of publicity of the age—Ex-President Roosevelt. His methods were so greatly successful that even a high official of the Standard Oil Company declared that they had made a mistake in their course of concealment, and proposed hereafter to take the people into their confidence. Such a course would doubtless have kept the officers and representatives of the Company from temptation and much wrong doing. Ex-President Roosevelt's publicity may have been disagreeable, but it caused a healthful revival of both business and civic honesty. Notwithstanding this good work, greater belief in and practice of honest publicity, there yet remains doubts, suspicions and prejudices in the minds of customers, as well as misunderstandings and jealousies betwwen competitors. Then it may be stated that the Ben Franklin Club needs a Publicity Committee to promote publicity for three reasons:

First, Because the Ben Franklin Club, in its developing of a cost information schedule and a reliable, correct, honest system, has that which will help others to better methods,

and, to a great extent, do away with price cutting and open the way for business success. "No one liveth to himself alone" in this age of multiplied business establishments and enterprises. One's success is dependent nearly as much on the course of his competitors as his own exertions. If through ignorance, competitors do work or sell goods at a loss, it is pretty difficult for one to secure a living remuneration, however energetic, wise and efficient. It is not enough that cost be understood only by the few. There is nothing so persistent as ignorance and selfish greed, and the two generally travel together. Knowledge must be made so broad and so accessible as to be open to all and not only this, it must be brought home to each and all.

The manager of the circulation of a great newspaper once said that he had worked on the rule of making it impossible for any one not to have the opportunity to buy or subscribe for his paper. The opportunity was not hung up in the office but was presented to each individual wherever he might be, every day in the week. The knowledge of the cost of the printing in order to make the business properly remunerative, must be pressed home to every individual in the calling and made so common and general that every ignoramus or conceited individual with only a one-sided view, who seeks to become an employing printer, will understand and take notice.

Second, Publictiy is needed for the better understanding with customers, though when all printers understand the true cost of production, the dealing with customers will become much easier. It is the variety of prices secured by customers, through the ignorance of printers as to real costs or any reliable methods for ascertaining the same, that makes for hardships in the calling. It is not true that business men as a rule wish to get work for less than cost, and I believe that it is often just as well to state the cost with the price charged, though there are exceptions. I remember hearing the case of a leading firm of this city discussed at the meeting of the Chicago Typothetae in 1893. This firm provided a room and a table on which were spread out the jobs on which figures or estimates were wanted. Each printer was invited to come and make estimates on the whole lot with the prospect of being awarded those jobs on which he was lower than all competitors. One leading printer, who refused to send his man to figure under such conditions, told the representative of the firm that in this way the work would all be obtained at less than cost for it was almost certain that when thirty or fourty different printers figure on from sixteen to thirty jobs in this way, that each, however well informed, would make a mistake on one or more of the jobs. The reply was, "We know it. We expect to get our work for less than cost." The man probably did not realize that getting work for less than cost through trickery was theft or simple stealing, or, if he did so realize, there are same thieves now in business. The only way is to lock the door against such schemes by having a perfect cost system and insisting upon the opportunity for fully and accurately figuring the cost of a job before submitting a bid or estimate. This is only fair and honest to our regular customers. Railroads are prohibited from the giving of preferred rates or credits because it is not honest or a square deal to others, leads to driving men out of business and the building up of oppressive monopolies. Cut prices given to greedy or dishonest customers or given with a view of beating a competitor, is not good business, it is not fair or honest to regular customers. The result is just as ruinous when losing prices are given through ignorance of cost or the lack of a reliable system for ascertaining the same, as when given through knavery or in an attempt to injure a competitor. Printers of the Ben Franklin Club want publicity that will inform and convince customers that instead of any combination or trust, to put up prices, they are seeking the universal adoption of an honest, reliable system of keeping and estimating cost and proper results therefrom—a basis for honest living prices that will be fair and to protect customers as well as the business. No reasonable man complains of just charges but no one wants to be put at a disadvantage by being compelled to pay more than his competitor.

Third, This and every other organization that is struggling to put the calling, that it represents, on an honest basis, such as will secure proper remuneration and command confidence and respect, needs a direct, convincing publicity among members of the craft in order that all printers may come to an understanding and join intelligently and heartilly in the establishing honestly correct methods worthy of a calling that serves all other callings and yet receives the least remuneration in proportion to the demands made upon it and the skill, industry, experience, risks and business ability required. Every worthy cause demands for success, strenuous promotion through publicity. It is most gratifying, and somewhat wonderful, to know of the growth of this Club and of the extension of its influence throughout the country. In this work the regular trade papers, that have, for good reasons, paid much attention to the successful work of this organization, have been of great help and the work of the *Ben Franklin Monthly* cannot be over estimated. How any employing printer can read a copy of that paper and not become convinced that he ought to become a member and share in its support and benefits, is certainly a mystery. I believe that the regular journals that have been educating printers for years along the lines taken up by this organization deserve consideration and support, yet it is evident that more is needed.

The opportunity for knowledge does not always make one wise, or good—knowledge does not always result in acts. There must be special appeals supported by the power of example and organization. The feet of the careless, of offenders walking in the old trodden ways of cut-throat prices ignorant guessing, bad habits and practices, must be taken out of the mire and clay and set on the solid rock of right methods and right practices. Some one must not only show how, but, by the compulsion of personal influence and the installation, in business, of right cost and other systems, must compel a change. One may have a right system filed away for years and yet never use it, just as a man may have the Gospel of the Great Teacher and the teachings of His Apostles on his center table for years and even know the contents, still continue in the carelsss, destructive ways of error. There must be a personal appeal and personal application, and in this work every one connected with this Club should consider himself an active member of the Publicity Committee, for his own good and the salvation of his fellows.

Reports of the satisfactory working of the cost system, and of its benefits, should be published in the journals devoted to the calling, briefly in the newspapers, as well, and then should be urged by personal letters and direct individual appeals. If such intelligent persistency and systematic appeals were used, as are used by life insurance agents or even by those interested in many of the fraternities intended to guard people and those dependent upon them against the accidents and uncertainties of life, the membership here would be doubled in six months and scores of similar organizations would be founded throughout the state and the west. The benefit to every member in his business, in the increase of its profits and its attractiveness, would be worth more than all the life insurance within reach of the means of the printers. An abundance of provision for the future would be secured in the business and permanance of business, in the profits that would insure competency, to all honest, efficient followers of the craft that owns the glory of the great philosopher, diplomat, statesman, philanthropist and patriot—Benjamin Franklin."

INTEREST IN LEGISLATION.

Mr. John J. Miller of the Barnard & Miller Company, showed the special interests of the printer affected by legislation, referring to the tariff on paper and pulp, to the Government printing of envelopes, to public printing in the State, and urged that printers have a regard for those matters and inform representatives in Congress and in the State Legislature of their rights and reasonable demands. He had an article read showing the extent of the printing industry and its standing in the scale of manufactures.

RECIPROCITY.

Mr. Miller's remarks drifted naturally into the matter of reciprocity in business and trading at home and when Mr. Morgan was called to speak of "The Work of the Cost Committee," he spoke of just having come from the meeting of the commitee of two hundred of the Chicago Association of Commerce, who have undertaken the placing of the $1,000,000 bonds for the erection of the Commercial Building and of the representation of the Ben Franklin Club in the organization. Recent discussions showed that large quantities of business are sent out of the city through the lack of proper understanding and reciprocity, this does not apply alone to printing but to the large lines of manufactures. Several instances were cited, among the rest a company with products of over a million dollars a year output, who ship thousands of dollars to jobbers in New York who sell the goods right back to Chicago retail dealers. It developed that the Chicago Association of Commerce had been taking up in a practical way the matter thus developed in the deliberations of the Ben Franklin Club and that an intelligent campaign was to be carried on for trading at home and a better understanding and thorough plan of reciprocity among merchants, business and professional men and manufacturers.

IF YOU SHOULD INVOKE THE COURT'S AID.

This proved to be a live subject as treated by Mr. Harvey T. Fletcher, attorney for the Printing Trades Credit Association, a useful organization that is an outgrowth of the Ben Franklin Club. He spoke of the difficulty of proving a contested account for printing, by reason of the inability, on the part of the printer, to show definite specifications and fulfillment of the contract. There should be a signed order for the printing, a signed O. K'd proof and a receipt for the delivery of the goods. Then recovery is certain. It is suggested that where alterations are made in the proof, that there should be some such entry as "O. K. with alterations which are hereby ordered to be made" to be signed of course by the man ordering the printing or by his authorized representative.

It is a fact that more disputes arise from alterations from copy than from any other one cause. It was very clearly shown that prompt collections should be enforced. Accounts permitted to run for a long time drive away more customers than they hold and are hard to collect and are often lost. A judgment on an account is a very convenient asset on which action can be taken speedily.

ADVANTAGE OF MEMBERSHIP IN THE CLUB.

Mr. W. H. Sleepeck treated this subject in a very intelligent way, showing the gains that had come in business knowledge, in price for work through an intelligent cost system that had also resulted in an increased output, and many other advantages. Then there were the advantages of comradeship, of an intelligent regard for the rights and interests of competitors and the building up the standing of the calling in the community.

It was a very satisfactory and profitoble meeting, yet it was only one of twelve each year in addition to the weekly talks at the noon lunches. The way to make an organization useful is to keep at it and keep up the interest by frequent conferences and constant, united work.

HOME TRADE AND HOME ADVERTISING

IT is is a pretty good rule from a business and economic standpoint as well as from one of community interest, to trade at home and help advance home business, industries and interests. The United States has been striving for more than half a century to enforce the idea of trading in America, by making the trading away from home expensive through the imposition of duties. There is no city so large but that the printers, publishers, manufacturers, and merchants therein, who pay taxes and who help to support all local institutions, think the people should, so far as possible, trade at home. The great Commercial Association of Chicago, as will be seen by an article as to the discussions of Chicago printers published elsewhere in this issue, have taken up this matter of trading at home or local reciprocity and have found some curious conditions and great need for a reform in this regard. Other organizations, in the different subdivisions of the city, are working for a reform that will lead to a better support of neighborhood industries and stores, instead of giving all the business to the large stores in the center of the city. The editors in the smaller cities need not think that there is anything belittling in this kind of work or evangelization for home support. Under the title of "The Editor's Troubles," the *Observer* of Pleasanton, Kansas, says some good things, and deals with conditions found in every printing or newspaper setablishment in the country, no matter how large or metropolitan they may be. Speaking of the editor, the *Observer* says:

He sees every side of humanity and knows all about the dispositions and characteristics of his constituents. His daily grind is a mixture of pleasures, vexatons and hopes. One caller will come in and pay his subscription, compliment the paper for the noble work it is doing for the town and county and leave the editor full of joy and satisfaction. He thinks that man is appreciative. The next man will want to lick the editor because he published a bit of news that told of some trouble that the caller had had which ended in the police court. The next man will hand in a long puff of himself and his business written on stationery printed in Chicago or some other place, and ask to have it published just to fill up. The next man will ask you to bid on a small job of printing and then send it to Chicago because he can save a nickle. Thus it goes from morning till night. What is the editor to do? Just do like everybody else, the best he can under the circumstances.

The *Observer* received a dollar a few days ago from a lady who gave the paper a few nice words and said that she had been taking it for thirty years and never allowed her subscription to get many days over due. That was one experience and a pleasant one.

A few days ago we lost a job of printing because we could not afford to do it at the price quoted by a firm in Fredonia, Kan. That was all right. We prefer to not do work unless there is a small margin of profit and that is the rule with all business men.

A few days ago the *Observer* secured a handsome line of samples of commencement cards and endeavored to secure the order from the graduating class for their invitations but the class found a printer in Chicago who could please them

better and he got the order. That was all right. The *Observer* will whoop it up for the graduates just the same and the Chicago printer will no doubt publish a page in his newspaper telling how handsome the girls are and how noble the boys are and how well they all did and how nice the decorations, and all that.

A few days ago Montgomery, Ward & Co., asked the *Observer* for rates on advertising space. We quoted them a price of 15 cents per inch for display and 10 cents per line for readers. They have accepted the offer and bought about $50.00 worth of space. There will probably be some of our readers who will think the *Observer* should have turned down the business entirely and refused the advertising while we think most people will see nothing bad about it and if they were in our place would do the same thing. Editors are human like other folks and they must eat and live and are required to live in houses and wear clothing the same as other folks and so long as the business is legitimate, there should be no objection.

The *Observer* has no love for Montgomery Ward & Co., and will advise every reader to trade with home merchants and at least, give the home dealer a chance to supply their needs. If you cannot get the articles you want in Pleasanton nor find a dealer who will order for you, then you can probably get as near satisfaction from Montgomery Ward & Co., as you can from Geo. B. Peck or John Taylor or Emery Bird Theyer & Co., of Kansas City, or the National Cloak Co., of New York, or any one of the many mail order houses.

The newspaper has its advertising space to sell to legitimate patrons the same as a merchant has his goods on the shelves to sell to whosoever calls and pays the price. If a Kansas City man calls and buys a bill of goods from any of our merchants this merchant and all his friends and the whole town seems to rejoice over the fact that our town has exchanged goods for Kansas City cash. If the *Observer* sells $50 worth of space to a Kansas City advertiser, then why should not every citizen be glad that a Pleasanton paper has sold a bill of space to a Kansas City house and gotten $50.00 of their good money. It is a poor rule that does not work both ways.

The *Observer* is right in the declared policy of advising its readers to trade at home; such trading at home, as a rule, is best for the readers and best for the newspaper's advertisers and for the home. A newspaper ought to be able to depend on home support which should be accorded willingly and in a liberal measure, but it sometimes occurs that merchants advertise in the home paper grudgingly and in such a stingy manner as not to be entitled to expect results, or even not all, who expect the home paper to work in season and out of season for the upbuilding of local trade and all home institutions for the small subscription price, which they condescendingly pay to help the paper. These men are not infrequently the most grievous faultfinders, if the newspaper sells its advertising space to out-of-town merchants who have a better knowledge and a higher appreciation of newspaper publicity and have the wisdom, persistency and enterprise to use the space which they purchase, in a manner and with a persistency to bring results.

As we have taught in these pages for over a fifth of a century, it is most wise and profitable for a newspaper publisher to cultivate his home advertising, constantly advertise his goods in his paper and endeavor to educate home merchants and home manufacturers as to the value and the best methods of home advertising and ever to stand by the home people and local institutions, as the *Observer* wisely declares to be its policy and practice. The home paper can render service to home advertisers of four times the value that it can render to foreign advertisers and this fact should be appreciated, but when the publisher has done his full duty in these regards, he has a perfect right to sell any remnant of his goods or any additional space that he has in his paper to legitimate out-of-town or foreign advertisers. He has the same duty as to his readers with regard to these as to his home advertisers. He has no right and will justly lose in the value of the advertising space in his paper by accepting advertising at home or from abroad that tends to the injury or the loss of his readers.

SOMETHING FOR NOTHING

Two Hours Additional of Daylight (the Most Valuable Thing in the World) Read Twice and You will Become an Enthusiast.

If, on May 1st of each year, the standard of time throughout the United States was advanced two hours, so that what is now five o'clock became seven o'clock, etc., and changed back to our present standard on October 1st, it would add greatly to the health, comfort, and pleasure of all, through the summer, without necessitating *any change* as to daily habits or create any more confusion than if a Western man went to some point East, having a time one or two hours faster than that to which he was accustomed, but would give two hours additional light for rcreation and health-giving exercise and the use of two of the coolest and best hours of the day for labor. Americans, in this manner, would obtain what those in Enkland greatly enjoy today, namely, *two additional hours of light.*

This would leave the same number of hours for business and sleep as now, and would give two better hours for the day's work, and two additional hours of daylight to the evening hours, which today are too short to be of much benefit to those living any considerable distance from their place of business, and, as the hours after business are the only portion of the week-day devoted to pleasure and exercise, the lengthening of same would be appreciated by all.

Nothing is more conductive to health than outdoor exercise, such as ball, tennis, golf, boating, bathing, gardening, etc., so why not readjust the hours devoted to business, sleep, and pleasure to the benefit of all?

Thousands of families would, under these circumstances, move into the country or suburbs, who are now held back by the fact that the men at the present time could not reach their homes until too late to get much benefit from a move of this kind.

As elderly persons and children are given to early rising, the breakfast hour will become more regular, and many annoyances of today will be avoided, and, during the heated term it should prove of special benefit to the school children.

As a rule, every proposed rule, law or custom works a positive injury or hardship to many who club together and bring about much opposition; it delays and discourages those interested in its passage, but, in this case, as no property is destroyed or depreciated, no one can be interested in opposing it, and it is one of the few changes that could be made to benefit all citizens of each and every State in *exactly the same proportion*, and not call for the expenditure of money

by the government, State, or people. Railroads would not be compelled to change their time-tables, as all trains would leave in future at the same hour as today. Local travel would be greatly increased, additional money put in circulation by the purchase of such things as are used for pleasure and recreation, and additional value would be given to what already exists in the way of parks, play grounds, gardens, resorts, boating and bathing facilities, tennis courts, automobiles, carriages, bicycles, etc., etc.

In England though they enjoy in summer time the benefits to be derived from a movement of this kind, they are endeavoring to establish a custom to more closely follow the movments of the sun, which would enable them to gain millions of dollars paid out each year for artificial light. This change is being opposed, however, by every gas and electric light comptny, and their stockholders in every village and hamlet throughout the kingdom, so that the proposed movement in America should not be confused with that being agitated in England, and should be accomplished at a comparatively early date, from the very fact that it injures none and would be of great benefit to millions.

To be beneficial and not confusing, it is necessary that the law or custom become universal throughout the United States. It has no political significance, so all should lend their aid to the movement. Talk it up. See that your friends thoroughly understand it. Remember that millions in England, for centuries have been accustomed to exactly these same hours and its benefits. If you do not need these additional hours for recreation yourself, aid in obtaining it for those who do.

CONVENTION OF FEDERATION OF TRADE PRESS ASSOCIATIONS IN THE UNITED STATES

National Printer-Journalist, Chicago, Ill.

Dear Sir:—The Fourth Annual Convention of the Federation of Trade Press Associations will be held at the Hotel Astor, New York, September 27 and 28, 1909. The place and date were decided upon at a meeting of the Executive Committee in New York in April. This preliminary notice is sent to you in the hope thatt you will keep the occasion in mind in making your plans for the Summer and Fall, and that you will be sure to attend.

The convention will be held at the time of the great Hudson-Fulton Celebration, which will make a visit to New York doubly attractive. The sessions will be arranged so as to permit sightseeing and attendance at the business meetings without the one interfering with the other.

The annual banquet will be held the evening of Tuesday, September 28th, and we already have promises, as unconditional as is possible so long in advance, from Hon. Charles Nagel, Secretary Department of Commerce and Labor, and Hon. Edward Forgan, Postmaster of New York, that they will be present as our guests.

Enclosed please find a schedule of hotel rates. The writer will be pleased to make any arrangements desired by the members or they can be made with the hotel management direct.

We want this convention to be the best yet held, and we invite your co-operation to that end. Fraternally yours.

Federation of Trade Press Associations,

John Clyde Oswald,

By order of the President. *Secretary-Treasurer.*

"EACH NUMBER MORE INTERESTING."

Mansfield, Mass

Yours is a fine paper, and each number is more interesting than its predecessor. Hastily, William White.

ITEMS OF INTEREST

The semi-annual meeting of the Illinois Daily Newspaper Association was held at Springfield on the 18th and 19th of May.

W. G. Klove has purchased the Leland, Ill., *Times* from Leonard Hanson and will again edit that paper. About a year ago Mr. Klove sold it to Mr. Hanson.

Bert Hupp, city editor of the Atlantic, Iowa, *Telegraph*, is taking an enforced vacation from his duties, on account of his health, which for some time has not been of the best.

J. A. Wheatley of Anita, Iowa, starts the publication of a magazine which made its appearance the latter part of May. It is called, "Our Home Journal," and is issued with Atlantic, Iowa, as the publication place.

Charles E. Crockett, secretary and treasurer of the South Bend *Tribune*, recently took high Masonic work in Indianapolis, Ind. The work was witnessed by his father, Elmer Crockett, president of the Tribune Company.

Frank E. Nellis, publisher of the Mt. Clemens, Mich., *Montior*, and postmaster, stole a march on his friends the other day, when he married Miss Caroline Goetz, a popular young woman of that place. The members of neither family knew of the event until an hour or two before it came off.

The Tipton Iowa Times is a new daily for that city. The paper is by J. O. Behymer, who has for a number of years had charge of the weekly by that name. The *Times* was formerly a daily, but for the last several years had been in the weekly field. It is clean and newsy and will doubtless have many friends.

F. A. Miller, editor of the South Bend *Tribune*, has been elected the first president of the South Bend Chamber of Commerce, which he helped organize, and is also on the directorate for a term of two years. H. B. C. VanAsmus, formerly secretary of the Grand Rapids, Mich., Board of Trade, has been elected secretary.

At the Bush Temple Theatre, "The Stolen Story" was presented during the week beginning May 10th, under the auspices of the Chicago Newspaper Club. Every attempt was made to make the newspaper scenes as realistic as possible. In the original story one of the scenes was laid in foyer of the Metropolitan Opera House, but on this occasion the scene was made to represent the Auditorium Theatre.

The first number of *Hygiene, Diet and Long Life*, a popular monthly medical journal, has been issued by the Hygiene-Diet Publishing Association, Chicago. Dr. Carl H. Von Klein is the managing editor and Horace Bird Frost associate editor. Its announced object is "to be the medium between the medical profession and the laity, teaching the duty of the public to the physician and of the physician to the public."

Chicago, the "great ecntral market," hereafter will be the headquarters of the *Traveling Man*, the monthly magazine, which has taken the trip from Milwaukee, where formely published, to Chicago, at the invitation of the Chicago Association of Commerce. The monthly lays claim to being the only traveling man's magazine in the United States, representing twenty-two national traveling men's associations with a membership of 500,000. The current number already appears to have caught the spirit, opening with articles on the Association of Commerce and the city's new passenger terminal.

ITEMS OF INTEREST

THE Morris, Ill., *Daily Post*, which has been in existence twenty years, suspended publication, May 15th. The subscription list has been sold to the Morris *Herald*.

G. F. Rinehart, formerly editor of the Des Moines *Tribune*, has bought a newspaper at Clinton, Okla., and will make his future home there.

B. H. Schearer, who has been connected with a paper at Ida Grove, Ill., has bought out the owners of the Columbus, Iowa *Gazette*, a weekly democratic paper.

The Chicago Newspaper Club realized more than $1,000 by a week's production at the Busch Temple Theater of Jessie Lynch Williams' play, "The Stolen Story."

On June 30th the members of the Michigan Press Association will leave Detroit on a special Grand Trunk train for Sarnia and will spend seventeen days investigating the Canadian northwest.

J. A. Atwood of Stillman Valley, Ill., is an editor, undertaker, justice of the peace, township supervisor, assessor for 30 years, president of the school board and for two years a trustee of the Geneva Girls' Home.

A new weekly is the Manhattan, Ill., *Messenger*, edited and published by Andrew Christianson. It contains much local news, several columns of readable matter and an exceptional amount of advertising for an infant publication.

Chicago Socialists are making a final effort to prevent the suspension of the *Chicago Daily Socialist*. Plans were made to have each branch raise subscription funds, and a meeting pledged more than $500. A. M. Simons said the total debt is approximately $50,000 and the weekly deficit $300 to $500.

At Marshalltown, Iowa, *The Evening Herald*, another daily paper has appeared, published from the office of the *Weekly Herald*, which has been run for about four years by James McNally. The paper is republication in politics. A. J. Boreman of Colo, Ia., is business manager.

Michigan's old newspaper, the *Kalamazoo Gazette*, published seventy-four years as an exponent of democracy, will not longer support the democratic party but will in the future be published as an independent newspaper. F. F. Rowe, publisher of the *Gazette*, is a member of the democratic state central committee. The paper will be neutral in politics.

Mr. Charles H. May, publisher of the Peoria, Ill., *Herald-Transcript* and the Springfield, Ill., Daily News, has just triumphed over the ravages of tuberculosis. He went into camp at Ottawa, Ill., and in eight months won a victory. He weighed about one hundred pounds when he went in and came out weighing 138 pounds. He realizes that he is completely recovered. May is a champion of the tent, or outdoor cure, for tuberculosis. He urges every man or woman to adopt the tent life and get into camp at once.

County Attorney, Frederick Woodward, of South Bend, gave a dinner the night of April 30th to South Bend newspaper men. Covers were laid for 12. Mr. Woodward's guests were F. A. Miller, editor; W. K. Lamport, associate editor, and J. P. Baldwin, city editor, of the *Tribune;* C. H. Passett, editor, and E. F. Lucas, business manager, of the *News;* J. R. Stoll, editor, E. A. Stoll, Elmer Stoll and J. F. DeHaven, of the *Times;* A. G. Graham, chairman of the Thirteenth District Republican Committee, and F. H. Wurzer, county attorney for the poor.

The Alaska-Yukon-Pacific Exposition, which is so splendidly exploited by the Publicity Department of the Exposition, is being supplemented by unusual efforts on the part of transcontinental rail lines. Of all the attractive folders that have been issued by the various railroads advertising the Exposition, the one just off the press and being distributed by the Denver & Rio Grande is perhaps the most brilliant and attractive. The cover design is peculiarly characteristic of the Yukon country, representing the Polar Sea, Aurora Borealis and Totem Poles of the far north.

The lakes to gulf deep-water-way proposition is to be advanced through the medium of the *Lakes to the Gulf Deep Water Way World Commerce Journal*, the first edition was a special May number, consisting of fifty-six pages, filled with material relative to marine, rail, engineering, commercial and financial exploitation. The front cover-page is an especially drawn design, showing progress linking rail and water transportation, and the deep waterway as a middle connecting feature, making of North America the central point of world commerce, and Chicago the center of the entire scheme for the western hemisphere.

SEATTLE CONVENTION "WILL PROVE ONE OF THE MOST SUCCESSFUL EVER HELD."

SEATTLE, May 20, 1909.

Editor National Printer-Journalist,

DEAR SIR:—We have every confidence that the forthcoming meeting of the National Editorial Association, at Seattle, will prove one of the most successful ever held. And particularly will this be true from an entertainment and excursion standpoint. Seattle and its charming Puget Sound environs will prove a marvel and a great delight to all newcomers. Former visitors will be greatly impressed with the marvelous growth and progressive development of the Pacific Northwest.

The Seattle Press Club feels that it is particularly fortunate in being able to offer delegates and their ladies a magnificent and unprecedented excursion to Southeastern and Southwestern Alaska. It will cover all the interesting and instructive features of this glorious paradise of the Northwest. The trip will be taken on the palatial Steamer "Northwestern" operated by the Alaska Steamship Company. And the cash outlay will be moderate for the editors.

The Editorial excursion will start from Seattle at 10 A. M., on Saturday, July 24th, returning to Seattle in 18 or 20 days. The steamship company has now in preparation a pamphlet giving a detailed and descriptive itinerary, with map, of this new trip. We shall take pleasure in mailing it to you as soon as it is published. In the meantime we send booklets that should awaken or stimulate a desire to journey through the picturesque Wonderland of America.

With the hope that we may be able to greet you and yours at the convention in Seattle, and that it may be your good fortune to participate in the pleasures of the Alaska excursion, I remain, with very kindest regards, Fraternally Yours.

WILL A. STEEL,
Chr. Com. Arrangements.

NATIONAL PRINTER JOURNALIST
A Journal for Printing and Allied Trades

Entered at the Chicago Post-office as Second-class Matter

BENJAMIN B. HERBERT . . EDITOR AND PUBLISHER

Official Paper of the National Editorial Association

PUBLISHED MONTHLY BY THE
OFFICE OF PUBLICATION:
1319 WEST RAVENSWOOD PARK, CHICAGO, ILLINOIS

ADVERTISING RATES PROMPTLY FURNISHED UPON APPLICATION

SUBSCRIPTION RATES—In the United States, Canada and Mexico, $2.00 per year, in advance.

Orders for subscriptions will be received by all dealers in printing material in the United States and Canada.

FOREIGN SUBSCRIPTIONS—To countries within the Postal Union 10s. 6d.

FOREIGN SUBSCRIPTION AGENTS—International News Company, Breams Building, Chancery Lane, London, E. C.; F. O. Strong, 111 Fleet Street, London, E. C.; G. G. Turri & Co., Melbourne, Australia; The India Printers' Agency, 249 Mint Street, Madras, India; Successful Advertising Company, Bangalore, India; John Dickinson & Co., Ltd., Cape Town, South Africa.

The NATIONAL PRINTER-JOURNALIST is unequaled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the NATIONAL PRINTER-JOURNALIST COMPANY by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, JUNE, 1909

A newspaper man's ambition to be a good fellow should begin with a desire to render valuable service and end only with the highest possible accomplishment. That is being the kind of good fellow who lasts, counts, and is dependable and is honored, trusted and rewarded for what he is as well as for what he does.

* * *

Meet all prospective advertisers with courtesy and with persuasive and convincing arguments and facts, but always insist on your advertising rates and fix these so that you may feel that they will bring a fair margin of profit to your paper. Rates should be reasonable but profitable to the publisher, withal, and then be as "unchangeable as the laws of the Medes and Persians." Do not tire in a gentlemanly insistance on your prices. Answer all letters with politeness and good humor, but remember that neither of these demand the yielding of a right. The men who stand to their guns or what is the same thing in business, to their rights, are the men who are never defeated and who in the end win in the battle of life.

* * *

The editor who has the opportunity and yet fails to attend the Convention of the National Editorial Association this year at Seattle, will miss the chance of a lifetime, as any one will be convinced who will read the program, study all the wonders to be presented for inspection free of charge at Alaska-Yukon-Pacific Exposition as narrated and contemplate all the enchanting scenes of scenic and architectuarl beauty, as shown by the splendidly perfect illustrations, to be witnessed and the entertainments and instructive travel to be enjoyed. Anyone who takes the trp to Alaska will not only return with broader views and nobler impulses but will add from one to five years to his life. It will as an investment yield tenfold the cost.

* * *

One of the pleasing compensations of newspaper publishing is the opportunity frequently afforded for valuable and distinguished public service while at the same time advancing the interests of the business. We spoke some months since of a Special Nurses' Hospital Edition planned by the Winona, Minn., *Republican-Herald*. The undertaking proved a good success and over $9,000 was realized through this one issue of the paper by the Winona General Hospital as the result of the donation of all proceeds of this Special Hospital Edition, for the construction of a nurses' home. There is a spirit of benevolence, a desire for useful helpfulness that pervades the press of this country. It probably is but natural, for real newspaper men come in close touch with the wants of every community and are in better position to judge where good may be done than the members of any other calling. The faithful family physicians stand next to the newspapers in being touched by existing needs, but the view of each is circumscribed to his own patients, while the editor takes in all. It is not to the discredit of the press that this kind of public service brings a returning benefit. Such examples as that set by the *Republican-Herald* should inspire other publishers to like work. We have not seen, as yet a copy of this issue of the enterprising Minnesota paper, and hope to present more practical, helpful facts, as to methods, that will prove an aid to others.

* * *

How far mind has power over all the forces of nature, mental and physical alike, is, in the present limitations of human knowledge, difficult to state. However, recorded and incontrovertable incidents in the lives of men of great will power, of unbounded faith in themselves or in the guide and aid of an overruling Power, prove beyond question that there is a something within a man, that when exercised in full faith and with full will power is almost irresistable. The members of no calling need more of this all-conquering, difficulty-overcoming power than of the one which deals with men in all the relations of life and with all human institutions, enterprises, measures and government. Our attention has been attracted to this subject by an address delivered before the Ben Franklin Club of Chicago, extracts from which are printed elsewhere in this issue under the caption of "Being Alive."

Orison Swett Mardin writes in *Success Magazine:* "The majority of failures began to deteriorate by doubting or depreciating themselves or by losing confidence in their own ability." There is no mysticism but practical wisdom founded on every-day experience in the words "to him that believeth all things are possible." Mr. Mardin further wisely remarks and exhorts:

So long as you carry around a failure atmosphere, and radiate doubt and discouragement, you will be a failure. Turn about face, cut off all the currents of failure thoughts, of discouraged thoughts. Boldly face your goal with a stout heart and a determined endeavor, and you will find that things will change for you.

Believe that you can make the best paper in the world, can do the best printing and can have the best, most desirable city, the most prosperous community, county and State in the land, then, with a faith that never falters, a wisdom, discretion and considerateness that will not fail, will not offend and will not err, and a will that is all compelling, make your belief a reality.

It may be hypnotism or something more powerful, but we have found by experience, after attempting some little act that seemed aggravating and impossible, after many trials, that a sudden exercise of will power, giving strength and direction, resulted in immediate accomplishment.

THE THING AS IT IS

A Wagon driver, going about his own and his employer's lawful business in a public street on Wednesday morning, was dragged from his seat by four ruffians and shot to death.

Why? Because the murdered man was not a member of the teamsters' union and his employer was not hiring members of the teamsters' union.

Was this murdered man doing anything contrary to the laws of Illinois or of the United States? He was not.

Was he wholly within his rights under the laws of Illinois and of the United States. He was.

Was it right as a citizen to work for whosoever would hire him without belonging to the teamsters' union. It was.

Then what was his killing? Just plain murder.

Had his assassins any right, because they consider the Teamsters' Union a beneficial organization, or belong to it, to assault or kill him? They had not.

Then what are they? Just murderers.

Since they combined as members or supporters of the teamsters' union to commit the crime, what was their combination. Conspiracy to murder.

Since from their viewpoint the teamsters' union is benefited by their crime, what is the teamsters' union, if so benefited? The beneficiary of murder.

Here is all there is to this kind of "labor movement." Here is the thing as it is, stripped of all verbiage like "social betterment," "civic righteousness," "the brotherhood of man," etc., etc., etc.

There are other kinds of "labor movements," but here is this kind. And nothing can change its naked hideousness.

When we look at the thing as it is we see just murder, that is all.—Editorial in the Chicago *Inter-Ocean.*

THE WORKING OF THE OPEN SHOP

In contrast with that former condition the existing open shop has proven the greatest and most practical benefit to employers and workmen alike. The capable and willing workman is sure of his job, his prospects for advancement are better than ever before and he rests easy in the thought that he has only to please his employer, without hanging on the word of some crafty labor organizer who may force him to leave his work that a lot of arrogant union officials may assert their authority and declare for an unjust cause. And what here proves good for the man is good for the boss. The work is handled with greater care, less expense, with greater certainty and rapidity and the employer is not now burdened with the dead weight of union domination, when a man's ability had to be recokened by his standing in a labor organization. The open shop for the printer really means a step forward in the path of national civilization.—From *American Industries* for May.

The union leaders, trained in the rough-and-ready ways of the movement in its early stage, concerned only with speedy results, and oblivious of the social aspect of the union, are not inclined to put aside methods which have so far stood them in good stead, and the union members are not likely of their own volition to resist primitive impulses and look beyond their immediate objects.

The justification urged for the closed shop is that the workers cannot be trusted to stand by the union if free to join or not to join any shop in which they might find employment. For that reason it is contended that a shop must be either all union or all non-union, "all free or all slave." The compulsion of the non-unionist is accordingly unavoidable; it is necessary for his own good and for the good of his fellows. Deprived, therefore, of the power to drive into the ranks the unwilling or indifferent workers, the union must fall. This is the whole union position.

But the incapacities and necessities of the union will not alter the attitude of outside elements. Certain of its methods having become obnoxious by reason of the extremes to which they have been pressed, they must be abandoned, or the union must face the alternative of a defensive struggle against even greater odds. Employers, who previously through motives of expediency submitted to union control, now are willing to submit to great loss rather than yield, and never before have they been so unified.

The plea of union advocates, that the union cannot live unless allowed to go on as it has been going, places the union in a sorry light. Without peaceful suasion as its guiding principle, the union is without a case.

Will past experience be turned to account to put the union in harmony with the conditions of social welfare, or will the leaders persist in a reactionary policy and invite possibly the greatest of all disasters? At all events, it is clear that we are nearing the end of unionism by compulsion and probably the rise of a new unionism—the unionism which will rest exclusively upon merit.—*North American Review.*

Just about the time a man finds himself unable to buy another pound of coal, spring comes.

We never see a man hurrying but what we are inclined to believe that he has been wasting his time.—W. J. Bryan's Commoner.

INSTRUCTIVE NEWSPAPER IDEALS AND EXPERIENCES

"O wad some Pow'r the giftie gie us,
"To see oursels as ithers see us!
"It wad frae monie a blunder free us
"And foolish notion."

NOTHING is more important to a member of the newspaper calling, than the taking a sane, common sense view of life and the relations of the calling to readers of and advertisers in the paper, as well as to the public, the community, city, county and state. Many editors are inclined to take a pessimistic view of the calling and to feel that their work is without proper appreciation, acknowledgment or reward. We do not believe that effective, industrious, conscientious newspaper men have any greater reasons to complain on the grounds of a lack of appreciation, at least, than have the faithful workers in any other honorable, useful, legitimate calling. There are, unfortunately, in this high and responsible profession, careless, indolent, unworthy, irresponsible shirkers, but the percentage of such is probably no greater, if as great, in this than in other employments of life. On account of the greater publicity and the opportunities and demands for useful accomplishment, the incentives for exertion are greater in the newspaper, than in most other vocations, and through the incentives of mutually educative organizations and a multiplicity of publications giving every possible view and incentive, there has been a great awakening of professional interest, sense of obligation, feeling and zeal and hence improvement. Another agency for good has been the numerous public acknowledgments by leaders in all branches of human work and attainment and the expression of the views of those outside the vocation of the esteem in which its faithful workers are held as well as the work, its influence, obligations and accomplishments.

We recently referred to recognition paid to one who had rounded out twenty-five years of newspaper work, Dietrick Lamade, manager of *Grit* of Williamsport, Pa., with a promise to return to a review of the instructive occasion. We are glad now to keep our promise, for, in the addresses delivered at the banquet, we find much, that tells how "others see us" and rich veins of instruction and inspiration for newpsaper workers who have "grit" and are "faithful to their high calling."

Mr. Lamade was honored with a solid silver loving cup and complimentary dinner by the entire *Grit* Family" in the elegant home of the great printing establishment.

The feast was spread in the Assembly hall of the *Grit* building. Is it not splendid that, now, even in our smaller cities, newspapers can not only own their own homes but have therein assembly hall, dining hall, reception and rest rooms, gymnasium, lavatories, bathrooms, reading room and all else for the enjoyment, health and comfort of employes and the ease and accommodation of their patrons? What a change has come about since the first issue of the NATIONAL PRINTER-JOURNALIST in January, 1888, at Indianapolis, Ind.

The story of this most exemplary and inspiring occasion was well told in the paper whose great force of employes made glad and we can do no better than to quote therefrom as follows:

The hall was beautifully decorated with flags and bunting, palms and flowers. The delightful orchestral music, the brilliant oratorical tributes, the "good feeling" that everywhere prevailed, made the event a remarkable one from an industrial viewpoint. The celebration connected more firmly, if possible, the close relation existing between employe and employer in *Grit's* wonderful printing plant.

At each plate a richly embossed souvenir menu, printed in gold and colors, bearing on the cover a portrait of Mr. Lamade, and the significant dates, "1884-1909." On the title page was the following dedication:

COMPLIMENTARY DINNER
TO
DIETRICK LAMADE
BY THE
GRIT FAMILY
Celebrating his Twenty-fifth Anniversary as
General Manager of Grit
Assembly Hall, Grit Building
Wednesday Evening, March 17th, 1909

Following the toasts were the names of the hosts, a group picture of *Grit* Family, photographs of the "homes" of *Grit,* from the small room in which the paper was published in 1884, to the mammoth plant of today, showing the paper's wonderful growth, a brief history of *Grit,* which is really a biography of Mr. Lamade, and the list of the committees having the dinner in charge. This menu is one of the best illustrations of artistic printing ever issued from the *Grit* press.

THE MODEL PROGRAM OF TOASTS.

The toasts of the evening covered every important phase of Mr. Lamade's activities during the past twenty-five years, and were as follows:

Toastmaster—F. E. Manson.
"Here's our chief guest.
If he had been forgotten
It had been as a gap in our great feast.'
—Macbeth.

"Twenty Five Years."—Dietrick Lamade.
"One thing is forever good;
That one thing is success."—Emerson.

"An Exemplar of Good Citizenship."—Hon. W. W. Hart.
"Before man made us citizens,
Just nature made us men."—Lowell.

"An Advocate of Good Government."—Hon. C. D. Wolfe.
"No personal consideration should
stand in the way of performing
a public duty."—Grant.

"A Factor in Industrial Life."—Hon. S. N. Williams.
"In every rank, or great or small,
'Tis industry supports us all."—Gay.

"A Moulder of Public Opinion."—George E. Graff.
"The press is the fourth estate
of the realm."—Carlyle.

"A Herald of High Ideals."—James B. Krause, Esq.
"Armed with high purpose
Sanctified by truth."—Jerrold.

"An Influence for Good."—Rev. Stephen Paulson.
"And sought the truest welfare
of his fellow man."—Young.
Personal Tributes.

THE TOASTMASTER GIVES ENTERTAINING STATISTICS AS TO THE LONGEVITY OF NEWSPAPERS AND THEIR NUMBER—A RECORD OF WORTHY ATTAINMENT.

ADDRESS OF TOASTMASTER.

In introducing the guest of the evening, and presenting to him a beautiful loving cup in behalf of *Grit* Family, the toastmaster said in part:
